## Support Healthy Housing in Pasadena

Pasadena's draft General Plan proposes increasing residential growth in the City along the 210 freeway. Yet the science is clear that placing housing directly next to a severely congested highway makes people sick, especially children. Why? Air pollution is worse along freeways, placing residents at higher risk to serious illnesses such as asthma, heart disease, cancer, reduced lung development, and premature birth and autism for unborn children.

Fortunately researchers have found that even a 500 foot separation can help dissipate pollutants closer to background levels, a policy recommended by the LA County Dept. of Public Health and California Air Resources Board.

**By signing this petition, you are telling the Pasadena City Council that you care about the health of City residents and support the adoption of a freeway buffer zone of at least 500 feet.**
