

**APPENDIX B:**

**ASSUMPTIONS AND GENERAL FORMULAS**

---

## Assumptions Summary used in the Modeling of the Pasadena GHG Reduction Plan

Emission estimates for the various scenarios were derived from EMFAC2007 and the URBEMIS2007 emissions models for CO2 emissions associated with transportation emissions and some area source emissions including landscape equipment. Many assumptions went into modeling of the emissions for the City of Pasadena GHG Reduction Plan, including customized land uses. The following briefly describes some of those assumptions followed by a detailed set of tables outlining the various land use quantification used in the modeling.

Modeling of transportation emissions included reductions in all years (1990, 2007, and 2020) for robust pedestrian infrastructure, which was modeled by affording sidewalks along all of the streets within Pasadena.

The Gold Line light rail service was placed into operation in 2003 and had partial utilization within the City of Pasadena in year 2007. Participation in the Gold Line spiked in 2008 coinciding with a precipitous rise gasoline prices. This spike in the 2008 ridership achieved near full capacity of the transit line. Current ridership in the gold line is lower than the 2008 spike but remains higher than 2007 and earlier years ridership. Unfortunately, the URBEMIS model cannot quantify partial utilization of transit. For this reason, the 2007 modeling did not include the transit line. However, the 2020 Business as Usual (BAU), 2020 with City Programs, and 2020 with City Programs plus additional reductions includes full participation and enhancement of the Gold Line light rail services. These reductions include transit oriented land uses in close proximity to the Gold Line transit stations.

Several land uses were modeled in URBEMIS using customized trip rates. These land uses include mixed uses (primarily residential with commercial), vehicle repair and the Rose Bowl Stadium. Details of the trip rates used for these land uses can be found on pages 33 and 34 of this appendix and used documented trip rates published by the San Diego Association of Governments (SANDAG). These trip rates were utilized for the City of Pasadena because of the documented data that supports the trip rates.

Growth rates used in modeling the increase in land uses for year 2020 utilize historical growth rates for the last eight years (2000 through 2008) found in the California Department of Finance(DOF) Statistics. They are as follows:

Year	Population	Percent Change
2000	133,936	NA (starting Point in determining change in population)
2001	135,511	1.16%
2002	138,742	2.33%
2003	141,974	2.28%
2004	143,658	1.17%
2005	145,285	1.12%
2006	145,834	0.38%
2007	146,452	0.42%
2008	148,126	1.13%

**1.25% annual average growth rate.**

This annual average growth rate per year is considered high for several reasons. One primary reason is that it was calculated based upon the City's highest growth period in recent history and is not expected to be repeated in the future. A second is that the DOF estimates exceed significantly those of other sources, including the U.S. Census Bureau estimates. However, from an emissions reduction planning point of view it is considered advantageous to plan for this aggressive growth rate. Therefore, it was used in the analysis.

All Electric, Natural Gas, Potable Water and Solid Waste were determined as a percentage of total annual city usage based on land use type. City Park percentages were augmented to provide a more accurate account of actual park usages.

**Pasadena GHG Reduction Plan**  
**Input data for Green House Gas Emissions**  
**2007**

**Consumption Totals**

	<b>Natural Gas (MMBTU/year)</b>	<b>Electric (kWh/year)</b>	<b>Potable Water (gallons/year)</b>	<b>Solid Waste (lbs/year)</b>

All Electric, Natural Gas, Potable Water and Solid Waste were determined as a percentage of total annual city usage based on land use type. City Park percentages were augmented to provide a more accurate account of actual park usages.

**Pasadena GHG Reduction Plan  
Input data for Green House Gas Emissions  
2020**

**Consumption Totals**

	<b>Natural Gas (MMBTU/year)</b>	<b>Electric (kWh/year)</b>	<b>Potable Water (gallons/year)</b>	<b>Solid Waste (lbs/year)</b>
Total Annual Consumption		1,656,481,003.04		
Natural Gas Fired Plants		122,222,269.19		
Intermountain Coal Fired (Utah)		1,469,440,733.85		
Purchased		64,818,000.00		
Natural Gas	5,467,590.90			
Other Fuels				
Potable Water			10,110,800,108.47	
Solid Waste Disposal				744,074,400.00
Assumed 1.25% increase per year between 2007 and 2020, therefore 1.1525% increase over 2007 levels.				

**Pasadena GHG Reduction Plan**  
**Input data for Green House Gas Emissions**  
**2020**

All Electric, Natural Gas, Potable Water and Solid Waste were determined as a percentage of total annual city usage based on land use type. City Park percentages were augmented to provide a more accurate account of actual park usages.

**Pasadena GHG Reduction Plan**  
**Input data for Green House Gas Emissions**  
**2020 With IRP**

**Consumption Totals 2020 With IRP**

	<b>Natural Gas (MMBTU/year)</b>	<b>Electric (kWh/year)</b>	<b>Potable Water (gallons/year)</b>	<b>Solid Waste (lbs/year)</b>
Total Annual Consumption		1,012,261,935.35		
Natural Gas Fired Plants		125,762,876.22		
Intermountain Coal Fired (Utah)		855,029,059.14		
Purchased		31,470,000.00		
Natural Gas	5,467,590.90			
Other Fuels				
Potable Water			10,110,800,108.47	
Solid Waste Disposal				744,074,400.00

Assumed 1.25% increase per year between 2007 and 2020, therefore 1.1525% increase over 2007 levels.

**Pasadena GHG Reduction Plan  
Input data for Green House Gas Emissions  
2020 With IRP**

8-Dec	Rose Bowl Half Marathon	1,500
9-Dec	RG Canning Flea Market	9,252
<b>2008 ATTENDANCE TOTAL</b>		<b>701,257</b>

Note: To account for round trips (2 trips = 1 round trip), employee trips, delivery truck trips and other trips needed to facilitate the attendance at the stadium, the trip rate for the stadium land use was determined at 3.5 trips per occupied seat (or 2008 attendance). However the "Unit" field in Urbemis will only accept values below 100,000 occupied seats. In order to account for the full stadium attendance, the occupied seats were divided by 10 ( $701,257/10 = 70,125.7$ ), and the trip rate was multiplied by 10 ( $3.5 \times 10 = 35$ ).

Transportation Emissions and Transit Service:

Transportation Assumptions for 1990 and 2007 include 90% of streets with sidewalks on both sides and 10% of streets with sidewalks on one side. For a comprehensive vehicle breakdown see Appendix C, D and E for the Urbemis breakdown.

Transit Oriented District –Gold line

2007 plan or build does not include actual usage of the Gold Line. Thought the Gold Line was in service in 2007 the Urbemis model could not quantify partial usage.

2020 BAU includes reductions associated with transit but does not include transit oriented development.

2020 with existing city programs includes a full suite of transit reductions including transit oriented development.
