

- La Casita del Arroyo – a recreational facility that houses community gatherings; it is located within the Lower Arroyo Seco
- Gamble House – Greene and Greene house on the western edge of the Arroyo Seco with extensive landscaping
- Wrigley Mansion and Gardens – home to the Tournament of Roses includes gardens with hundreds of varieties of roses, camellias and annuals
- Norton Simon Museum – site of original Carmelita gardens in the 1870s, now home to nearly 2 acres of lush landscaping with trees, meandering pond, and sculptures
- Tournament Park – located on the south portion of the Caltech campus, this neighborhood park includes play equipment, barbeque and picnic facilities
- Brookside Golf courses – two 18-hole public golf courses in the Central Arroyo Seco
- Eaton Canyon Golf Course – nine hole public golf course in Eaton Canyon
- Annandale Golf Club – private 18-hole golf course in the Linda Vista/Annandale canyons
- South Lake Pocket Park – A small greenbelt located on the west side of Lake Avenue south of California Blvd. This area contains trees, shrubs, a small turf area and benches.
- Arlington Mediterranean Garden – vacant lot transformed into water-saving demonstration garden

c. Special Facilities

Non-public facilities play a large role in meeting the recreational needs of the residents of Pasadena. The network of private facilities within the city is made up of businesses, churches, clubs, organizations and schools and the array of programs and facilities they provide is substantial. More than 1,000 non-profit organizations offer an enormous range of services and programs. More than 22 private school facilities are located in Pasadena. Three large colleges with recreational facilities are also within the City limits: Pasadena City College, the California Institute of Technology and the Fuller Theological Seminary.

This Plan does not include a detailed inventory of this system. Because the City neither controls, maintains, nor programs private facilities, these important recreation resources are not credited toward satisfaction of the City's acreage goals for public parks. However, since they do fill a

recreation role, their influence on the availability of recreation is important to recognize. In particular, the influence of private facilities is discussed in Chapter Four with relation to the identified community program and facility needs. A component of the Master Plan is to review how existing public/private partnerships may be working in the provision of facilities and programs. Recommendations within Section 5 of the Master Plan include an analysis of how private facilities could assist in meeting the identified needs for specific types of recreation facilities.

d. Joint Use Public School Facilities

In almost every Pasadena neighborhood, school facilities play an important role in family life and routine. The distribution of school facilities throughout the City suggests that these facilities could also play an important role in neighborhood green space and recreation programming, especially in areas not currently served conveniently by City park facilities. If a school, through joint improvement and use, becomes effective as a recreation facility, then it could become part of the inventory of City facilities as a neighborhood park.

There are 30 campuses in the Pasadena Unified School District, of which 22 are in Pasadena. In a built-out community like Pasadena, joint use of public school and parks facilities is critical to promoting physical activity and accommodating demand for recreation opportunities citywide. When school activities are not scheduled, the grassy areas, sports fields, courts, and children's play areas can potentially be used informally in much the same manner as neighborhood parks. However, this use is dependent on whether the campus is fenced and gated during non-school hours and on the goodwill of a particular school's administration to allow informal use. In some cases, individual sports groups and/or leagues have arranged, either through the City or independently with the schools, to schedule games and practices at school sites.

Prior to the mid-1970's recreation programs on school sites and in parks were conducted by a single recreation department, which was part of the local School District. Every elementary, middle and high school in the District (which extended beyond Pasadena to include Altadena, Sierra Madre, La Cañada-Flintridge and Temple City) had dedicated recreation staff who planned and conducted a wide range of sports, drama, dance, cultural arts and related activities. In many sites activities were offered not only after school but during the school lunch hours, evenings and

weekends. Recreation programs extended beyond schools to local parks and designated church facilities. In 1974, facing significant budget reductions, the School District laid off all recreation personnel and eliminated school recreation programs during non-school hours. The City then hired a small number of recreation staff who formed a new City recreation division, and service delivery shifted to the recreation and community center system. A few years later, City recreation expanded to re-establish after school recreation playground programs at 4 public schools and, over the next decades, expanded to serve 16 elementary and middle school locations. City youth sports programs have also grown, providing school playground and parks opportunities to participate in basketball, flag football, volleyball, soccer, tennis, cheer and other sports teams. While not funded to a level that supports extended evening and weekend hours nor such a comprehensive recreation services as prior to 1974, in 2006 City staff, sports contractors and local community organizations offer a wide range of recreation opportunities that rely on the availability of both parks and public schools as service delivery locations.

Since 1993 a detailed Joint Use Agreement between the City and the Pasadena Unified School District has been in place which describes general responsibilities and benefits of each party regarding the use of both City and District facilities. The Agreement and State law allow the School District and the City to cooperate with each other for the purposes of improving facilities and for organizing, promoting and conducting recreation and education programs for children and adults, without any rental or field use cost (only actual out-of-pocket expenses, if any, are charged).

In 2006, there are 22 local public school properties where City recreation programs are delivered (listed on Table 2.4-2); these and other school facilities are also used by various other sports organizations. The City provides free after school recreation playground programs for children until approximately 5:30pm at all District elementary schools in Pasadena, where children can choose from a variety of activities in a safe, supervised, fun environment. The School District also makes use of various City parks, fields and other recreation facilities; for example, several District middle and high schools use City fields and facilities to conduct school sports activities, including practices or games by school soccer, football, baseball, and softball teams.

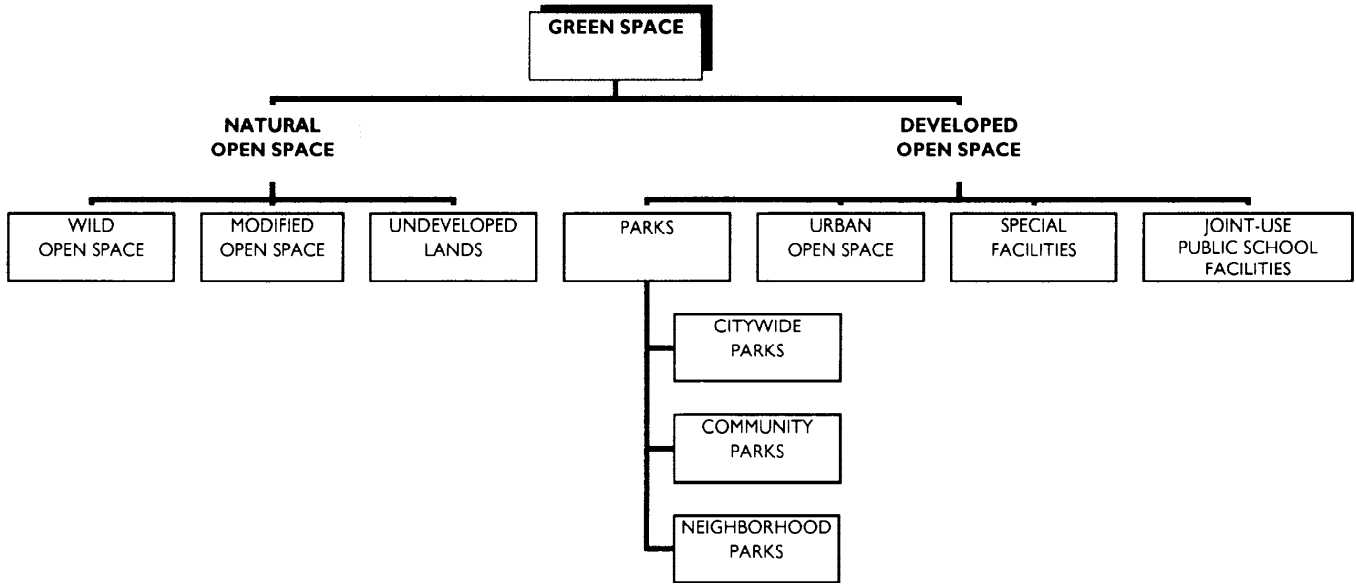

To date, the City–School District Joint Use Agreement has primarily been utilized to conduct organized sports activities or scheduled recreation events. The City has provided financial support for the improvement or expansion of School District fields, all of which are used by organized sports. A few schools have been reported as unofficially used by neighborhoods or communities for casual, informal recreation during non-school hours, but no Pasadena public schools have been officially designated for informal recreation and thus opened for public use to picnic, play, walk or otherwise enjoy drop-in recreation during after school and weekend hours. However, a pilot program at Madison Elementary School opened the school playground and grass field for informal recreation during non-school hours. In this project, the City and District are partnering to add playground equipment, picnic tables, trash cans and related items to better accommodate weekend informal recreation use. The City will assume responsibility to open and close the gates to allow daytime access during after school, holiday and weekend hours, and will remove weekend trash as well as include the site for patrol by the City Park Security personnel. Following implementation of this pilot project, the City and School District have identified additional schools to potentially offer similar casual recreation use during non-school hours.

Note that there is overlap between these categories and some of Pasadena’s green spaces may fall into more than one of the categories. For example, Lower Arroyo Park includes walking trails that deem it appropriate as “Planned Open Space”, but it is also a dedicated “Citywide Park.”

Open Space or OS is also a category used in Pasadena’s Zoning Code and in the General Plan Land Use diagram. OS is included within Green Space. In the General Plan diagram, OS is defined as follows:

This category is for a variety of active and passive public recreational facilities and for City-owned open space facilities. This includes natural open spaces and areas, which have been designated as environmentally and ecologically significant. This category also applies to land, which is publicly owned, though in some instances public access may be restricted. Most importantly, this designation only applies to lands owned by the City.

Pasadena's Green Space Categories

B. OVERVIEW OF STATUTORY REQUIREMENTS

The Green Space, Recreation and Parks Element and Master Plan serve as guiding policy documents for the preservation of existing green space as well as the future stewardship of both passive and active recreation areas. California law requires that every City and County prepare a comprehensive and internally consistent General Plan (§65300.5). The seven required Elements of the General Plan are Land Use, Mobility, Housing, Open Space, Noise, Safety, and Conservation.

Along with the seven mandatory General Plan Elements, the State of California also encourages the adoption of optional Elements when appropriate to a particular City or County. Pasadena's Green Space, Recreation and Parks Element is one of the optional Elements that comprise the General Plan.

In recognition of the importance of properly identifying recreational opportunities and the needs of Pasadena residents, the City has chosen to prepare the optional Green Space, Recreation and Parks Element in addition to the required Open Space and Conservation Elements. This will result in mutually reinforcing policies that will guide the preservation of Pasadena's existing green spaces, while ensuring that opportunities for both active and passive uses of parks and open space are available throughout the City, and that these opportunities are responsive to the community's needs.

The City will update the Open Space and Conservation Elements beginning in Fiscal Year 2007. If any inconsistencies are found between the Green Space, Recreation and Parks Element and these elements, amendments to the Green Space, Parks and Recreation Element may be proposed concurrently with the adoption of the Open Space and Conservation Elements.

C. RELATIONSHIP TO OTHER GENERAL PLAN ELEMENTS

The foundation for the objectives and policies within the Green Space, Recreation and Parks Element comes from a number of sources including the City's General Plan, the 2004 Land Use Element Update, extensive studies of the Arroyo Seco, the 2004 Park and Recreation Fee Nexus Study; and individual city park master plans. In addition, substantial community feedback in the form of visioning workshops, user group workshops, and community surveys led to the development of the goals and vision of the Element. Finally, the Element is accompanied by a comprehensive, citywide Master Plan that serves as the primary implementation guide for the vision, goals, and policies expressed herein.

The City of Pasadena General Plan

In 1994, the Comprehensive General Plan Revision Program was a directed response to growth management issues that came to the forefront during much of the 1980s. The revision program was designed to provide a unified vision for the future of the City. It is a vision that was shaped and driven by community values and reflects the input of Pasadena residents.

The extensive community outreach conducted during the 1994 Revision Program led to the creation of seven guiding principles that serve as the overall framework for each General Plan Element. The seven guiding principles of the City's General Plan are as follows:

1. *Growth Will Be Targeted to Serve Community Needs and Enhance the Quality of Life.*
2. *Change Will Be Harmonized to Preserve Pasadena's Historic Character and Environment.*
3. *Economic Vitality Will Be Promoted To Provide Jobs, Services, Revenues And Opportunities.*
4. *Pasadena Will Be Promoted as a Healthy Family Community.*
5. *Pasadena Will Be A City Where People Can Circulate Without Cars.*
6. *Pasadena Will Be Promoted as a Cultural, Scientific, Corporate, Entertainment and Educational Center for the Region.*
7. *Community Participation Will Be A Permanent Part Of Achieving A Greater City.*

The Green Space, Recreation and Parks Element is the latest in a series of recent updates of Pasadena's Comprehensive General Plan. Other newly adopted Elements include Land Use (2004), Mobility (2004), Safety (2002), Noise (2002), and Housing (2002). Following the adoption of the Green Space, Recreation and Parks Element, Open Space and Conservation will be the last state-mandated topics requiring an update. The City of Pasadena also plans to update two elective elements: Economic Development & Employment and Art & Culture.

Comprehensive General Plans in the State of California are required to be internally consistent. Accordingly, the objectives and policies expressed within the Green Space, Recreation and Parks Element must support and be informed by the other Elements within Pasadena's General Plan.

General purpose statements that describe the five most recently updated Elements are as follows:

LAND USE / To protect residential neighborhoods, to direct density and development into specific areas, and to create mixed-use urban environments oriented to transit and pedestrian activity.

MOBILITY / Pasadena will be a city where people can circulate without cars.

SAFETY / To improve the safety of the community, and in the process make it more sustainable and prosperous.

NOISE / To minimize exposure of residents, workers, and visitors to excessive noise levels, while maximizing the Land Use Element's objectives to encourage mixed-use development in the Central District and other Specific Plan areas as well as to promote economic vitality.

HOUSING / To conserve and improve existing affordable housing, provide adequate housing sites, assist in the development of affordable housing, remove government and other constraints to housing development, and promote equal housing opportunities to all segments of Pasadena's population.

The GREEN SPACE, RECREATION AND PARKS ELEMENT adds to this list the following vision or statement:

To create, maintain, protect, and restore an interrelated system of parks, trails, and natural open spaces. To provide recreational opportunities which sustain a vibrant and healthy community with an emphasis on ecologically sensitive public enjoyment and education.

Because green space, recreation and park policies touch on so many aspects of the General Plan, the community vision within the Green Space, Recreation and Parks Element is broad in scope, allowing the

objectives and policies expressed herein to complement the efforts of other Elements. For example, the Element will help to support the directed development patterns prescribed in the Land Use Element because they provide a means to preserve valuable green space and parks. In addition, this Element will promote opportunities for integrated bike and pedestrian trail networks to reinforce the vision of the Mobility Element for increased non-motorized circulation throughout Pasadena. These and other examples throughout this document demonstrate the close relationship that must exist between the visions of individual Elements of the General Plan, as they reflect the overall goals of the City.

Most importantly, the vision statement and associated Core Principles address the question: What are Parks and Green Spaces For in Pasadena? The answers to this question provide direction toward the balancing of uses within and between the City's parks and open spaces.

The Land Use Element of the General Plan

The State of California's Office of Planning and Research stated the following in describing the purpose of the Open Space Element: "Along with the housing element, the open-space element has the most detailed statutory intent and, next to land use, is the broadest in scope." Indeed, the present Pasadena Green Space & Recreation Element tiers off of the recently updated Land Use Element by incorporating the objectives and policies prioritized by the community.

The Land Use Element contains policies to provide safe and well-designed public spaces, preserve the City's heritage, ensure the accessibility of human services, and foster stewardship of the natural environment. Specifically, the Land Use Element has three major objectives that will be further detailed throughout the Green Space Element:

- Objective 2, Open Space
 - policies regarding neighborhood parks, urban parks, and urban open spaces;
- Objective 9, Open Space Preservation and Acquisition
 - policies related to the Arroyo Seco, Eaton Canyon, open space corridors, and stewardship of the environment and;
- Objective 17, Recreation, with policies related to accessibility
 - equal distribution of facilities, and meeting the community's needs.

Many of the goals of the Green Space, Recreation and Parks Element are directly related to the goals and policies expressed in these three objectives of the Land Use Element. All of the objectives and policies of

this Element are organized around the Seven Guiding Principles of the General Plan.

D. OTHER PARK AND OPEN SPACE PLANNING DOCUMENTS

The Arroyo Seco Master Plans

The Arroyo Seco Master Plans are comprised of a set of four separate planning documents that portray a community vision for one of the region's most valued resources, the Arroyo Seco. The creation of the Arroyo Seco Master Plans is the result of a broad-based community effort that included a long list of stakeholders.

The Arroyo Seco is on the west side of the City of Pasadena and serves as a major tributary to the Los Angeles River. The importance of the Arroyo Seco as a valued resource to the City as a whole prompted the need for the Arroyo Seco Master Plans. The Arroyo provides not only opportunities for recreation but also a rich ecosystem within the Pasadena city limits. The Plans address development of recreational, educational and interpretive opportunities and protection and restoration of the ecosystem, while recognizing the important existing water supply and flood control functions of the area.

The four planning documents that make up the Arroyo Seco Master Plans are as follows:

- Design Guidelines for the Arroyo Seco
- Hahamongna Watershed Park Master Plan (HWP)
- Lower Arroyo Master Plan (LAMP)
- Central Arroyo Master Plan (CAMP)

To date, all of the Arroyo Seco Master Plans have been adopted by the Pasadena City Council, the most recent of which was the Central Arroyo Master Plan, approved on September 26, 2005. The Design Guidelines for the Arroyo Seco were adopted on April 14, 2003 and the Hahamongna Watershed Park Master Plan and the Lower Arroyo Master Plan were adopted on September 29, 2003.

Taken together, these plans provide a detailed implementation schedule for preservation and enhancements throughout the Arroyo. The Green Space, Recreation and Parks Element acknowledges these important planning efforts and incorporates them into the overall policies and objectives of the City. The Master Plan will provide the basis through which the implementation of the Arroyo plans will be carried out and prioritized within the overall context of City parks and recreation planning. The level of detail provided in the series of Arroyo Seco plans provides an example of how specific facilities will be planned and enhanced following the adoption of the citywide Green Space, Recreation and Parks Master Plan.

Specific Park Master Plans

Within the context of a citywide Master Plan, specific park plans can be prioritized and planned collectively. The benefit of having a Green Space, Recreation and Parks Element and Master Plan created at the same time is that policies and objectives can be jointly prioritized for implementation.

There are currently 10 parks and/or recreational facilities in the City of Pasadena that have up-to-date master plans and/or facility plans. They include:

- Brookside Park
- Brookside/Rose Bowl - Area H
- Central Arroyo
- Central Park
- Hahamongna Watershed Park
- Lower Arroyo Park
- Memorial Park
- Robinson Park
- Viña Vieja Park
- Washington Park

The City also has a number of master plans that are now considered out-of-date by Parks and Natural Resources staff. These plans are superseded by the Green Space, Recreation and Parks Master Plan. These park master plans include:

- Eaton Blanche Park
- Hamilton Park
- Jefferson Park
- McDonald Park
- Victory Park
- Villa-Parke Center

The up-to-date master plans that are currently observed are deemed to meet the needs of the community. Conversely, the out-of-date plans are not currently meeting community needs. The Green Space, Recreation and Parks Element and Master Plan will provide a citywide understanding of the facilities and resources necessary to meet the needs of residents, and to direct these resources to the parks and facilities where they will be the most useful and necessary. Following completion of the Master Plan, information from the Plan may be used to revisit existing facility master plans for potential update or modification, including those that are currently considered up-to-date.

Park and Recreation Impact Fee Nexus Study

Pasadena's Residential Impact Fee was established in 1988 with the adoption of Ordinance #6252, which was created to provide funds to mitigate the impact of new residential development (subdivisions, single family dwellings, and multifamily dwellings) on City parks and park facilities.

In 2004, the City contracted with Brion & Associates to prepare an updated study to evaluate the nexus between residential development within the City and the fee charged to developers to pay for recreation and parks. The primary purpose for the study was to establish an impact fee per residential unit based on current and projected development patterns as well as the City's growth rates and population projections.

The Nexus Study was based on the principles of AB1600 and California Government Code 66000 which establish a uniform process for formulating, adopting, imposing, collecting, accounting for, and protesting fees. The Nexus Study developed a framework that provides a rationale for a fee that allows the City to capture both land and development costs, as well as the costs of new recreational facilities. Based on this study, the City Council adjusted the fee. The proposed park and recreation fee will be used to enhance existing or fund new park and recreation facilities that will serve new and existing developments in the City of Pasadena. These fees are required to ensure that adequate public facilities will be available commensurate with the timing of new development. The fee amount will be periodically reviewed to ensure that it is aligned with the cost of funding facilities.

E. COMMUNITY CONTEXT

As a historic, built-out city, the need for careful preservation and enhancement of Pasadena's green space resources to accommodate the needs of present and future residents is critical. Pasadena is a city of approximately 133,936 residents² who have long regarded green space as an integral part of daily life and culture. Since the City's founding in 1874, individuals from around the United States have come to Pasadena

to settle or to vacation, drawn particularly by the area's abundant natural resources and scenic beauty, most notably provided by the San Gabriel Mountains.

Pasadena grew as a residential locale thoroughly distinct from Los Angeles, its neighbor to the south. Residents in the late 1800s perceived Pasadena as a natural, garden-like setting that did not require formal park planning. By the turn of the 20th century, however, changing development patterns led residents to rethink that stance. Consequently, city government acquired its first green space for Central and Memorial Parks in 1902. In 1903, the City's first park regulating ordinance (#539) was passed. Later, in the 1920s, Pasadena created a citywide recreation program that emphasized after-school playground activities.

As the City has evolved, recreation and green spaces have also evolved to meet changing needs and expectations. Pasadena has a unique and varied inventory of green spaces, including regionally significant open spaces, such as the Arroyo Seco and Eaton Canyon, which include hiking, biking, and equestrian trail networks. As of 2005, Pasadena has 23 dedicated city parks totaling 635 acres of parkland as well as an abundant urban forest of more than 50,000 street trees. Further, the City offers an extensive palette of recreation programs and services available to residents year round.

Each of these components is important to maintaining a high quality of life for those who live, work, and play in Pasadena. Some of the most popular recreation activities in Pasadena do not even have a specific facility. Walking, jogging, and bike riding are activities that a large number of Pasadenans enjoy right from their front doors. Green Space is found in the City's parkways, along its sidewalks, throughout its hillsides and through mountain vistas.

² P1. Total Population. Census 2000 Summary File 1 (SF 1) 100-Percent Data. Pasadena City, California." [American FactFinder](#). 2000. Bureau of the Census. 28 November 2005..

GENERAL DESCRIPTION OF PASADENA COMMUNITY

Pasadena is a unique city known for its cultural amenities, diverse housing options, architectural heritage, traditional neighborhoods, special events, educational and scientific institutions, thriving central district, and vibrant economic base. It is truly a city on the world stage but with close-knit neighborhoods and smaller scale community experiences. There are myriad opportunities as a Pasadena citizen to participate in community life by volunteering and interacting with neighbors. A wide variety of public and private agencies, groups, non-profit organizations, businesses, and institutions support community interaction and education.

Pasadena has received national recognition for its efforts pertaining to quality of life planning and its Quality of Life Index report (available online through the City's website). A charter city of the California Healthy Cities and Communities program, Pasadena has focused on identifying and prioritizing quality of life issues, of which park and open space planning is an important part. A mature city that, in part, has evolved along the lines of traditional urban neighborhood patterns, Pasadena is fortunate to have elements of all six (6) of the key indicators for a livable community as identified by the Local Government Commission³. These six indicators are as follows:

1. Mixed-use development brings housing, commercial, retail, civic and office development into closer proximity placing more destinations within reach of a short walk, bike ride or transit trip.
2. Compact development makes more efficient use of land, preserves open space, lowers infrastructure costs, supports neighborhood retail and transit services, and brings destinations closer together.
3. Slow, interconnected traffic-calmed streets ensure safe, convenient pedestrian and bicycle circulation without impeding vehicle circulation.
4. Pedestrian-scale design balances automobile circulation and focuses on making environments that are comfortable, pleasant and pedestrian-oriented.
5. Transit-oriented and transit-adjacent development places higher intensity development within close proximity to transit stops making transit a more viable alternative to the automobile and increasing ridership for the transit system. Increases in ridership generate revenue to fund higher levels of transit service.
6. Mix of housing types provides housing choices and equitable access to services for people of all income levels and life cycles.

COMMUNITY TRENDS/DEMOGRAPHICS

Understanding the demographic context of the City creates a valuable perspective for current open space, park and recreation facility and program recommendations and, moreover, for anticipating open space, park and recreation facility and program needs in the future. Demographic characteristics such as age, number of children, ethnicity, culture, and income have been demonstrated in past research to have a relationship to recreation patterns and needs. For those reasons, an overview of historical change and emerging directions of the resident population of Pasadena are important considerations as the community plans for and moves forward to its preferred future.

Full demographic reports are provided in the Appendix of the Master Plan. Some key findings include:

- The population of Pasadena grew 1.8% from 1990 to 2000. One in four households (27.1%) in 2000 were families with children under 18 years of age, up 2.5% from 1990. However, the fastest growing household type in the City during that decade was one-person households (up 8.8%).
- Density of the overall population and specifically children 18 years of age and younger is concentrated within northwest Pasadena (see Exhibit 4.4-1 of the Green Space, Recreation and Parks Master Plan for a detailed graphic).
- The median age in Pasadena is 34 years, an increase from 33 in 1990.
- Educational attainment is a high priority for Pasadena residents, with 41.3% of residents holding a Bachelor or graduate/professional degree in 2000 as compared to 36.3% in 1990.
- There are approximately 110,000 jobs within the City that support a vital business community.

Pasadena's location and status as a primarily "built-out" community limits the potential for citywide growth. In addition, Pasadena's demographic profile over the next 20 years is anticipated to be characterized by an aging population and continuing ethnic diversity, trends evident throughout Los Angeles County as well. The historical trend of a modestly declining household size, evidenced between 1990 and 2005, and similar projections through the year 2025, indicate a minimal but continuing reduction in household size in the future.

EXISTING GREEN SPACE INVENTORY

NATURAL OPEN SPACE

Natural Open Space is a significant defining feature of Pasadena and the natural open spaces are highly valued by the community. Pasadena has 502 acres of open space (OS) zoned natural open space land. Much of this is in the Arroyo Seco area and the Eaton Wash area.

In addition there are also privately-owned areas that are not zoned as open space, but are valued as natural open space by residents. These are areas that often have development rights associated with them such as vacant hillside properties or vacant lots within existing neighborhoods.

Several different native habitats comprise the natural open spaces. These include Chaparral, Riparian Woodlands, Coastal Sage Scrub and California Native Grasslands. These areas provide suitable habitats for a variety of native animal species such as deer, smaller mammals and birds.

PARKS

The City of Pasadena owns and/or controls approximately 635 gross acres of public parkland in twenty-three sites, ranging in size from less than an acre (San Rafael Park) to more than 290 acres (Hahamongna Watershed Park). Each park has a role in fulfilling recreation needs of the neighborhood and/or the community in an integrated, balanced manner. City parks offer a variety of elements, including natural open space areas, community centers, swimming pools, lawn bowling greens, stages and amphitheaters, large trees, sports courts and fields, passive areas, community gardens, children's play areas, trails for hiking and horses, areas for kids, disc golf course, rose gardens, picnic areas, horseshoes, and even a casting pond and an archery range. In addition, Pasadena is located at the base of the San Gabriel Mountains and the Angeles National Forest, which offer an extensive network of trails and additional recreational opportunities. (See Exhibit 2.2-1 of the Green Space, Recreation and Parks Master Plan for a detailed map of Pasadena Park locations.)

Although the inventory focuses on City owned and operated green spaces, public schools provide vital and important recreational opportunities throughout the City. The Public School system provides sports fields and courts, open spaces, and recreation area throughout Pasadena neighborhoods. While the City and the Pasadena Unified School District cooperate and share the use of some facilities through a joint use agreement, the potential exists for continued cooperation and sharing of resources to meet the recreational needs of students and the

broader community. Similar opportunities for joint use with Pasadena City College are also important to address local recreation.

In addition to public sector opportunities, the City has a rich history of private institutions that provide recreational opportunities for local residents. These include private schools from the elementary school level to world-renown institutions such as the California Institute of Technology. Private athletic, recreation and social clubs also provide numerous opportunities for Pasadena residents in many facets of recreation and athletics.

Historic, built-out cities like Pasadena must look to opportunities for creative use of recreational resources and green spaces that exist within the City limits. With little undeveloped land and a growing population, it is important to continue to search for creative and efficient ways to meet the green space and recreation needs of the Pasadena population. Therefore, while city-owned green spaces are the focus of much of this planning effort, joint use and sharing of resources with public schools and private institutions is a crucial component of recreation planning for Pasadena's future.

PROGRAMS

Recreation and community service programs provide a variety of benefits to individuals, families, neighborhoods and communities. Determining the most important needs and planning programs and activities that effectively address those needs is essential to a delivery system that benefits the Pasadena community. The City of Pasadena provides recreational and community service programs that target unmet needs, underserved populations, and service gaps, operating in coordination with the wide range of activities provided by other private and public organizations. Cooperation with other local providers prevents duplication of effort and promotes effective, efficient use of available community service and recreation resources.

The City's Human Services and Recreation Department is the primary City provider of recreation and community services activities. The Department provides activities that can be grouped into nine service areas, categorized by target populations served: pre-school aged youth, elementary aged youth, middle school youth, high school young adults, adults, seniors, Adaptive Recreation, events, and family/household. Types of programs offered include special interest, the arts, sports, consumer assistance services, special or seasonal events, physical fitness, activities during non-school hours, and social activities.

Currently the City recreation and community service programs include a total of 156 different programs or activities, offered at City and school locations throughout the Pasadena community. The following is a brief summary of programs and services provided by target population category.

Pre-School

18 months – 5 years

Programs for this age group include Tiny Tot Tap, ballet, tennis, swim lessons, karate, sports and fitness, soccer, basketball, and gymnastics.

Elementary School Age Youth Programs

5 - 12 years

There are approximately 26 types of programs or classes as well as various youth sports programs available throughout the year. Classes include dance, cultural dance, art, self defense or martial arts, gymnastics, drill team, tennis, boxing, mentoring and homework assistance, and out of school programs. Seasonal programs include flag football, soccer, cheerleading, basketball, and day camps.

Middle School Youth Programs

12 - 15 years

Program offerings for this age group include aquatics, youth sports, computer instruction, self-defense, a weight-training program, dance, boxing, model car club, and music lessons. Tutoring and SAT are also available for this age group. Drop-in teen after-school programs are also available.

High School – Young Adult Activities

16 – 18 years

Activities for this age group include GED, SAT, tutoring, computer lab, a weight-training program, aquatics, open basketball, Teen Club, and youth employment.

Adult Activities

18 + years

Special interest classes for adults include computer instruction, yoga, tai chi and tai chi sword, ballet, aerobics, weight training, conversational Spanish, English as a second language, art, dog obedience training, and self defense. Sports programs include 3 on 3 basketball, basketball, soccer leagues, 5 on 5 flag football, softball, tennis, and aquatics. Community services include consumer assistance, social service linkage and referrals, volunteer service, and immigration assistance.

Senior Services

Age 55 and above

The Pasadena Senior Center is the primary location providing senior services, located in a City park and operated by a non-profit organization by contract with the City. Additional senior programs are provided at several City community and recreation centers on a year round basis. Special interest classes include dance, crafts, sewing, excursions, fitness, computer education, sports leagues, lawn bowling, special events, language arts, and citizenship classes. Social group activities such as bridge club and drop in table games (e.g. billiards) are also provided. Assistance programs include a lunch program (hosted by

the YWCA), outreach, income tax assistance, health and wellness screening and education, housing assistance, counseling and advocacy, legal services, homebound senior services, food and transportation voucher distribution and volunteer opportunities.

Adaptive Recreation

All ages

Recreation for residents with disabilities includes drama, arts and crafts, music, recreation excursions, event planning, and special holiday events. The City co-sponsors a therapeutic horseback-riding program for youth, Friday night socials, and wheel chair basketball.

Events

All ages

A wide variety of special events are held throughout the year, ranging from neighborhood based to community wide activities. These include seasonal and holiday events, primarily with youth, family or adult focus and are specifically listed in the program and services inventory.

Family/Household Activities

All Ages

Family activities include Family Fun Days, summer family swim, family art class, parent and me programs, and special holiday events. Many center and park programs coordinate activity schedules so that family members of various ages and interests can participate in different activities in one location at one time (e.g. children's dance, youth sports and after school tutoring programs offered at the same time and location as adult aerobics, ESL classes and computer training).

A detailed inventory of information on programs provided by location is listed in the appendix of the Recreation & Parks Master Plan.

IV. COMMUNITY GREEN SPACE, RECREATION AND PARK NEEDS

PUBLIC INVOLVEMENT AND OUTREACH PROGRAM

Significant community input is an objective of the Green Space, Recreation and Parks Element of the General Plan, as well as Pasadena planning efforts overall. From lively evening workshop discussions to one-on-one telephone interviews with 450 residents, community input has provided important insights into the actual patterns of resident activity in the City's green spaces as well as their ideas regarding the future needs of these critical local resources. Nine separate community input opportunities were offered (not including public hearings) to discuss and provide suggestions for the drafting of both the Element and the Master Plan. Descriptions of each community outreach effort are included below. Detailed results can be found in Section 4 of the Master Plan.

Citywide Telephone Survey

A total of 450 randomly selected, geographically distributed telephone interviews were completed with adult household heads living in the City of Pasadena. The subject areas of inquiry included:

- One feature respondents liked best about living in Pasadena
- One change respondents would like to make in Pasadena
- Frequency of recreation facility usage
- Park used most often in the last year
- Recreation program most often used in the last year
- Participation rates for 26 listed recreational activities
- One facility respondent wants most
- One program, class, or activity respondent wants most
- Demographic characteristics of respondents

The full survey report can be found in the Appendix. Results of the survey are summarized together with other tools in Section 4.6 of the Master Plan.

Workshop #1 – Visioning

The purpose of Workshop #1 was to lay the foundation for the creation of a Working Vision Statement (which was then completed in Workshop #2) by identifying the most important community attributes that contribute to why Pasadena is a great place to live, work, and play. The 65 workshop participants also listed trends, issues and/or

opportunities that may be impacting those attributes, and the ways in which parks, recreation and community services can mitigate issues or enhance opportunities in support of the community attributes.

Workshop #2 – Visioning

Eighty participants in the second workshop provided information reflective of their community vision and the role parks, open space, recreation and community services will play in that vision. The topics discussed during this session included:

- Identification of what should be preserved as a part of the Master Plan process.
- Recommendations as to what should be created as a part of the Master Plan process.
- Common themes that translate to needs.
- The strengths, weaknesses, opportunities and threats (SWOT) to achieve the Element and Master Plan recommendations.

Workshop #3 - Sports User Groups

All local sports organizations that had requested use of City park facilities over the past two years were invited to participate in a workshop to discuss park facility issues related to active use for organized sports. Twenty-seven representatives of sports user groups in Pasadena participated in this workshop. Local sports user groups were selected for a specific workshop because of their extensive familiarity with athletic facilities and groups that request to use them, as well as their knowledge about and experience in local trends in organized sports.

Workshop #4 – Needs Summary and Prioritization

Approximately thirty-seven representatives of the community participated in workshop activities involving the prioritization of recreation program and facility needs that were identified through earlier data collection, community surveys, interviews, and workshops.

Workshop Participant Questionnaires

Those that attended the continuum of four workshops were invited to complete written questionnaires that posed six questions. Forty-three questionnaires were returned. The questionnaire addressed the following:

- What do you value most about the Pasadena Parks and Recreation Services, Open Space, and Facilities, and Why?
- What changes would you like to see?
- What opportunities exist to accomplish those changes?
- Please list any programs or services you would like to see added and how they support the community?
- Please list any facilities you would like to see added and how this would support the community?
- Is there anything else you would like to add?

Community Organization Questionnaires

Pasadena community service providers and civic groups were requested to participate in the identification of recreational community service needs of Pasadena residents. A total of 99 questionnaires were distributed and 12 were completed and returned. Questions included:

- What would you say the Pasadena community does best for its families, adults, youth, seniors, business and visitors?
- What change or improvement would you identify as the highest priority to meet the current recreation and community service needs of Pasadena residents?
- What are the most important issues or challenges facing the Pasadena community during the next ten years?
- Describe the characteristics or qualities that you feel are most important to support or strengthen in the future of Pasadena?
- If you were to name one program needed for Pasadena residents, what would that program be and why?
- If you were to name one facility needed for Pasadena residents, what would that program be and why?
- Would you like to give any other thoughts or comments that you feel are important to include in the Pasadena Green Space, Recreation and Parks Element and Master Plan?

Stakeholder Interviews

A series of one on one interviews and round table discussions involving stakeholders were conducted to provide an assessment of key issues, perceptions and opinions in the Pasadena community with relation to green space, parks or recreation. A total of 23 individuals were interviewed. The information derived from the interviews is included in

the overall public input process that identifies the needs of the community related to parks, recreation, and community services.

Interviewees were selected by staff based on their interest in parks and recreation in the community. They were also selected on the basis of their insight and/or knowledge about the community related to parks, recreation and community services.

FACILITY AND PROGRAM DEMAND ANALYSIS AND NEEDS ASSESSMENT

A key element in any planning strategy is an understanding of the nature of demand for parks and recreation facilities. Without this understanding, policies can only be based on general standards of supply and demand, such as population ratios (acres per thousand population) or service area (distance to park facilities). Such standards may be useful guides but the demand analysis guarantees that the needs assessment reflects the character of Pasadena. The citywide telephone survey and an extensive survey of sports organizations provided a quantitative basis for determining how the residents of Pasadena participate in recreation activities. These quantitative methods are utilized along with each of the community outreach efforts outlined above to develop a comprehensive picture of facility and program demand, which is key to the development of recommendations for the types of facilities desired by Pasadena residents.

Please see the Appendix for the full Demand and Needs Analysis report, including a detailed description of the methodology utilized and calculations.
