Re: Native American Tribal Consultation, Pursuant to the Assembly Bill 52 (AB 52), Amendments to the California Environmental Quality Act (CEQA) (Chapter 532, Statutes of 2014), Public Resources Code Sections 5097.94 (m), 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2 and 21084.3, 3ARD012200, 3PAS012100, and 3SPA010100 Projects, Los Angeles County

Dear Mr. Cisneros:

Pursuant to Public Resources Code section 21080.3.1 (c), attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Please note that the intent of the AB 52 amendments to CEQA is to avoid and/or mitigate impacts to tribal cultural resources, (Pub. Resources Code §21084.3 (a)) ("Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.")

Public Resources Code sections 21080.3.1 and 21084.3(c) require CEQA lead agencies to consult with California Native American tribes that have requested notice from such agencies of proposed projects in the geographic area that are traditionally and culturally affiliated with the tribes on projects for which a Notice of Preparation or Notice of Negative Declaration or Mitigated Negative Declaration has been filed on or after July 1, 2015. Specifically, Public Resources Code section 21080.3.1 (d) provides:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The AB 52 amendments to CEQA law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction prior to receiving requests for notification of projects in the tribe's areas of traditional and cultural affiliation. The Native American Heritage Commission (NAHC) recommends, but does not require, early consultation as a best practice to ensure that lead agencies receive sufficient information about cultural resources in a project area to avoid damaging effects to tribal cultural resources.

The NAHC also recommends, but does not require that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;

- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was positive. Please contact the Gabrieleno Band of Mission Indians – Kizh Nation on the attached list for more information.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: steven.quinn@nahc.ca.gov.

Sincerely,

Steven Quinn
Cultural Resources Analyst

PSOMAS

Attn: Charles Cisneros
re: Paleontological resources for the 3PAS012100 Project

Dear Charles:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the 3PAS012100 project area as outlined on the portion of the Pasadena USGS topographic quadrangle map that you sent to me via e-mail on December 16, 2020. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM IP 24385	South Pasadena; on east side of Fair Oaks Ave just north of intersection of Pasadena Freeway and Fair Oaks Ave	Unknown formation (Pliocene)	Invertebrates	Unknown
LACM IP 23222	on Fair Oaks Ave; north of the intersection of Fair Oaks and the Arroyo Seco Freeway	Unknown formation (Pliocene)	Invertebrates	Surface, along bluff next to sidewalk
LACM VP 1023	Workman & Alhambra Sts, Lincoln Heights	Unknown Formation (Pleistocene)	Birds (Aves)	Unknown (excavations for storm drains)
LACM VP 2032	Los Angeles Brickyard Mission Rd. & Daly St.	Unknown Formation (Pleistocene, silt & clay)	Mastodon (<i>Mammut</i>)	20-35 ft bgs
LACM VP 3363	W of Monterey Pass Road in Coyote Pass; E of the Long Beach Freeway & S of the N boundary	Unknown Formation (Pleistocene; sand)	Horse (<i>Equus</i>)	unknown

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the Natural History Museum of Los Angeles County (“NHMLA”). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

A handwritten signature in black ink that reads "Alyssa Bell". The signature is written in a cursive, flowing style. The letters are connected, and the overall appearance is that of a personal or professional signature.

Alyssa Bell, Ph.D.

Conditions noted in the Project Summary Table are representative of the overall conditions of the property. The Project Summary Table should not be used as a stand alone document. REC - Recognized Environmental Condition, as defined by ASTM E1527-13.

Footnotes:

1. A "gasol" pump was identified in the southeastern corner of 511 South Arroyo Parkway based on Sanborn maps dated 1950 and 1970. "Gasol" is an abbreviated term for gasoline, which is used on Sanborn maps during this time period. A "gasol" pump generally consists of a fuel dispenser and most commonly a mechanical pump and nozzle. Based on the lack of information related to the historical presence of a "gasol" pump on-site, Ramboll US Corporation (Ramboll) conducted a Phase II Environmental Site Assessment to evaluate the subsurface conditions in the vicinity of the pump. On February 13, 2018, Spectrum Geophysics of Chatsworth conducted a geophysical survey to mark subsurface utility lines, subsurface structures, and underground obstructions in the area of concern. During the geophysical survey, two approximately 2-inch diameter metal conduits were observed extending above ground surface in the general vicinity of the former "gasol" pump. One conduit was located within an elevated concrete pad, extended approximately three inches above the ground surface and was backfilled with concrete. The second conduit extended approximately two inches above the ground surface and was open to an approximate depth of five feet below ground surface (bgs). A petroleum-like odor was noted on the measuring tape used to measure the total depth of the open conduit. Finally, a subsurface metallic anomaly, suggestive of piping, was detected approximately 0.5 foot bgs and extended laterally between the two aforementioned conduits. Two soil borings were also advanced to 20 feet bgs in the vicinity of the former pump. Soil samples were collected from borings at approximate depths of 5, 10, 15, and 20 feet and were field screened for organic vapors with a photoionization detector (PID).

The soil samples were also submitted to a laboratory for the analysis of volatile organic compounds (VOCs), oxygenates and methyl tert butyl ether (MTBE), total petroleum hydrocarbons (TPH)-gasoline range organics (GRO), TPH-diesel range organics (DRO), TPH-oil range organics (ORO), and lead. Groundwater samples were not collected due to the typical depth to groundwater in the area (more than 140 feet bgs). No VOC, MTBE or TPH were detected in soil samples. Lead was detected at concentrations ranging from 3.8 mg/kg to 10 mg/kg; however, all concentrations were below the USEPA regional screening levels for residential and commercial/industrial use, and within typical background levels for California. Based on this information, the former "gasol" pump represents a de minimis condition associated with the Project. No further action or investigation is recommended.

2. One cooking grease bin and an in-ground grease trap which are not currently in use were identified at the vacant former Margarita Jones restaurant (541 South Arroyo Parkway) and an additional in-ground grease trap which is not currently in use was identified at the vacant former Dona Rosa Bakery and Taqueria (577 South Arroyo Parkway) located on the southwest portion of the Project. In addition, a 55-gallon drum was observed on the southwest portion of the Project. According to labeling on the drum, the contents are "Non-hazardous" and consist of soil cuttings that were generated during the completion of a subsurface investigation at the Project in 2018. No evidence of releases from the grease bin, traps or drum, such as staining or dead vegetation, was observed. The cooking grease in the bin and any remaining cooking grease located in the grease traps, as well as the contents of the soil cutting drum, should be disposed by a licensed contractor in accordance with applicable regulations.
3. The review of the historical data available for the Project identified that a bus facility (and later a distributing company, auto repair facility, tire center and auto detailing shop) with an associated fueling station was located on the northern portion of the Project, in the area of the current Whole Foods store, from approximately the 1930s through 2007. Sanborn Maps from 1950 through 1970 depicted "gas and oil tanks" in the southern portion of the Whole Foods site. Furthermore, a UST was formerly associated with 455 South Arroyo Parkway, in the area of the current Whole Foods store. No details regarding the size or contents of the UST were provided. Additionally, Absolute Automotive at 451 South Arroyo Parkway was also listed on the historical auto station database which may have also been associated with this address/business. No records regarding the installation or removal of USTs were found during this assessment. Based on the fact that a three-story underground parking garage was constructed at the Whole Foods building, it appears likely that any onsite USTs or potentially contaminated soils associated with USTs would have been excavated and removed during the construction of the parking garage. Based on the excavation of onsite soils during the redevelopment in 2008 and anticipated depth to groundwater, the former bus fueling facility and historical USTs do not appear to represent a recognized environmental condition. No further action or investigation is recommended at this time.
4. The review of the historical data available for the Project and the regulatory database report identified that a service station, the former ARCO station located at 125 East California Boulevard, was located at the Project from approximately the 1930s to 2002 and utilized at least three USTs. This facility was located on the southern portion of the Project, the site of the current vacant restaurant at 577 South Arroyo Parkway. An unauthorized gasoline release impacting groundwater was first reported in 1988 and soil vapor extraction operations were initiated. In 1998, three USTs were removed from the site and various soil and groundwater investigations were subsequently conducted. The Project received a "no further action" letter from the Pasadena Fire Department dated May 24, 2000; however, the site also received an additional clarification letter regarding the "no further action" letter stating that while the site has complied with the regulatory requirements for the site investigation/remediation, contamination remained at the Project below regulatory action levels. A Declaration of Environmental Restriction allowing access for remediation was recorded on August 21, 2002 that was to terminate 90 days after No Further Action was received. Quarterly monitoring was completed and 761 cubic yards of soil was removed. The LARWQCB granted case closure on December 3, 2004 with no property use restrictions, activity and use limitations, institutional controls, or engineering controls. The monitoring wells were abandoned in 2005. Based on the "no further action" status, the historical use of the Project as a service station represents a historical recognized environmental condition. No further action or investigation is recommended at this time.

5. Based on the date of construction (1921, 1925, 1951, 2003 and 2008), there is a potential that asbestos containing materials (ACM) exist at the Project. The suspect asbestos containing roofing materials, ceiling tile, wallboard/joint compound, vinyl floor tile, vinyl sheet flooring and various mastics were observed in generally good condition with the exception of some limited areas of damage noted in the 499/511 Building and the 577 Building. These materials can be maintained in place if an Operations and Maintenance (O&M) Program is developed and implemented. A properly designed O&M Program is sufficient to maintain the materials in accordance with current regulatory standards.
6. Moisture conditions (including standing water on the floors) were observed on the ceiling, wall and floor areas at the 499/511 Building (currently a vacant building). The areas affected by the moisture were approximately 320 square feet in size. In addition, moisture conditions were observed on the second floor ceiling tiles at the 577 Building (former Dona Rosa Bakery and Taqueria). The areas affected by the moisture were approximately 20 square feet in size. Refer to the EMG Property Condition Assessment (PCA) report (EMG Project Number 136895.19R000-001.264) for further discussion.

1.0 Executive Summary

EMG performed a Phase I Environmental Site Assessment of the property summarized below on February 28, 2019.

Project Description	
Project Name:	465, 491, 503, 525 and 577 South Arroyo Parkway (the "Project")
Project Address:	465, 491, 503, 525 and 577 South Arroyo Parkway, Pasadena, Los Angeles County, California 91105
Additional Current/Historical Addresses:	441-577 South Arroyo Parkway; 112-118 East Bellevue Drive; 101-125 East California Boulevard
Assessor Parcel Number(s):	5722-008-002, 5722-008-012, 5722-008-016, 5722-008-017, 5722-008-019
Site Visit Date:	February 28, 2019
Property Type:	Retail
Land Area (acres)/Source:	3.3 from assessing records
Number of Units:	8 units
Number of Buildings:	8
Year Constructed:	1921 (499/501/511), 1925 (485-497), 1951 (523/541), 2003 (577), and 2008 (441-483)
Basement:	Yes (499 Building and Subterranean Parking Garage in 441-483 Building)
Building Area (SF)/Source:	147,725 from client provided information (rent roll)
Domestic Sewage:	Public utility - City of Pasadena

1.1 Findings, Opinions, & Conclusions

EMG performed a *Phase I Environmental Site Assessment* using methods and procedures consistent with good commercial and customary practice in conformance with ASTM E1527-13 of 465, 491, 503, 525 and 577 South Arroyo Parkway, Pasadena, Los Angeles County, California 91105. Any exceptions to, or deletions from, this practice are described in Section 2 of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), controlled recognized environmental conditions (CRECs), significant data gaps, or significant business environmental risks in connection with the Project, except as discussed below.

Storage Tanks

De Minimis Condition: Historic "Gasol pump" identified

A "gasol" pump was identified in the southeastern corner of 511 South Arroyo Parkway based on Sanborn maps dated 1950 and 1970. "Gasol" is an abbreviated term for gasoline, which is used on Sanborn maps during this time period. A "gasol" pump generally consists of a fuel dispenser and most commonly a mechanical pump and nozzle. Based on the lack of information related to the

historical presence of a "gasol" pump on-site, Ramboll US Corporation (Ramboll) conducted a Phase II Environmental Site Assessment to evaluate the subsurface conditions in the vicinity of the pump. On February 13, 2018, Spectrum Geophysics of Chatsworth conducted a geophysical survey to mark subsurface utility lines, subsurface structures, and underground obstructions in the area of concern. During the geophysical survey, two approximately 2-inch diameter metal conduits were observed extending above ground surface in the general vicinity of the former "gasol" pump. One conduit was located within an elevated concrete pad, extended approximately three inches above the ground surface and was backfilled with concrete. The second conduit extended approximately two inches above the ground surface and was open to an approximate depth of five feet below ground surface (bgs). A petroleum-like odor was noted on the measuring tape used to measure the total depth of the open conduit. Finally, a subsurface metallic anomaly, suggestive of piping, was detected approximately 0.5 foot bgs and extended laterally between the two aforementioned conduits. Two soil borings were also advanced to 20 feet bgs in the vicinity of the former pump. Soil samples were collected from borings at approximate depths of 5, 10, 15, and 20 feet and were field screened for organic vapors with a photoionization detector (PID). The soil samples were also submitted to a laboratory for the analysis of volatile organic compounds (VOCs), oxygenates and methyl tert butyl ether (MTBE), total petroleum hydrocarbons (TPH)-gasoline range organics (GRO), TPH-diesel range organics (DRO), TPH-oil range organics (ORO), and lead. Groundwater samples were not collected due to the typical depth to groundwater in the area (more than 140 feet bgs). No VOC, MTBE or TPH were detected in soil samples. Lead was detected at concentrations ranging from 3.8 mg/kg to 10 mg/kg; however, all concentrations were below the USEPA regional screening levels for residential and commercial/industrial use, and within typical background levels for California. Based on this information, the former "gasol" pump represents a de minimis condition associated with the Project.

No further action or investigation is recommended.

Waste Generation

Business Environmental Risk: Unused cooking grease bin, grease traps and soil cutting drum identified

One cooking grease bin and an in-ground grease trap which are not currently in use were identified at the vacant former Margarita Jones restaurant (541 South Arroyo Parkway) and an additional in-ground grease trap which is not currently in use was identified at the vacant former Dona Rosa Bakery and Taqueria (577 South Arroyo Parkway) located on the southwest portion of the Project. In addition, a 55-gallon drum was observed on the southwest portion of the Project. According to labeling on the drum, the contents are "Non-hazardous" and consist of soil cuttings that were generated during the completion of a subsurface investigation at the Project in 2018. No evidence of releases from the grease bin, traps or drum, such as staining or dead vegetation, was observed.

The cooking grease in the bin and any remaining cooking grease located in the grease traps, as well as the contents of the soil cutting drum, should be disposed by a licensed contractor in accordance with applicable regulations.

Historical Review

De Minimis Condition: Historical bus facility fueling station/USTs identified

The review of the historical data available for the Project identified that a bus facility (and later a distributing company, auto repair facility, tire center and auto detailing shop) with an associated fueling station was located on the northern portion of the Project, in the area of the current Whole Foods store, from approximately the 1930s through 2007. Sanborn Maps from 1950 through 1970 depicted "gas and oil tanks" in the southern portion of the Whole Foods site.

Furthermore, a UST was formerly associated with 455 South Arroyo Parkway, in the area of the current Whole Foods store. No details regarding the size or contents of the UST were provided. Additionally, Absolute Automotive at 451 South Arroyo Parkway was also listed on the historical auto station database which may have also been associated with this address/business.

No records regarding the installation or removal of USTs were found during this assessment. Based on the fact that a three-story underground parking garage was constructed at the Whole Foods building, it appears likely that any onsite USTs or potentially contaminated soils associated with USTs would have been excavated and removed during the construction of the parking garage. Based on the excavation of onsite soils during the redevelopment in 2008 and anticipated depth to groundwater, the former bus fueling facility and historical USTs do not appear to represent a recognized environmental condition.

No further action or investigation is recommended at this time.

Project Regulatory Database Review

Historical Recognized Environmental Condition: Historic service station identified

The review of the historical data available for the Project and the regulatory database report identified that a service station, the former ARCO station located at 125 East California Boulevard, was located at the Project from approximately the 1930s to 2002 and utilized at least three USTs. This facility was located on the southern portion of the Project, the site of the current vacant restaurant at 577 South Arroyo Parkway. An unauthorized gasoline release impacting groundwater was first reported in 1988 and soil vapor extraction operations were initiated. In 1998, three USTs were removed from the site and various soil and groundwater investigations were subsequently conducted. The Project received a "no further action" letter from the Pasadena Fire Department dated May 24, 2000; however, the site also received an additional clarification letter regarding the "no further action" letter stating that while the site has complied with the regulatory requirements for the site investigation/remediation, contamination remained at the Project below regulatory action levels. A Declaration of Environmental Restriction allowing access for remediation was recorded on August 21, 2002 that was to terminate 90 days after No Further Action was received. Quarterly monitoring was completed and 761 cubic yards of soil was removed. The LARWQCB granted case closure on December 3, 2004 with no property use restrictions, activity and use limitations, institutional controls, or engineering controls. The monitoring wells were abandoned in 2005. Based on the "no further action" status, the historical use of the Project as a service station represents a historical recognized environmental condition.

No further action or investigation is recommended at this time.

Asbestos

Business Environmental Risk: Suspect ACM Identified

Based on the date of construction (1921, 1925, 1951, 2003 and 2008), there is a potential that asbestos containing materials (ACM) exist at the Project. The suspect asbestos containing roofing materials, ceiling tile, wallboard/joint compound, vinyl floor tile, vinyl sheet flooring and various mastics were observed in generally good condition with the exception of some limited areas of damage noted in the 499/511 Building and the 577 Building.

These materials can be maintained in place if an Operations and Maintenance (O&M) Program is developed and implemented. A properly designed O&M Program is sufficient to maintain the materials in accordance with current regulatory standards.

Moisture Conditions

Business Environmental Risk: Moisture conditions identified

Moisture conditions (including standing water on the floors) were observed on the ceiling, wall and floor areas at the 499/511 Building (currently a vacant building). The areas affected by the moisture were approximately 320 square feet in size. In addition, moisture conditions were observed on the second floor ceiling tiles at the 577 Building (former Dona Rosa Bakery and Taqueria). The areas affected by the moisture were approximately 20 square feet in size.

Refer to the EMG Property Condition Assessment (PCA) report (EMG Project Number 136895.19R000-001.264) for further discussion.

1.2 Recommendations

EMG recommends the following:

Recommendation	Estimated Cost
The cooking grease in the bin and any remaining cooking grease located in the grease traps, as well as the contents of the soil cutting drum, should be disposed by a licensed contractor in accordance with applicable regulations.	Not Applicable
The development and implementation of an Asbestos O&M Program. Costs indicated are for O&M Program Document development only. Comprehensive survey costs, if required, will be identified as a result of O&M Program implementation.	\$499
Refer to the EMG Property Condition Assessment (PCA) report (EMG Project Number 136895.19R000-001.264) for further discussion of the identified moisture conditions.	To Be Determined

1.3 Certification

EMG certifies that EMG has no undisclosed interest in the subject property, that EMG's relationship with the Client is at arms-length, and that EMG's employment and compensation are not contingent upon the findings or recommendations provided in the Report.

If you have any questions regarding this report, please contact Kelly Hoover at (800) 733-0660 x6279 or khoover@emgcorp.com.

Surveyed By: Jeanie Schulz, Project Manager

Environmental Professional and Reviewed By:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Project. I have developed and performed the all appropriate inquiries in conformance with the standard and practices set forth in 40 CFR Part 312.

Kelly Hoover, Senior Environmental Consultant

1.4 Reliance

1. May be relied upon by Lender and its successor in determining whether to make a loan evidenced by a note "Property Note" secured by the Subject Property.
2. May be relied upon by any purchaser in determining whether to purchase the Property Note for this transaction from Lender.
3. May be relied upon by any Rating Agency in rating securities issued by Lender and representing an interest in the Property Note.
4. May be included with and referenced to in materials offering the Property Note or an interest in the Property Note for sale to intended third party beneficiaries to this Report, except as expressly stated herein.

Lender (to be identified), its parent, affiliates and their successors and assigns, bond holders and potential bond holders, the underwriters

of and securitization of the loan secured by the Property, the rating agencies rating such securitization, and each of such parties' counsel, are entitled to rely upon this Report and to use its contents and conclusions as may be appropriate. This report is also for the use and benefit of, and may be relied upon by, Allstate Insurance Company, an Illinois Insurance company, Arroyo Parkway, LLC, Arroyo Parkway Property Owner, LLC, Edgewood Realty Partners, LLC, Adept Development and The Kutzer Company, and any of their affiliates, partners, members, officers, employees, agents, assigns, and their respective heirs, executors, administrators, transferees, successors in interest, and third parties authorized in writing by Edgewood Realty Partners, LLC, and EMG, including the lender(s) in connection with a secured financing of the site, and their respective successors and assigns. The above mentioned parties agree by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the site that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of EMG, is at the sole risk and expense of such third party except as noted in the reliance language above.

2.0 Scope of Work

2.1 Purpose

The purpose of this report is to provide the Client the results of a commercially prudent and reasonable inquiry designed to identify recognized environmental conditions at the Project taking into account reasonably ascertainable information. In accordance with ASTM E1527-13, the level of environmental assessment was guided by several factors, including the type of property and the risk tolerance of the user.

The user informed EMG that the purpose of the assessment is for financing.

2.2 Scope of Work

The assessment was conducted utilizing generally accepted Phase I industry standards, using American Society for Testing and Materials (ASTM) Standard Practice E 1527-13.

This assessment is based on the evaluation of the information gathered, laboratory analyses of samples collected (when required), and accessibility at the time of the assessment.

The Scope of Work included an evaluation of:

- Interviews with individuals knowledgeable about the Project for the purpose of gathering information regarding the potential for contamination at the Project.
- Available pertinent documents obtained by EMG or provided by the client.
- Reasonably ascertainable federal, state, and local records in an effort to identify sites of known or suspected hazardous waste activity located at or near the Project.
- The Project history in an attempt to identify possible ownership(s) and/or uses, as identified through review of reasonably ascertainable standard historical sources.
- The physical characteristics of the Project, as identified through review of reasonably ascertainable topographic data, wetlands, soils, geology, and groundwater data.
- Current Project conditions (as applicable) as they pertain to the presence or absence of: facility storage tanks, drums, containers (above or below ground), etc., transformers and other electrical equipment which utilize fluid which may potentially contain PCBs, the use of hazardous materials/chemicals and petroleum products, and/or the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes.
- An evaluation of information contained in programs such as the NPL, SEMS, CERCLIS, SHWS, RCRIS, SWF, LUST, and other governmental information systems within specific search distances of the Project. This evaluation was performed to identify sites that represent a recognized environmental condition. The regulatory agency report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The search is designed to meet the requirements of ASTM Standard Practice E 1527-13. The information provided is assumed to be correct and complete.
- Visual observation of the adjoining properties to identify high-risk neighbors and the potential for known or suspected contamination to migrate onto the Project.

2.3 ASTM E1527 Non-Scope Considerations

At the Client's request, the assessment included a screening approach for the following Non-ASTM Considerations, which are otherwise beyond the Scope of ASTM E1527-13.

Non-ASTM Considerations	
Asbestos Containing Materials:	The identification of suspect asbestos containing materials in accessible areas. Sampling of suspect materials was not performed.
Radon Gas:	Radon gas propensity, through the review of the USEPA's Map of Radon Zones.
Lead-Based Paint:	The identification of lead-based paint for residential and daycare properties constructed prior to 1978. Sampling of suspect materials was not performed.
Lead In Drinking Water:	A screening for lead in water, based on information provided by the municipal water provider.
Moisture Conditions:	The identification of visible moisture conditions and conditions conducive for moisture conditions. In addition, EMG interviewed Project personnel regarding any known or suspected moisture conditions, water intrusion, or mildew like odors.
Wetlands:	Review of readily available wetlands map data available from the US Fish and Wildlife Service. A site specific wetland delineation is beyond the scope of this assessment.
Flood Zone:	Review of readily available flood zone map designations available from regulatory agencies, such as the Federal Emergency Management Agency (FEMA).

3.0 User Provided Information

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfield's Revitalization Act of 2001 (the "Brownfield's Amendments") (if desired), the user must provide certain information (if available) identified in the User Questionnaire to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Within this Phase I Environmental Site Assessment, EMG's reference to the Client follows the ASTM guide's definition of user, that is, the party that retains EMG for the preparation of a baseline ESA of the Project. A user may include, without limitation, a purchaser, potential tenant, owner, existing or potential mortgagee, lender, or property manager of the Project.

3.1 User Questionnaire

EMG submitted the following User Questionnaire to the user pursuant to the responsibilities described in Section 6 of ASTM Standard E 1527-13. All Appropriate Inquires (40 CFR Part 312) requires that these questions be answered by or on behalf of a party seeking to qualify for limited liability protections to CERCLA liability.

A completed User Questionnaire was not returned to EMG. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of the User Questionnaire does not represent a significant data gap. A copy of the User Questionnaire is included in Appendix D.

3.2 Environmental Lien/AUL Search

The presence of an Activity and Use Limitation (AUL) at a property is an indication that there may be residual levels of hazardous substances or petroleum products present above unrestricted land use levels. Although Environmental Liens and AULs are often recorded with the property deed at the local land title office, in some cases they are filed in a separate environmental agency database or in project documentation, such as agency closure letters. ASTM E1527-13 does not require the environmental professional to undertake a review of recorded land title records and judicial records for environmental liens and AULs. Such a review is performed at the discretion of the user, based on their need to meet the requirements of 40 CFR 312.20 and 312.25.

The user did not engage EMG to review title and judicial records for environmental liens or AULs recorded against the Project. Furthermore, these documents were not provided to EMG for review. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of the Environmental AUL/Lien search does not represent a significant data gap.

4.0 Physical Setting

ASTM E1527-13 requires that the current 7.5-minute USGS Topographic Map (or equivalent) showing the area on which the Project is located be reviewed. Additional physical setting sources, such as soil survey maps, groundwater maps and geologic maps may be obtained and reviewed at the discretion of the environmental professional. The purpose of this review is to evaluate whether hazardous substances or petroleum products are likely to migrate to the Project.

4.1 Topography

The most recent version of the USGS Topographic Map available is discussed below. Historical USGS Topographic Maps, if available, are discussed in Section 6.

USGS Topographic Map and Google Earth Review	
Topographic Map Name:	Pasadena, California
Topographic Map Year:	2015
Project Topography	
Upper Elevation (feet):	790
Lower Elevation (feet):	790
Surface Slope:	Relatively flat
Slope Direction:	South
General Vicinity Topography	
Slope Direction:	South
Nearest Surface Water Feature:	Arroyo Seco Creek
Nearest Surface Water Feature Distance:	5,950 feet
Nearest Surface Water Feature Direction:	West

4.2 Geology

The generalized geology of the Project area was researched using seamless USGS geological maps provided in the ERIS Physical Setting Report (PSR) and/or readily available geologic maps. The PSR is included in Appendix H.

Generalized Geology	
Source:	ERIS
Unit Name:	Quaternary alluvium and marine deposits
Primary Rock Type:	Alluvium
Secondary Rock Type:	Terrace

4.3 Hydrogeology

Groundwater conditions at the Project are estimated based on reasonably available data such as groundwater maps, previous subsurface investigations conducted at, or in the vicinity of the Project, and local conditions. Shallow groundwater flow is generally expected to follow the ground level slope of surface elevations towards the nearest open body of water. Estimated groundwater levels may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.

Hydrogeology	
Source:	A previous subsurface investigation completed at the Project.
Estimated Depth to Shallow Groundwater:	146-155 feet below ground surface
Estimated Direction of Shallow Groundwater Flow:	South-southeast

4.4 Soils

The Soil Survey Geographic Database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Review of the SSURGO data available in the PSR (Appendix H) and/or from the NRCS Web Soil Survey identified the following soil type(s) at the Project:

Soil Series Name	Drainage	Texture
Urban land-Palmview-Tujunga complex	Well drained to somewhat excessively drained	Sandy loam and loamy sand

5.0 Site Reconnaissance

The objective of the site reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the property. In accordance with ASTM E1527-13, EMG attempted to visually observe the periphery of the Project and all structures to the extent not obstructed by obstacles. In addition, EMG attempted to visually observe interior common areas, maintenance and repair areas, and a representative sample of occupant spaces. In general, EMG does not look under floors, above ceilings, behind walls, in confined spaces, in transformer vaults, or in other areas not considered to be safe to access.

Site Reconnaissance Conditions	
Date Completed:	February 28, 2019
EMG Project Manager:	Jeanie Schulz
Weather Conditions:	Partly cloudy
Temperature (F):	70s
Percent of Units Observed:	Approximately 85%
Access Limitations:	A representative sample of interior areas of the tenant space located at 501 South Arroyo Parkway was not made available to EMG for access due to the privacy concerns as patients/clientele were present. Additionally, EMG was unable to access the roofs. The lack of access represents a data gap. However, based on the conditions observed in the accessed areas, discussions with the site contact, and review of other available information, the lack of access does not represent a significant data gap.

5.1 Units

The units located at the Project are discussed below.

Commercial Units Observed		
Unit #	Tenant Name	Tenant Operations
441-483 South Arroyo Parkway (441-483 Building)	Whole Foods	Grocery store
485-497 South Arroyo Parkway (485-497 Building)	K9 Loft	Pet product retail store and pet daycare/boarding
499/511 South Arroyo Parkway (499/511 Building)	Vacant	Not applicable
501 South Arroyo Parkway (501 Building)	Encompass Wells and Gold Line Pilates	Wellness center and Pilates studio
523 South Arroyo Parkway	Town and Country	Party rental retail store
541 South Arroyo Parkway (541 Building)	Vacant	Not applicable

Commercial Units Observed		
Unit #	Tenant Name	Tenant Operations
577 South Arroyo Parkway/125 East California Boulevard (577 Building)	Vacant	Not applicable

Whole Foods store interior (441-483)

Whole Foods office space (441-483)

Whole Foods parking garage (441-483)

K9 Loft store interior (485-497)

K9 Loft dog play area (485-497)

499/511 Building interior

499/511 Building interior

499/511 Building basement interior

Encompass Wellness patient treatment room (501)

Town and County interior (523)

541 Building interior

541 Building kitchen

577 Building interior

577 Building kitchen

5.2 Project Use

Environmentally Suspect Project Use	
Project Use	Currently Located at the Project
Cellular Communications Equipment:	No
Commercial Printing:	No
Dry Cleaner:	No
Emergency Generator or Diesel Fire Pump:	No
Gas Station:	No
Industrial Use:	No
Landfill:	No
Machine Shop:	No
Meth Lab:	No
Military Use:	No

Environmentally Suspect Project Use	
Project Use	Currently Located at the Project
Petroleum Exploration/Production:	No
Photograph/X-Ray Developing:	No
Vehicle Repair:	No

5.3 Hazardous Materials and Petroleum Products

Accessible interior and exterior areas of the Project were observed for the presence of hazardous materials and petroleum products.

EMG evaluated any observed manways, vent pipes, fill connections, concrete pads, and unknown saw cuts to determine if USTs are present at the Project, or if USTs were historically located at the Project. In addition, the Key Site Manager and other property management personnel were interviewed regarding the presence of USTs at the Project.

EMG observed the Project for the presence of potentially PCB-containing equipment such as electrical transformers and hydraulic lifts. Equipment installed after 1979 is unlikely to contain PCBs.

EMG observed the Project for visual evidence of petroleum and natural gas pipelines, such as pipeline markers.

Storage and Use of Hazardous Materials and Petroleum Products	
Feature	Identified at Project
Drums and Small Containers:	Yes. Further discussed below.
Underground Storage Tanks (USTs):	No
Aboveground Storage Tanks (ASTs):	No
Oil Cooled Transformers:	Yes. Further discussed below.
Hydraulic Elevators:	Yes. Further discussed below.
Hydraulic Lifts:	Yes. Further discussed below.
Other Hydraulic Equipment:	Yes. Further discussed below.
Petroleum or Natural Gas Pipelines:	No

Drums and Small Containers			
Material	Quantity	Storage Location	Spills or Leaks
Janitorial and maintenance supplies	Retail-size containers	Janitor closets and other designated areas	No

Review of the hazardous materials use and storage at the Project did not identify any recognized environmental conditions or environmental concerns with regards to the materials listed in the table above.

Typical janitorial supply storage in tenant spaces

Janitorial supply storage at Whole Foods

Maintenance supply storage at Whole Foods

Oil Cooled Transformers	
Type:	Vaulted
Number of Units:	2
Owner:	Utility company
Labeled:	Not labeled
Age:	Appears to have been installed after 1979
PCB Status:	Unlikely to be PCB-contaminated based on the apparent age of the equipment.
Spills or Leaks Observed:	No
Conclusion:	Based on the information above, the presence of this equipment does not represent a recognized environmental condition.

Vaulted transformer on northwest exterior of 441-483 Building

Vaulted transformer on western exterior of 577 Building

Hydraulic Elevators	
Number of Elevators:	2
Owner:	Tenant
Age:	Appears to have been installed after 1979
PCB Status:	Unlikely to be PCB-contaminated based on the apparent age of the equipment.
Spills or Leaks Observed:	No
Conclusion:	Based on the information above, the presence of this equipment does not represent a recognized environmental condition.

Hydraulic elevator equipment in parking garage

Hydraulic elevator equipment in parking garage

Hydraulic Lifts	
Number of Lifts:	1
Owner:	Property
Installation:	Below grade
Age:	Appears to have been installed prior to 1980
PCB Status:	Potentially contains PCBs
Spills or Leaks Observed:	No
Conclusion:	Based on the information above, the presence of this equipment does not represent a recognized environmental condition.

Hydraulic lift equipment in the basement of the 499 Building

Other Hydraulic Equipment	
Type of Equipment:	Box baler
Number of Units:	1
Owner:	Tenant
Age:	Appears to have been installed after 1979
PCB Status:	Unlikely to be PCB-contaminated based on the apparent age of the equipment.
Spills or Leaks Observed:	No
Conclusion:	Based on the information above, the presence of this equipment does not represent a recognized environmental condition.

Hydraulic box baler

5.4 Waste Generation, Storage, and Disposal

Visual observation for the generation, treatment, storage, and disposal of wastes was performed. The areas of waste generation and storage were observed for evidence of current and past releases.

Although a waste disposal regulatory compliance audit is beyond the scope of this assessment, general waste disposal procedures were evaluated to determine if any deficiencies exist that are likely to result in a release to the Project.

Waste Generation and Disposal	
Feature	Identified at Project
Waste Generation:	Yes. Further discussed below.
Septic Systems:	No
Sewer Lift Stations:	No
Grease Traps:	Yes. Further discussed below.
Oil Water Separators:	Yes. Further discussed below.
Unknown Drums or Containers:	No
Waste Disposal Ponds or Lagoons:	No

Waste Generation			
Waste Type	Disposal Method	Storage Location	Spills or Leaks
Domestic sewage	Sanitary sewer	Not applicable	No
Municipal trash	Contracted waste hauler	Dumpsters	No
Retail waste (damaged or expired product)	Contracted waste hauler	Whole Foods warehouse (441-483)	No
Cooking grease	Contracted waste hauler	Grease traps and bin	No
Non-hazardous soil cuttings	Contracted waste hauler	Western exterior of 577 Building	No

A grease bin containing minimal quantities of grease was observed on the western exterior of the 541 Building. In addition, a drum was observed on the western exterior of the 577 Building with labeling indicating the contents consisted of non-hazardous soil cuttings. According to the Key Site Manager, the grease bin has not been used in several years and the soil cuttings in the drum were generated during a 2018 subsurface investigation completed at the 499/511 Building. Refer to Sections 1.1 and 6.3 for further discussions.

Review of waste storage and disposal information did not identify any recognized environmental conditions or environmental concerns with regards to the wastes listed in the table above.

Dumpsters

Retail waste storage in Whole Foods (441-483)

Below-grade grease trap on western exterior of 541 Building

Below-grade grease trap on northern exterior of 577 Building

Grease trap in parking garage of 441-483 Building (Whole Foods)

Grease trap in parking garage of 441-483 Building (Whole Foods)

Empty grease bin on western exterior of 541 Building

Drum labeled as non-hazardous soil cuttings on western exterior of 577 Building

Grease Traps	
Type:	In-ground concrete (2 traps)
Wastes:	Cooking grease
Year Installed:	Unknown
Currently Active:	No
Reported Condition:	Good
Observed Condition:	Good
Location:	Western exterior of 541 Building and northern exterior of 577 Building
Discharge Location:	Storm sewer
Waste Removal:	According to the Key Site Manager, the grease traps have been inactive for several years.
Waste Manifests:	Copies of the most recent disposal manifests were not available.
Conclusion:	Based on the information above, no recognized environmental conditions or environmental concerns were identified.

Below-grade grease trap on western exterior of 541 Building

Below-grade grease trap on northern exterior of 577 Building

Grease Traps	
Type:	Above ground plastic (2 traps)
Wastes:	Cooking grease
Year Installed:	2008
Currently Active:	Yes
Reported Condition:	Good
Observed Condition:	Good
Location:	Lower level of parking garage below Whole Foods building (441-483)
Discharge Location:	Storm sewer
Waste Removal:	A contracted waste hauler reportedly removed the waste as needed
Waste Manifests:	Copies of the most recent disposal manifests were not available but the equipment appears to be serviced regularly based on field observations and discussion with the Key Site Manager.
Conclusion:	Based on the information above, no recognized environmental conditions or environmental concerns were identified.

Grease trap in parking garage of 441-483 Building (Whole Foods) Grease trap in parking garage of 441-483 Building (Whole Foods)

Oil Water Separators	
Type:	In-ground concrete
Wastewater Source:	Parking facility
Year Installed:	2007
Currently Active:	Yes
Reported Condition:	Good
Observed Condition:	Good
Location:	Lower level of parking garage beneath Whole Foods building (441-483)
Discharge Location:	Storm sewer
Waste Removal:	A contracted waste hauler removes the waste as needed.
Waste Manifests:	A copy of the most recent disposal manifest was not available but the equipment appears to be serviced regularly based on field observations and discussion with the Key Site Manager.
Conclusion:	Based on the information above, no recognized environmental conditions or environmental concerns were identified.

Sump and oil-water separator in parking garage of 441-483 Building

5.5 Surface Areas

The interior and exterior surface areas were observed for environmentally significant features such as wells, sumps, staining, and pits.

Surface Areas	
Feature	Identified at Project
Environmentally Significant Floor Drains, Sumps and Pits:	Yes. Further discussed below.
Pools of Liquid Waste:	No
Surface Staining:	No
Unusual or Noxious Chemical Odors:	No
Landfilling:	No

Surface Areas	
Feature	Identified at Project
Stressed Vegetation:	No
Stormwater Retention/Detention Basins:	No
Domestic Water Wells:	No
Monitoring Wells:	No
Irrigation Wells/Dry Wells:	No
Evidence of Former Subsurface Investigation:	Yes. Further discussed below.
Railroad Tracks:	Yes. Further discussed below.

Environmentally Significant Floor Drains, Sumps, and Pits					
Type of Drain	# of Drains	Discharge Point	Staining or Odors Observed	Connected to Oil/Water Separator	Location
Sump	1	Storm sewer	No	Yes	Lower level of parking garage beneath Whole Foods building (441-483)

Sump and oil-water separator in parking garage of 441-483 Building

Evidence of Former Subsurface Investigation	
Evidence:	Three apparent boreholes
Location:	North, northwest and west exterior of 577 Building
Staining:	No
Stressed Vegetation:	No
Dumping of Hazardous Waste:	No
Conclusion:	Refer to Sections 1.1 and 6.3 for further discussions.

Evidence of former soil boring on western exterior of 577 Building

Evidence of former soil boring on north- northwest exterior of 577 Building

Evidence of former soil boring on north exterior of 577 Building

Railroad Tracks	
Location:	Abutting west of the Project
Type:	Thru-railway
Rail Yard:	Not associated with a rail yard or other area of concentrated activity
Timeframe:	Since at least 1890

Railroad Tracks	
Current Status:	Active
Staining:	No
Distressed Vegetation:	No
Other Evidence of Contamination:	No
Conclusion:	Based on this information, the presence of the railroad tracks does not appear to represent a recognized environmental condition at this time.

Abutting west railroad tracks

5.6 Utilities, Heating, and Cooling

Utilities	
Domestic Water:	Public utility - City of Pasadena
Electricity:	Public utility - City of Pasadena
Natural Gas:	Public utility - Southern California Gas Company
Domestic Sewer:	Public utility - City of Pasadena

Heating and Cooling	
Type of Heating:	Natural gas units
Type of Cooling:	Electric units

Water heater

5.7 Adjoining Property Use

The adjoining properties were visually observed for evidence of recognized environmental conditions, such as property uses likely to result in a release and visual evidence of surface migration of releases. ASTM E1527-13 defines adjoining properties as any real property that is contiguous or partially contiguous with the Project or that would be but for a street, road, or other public thoroughfare separating them. The following adjoining properties were identified:

North	
Bordering Street/Road:	East Bellevue Drive
Address Range:	412 South Raymond Avenue, 411 South Arroyo Parkway, 432 South Arroyo Parkway
Description of Property Use:	Union Station Homeless Services adult center (northwest), Arroyo Parkway Self Storage (north), Snyder Diamond retail store (northeast)
East	
Bordering Street/Road:	South Arroyo Parkway
Address Range:	450-560 South Arroyo Parkway, 171 East California Boulevard
Description of Property Use:	Commercial/retail businesses (Lifestyle Outdoors, MC2Fit, Cisco Home, Denong Fine Tea, Parkway Grill, Arroyo Chop House, Bryan's Cleaners and Laundry, Granny's Pantry and West World Imports) and condominiums
South	
Bordering Street/Road:	East California Boulevard
Address Range:	100 East California Boulevard, 605 South Arroyo Parkway, 160 East California Boulevard
Description of Property Use:	Medical office building (Retina Institute/The California Clinic to the southwest), Valero service station (south) and Arroyo-California Car Wash/Chevron service station (southeast)
West	
Bordering Street/Road:	Railroad tracks
Address Range:	442-552 South Raymond Avenue
Description of Property Use:	Commercial/retail businesses (Plati German Car Service, Absolute Automotive, SoCal Public Radio/KPCC, CMG Design and U-Haul Rentals and Self Storage)

Findings	
Environmentally Suspect Uses:	<p>Yes, two service stations (Valero and Chevron) are located at 605 South Arroyo Parkway and 160 East California Boulevard, adjacent to the south and southeast of the Project. In addition, two auto repair facilities (Plati German Car Service and Absolute Automotive) are located at 442 and 450 South Raymond Avenue), adjacent to the west of the Project. Lastly, a dry cleaner (Bryan's Cleaners and Laundry) is located at 544 South Arroyo Parkway, adjacent to the east of the Project.</p> <p>No monitoring wells or other visual evidence of a current or past release associated with the service stations, auto repair facilities and dry cleaner were observed.</p>
Visual Evidence of a Release:	No visual evidence of a release, such as staining or monitoring wells, was observed near the Project boundary closest to these facilities.
Releases Reported:	The adjacent SoCal Public Radio/KPCC and U-Haul Rentals and Self Storage facilities are identified on the LUST and CHMIRS databases, respectively, indicating releases occurred at these facilities.
Conclusion:	Refer to Section 7.1.2 for further discussion of the regulatory database listing associated with the adjacent properties. No other recognized environmental conditions or environmental concerns were identified.

Adjacent north Arroyo Parkway Self Storage

Adjacent northeast Snyder Diamond and Lifestyle Outdoor retail stores

Adjacent east mixed-used building and Cisco Home store

Adjacent east-southeast Granny's Pantry and Bryan's Cleaners and Laundry

Adjacent southeast Chevron service station

Adjacent south Valero service station car wash and auto repair

Adjacent west railroad tracks and Plati German Car Service

Adjacent west railroad tracks and U-Haul facility

5.8 Interviews

5.8.1 Key Site Manager

EMG attempted to interview the Key Site Manager as part of this assessment. In addition, a Questionnaire was provided to the Key Site Manager to assist EMG in determining if recognized environmental conditions exist at the Project.

Key Site Manager Interviews			
Name	Relationship To Property	Years With Property	Telephone Number
Claudia Rodriguez	Property Manager	1	626.441.9620

Refer to Section 1.1 for further discussions of historical uses of the Project and the moisture conditions identified by the Key Site Manager Questionnaire. A copy of the Key Site Manager Questionnaire is included in Appendix D.

5.8.2 Current Occupants

EMG made a reasonable attempt to interview all major occupants and also those other occupants whose operations are likely to indicate a recognized environmental condition.

No occupants of the Project were available or would agree to an interview. The lack of occupant interviews represents a data gap. However, based on the conditions observed in the accessed areas, discussions with the site contact, and review of other available information, the lack of this information does not represent a significant data gap.

5.8.3 Current Owner

EMG submitted an Owner Questionnaire to the client in an effort to identify the owner of the Project who could be interviewed to provide information regarding proceedings involving the Project.

A completed Owner Questionnaire was not returned to EMG. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of the Owner Questionnaire does not represent a significant data gap. A copy of the blank Owner Questionnaire is included in Appendix D.

5.8.4 Past Owners and Occupants

No past owners of the Project, who likely would have material information regarding recognized environmental conditions at the Project, were identified.

5.8.5 Nearby Owners and Occupants

The Project was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews were not conducted with adjoining or nearby property owners or occupants.

6.0 Historical Use Information

The purpose of the historical review is to determine the previous uses of the Project and surrounding area in order to identify the likelihood of past uses having led to a recognized environmental condition. Historical sources that are both reasonably ascertainable, and likely to be useful are reviewed in an attempt to document the historical use of the Project and surrounding areas dating back to 1940, or the first developed use, whichever is earlier.

Copies of representative historical maps/aerial photographs are included in Appendix C. Other historical documentation, such as City Directory abstracts, copies of building department records, and ownership records are included in Appendix F, when available.

The following standard historical sources were researched:

Standard Historical Sources		
Data Type	Source	Years Covered
Aerial Photographs:	Environmental Risk Information Services (ERIS)	1928, 1934, 1938, 1944, 1949, 1956, 1964, 1972, 1980, 1988, 1994, 2002, 2005, 2010, 2012, 2014, 2016
Fire Insurance (Sanborn) Maps:	ERIS	1890, 1894, 1903, 1910, 1931, 1950, 1970
USGS Topographic Maps:	ERIS	1894, 1896, 1900, 1928, 1940, 1953, 1966, 1972, 1988, 1995, 2015
Local Street Directories:	ERIS	1921, 1924, 1928, 1933, 1937, 1940, 1943, 1947, 1951, 1955, 1960, 1965, 1970, 1975, 1979, 1985, 1990, 1995-96, 2000-01, 2005-06, 2012, 2018
Building Department Records:	City of Pasadena Building and Safety Department	1920s - Current
Fire Department Records:	City of Pasadena Fire Department	Not applicable
Zoning/Land Use Records:	City of Pasadena Planning Department	2005 - Current
Property Tax Files and Land Title Records:	Los Angeles County Assessor	2002 - Current
Key Site Manager Interview:	Pre-Survey Questionnaire	2018 - Current
Oil and Gas Well Map:	ERIS	Current
Previous Environmental Reports:	Refer to Section 6.3	Refer to Section 6.3
Other Historical Sources:	Not applicable	Not applicable

EMG was not able to obtain standard historical sources that document the Project history in five-year intervals. Furthermore, EMG was not able to document the use of the Project back to the first developed use, or back to 1940, whichever is earlier. The lack of this information represents a data gap. However, based on the other information obtained during the completion of this assessment, the lack of this information does not represent a significant data gap.

6.1 Project Historical Use

Based on review of the historical resources identified in Section 6.0, the following chronological history was developed for the Project.

Chronological History of Project			
Years	Project Use	Tenants	Environmental Concern
Prior to 1890	No historical data available.	Not applicable	No
1890s	Residences and vacant lots	Residential	No
1900s	A factory and vacant lots	Voting machine factory	No
1910s	Vacant building and vacant lots	Not applicable	No
1920s - Mid 1930s	Various commercial buildings (including current 485-497, 499/511 and 501 Buildings) and vacant lots	Pacific Electric RV Company motor bus garage and office, a storage building, roofing material storage building/offices, sheet metal works, wholesale groceries warehouse/offices, and a plumbing supply warehouse/office	No
Late 1930s - 1940s	Various commercial buildings (including current 485-497, 499/511 and 501 Buildings) and a service station on the southeast portion of the Project.	Pasadena City Lines bus garage/office and an associated fueling station (439-457 S Arroyo), G. Rose used lumber (473), Destruxol Corporation Insecticides (495), Market Basket office (501) and S Connolly Richfield Service Station (125 E California)	Yes. Refer to Section 1.1 for further discussion.
1950s - Early 1960s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Buildings) and a service station on the southeast portion of the Project. Of note, a "gasol pump" was noted on the 1950 Sanborn map located on the southeast corner of the 499/511 building.	Pasadena City Lines (bus garage, office, paint spray booth, wash rack and fueling station) (439-483), various warehouses and offices (485), Destruxol Corporation Insecticides (495), Taverner & Fricke wholesale paper/Dorr Bros. Moving/Rade Corporation (501), Home & Industrial Supply building materials/Skills Unlimited (523) and Chick & John Richfield Service Station/Patterson Richfield Service Station (125)	Yes. Refer to Section 1.1 for further discussion.
Mid 1960s - Late 1960s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Buildings) and a service station on the southeast portion of the Project	Pasadena City Lines (bus garage, office, wash rack, spray paint booth and fueling station) (439-483), Servisoft Water Service (491), multi-tenant building (495), Commercial Commodities/Dorr Bros. Moving/Pasadena Scientific Industries/Marick Corporation (501), Westward Ho restaurant (541) and Patterson Richfield Service Station (125)	Yes. Refer to Section 1.1 for further discussion.

Chronological History of Project			
Years	Project Use	Tenants	Environmental Concern
1970s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Buildings) and a service station on the southeast portion of the Project. Of note, a "gasol pump" was noted on the southeast corner of the 499/511 building in the 1970 Sanborn map.	A municipal vehicle maintenance facility (including a garage, office, spray paint booth, wash rack and fueling station (439-483), Cimino Distributing/ Foto Beverage Company (455), Servisoft Water Service (491), multi-tenant office/warehouse facility (495), Huntington Desk Company (499), Commercial Commodities Company/Pasadena Scientific Industries/John R. Anderson (501), Robert Masten (503), Lewis Unique Iron (523), Westward Ho/Duck Soup restaurant (541) and Patterson Richfield Service Station (125)	Yes. Refer to Section 1.1 for further discussion.
1980s - Early 1990s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Buildings) and a service station on the southeast portion of the Project	ATW/A&S Tire Sales/American Tire Warehouse/Capitol Group Tire/ Discount Tire Center (455), Rags to Riches (491), multi-tenant office/ warehouse building (495), Huntington Desk Company (499), John R. Anderson/Rae Mar Development (501), Lewis Wrought Iron/Colonial Antiques/ Phil Harbaugh Auto/Porte La Grande Auto (523), Manana restaurant (541) and Patterson Richfield Service Station (165)	Yes. Refer to Section 1.1 for further discussion.
Mid 1990s - Late 1990s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Buildings) and a	Absolute Automotive Service/Mark Kramer Construction (451), Discount Tire Centers (455), multi-tenant office/ warehouse building (495), Huntington Desk Company/Business Interiors (499), Bruce Anderson (501), Roy Aldridge Auto (523), Manana restaurant (541) and ARCO service station (125)	Yes. Refer to Section 1.1 for further discussion.
Early 2000s - Mid 2000s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Buildings) and a service station on the southeast portion of the Project. Of note, the service station was demolished in approximately 2002 and replaced by the current 577 Building.	Absolute Automotive Service/Frank's Detail Shop (451), Discount Tire Centers (455), Absolute Auto Detail (491), Corporate Furniture Resources (499), Parkway Antiques (523), Margarita Jones restaurant (541), Dona Rosa/HMS Catering (577), Vic's ARCO Mini Market and Service Station (125) in 2000-2002	Yes. Refer to Section 1.1 for further discussion.

Chronological History of Project			
Years	Project Use	Tenants	Environmental Concern
2008 - Current	Various commercial buildings (including current 441-483, 485-497, 499/511, 501, 523, 541 and 577 Buildings)	Whole Foods Market (465), K9 Loft (499), AAA Board Up/E-Biome/Gold Line Pilates/Encompass Wellness/Jensen Construction (501), Margarita Jones restaurant (541) and Dona Rosa Bakery and Tacqueria (577)	No

Tax files and land title records can include general property information, current and historical ownership names, and title records provided by the user. Readily available ownership records are reviewed from the local tax assessor. A 50-year chain of title search was not performed based on the Scope of Work. The following ownership history was identified.

Ownership History of Project		
Year Purchased	Owner Name	Environmental Concern
Prior to 2002	BP Coast Products, LLC (southern portion of Project)	Yes. Refer to Section 1.1 for further discussion.
2002	125 ECP, LLC (southern portion of Project)	No
2007	Marc Itah Trust	No

6.2 Off-Site Historical Use

Based on review of the historical resources identified in Section 6.0, the following chronological history was developed for the adjoining properties.

Chronological History of Adjoining Properties		
Years	Adjoining Property Use	Environmental Concern
North		
Prior to 1890	No historical data available	No
1890 - 1930s	Undeveloped land	No
1940s - Current	General commercial (including a former dry cleaner to northeast)	Yes. Refer to Section 7.1.2 for further discussion.
East		
Prior to 1890	No historical data available	No
1890 - 1920s	Residential and undeveloped land	No
1930s - 1940s	General commercial, residential and undeveloped land	No
1950s - Current	General commercial (including dry cleaners) and residential	Yes. Refer to Section 7.1.2 for further discussion.
South		
Prior to 1890	No historical data available	No
1890 - Mid 1900s	Undeveloped land	No

Chronological History of Adjoining Properties		
Years	Adjoining Property Use	Environmental Concern
Late 1900s - Mid 1930s	General commercial	No
Late 1930s - Current	General commercial including two service stations to the south and southeast	Yes. Refer to Section 7.1.2 for further discussion.
West		
Prior to 1890	No historical data available	No
1890 - 1920s	Railroad tracks, residential and undeveloped land	No
1930s - 1950s	Railroad tracks, residential, warehouses and office buildings	No
1960s - Current	Railroad tracks, warehouses and office buildings (businesses include various auto repair facilities)	Yes. Refer to Section 7.1.2 for further discussion.

Refer to Section 7.1.2 for further discussion of the historical adjacent properties.

6.3 Historical Environmental Documentation

In accordance with ASTM E1527-13, EMG requested that the user provide copies of previous environmental assessments for review. Furthermore, EMG may have obtained prior environmental assessments and regulatory records from local, state, and federal regulatory agencies. The purpose of reviewing prior environmental assessments is to determine if any recognized environmental conditions have previously been identified. Documentation provided to EMG which is unrelated to the completion of this report may not be reviewed.

Report Title	Prepared By	Report Date	Obtained From	Copy of Report	Concerns Identified
Request for Closure Letter for ARCO Facility No. 510	Delta Environmental Consultants, Inc. (DEC)	August 26, 1999	Client	Appended	Yes. Further discussed below.

Historical Recognized Environmental Condition: Historical service station identified

The review of the historical data available for the Project and the regulatory database report identified that a service station (former ARCO station located at 125 East California Boulevard) was located at the Project from approximately the 1930s to 2002 and utilized at least three USTs. This facility was located on the southern portion of the Project (site of the current vacant restaurant at 577 South Arroyo Parkway). An unauthorized gasoline release impacting groundwater was first reported in 1988 and soil vapor extraction operations were initiated. In 1998, three USTs were removed from the site and various soil and groundwater investigations were subsequently conducted. The Project received a "no further action" letter from the Pasadena Fire Department dated May 24, 2000; however, the site also received an additional clarification letter regarding the "no further action" letter stating that while the site has complied with the regulatory requirements for the site investigation/remediation, contamination remained at the Project below regulatory action levels. A Declaration of Environmental Restriction allowing access for remediation was recorded on August 21, 2002 that was to terminate 90 days after No Further Action was received. In addition, the Declaration indicates that written approval would be required from BP West Coast Products LLC prior to the construction of any improvements or installing any equipment within the Restricted Area for a period of 90 days after the receipt of a No Further Action letter. Quarterly monitoring was completed and 761 cubic yards of soil was removed. The LARWQCB granted case closure on December 3, 2004 with no property use restrictions, activity and use limitations, institutional controls, or engineering controls. The monitoring wells were abandoned in 2005. Based on the "no further action" status, the historical use of the Project as a service station represents a historical recognized environmental condition.

De minimis condition: Historical bus station fueling facility/USTs identified

The review of the historical data available for the Project identified that a bus facility (and later a distributing company, auto repair facility, tire center and auto detailing shop) with an associated fueling station was located on the northern portion of the Project, in the area of the current Whole Foods store, from approximately the 1930s through 2007. Sanborn Maps from 1950 through 1970 depicted "gas and oil tanks" in the southern portion of the Whole Foods site. No records regarding the installation or removal of USTs were found during this assessment. Based on the fact that a three-story underground parking garage was constructed at the Whole Foods building, it appears likely that any onsite USTs or potentially contaminated soils associated with USTs would have been excavated and removed during the construction of the parking garage. Based on the excavation of onsite soils during the redevelopment in 2008, the former bus fueling facility does not represent a recognized environmental condition.

De minimis condition: Historical UST identified

The 2014 EBI Phase I Environmental Site Assessment indicated a UST was formerly associated with 455 South Arroyo Parkway, in the area of the current Whole Foods store. No details regarding the size or contents of the UST were provided. Additionally, 451 South Arroyo Parkway (Absolute Automotive Service) was listed on the historical auto station database which may have been associated with this address/business. No records regarding the installation or removal of UST(s) at this site were found during this assessment. Based on the fact that a three-story underground parking garage was constructed at the Whole Foods building, it appears likely that any onsite USTs or potentially contaminated soils associated with USTs would have been excavated and removed during the construction of the parking garage. Based on the excavation of onsite soils during the redevelopment in 2008, the reported SWEEPS UST or historical usage of the Project does not represent a recognized environmental condition.

De minimis condition: Historical "gasol pump" identified

A "gasol pump" was identified in the southeastern corner of 511 South Arroyo Parkway based on Sanborn maps dated 1950 and 1970. "Gasol" is an abbreviated term for gasoline, which is used on Sanborn maps during this time period. A "gasol pump" generally consists of a fuel dispenser and most commonly a mechanical pump and nozzle. Based on the lack of information related to the historical presence of a gasol pump on-site, Ramboll US Corporation (Ramboll) conducted a Phase II Environmental Site Assessment to evaluate the subsurface conditions in the vicinity of the pump. On February 13, 2018, Spectrum Geophysics of Chatsworth conducted a geophysical survey to mark subsurface utility lines, subsurface structures, and underground obstructions in the area of concern. During the geophysical survey, two approximately 2-inch diameter metal conduits were observed extending above ground surface in the general vicinity of the former gasol pump. One conduit was located within an elevated concrete pad, extended approximately three inches above the ground surface, and was backfilled with concrete. The second conduit extended approximately two inches above the ground surface and was open to an approximate depth of five feet below ground surface (bgs). A petroleum-like odor was noted on the measuring tape used to measure the total depth of the open conduit. Finally, a subsurface metallic anomaly, suggestive of piping, was detected approximately 0.5 foot bgs and extended laterally between the two conduits. Two soil borings were also advanced to 20 feet bgs in the vicinity of the former pump. Soil samples were collected from borings at approximate depths of five, ten, 15, and 20 feet and were field screened for organic vapors with a photoionization detector (PID). The soil samples were also submitted to a laboratory for the analysis of volatile organic compounds (VOCs), oxygenates and methyl tert butyl ether (MTBE), total petroleum hydrocarbons (TPH)-gasoline range organics (GRO), TPH-diesel range organics (DRO), TPH-oil range organics (ORO), and lead. Groundwater samples were not collected due to the typical depth to groundwater in the area (more than 140 feet bgs). No VOCs, MTBE or TPH were detected in soil samples. Lead was detected at concentrations ranging from 3.8 mg/kg to 10 mg/kg; however, all concentrations were below the USEPA regional screening levels for residential and commercial/industrial use, and within typical background levels for California. Based on this information, the former gasol pump represents a de minimis condition associated with the Project.

Refer to Section 1.1 for further discussion.

7.0 Environmental Records Review

The purpose of the records review is to obtain and review records that will help identify recognized environmental conditions. ASTM E1527-13 requires the review of reasonably ascertainable records from standard sources as defined in Section 8.2.1 of ASTM E1527-13. Additional records sources, such as local fire department records, local building department records, and local environmental health department records may be obtained and reviewed at the discretion of the environmental professional.

The availability of record information varies widely, depending on the source. Reasonably ascertainable records are those records that are publicly available, obtainable within reasonable time and cost constraints, and practically reviewable. In addition, the records must be provided by the agency within 20 calendar days of receiving a request, at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information.

7.1 Regulatory Database Review

EMG obtained a regulatory database report from a commercial database provider in an effort to determine if the Project is a listed regulatory site and whether there are any mappable regulatory database sites within the search distances specified by ASTM E1527-13. EMG attempted to field-verify the locations of the identified regulatory sites, as well as confirm distances and locations relative to the Project using available mapping software. Therefore, the distances and/or directions noted in this section may not match the Database Report. In addition, EMG reviewed the unmappable sites in the database report, cross-referencing addresses and site names.

In accordance with ASTM E1527-13, regulatory files and/or records associated with standard environmental record sources may be obtained and reviewed when the files and/or records are reasonably ascertainable, the files/records are expected to contain significant information for the purpose of identifying recognized environmental conditions, and an alternative source of the information is not available. Furthermore, review of regulatory files and/or records may be limited by the scope of work. Unless otherwise noted in Section 1.1, further review of regulatory agency files and/or records is not considered to be warranted based on the general nature of the regulatory database listing, the level of detail provided in the regulatory database, the availability of information from alternative sources, and/or the low likelihood that the agency files and/or records will contain information indicating the presence of a recognized environmental condition.

A copy of the full regulatory database report is included in Appendix H.

Facility Index System (FINDS)

The FINDS database cross-references various federal and state database listings and does not, in and of itself, typically contain environmentally significant information. The FINDS database provides the following pertinent information:

- Facility Name: Whole Foods #37
- Facility Address: 465 South Arroyo Parkway
- Program Cross Referenced: CERS

- Facility Name: Dona Rosa Bakery and Taqueria
- Facility Address: 577 South Arroyo Parkway
- Program Cross Referenced: CERS

- Facility Name: ARCO #0510
- Facility Address: 125 East California Parkway
- Program Cross Referenced: LUST

- Facility Name: Crowell and Lyons Equipment
- Facility Address: 495 South Arroyo Parkway
- Program Cross Referenced: RCRA Gen

The information provided is not indicative of a recognized environmental condition and no further action or investigation is recommended.

HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

HAZNET		
Facility Name	Wastes Generated	Years Generated
Mrs. Gooch's Natural Foods Market (Whole Foods)	Alkaline solution without metals, surplus inorganics, solvent mixture, surplus organics, inorganic solid waste	2014, 2015
ARCO Products Company BP West Coast Products Patterson's Arco 510 Arco Products Company	Hydrocarbon solvents, oil-containing waste, aqueous solution with organic residues	1993, 1994, 1997, 1998, 1999, 2000
Absolute Automotive	NR	NR
Bellevue Ventures LLC	Organic solids, aqueous solution	2007

Discount Tire Centers	Solvent mixture, aqueous solution with organic residues, waste oil	1996, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005
Belview Center	Solvent mixture, aqueous solution with organic residues, waste oil	2006
Pro Auto Center	NR	NR
Crowell and Lyons Equipment	NR	NR
Builders Plus	NR	NR

NR-Not Reported

The information provided in this database is not indicative of a recognized environmental condition and no further action or investigation is recommended.

RCRA Generators

The RCRA Generators database is a listing of facilities that generate, transport, store, treat and/or dispose of hazardous waste and does not necessarily indicate that a release to the environment has occurred. Refer to Section 5.4 for further discussion of wastes currently generated at the Project.

RCRA Generators				
Facility Name	Classification	Violations Noted	Wastes Generated	Years Generated
Crowell and Lyons Equipment	Non-generator	Compliance evaluation	NR	1982-1985
Mrs. Gooch's Natural Foods Market Inc. DBA Whole Foods Market ARR 37	Non-generator	None	NR	2014

NR-Not Reported

The information provided in this database is not indicative of a recognized environmental condition and no further action or investigation is recommended.

CERS HAZ

The California Environmental Reporting System Hazardous Waste Sites (CERS HAZ) database is a list of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials. The CERS HAZ database indicates Whole Foods is a chemical storage facility and a hazardous waste generator with minor violations (e.g., failure to submit update on business plan, failure to submit hazardous material inventory, failure to submit site plan, etc.) reported in December 2015. The facility returned to compliance in March 2016.

Leaking Underground Storage Tank (LUST)

The LUST database is maintained by the individual California Regional California Water Quality Control Boards (RWQCB) to track sites where releases have been reported through the Leaking Underground Storage Tank program. These sites typically include releases related to petroleum products, such as gasoline and diesel fuel. The LUST database provides the following pertinent information:

- Facility Name: ARCO #0510
- Facility Address: 125 East California Boulevard
- Case Type: LUST Cleanup Site
- Release Date: October 10, 1988
- Facility Status: Case Closed

- Status Date: December 3, 2004
- Lead Agency: Los Angeles Regional Water Quality Control Board
- Potential Media Affected: Soil and groundwater
- Potential Contaminants of Concern: Gasoline

Refer to Section 1.1 for further discussion of the LUST database listing for the Project.

HIST MANIFEST

A list of historic hazardous waste manifests received by the DTSC from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments. The Historic Manifest database indicates the former ARCO facility (125 East California Boulevard) generated gas scrubber waste in 1989, contaminated soil from site cleanup in 1990 and 1992, and aqueous solution with total organic residues less than 10 percent in 1992.

HHSS

The Historical Hazardous Substance Storage (HHSS) database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker. The HHSS database indicates the former ARCO facility (125 East California Boulevard) had three, 4,000-gallon gasoline USTs installed in 1954, one, 6,000-gallon gasoline UST installed in 1970, one 10,000-gallon gasoline UST installed in 1977, and one 280-gallon waste oil UST with an unknown installation date. The HIST TANK and DELISTED TNK databases appear to cross-reference this information.

LA HMS

List of sites in the Los Angeles County Department of Public Works Hazardous Materials System (LA HMS) Database which have or have had permits for Industrial Waste, Underground Storage Tanks, or Stormwater in the county of Los Angeles. The LA HMS database indicates the Discount Tire Centers site (455 South Arroyo Parkway) had equipment removed and the ARCO site (125 East California Boulevard) site had an underground storage tank operating permit, had underground storage tank equipment removed, and had other equipment removed. No additional detail was provided in this database.

7.1.2 Off-Site Regulatory Database Review

Regulatory database listings which have a reasonable potential to impact the Project are discussed below. This determination is based on, but not limited to, factors such as the topographic gradient in relation to the Project, the estimated groundwater flow direction in the vicinity of the Project, the distance between the listed site and the Project, the type of site or materials involved, and/or whether a release to the environment is known or likely to have occurred.

Home Van Vechten/Derek Bedell Ent. in the Home	
Facility Address:	450 South Arroyo Parkway
Databases:	DRYCLEANERS, FED DRYCLEANERS, EMISSIONS, FINDS, HAZNET, RCRA-SQG
Distance:	Adjacent
Direction:	East
Estimated Groundwater Flow:	South-southeast
Relationship to Project:	Parallel to or away from the Project

Release Reported:	No
Other Significant Database Information:	None
Significant Information from Other Sources:	While this address is technically adjacent, the building is located approximately 100 feet to the east of the northern portion of the Whole Foods tenant space, across a divided highway. Furthermore, if any impacted soil had existed at the Project as the result of this facility it likely would have been encountered and removed during the construction of the existing Whole Foods and below-grade parking structure in 2008. The on-site parking garage also employs a ventilation system in order to removed fumes from the underground levels.
Significant Factors:	Lack of a reported release. Estimated direction of groundwater flow. Estimated depth to groundwater. Lack of current dry cleaning operations.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the Project and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	Unlikely

Laundry Partners Limited/Munson & White Company/Tyler Cobleigh	
Facility Address:	432 South Arroyo Parkway
Databases:	DRYCLEANERS, HIST MANIFEST, LA HMS, HAZNET
Distance:	Adjacent
Direction:	Northeast
Estimated Groundwater Flow:	South-southeast
Relationship to Project:	Parallel to or away from the Project
Release Reported:	No
Other Significant Database Information:	None
Significant Information from Other Sources:	While this address is technically adjacent, the building is located approximately 115 feet to the northeast of the northern portion of the Whole Foods tenant space, across a divided highway. Furthermore, if any impacted soil had existed at the Project as the result of this facility it likely would have been encountered and removed during the construction of the existing Whole Foods and below-grade parking structure in 2008. The the on-site parking garage also employs a ventilation system in order to removed fumes from the underground levels.
Significant Factors:	Lack of a reported release. Estimated direction of groundwater flow. Estimated depth to groundwater.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the Project and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	Unlikely

Bryan's Cleaners and Dyers	
Facility Address:	544 South Arroyo Parkway

Databases:	DRYCLEANERS, HHSS, HIST TANK, EMISSIONS, FINDS, HIST MANIFEST, LA HMS, HAZNET, RCRA-SQG, FED DRYCLEANERS, CERS HAZ
Distance:	Adjacent
Direction:	East
Estimated Groundwater Flow:	South-southeast
Relationship to Project:	Parallel to or away from the Project
Release Reported:	No
Other Significant Database Information:	None
Significant Information from Other Sources:	While this address is technically adjacent, the building is located approximately 100 feet to the east of the vacant 541 Building, across a divided highway. Review of the HHSS database indicates a UST containing Stoddard (petroleum-based) solvent was installed in 1939. According to AQMD records, this facility used petroleum-based solvent through the 1970s, converted to PCE use in the 1980s and 1990s, and reverted back to petroleum-based solvent in the early 2000s. Soil samples collected at the former Arco facility in the southern portion of the Project in 2002 were analyzed for chlorinated solvents and no contaminants of concern were detected.
Significant Factors:	Removal of the USTs. Current regulatory status. Current solvent used. Estimated direction of groundwater flow. Lack of reported release. Estimated direction of groundwater flow.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the Project and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	Unlikely

Arroyo Car Wash Corporation/Lung Chu/Tosco Unocal Dealer/Unocal Service Station #9693	
Facility Address:	605 South Arroyo Parkway
Databases:	UST, CERS TANK, FINDS, HHSS, HIST TANK, FINDS, LA HMS, HAZNET, DELISTED TNK
Distance:	Adjacent
Direction:	South
Estimated Groundwater Flow:	South-southeast
Relationship to Project:	Away from the Project
Release Reported:	No
Other Significant Database Information:	The facility was in compliance at the time of the most recent compliance inspection in 2018.
Significant Information from Other Sources:	Not Applicable
Significant Factors:	Lack of a reported release. Estimated direction of groundwater flow. Estimated depth to groundwater. Current regulatory status.

Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the Project and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	Unlikely

ZAQ Chevron/Chevron Station No. 91410/Bill Barry	
Facility Address:	160 East California Boulevard
Databases:	UST, CERS TANK, FINDS, HHSS, HIST MANIFEST, LA HMS, HIST TANK, HAZNET, RCRA-SQG, EMISSIONS
Distance:	Adjacent
Direction:	Southeast
Estimated Groundwater Flow:	South-southeast
Relationship to Project:	Away from the Project
Release Reported:	No
Other Significant Database Information:	The facility was in compliance at the time of the most recent reported compliance inspection in 2017.
Significant Information from Other Sources:	Not Applicable
Significant Factors:	Lack of a reported release. Estimated direction of groundwater flow. Estimated depth to groundwater. Current regulatory status.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the Project and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	Unlikely

U-Haul Corporation/Pasadena Moving Center	
Facility Address:	552 South Raymond Avenue
Databases:	CHMIRS, HHSS, HIST TANK, ALT FUELS, CERS HAZ, FINDS, HIST MANIFEST, HAZNET
Distance:	Adjacent
Direction:	West
Estimated Groundwater Flow:	South-southeast
Relationship to Project:	Parallel to the Project
Release Reported:	Yes
Release Date:	May 14, 2014
Contaminant(s) of Concern:	Propane
Media Impacted:	Air (vapor)
Regulatory Status of Release:	Cleaned up
Regulatory Status Date:	May 14, 2014

Other Significant Database Information:	Storage tank valve leaked causing the release. Fire Department on the scene, contractor en route for containment and cleanup. The spill report indicates a vapor release.
Significant Information from Other Sources:	Not Applicable
Significant Factors:	Current regulatory status. Nature of the release. Removal of the petroleum source.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the Project and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	Unlikely

Southern California Public Radio/Jurgensens Grocery Company/Image of Ink	
Facility Address:	474-494 South Raymond Avenue
Databases:	LUST, HIST MANIFEST, HAZNET, CERS HAZ, CERS TANK, FINDS, HHSS, LA HMS, HIST TANK
Distance:	Adjacent
Direction:	West
Estimated Groundwater Flow:	South-southeast
Relationship to Project:	Parallel to or towards the Project
Release Reported:	Yes
Release Date:	June 19, 2009
Contaminant(s) of Concern:	Not reported
Media Impacted:	Not reported
Regulatory Status of Release:	Completed - Case Closed
Regulatory Status Date:	October 9, 2009
Other Significant Database Information:	This site currently operates an AST. The facility was found to be in compliance during an April 2018 compliance inspection.
Significant Information from Other Sources:	A copy of the No Further Action letter is included in Appendix F.
Significant Factors:	Current regulatory status. Estimated depth to groundwater. Lack of reported groundwater contamination. Length of time that has passed since closure was granted.
Conclusion:	Based on the factors discussed above, this facility is unlikely to have impacted the Project and therefore does not represent a recognized environmental condition.
Vapor Migration Concern:	Unlikely

7.1.3 Vapor Migration

Indoor air quality concerns are generally excluded from the scope of ASTM E1527-13 and this assessment. However, the migration of vapors caused by a release of hazardous substances or petroleum products to the environment can represent a recognized environmental condition in certain conditions.

For the purposes of this assessment, the potential for migrating vapors to represent a recognized environmental condition was evaluated using a limited screening method based on technical guidance documents from the US EPA and *ASTM E2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*. In addition, screening tools created by regulatory agencies may be used to evaluate the significance of a release with respect to the vapor migration and/or vapor intrusion potential. EMG's vapor migration screening is not a human health risk assessment and is not intended to comply with regulatory requirements that might exist for the evaluation of vapor migration.

Based on the review of regulatory database records in Section 7.1.1 and 7.1.2, no vapor migration concerns were identified.

7.2 Local Agency Records

The following additional environmental records were reviewed to supplement the standard environmental record sources discussed in Sections 7.1.1 and 7.1.2.

Reasonably ascertainable records for the Project may be reviewed for evidence of recognized environmental conditions and other environmental concerns such as underground storage tanks, significant hazardous materials use, the presence of septic systems, and/or the presence of wells.

In the case of pending requests, upon receipt and review any significant information not identified through other sources will be provided to the Client.

Building Department	
Name of Agency:	City of Pasadena Building and Safety Department
Contact Name/Telephone:	Jackie Adkins, Permit Technician/626.744.4150
Review Method:	Telephone interview and online records review
Records Date Back To:	1920s - Current
Summary of Records Reviewed:	General permits were on file and included information indicating the current buildings were constructed in 1921, 1925, 1951, 2003 and 2008.
Environmentally Significant Information:	A permit, dated 2015, was issued to install a grease interceptor at 465 South Arroyo Parkway. Various permits, dated 1998, 1999 and 2007, were on file that reference an auto detailing shop at 491 South Arroyo Parkway. Permits, dated 1988 and 2002, were on file to remove five USTs, to install a temporary vapor extraction system, and demolish a service station at 125 East California Boulevard.

Fire Department	
Name of Agency:	City of Pasadena Fire Department
Contact Name/Telephone:	Records Request/626.744.4655
Review Method:	Not Applicable
Records Date Back To:	Not Applicable
Summary of Records Reviewed:	No response has been received to date. However, based on review of other historical and regulatory resources, it is not anticipated the information from this agency, if any, would significantly alter the findings and conclusions of this report. Upon receipt and review, any environmentally significant information not identified through other sources will be provided to the Client.
Environmentally Significant Information:	Not anticipated

Planning/Zoning Department	
Name of Agency:	City of Pasadena Planning Department
Contact Name/Telephone:	Martin Potter, Planner/626.744.6710
Review Method:	Telephone interview and online records review.
Records Date Back To:	2005 - Current
Current Zoning:	CD-6 - Central District-6
Historical Zoning:	The Project has maintained the current zoning since at least 2005.
Environmentally Significant Information:	None identified

8.0 ASTM E1527 Non-Scope Considerations

The items discussed in this section are outside the scope of ASTM E1527-13. These are included at the discretion of the user based upon the scope of work.

8.1 Asbestos

In accordance with the scope of work, EMG performed a screening to document the presence of known and/or suspect asbestos containing materials (ACM) at the Project. This screening approach is not a comprehensive (i.e., AHERA-Style) asbestos survey, nor is it intended to fulfill the NESHAP requirements for demolition or renovation purposes. All materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication Managing Asbestos in Place (the "Green Book") are considered suspect.

Some non-friable building products, such as sheet vinyl floor tile, vinyl floor tile, floor tile mastic, asbestos-cement board, and roofing materials can still be manufactured with asbestos and installed in the United States. However, U.S. manufacturers have largely excluded asbestos fibers from their building products since 1981. In addition to a visual assessment, EMG reviewed provided documentation to determine if asbestos has been previously documented at the Project.

Suspect Asbestos Containing Materials		
Material	Friable	Condition
Roofing materials	No	Good
Ceiling tile	Yes	Poor to Good
Wallboard/joint compound	No	Good
Vinyl composition tile	No	Poor to Good
Vinyl sheet flooring	No	Good
Mastic	No	Good

Based on the scope of work, sampling of suspect asbestos containing materials was not performed. Refer to Section 1.1 for further discussion.

Damaged vinyl floor tile in second floor of 577 Building

8.2 Radon Gas

Radon originates from the natural (radioactive) breakdown of uranium in soil, rock, and water and is the second leading cause of lung cancer in the United States. Radon can move up through the ground and into living spaces through cracks and other holes in the foundation. The USEPA has developed the EPA Map of Radon Zones to assist National, State, and local organizations in implementing radon-resistant building codes. This map assigns each county in the U.S. to one of three zones based on radon potential. The USEPA uses a continuous exposure level of 4.0 pCi/L (picoCuries per liter of air) as an action level at which additional action is recommended.

The USEPA Radon Zones are defined as:

- Zone 1 (Highest potential) - Average indoor radon screening level greater than 4 pCi/L
- Zone 2 (Moderate potential) - Average indoor radon screening level between 2 and 4 pCi/L.
- Zone 3 (Lowest potential) - Average indoor radon screening level less than 2 pCi/L.

For the purposes of this assessment, the radon zone and the use of the Project have been used to determine the level of risk associated with radon. However, the USEPA and the Surgeon General recommend testing all homes for radon, regardless of geographic location.

The property is located in USEPA Radon Zone 2.

Radon sampling was not performed based on the non-residential use of the Project and the Scope of Work. No further action or investigation is recommended regarding radon.

8.3 Lead-Based Paint

All paint applied prior to 1978 is considered suspect. The basis for this determination is taken from the Lead Paint Poisoning Act passed by the Congress of the United States that banned the use of lead paint starting January 1, 1978. This screening approach does not comply with Requirements for Disclosure of Known Lead-Based Paint and/or Lead-Based Paint Hazards in Housing. This approach does not constitute a pre-occupancy survey or the basis of attainment of "Lead Free" certification.

Considering the dates of construction (1921, 1925, 1951, 2003 and 2008), there is a potential that the paint at the Project is lead-based. The painted surfaces were observed to be in generally good condition, with no chipping, peeling, or cracking paint observed. Furthermore, the Project is not a residential use and there is no regulatory requirement to sample suspected lead-based painted surfaces at this time. Therefore, no samples were collected. No further action or investigation is recommended regarding lead-based paint.

8.4 Lead in Drinking Water

Lead is commonly used in household plumbing materials and water service lines. Exposure to lead in drinking water above the USEPA action level can result in adverse health effects in children and adults. Lead is rarely found in source water, but enters tap water through corrosion of plumbing materials. Homes built before 1986 are more likely to have lead pipes, fixtures and solder. The most common problem is with brass or chrome-plated brass faucets and fixtures which can leach significant amounts of lead into the water. The USEPA action level for lead-in-drinking water is 15 parts per billion (ppb).

According to information from the local water utility, the water supplied to the Project is within federal, state, and local drinking water quality standards. No further action or investigation is recommended regarding lead in drinking water at the Project.

8.5 Moisture Conditions

EMG performed a limited visual and olfactory assessment for evidence of moisture conditions in readily accessible interior areas of the Project. In addition, the Key Site Manager was interviewed regarding the presence of current and historical moisture conditions. This assessment was not designed to discover all areas which may be affected by moisture conditions. Rather, it is intended to provide an indication of significant moisture conditions observed during the site visit. Moisture conditions may be present in areas not observed,

such as pipe chases, HVAC systems, and behind enclosed walls and ceilings. De minimis moisture conditions, such as small, isolated, water stains on ceiling tiles, and mildew at bathtubs and sinks are considered to be routine maintenance issues and are not addressed in this Report.

Observed Moisture Conditions		
Location	Approximate SF	Observed Condition
499/511 Building	320	Standing water was observed on the ground floor and in the basement areas and evidence of moisture conditions was observed on the walls and ceiling tiles
577 Building	20	Evidence of moisture conditions was observed on the second floor ceiling tiles

Refer to Section 1.1 for further discussion of the moisture conditions discussed above.

Moisture condition in ground floor of 499 Building

Moisture condition in basement of 499 Building

Moisture condition in basement of 499 Building

Evidence of moisture condition in second floor ceiling of 577 Building

Evidence of moisture condition in second floor ceiling of 577 Building

8.6 Wetlands

For regulatory purposes under the Clean Water Act, wetlands are "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas." A wetlands delineation is beyond the scope of this assessment. However, review of National Wetlands Inventory (NWI) data, provided by the PSR and/or the United States Fish and Wildlife Service, indicated the following:

Wetlands Review	
Project	Adjoining Properties
Review of the NWI data did not identify any wetlands.	Review of the NWI data did not identify any wetlands.

No wetlands were identified. No further action or investigation is recommended regarding wetlands.

8.7 Flood Zone

FEMA identifies flood hazards, assesses flood risks and partners with states and communities to provide accurate flood hazard and risk data to guide them to mitigation actions. Flood hazard mapping is the basis for the National Flood Insurance Program (NFIP) and flood insurance requirements. FEMA maintains and updates data through Flood Insurance Rate Maps (FIRMs) and risk assessments. FIRMs include statistical information such as data for river flow, storm tides, hydrologic/hydraulic analyses and rainfall and topographic surveys. Review of the FIRM available from the PSR and/or from the FEMA website indicated the following:

Flood Zone Map Review		
Map Date	Area	Project Flood Zone
September 26, 2008	Entire Project	Zone X (unshaded), minimal risk areas outside the one percent and 0.2 percent annual chance floodplains. No base flood elevations or base flood depths are shown within these zones.

The flood zone designation is provided for informational purposes only. A determination of the need for flood insurance is beyond the scope of this assessment.

9.0 Limitations, Key Terms, and References

9.1 Limitations

The opinions EMG expresses in this report were formed utilizing the degree of skill and care ordinarily exercised by any prudent Environmental Professional in the same community under similar circumstances. EMG assumes no responsibility or liability for the accuracy of information contained within this report that has been obtained from the Client or the Client's representatives, from other interested parties, or from the public domain. The conclusions presented represent EMG's professional judgment based on information obtained during the course of this assignment.

Factual information regarding operations, conditions, and test data provided by the Client or the Client's representative has been assumed to be correct and complete. The conclusions presented within this report are based on the data provided, observations made, and conditions that existed specifically on the date of the assessment.

EMG's ESA cannot wholly eliminate the uncertainty regarding the presence of recognized environmental conditions and environmental business risk. The report is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the Project. The report is limited in budget and scope. The nature of subsurface soil and ground water at the Project cannot be confirmed, given the limited budget and scope of this ESA. The report is not and should not be considered a warranty or guarantee about the presence or absence of environmental contaminants which might affect the Project. It should be understood that EMG's suggested remedy may be determined under time constraints or may be formed without the aid of engineering calculations, testing, exploratory probing, the removal of materials, or design. Furthermore, there may be other alternate or more appropriate schemes or methods to remedy the noted environmental conditions.

9.3 Key Terms

Business environmental risk - A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations. For the purposes of this assessment, a significant business environmental risk is both included in the agreed upon scope of work and requires further action at this time.

Controlled recognized environmental condition - A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Data gap - The lack of or inability to obtain information required by ASTM E 1527-13 despite good faith efforts is considered a data gap. A data gap is considered significant if it affects the ability of the environmental professional to identify recognized environmental conditions.

De minimis condition - A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

Environmental Professional - A person meeting the education, training, and experience requirements set forth in 40 CFR 312.10(b).

Historical recognized environmental condition - A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g. property use restriction, AULS, institutional controls, or engineering controls), at the time the Phase I ESA is conducted (e.g., if there has been a change in the regulatory criteria). If the EP considers this past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusion section of the report as a REC.

Material threat - A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment.

Practically reviewable - Information that is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data.

Release - Any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment (including the abandonment or discarding of barrels, containers, and other closed receptacles containing any hazardous substance or pollutant or contaminant), with certain exclusions as defined in 42 U.S.C. 9601 (22).

Reasonably ascertainable - Information that is publicly available, obtainable from its source within reasonable time and cost constraints, and practically reviewable.

Recognized environmental condition - The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

Standard environmental record sources - Environmental records contained in various regulatory databases, with search distances defined by ASTM E1527-13, unless otherwise specified by client in the scope of work.

Standard historical sources - Reasonably ascertainable records, including aerial photographs, fire insurance maps, property tax files, recorded land title records, USGS topographic maps, local street directories, building department records, and zoning/land use records.

Appendix D: Questionnaires

PHASE I: KEY SITE MANAGER QUESTIONNAIRE

Name of person completing questionnaire: Claudia Rodriguez

Association with property: Property Manager

Length of association with property: 1 year

Are you a representative of the Owner ☐: _____

Phone Number: 626.441.9620

Property Name: 465, 491, 503, 525 & 577 South Arroyo Parkway

EMG Project Number: 136895.19R000-001.135

Signature: _____ Date: 02/28/19

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Additional details necessary to explain any **yes or unknown responses** should be provided in the "Comments" column.

QUESTION		RESPONSE			COMMENTS
		Y	N	Unk	
1	Are the Property or any adjoining properties currently or previously in industrial use <input type="checkbox"/>	X			Service stations are located adjacent to the south and southeast and a dry cleaner is located adjacent to the east
2	Have the Property or adjoining properties currently or previously been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility <input type="checkbox"/>	X			Former service stations on-site and current and former service stations and dry cleaners are adjacent to the east and south
3	Are there currently or previously any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or fifty gallons in the aggregate, stored on or used at the Property <input type="checkbox"/>			X	None currently/previously unknown
4	Are there currently or have there been previously any industrial drums (typically 55 gallon) or sacks of chemicals located on the Property <input type="checkbox"/>		X		
5	Are there currently or previous any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the Property <input type="checkbox"/>			X	
6	Are there currently or previously any pits, ponds, or lagoons located on the Property in connection with waste treatment or waste disposal <input type="checkbox"/>		X		
7	Are there any significant areas of stained soil on the Property (currently or previously) <input type="checkbox"/>		X		
8	Are there currently or previously any storage tanks (above or underground) located on the Property <input type="checkbox"/> If so, please indicate the material stored and if the tank is registered.	X			Former USTs on southern portion of the Project and possibly on the northern portion as well

QUESTION		RESPONSE			COMMENTS
		Y	N	Unk	
9	Are there currently or previously any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the Property or adjacent to any structure located on the Property?		X		
10	Are there currently or previously any flooring, drains, or walls located at the Property that are stained by substances other than water or are emitting foul odors?		X		
11	If the Property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system? Has the well been designated as contaminated by any government environmental/health agency?		X		
12	Have you been informed of the past existence of hazardous substances or petroleum products with respect to the Property or any facility located on the Property?	X			Former service stations on the northern and southern portions of the Project
13	Have there been any environmental site assessments of the Property that indicated the presence of hazardous substances or petroleum products on, or contamination of, the Property or recommended further assessment of the Property?	X			Provided for EMG's review
14	Does the Property discharge waste water on or adjacent to the Property, other than storm water, into a storm water sewer system?		X		
15	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials been dumped above grade, buried, and/or burned on the Property?		X		
16	Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?			X	
17	Is there now or has there ever been any asbestos-containing materials (ACM), in any application, on the Property?			X	
18	Has there ever been any asbestos-containing materials testing conducted on the Property?			X	
19	Is there an Asbestos Operations and Maintenance (O&M) program in place at the Property?		X		
20	Is there now or has there ever been any lead-based paint (LBP) applications on the Property?			X	
21	Has there ever been lead-based paint testing conducted on the Property?			X	
22	Is there a Lead Paint Operations and Maintenance (O&M) Program in place at the Property?		X		
23	Has the water at the Property ever been tested for lead?			X	
24	Has radon testing ever been conducted at the Property?			X	
25	Has any part of the Property ever contained visible mold growth?	X			Yes – Significant moisture conditions are present in the 499 Building
26	Has there ever been any sort of Indoor Air Quality (IAQ) or mold testing conducted in the building(s)?			X	

QUESTION		RESPONSE			COMMENTS
		Y	N	Unk	
27	Is there a Mold Operations and Maintenance (O&M) program in place at the Property <input type="checkbox"/>			X	
28	Are there any other Operations and Maintenance (O&M) programs in place that we should be made aware of <input type="checkbox"/> If so, please provide details.		X		
29	Has fill dirt been brought onto the Property which originated from a contaminated site or is of an unknown origin <input type="checkbox"/>		X		
30	Is the Property or any portion of the Property located or involved in any environmentally sensitive areas (i.e., wetlands, coastal barrier resource areas, coastal barrier improvement act areas, flood plains, endangered species) <input type="checkbox"/>		X		
31	Have you been informed of the past existence of environmental violations with respect to the Property or any facility located on the Property <input type="checkbox"/>		X		
32	Are there any environmental liens or governmental notification relating to past or current violations of environmental laws with respect to the Property or any facility located on the Property <input type="checkbox"/>		X		
33	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances of petroleum products in, on or from the Property <input type="checkbox"/>		X		
34	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Property <input type="checkbox"/>		X		
35	Are you aware of any notices from any governmental entity regarding any possible violation or environmental laws or possible liability relating to hazardous substances or petroleum products <input type="checkbox"/>		X		
Summarize historical Property use (when was the Property developed with the current improvements, what modifications have taken place, what was the Property used for prior to its current use)					
On the day of the site visit, provide EMG's Field Observer access to all of the available documents listed below. <ul style="list-style-type: none"> ▪ Previous Environmental Site Assessment and Compliance Audit reports ▪ Site plans, ALTA surveys, etc. ▪ Asbestos, Lead Based Paint, Mold Operations and Maintenance Programs (O&Ms) ▪ Environmental permits, including registrations for aboveground and underground storage tanks and registrations for underground injection systems ▪ Material Safety Data Sheets ▪ Hazardous waste generator notices or reports ▪ Community Right-to-Know Plan, Risk Assessments, Safety plans, SPCC plans, FRP Plans, etc. ▪ Reports regarding hydrogeological conditions on the Property or adjoining properties ▪ Notices from government agencies regarding past or current violations of environmental laws ▪ Environmental liens and recorded Activity and Use Limitations ▪ Geotechnical surveys

ASTM E1527 USER QUESTIONNAIRE PHASE I ENVIRONMENTAL SITE ASSESSMENT

EMG has been retained to conduct a Phase I Environmental Site Assessment (ESA) on your property as contracted. The Phase I ESA will involve site observations, interviews, and a review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM E1527 Scope of Work, we are required to ask the following questions to the User of the report seeking to fulfill the User Requirements of the Standard. Please complete and return this questionnaire to EMG (within two days of receipt).

	Date: _____
Company name:	_____
Property Name/Street Address:	_____
Property City/State/Zip:	_____
Name of person completing questionnaire:	Phone Number: _____
Role/Title:	Fax Number: _____
Length of association with property:	E-mail address: _____
Please check one:	User: <input type="checkbox"/> User Representative: <input type="checkbox"/>

Signature: _____

Directions: Please answer all questions to the best of your knowledge and in good faith. ☐ Mark the column corresponding to the appropriate response. ☐ Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column. ~ Note: *U* indicates "Unknown", *NR* indicates "No Response" and "N/A" indicates not applicable.

QUESTION		RESPONSE				COMMENTS
		Y	N	U	NR	
1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
4	Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
5	Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

QUESTION		RESPONSE				COMMENTS
		Y	N	U	NR	
6	As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
7	Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
8	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
	8 (a) Do you know the past uses of the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
	8 (b) Do you know of specific chemicals that are present or once were present at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
	8 (c) Do you know of spills or other chemical releases that have taken place at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
	8 (d) Do you know of any environmental cleanups that have taken place at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
9	As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

If you have access to any of the following helpful documents, please indicate them below and then send them to EMG via standard mail or e-mail/fax along with this questionnaire. Mailing address: 10461 Mill Run Circle, Suite 1100 Owings Mills, MD 21117

Helpful Documents to be forwarded EMG:

- ☐ Environmental site assessment reports (i.e., Phase I, Phase II, tank testing results, radon, lead paint, or asbestos testing, etc.)
- ☐ Environmental compliance audit reports; risk assessments; and recorded Activity and Use Limitations (AULs)
- ☐ Environmental permits (i.e., solid waste disposal, hazardous waste disposal, wastewater, NPDES, underground injection, etc.)
- ☐ Registrations for underground storage tanks (USTs) and aboveground storage tanks (ASTs)
- ☐ Registrations for underground injection systems
- ☐ Material safety data sheets
- ☐ Community right-to-know plan
- ☐ Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans, etc
- ☐ Reports regarding hydrogeological or geotechnical conditions on the property and surrounding area
- ☐ Notices/correspondence from any agency relating to past/current violations of environmental laws, or liens encumbering the property
- ☐ Hazardous waste generator notices or reports
- ☐ Other:

Identifies if tax payments for a secured assessment are:
"Current" (TS=0), "Delinquent" (TS=1), "Defaulted, Power to Sell" (TS=2), or "Exempt" (TS=3).
IMPORTANT NOTE: Tax payments for the current roll that are late and incurring penalties may still show "Current" due to timing issues, assuming the property is not delinquent for prior years. Also, unsecured delinquent or defaulted tax bills will not be reflected here.

**UNDERGROUND TANK PROGRAM - NOTIFICATION TO FEE TITLE HOLDER
WITH INTENT TO CLOSE CASE
FORMER ARCO SERVICE STATION NO. 510
125 EAST CALIFORNIA BOULEVARD, PASADENA (ID # 911050025)**

Dear Mr. Scully,

The California Regional Water Quality Control Board, Los Angeles Region, is the primary agency with primary responsibility for the protection of ground and surface water quality for all beneficial uses within Los Angeles and Ventura counties. As such, we are the lead regulatory agency for overseeing corrective action and cleanup of releases from leaking underground storage tank systems at the site located at **125 East California Boulevard, Pasadena**. We have completed our review and evaluation of information provided to this agency for the underground storage tank release(s) at the above-described location, and have determined that this case meets the Regional Board low risk criteria for case closure.

Pursuant to recent changes of the California Health and Safety Code (Sections 25299.37.2) and Division 7 the Porter Cologne Water Quality Control Act under AB 681, the Regional Board is required to notify all current fee title holders for a site impacted by underground storage tank release(s) prior to considering corrective action or granting case closure. You have been identified as a fee title holder for the subject site or a site impacted by an underground storage tank release and we are notifying you of our plan to close this low risk underground storage tank case. In order to expedite the closure process we are requesting that you provide us with any comments on the proposed plan to close this case in writing by **November 22, 2004**. If you do not wish to participate, you need not respond. If we do not receive a response by **November 22, 2004**, the case will be closed and you will be notified of our action.

If you wish to obtain additional information about the case, you may arrange to review the UST case file for this site by mailing in a written request by the response date to the address in the letterhead above or by faxing in a written request to (213) 576-6707. Regional Board staff will then contact you and arrange a time and date to visit the Regional Board and review the files requested.

**Subject: Underground Storage Tank Closure Activities at ARCO Facility #510,
125 E California Bl., in Pasadena, California [PFD ID 000042]**

Dear Mr. Zapka:

This letter contains some important clarifications that you should consider in addition to the accompanying "closure" or "no further action" letter. These letters should always be filed and reviewed together in order to accurately reflect the status of this property.

The "no further action" letter indicates that you have complied with the regulatory requirements for site investigation and/or site remediation at this site, at this time. It does not indicate that the site is free from contamination. In fact, contamination is present at the site. The contamination, as it currently exists, is below the level of regulatory concern. However, if the site is excavated or subsurface work is conducted, excavated materials may be regulated and site workers may require protective equipment.

Additionally, while no further action is required relating to the contamination at this time, neither this letter nor the accompanying letter should be viewed as a guarantee that the property can be used without restriction. Each project proposed for this site should be evaluated to ensure that the specific project will not impact the health of workers at the site, off-site members of the community, water quality, or have other environmental impacts.

To restate, this letter is provided to merely clarify some issues not fully addressed in the accompanying "no further action" letter. This letter does not change the determination that no further action is required at this site, at this time.

If you have any questions, please contact this office at (626) 744-4115.

Sincerely,

A handwritten signature in cursive script that reads "James C. Weckerle".

Pasadena, California
Delta Project No. L098-628

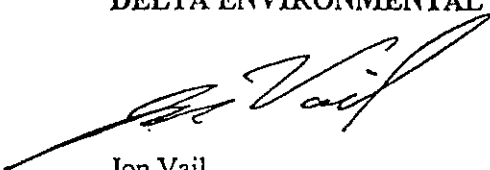

Dear Mr. Weckerle:

Delta Environmental Consultants, Inc. (Delta) is contracted by ARCO Products Company (ARCO) to obtain information from the Pasadena Fire Department concerning closure at ARCO Facility No. 510, located at 125 East California Boulevard in Pasadena, California. A request for closure letter report, dated February 23, 1998 was submitted to you by Brown and Caldwell, Inc. (ARCO's previous consultant for this site). We request your review of this site and your concurrence with our recommendation for closure. We appreciate your attention in this matter.

If you have any questions, please contact me at (949) 363-3306.

Sincerely,

DELTA ENVIRONMENTAL CONSULTANTS, INC.

Subject: Notice of Detection of Site Contamination and Landowner Notification
Requirements for ARCO Facility 510, 125 E California Bl., in Pasadena,
California

Dear Name:

This letter serves as notice to you that your facility has been determined to have suffered an unauthorized release of a hazardous substance from an underground storage tank system. As such, you are subject to, and directed to comply with, the corrective action and landowner notification requirements contained in Chapter 6.7 of the California Health and Safety Code.

This letter is to inform you of legislative requirements pertaining to cleanup and closure of sites where an unauthorized release of hazardous substance, including petroleum, has occurred from an underground storage tank (UST). Section 25297.15(a) of Ch. 6.7 of the Health & Safety Code requires the primary or active responsible party to notify all current record owners of fee title to the site of: 1) a site cleanup proposal, 2) a site closure proposal, 3) a local agency intention to make a determination that no further action is required, and 4) a local agency intention to issue a closure letter. Section 25297.15(b) requires the local agency to take all reasonable steps to accommodate responsible landowners' participation in the cleanup or site closure process and to consider their input and recommendations.

For purposes of implementing these sections, you or your client has been identified as the primary or active responsible party. Please provide to this agency, within twenty (20) calendar days of receipt of this notice or before your next submittal to this agency, a complete mailing list of all current record owners of fee title to the site. You may use the enclosed list of landowners form (sample letter 2) to comply with this requirement. If the list of current record owners of fee title to the site changes, you must notify the local agency of the change within twenty (20) calendar days from when you are notified of the change.

If you are the sole landowner, please indicate that on the landowner list form. The following notice requirements do not apply to responsible parties who are the sole landowner for the site.

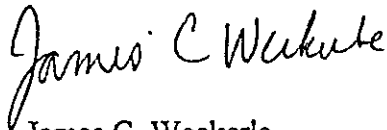

In accordance with Section 25297.15 (a) of Ch. 6.7 of the Health & Safety Code, you must certify to the local agency that all current record owners of fee title to the site have been informed of the proposed action before the local agency may do any of the following:

- 1) consider a cleanup proposal (corrective action plan) ;
- 2) consider a site closure proposal;
- 3) make a determination that no further action is required; and/or,
- 4) issue a closure letter.

You may use the enclosed notice of proposed action form (sample letter 3) to comply with this requirement. Before approving a cleanup proposal or site closure proposal, determining that no further action is required, or issuing a closure letter, the local agency will take all reasonable steps necessary to accommodate responsible landowner participation in the cleanup and site closure process and will consider all input and recommendations from any responsible landowner.

If you have any questions, please contact the undersigned at (626) 744-4115.

Sincerely,

James C. Weckerle
Hazardous Materials Specialist

Subject: Underground Storage Tank Closure Activities at ARCO Facility #510,
125 E California Bl., in Pasadena, California [PFD ID 000042]

Dear Mr. Zapka:

This letter confirms the completion of a site investigation and remedial action for the underground storage tank(s) formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former tank(s) are greatly appreciated.

Based upon information in the above referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action to the underground tank release is required.

This notice is issued pursuant to a regulation contained in Section 2721(e) of Title 23 of the California Code of Regulations.

Please contact our office if you have any questions regarding this manner.

Sincerely,

James C. Weckerle

ATLANTIC RICHFIELD COMPANY QUARTERLY REPORT
Quarter 4, 2004 (January 15, 2004)

Former Station No.: 0510 Address: 125 East California Boulevard, Pasadena, California
Atlantic Richfield Company Environmental Engineer/Phone No.: Mr. Ray Vose/818-957-1755
Consulting Co./Contact Person/Phone No.: SECOR/Mr. Gareth Roberts/ (805) 230-1266 Ext 240
SECOR Project No.: 37BP.U0510.05
Primary Agency/Regulatory ID No.: LARWQCB / Ms. Chandra Cansler /File No. 911050025
Other Agencies to Receive Copies: None

WORK PERFORMED THIS QUARTER [Fourth - 2004]:

1. Completed quarterly groundwater sampling and prepared Quarterly Status Report.
2. Received Case Closure from the LARWQCB in their letter dated December 3, 2004.

WORK PROPOSED FOR NEXT QUARTER [First - 2005]:

1. Abandon groundwater monitoring wells MW-1, MW-2, and MW-3 and submit Well Abandonment Report.

Current Phase of Project:	Monitoring	(Assmnt, Remed. etc)
Frequency of Sampling:	Quarterly	(Quarterly, etc.)
Frequency of Monitoring:	Quarterly	(Monthly, etc.)
Liquid Phase Hydrocarbon Present On-Site	No	(Yes/No)
Cumulative LPH Recovered to Date:	None	(gallons)
LPH Recovered This Quarter:	None	(gallons)
Bulk Soil Removed to Date:	761	(cubic yards)
Bulk Soil Removed This Quarter:	None	(cubic yards)
Water Wells or Surface Waters (4000-ft radius)	4057H-3,000' S	
Radius & Their Respective Directions:	N/A	(Distance and Direction)
Current Remediation Techniques:	None	(SVES, LPH Removal, etc.)
Permits for Discharge:	N/A	(NPDES, POTW, etc.)
Approximate Depth to Groundwater:	Range: 146.59 to 147.28	(Measured Feet)
Groundwater Gradient:	Southeast	(Direction)
	0.004 feet/foot	(Magnitude)

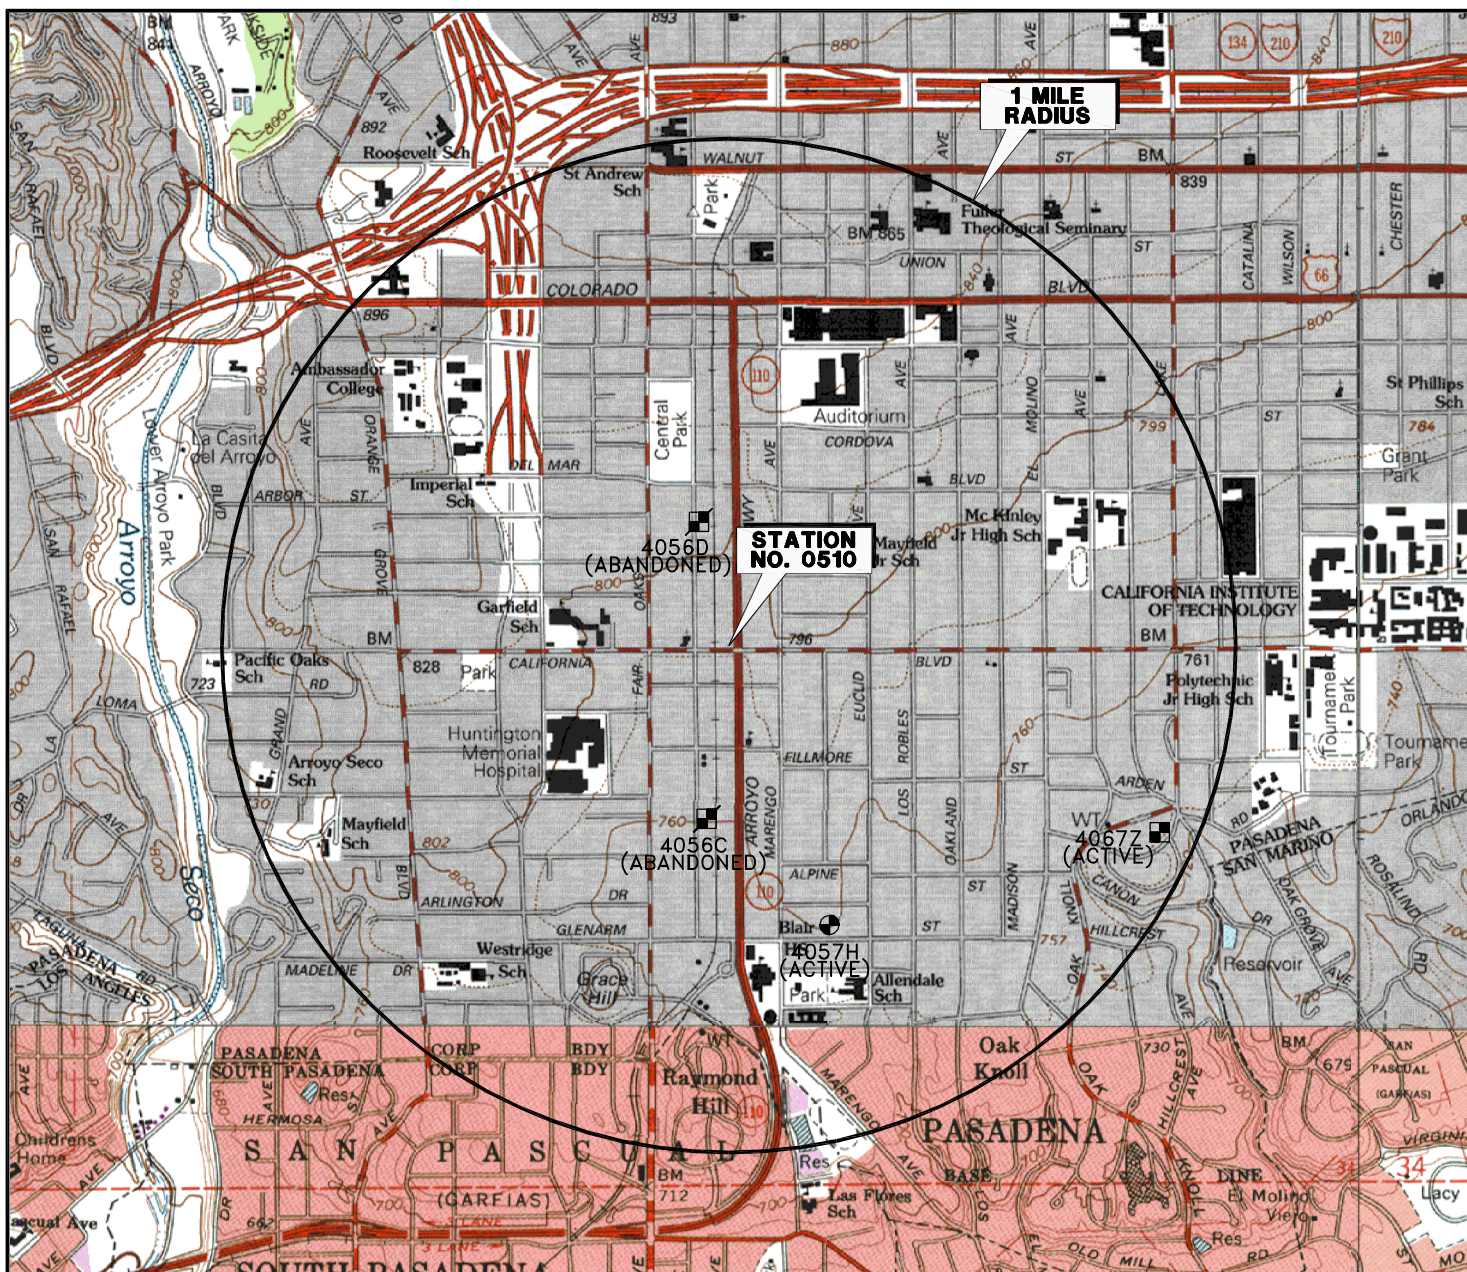

Agency Directive Requirement: LARWQCB letter dated December 3, 2004, issuing Case Closure.

Notes:

GRO \square Gasoline range organics

B \square Benzene

T \square Toluene

E \square Ethylbenzene

X \square Total xylenes

MTBE \square Methyl tert-butyl ether

TBA \square Tert-butyl alcohol

DIPE \square Di-isopropyl ether

ETBE \square Ethyl tert-butyl ether

TAME \square Tert-amyl methyl ether

SPH \square Separate phase hydrocarbons

TOC \square Top of casing (surveyed)

Calc. GW Elev. \square Calculated groundwater elevation \square TOC - Depth to Water \square 0.75 \square (Measured SPH Thickness); assuming a specific gravity of 0.75 for SPH

ft-MSL \square feet above mean sea level

μ g/L \square Micrograms per liter

\square \square Analyte was not detected above the specified method reporting limit

- \square Not measured or analyzed

J \square Estimated value (less than the method reporting limit and greater than or equal to the method detection limit)

Refer to the reports in which data was first presented for more information on historical data.

GRO analyzed by EPA Method 8015 Modified. The carbon chain range used for analysis is C4-C12.

BTEX and oxygenates analyzed by EPA Method 8260B.

DUP \square Duplicate sample

NS \square Well not sampled

APPENDIX A

Laboratory Report and Chain-Of-Custody Document

LABORATORY REPORT

Prepared For: SECOR International, Inc.-Thousand Oaks
290 Conejo Ridge Avenue, Suite 200
Thousand Oaks, CA 91361
Attention: Gareth Roberts

Project: ARCO 0510, Pasadena

Sampled: 12/10/04
Received: 12/13/04
Issued: 12/29/04 12:02

NELAP #01108CA CA ELAP #1197 CSDLAC #10117

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of Del Mar Analytical and its client. This report shall not be reproduced, except in full, without written permission from Del Mar Analytical. The Chain of Custody, 1 page, is included and is an integral part of this report.

This entire report was reviewed and approved for release.

CASE NARRATIVE

SAMPLE RECEIPT: Samples were received intact, at 6°C, on ice and with chain of custody documentation.

HOLDING TIMES: All samples were analyzed within prescribed holding times and/or in accordance with the Del Mar Analytical Sample Acceptance Policy unless otherwise noted in the report.

PRESERVATION: Samples requiring preservation were verified prior to sample analysis.

QA/QC CRITERIA: All analyses met method criteria, except as noted in the report with data qualifiers.

COMMENTS: Results that fall between the MDL and RL are 'J' flagged.

SUBCONTRACTED: Refer to the last page for specific subcontract laboratory information included in this report.

BB,LM Sample > 4x spike concentration, The MS and/or MSD were above the acceptance limits. See Blank Spike (LCS).
BB,LN Sample > 4x spike concentration, The MS and/or MSD were below the acceptance limits. See Blank Spike (LCS).
BH Reporting limits raised due to high level of non-target analytes
J,DX EPA Flag - Estimated value, Value < lowest standard (MQL), but > than MDL
MB Analyte present in the method blank
PV Hydrocarbon result partly due to individ. peak(s) in quant. range
RB RPD exceeded method control limit; % recoveries within limits.
ND Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
RPD Relative Percent Difference

ADDITIONAL COMMENTS

For GRO (C4-C12):

GRO (C4-C12) is quantitated against a gasoline standard. Quantitation begins immediately following the methanol peak.

Declaration of Environmental Restriction and other Environmental Covenants and Conditions recorded August 21, 2002.

A declaration entered into by 125 ECP, LLC ("Owner") and BP West Coast Products, LLC ("West Coast," former owner of the property).

(1) Grant to West Coast unrestricted access rights to assess, monitor, and perform corrective actions on contamination released during the operation of a gas station.

Oral or written notice must be provided before exercise their access right.

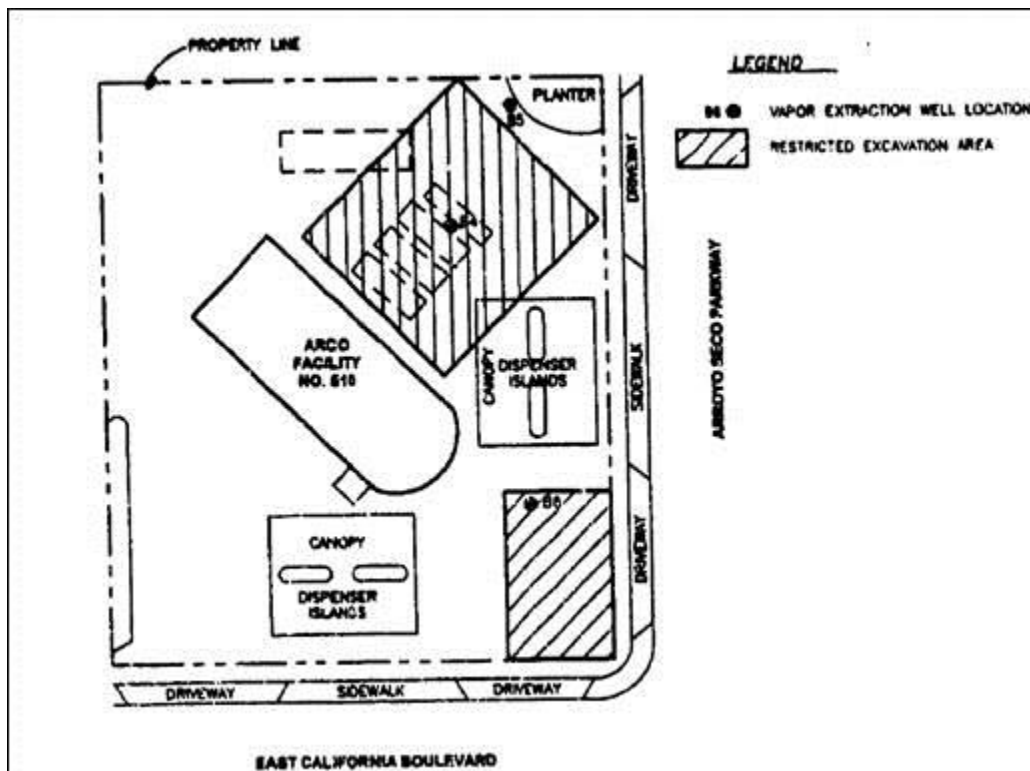

Access rights terminate 90 days after West Coast receives a letter by environmental regulatory agency that no further action with respect to the real estate is required.

(2) Construction Restriction

Requires Owner to obtain, during the access period, West Coast's written approval before constructing any improvements or installing any equipment that would be likely to materially adversely interfere with access rights or affect corrective action.

Restricts Owner from constructing or installing any improvement on or under any Restricted Area, except for asphalt surfacing or landscaping, until 90 days after West Coast receives the no further action letter. Thereafter, until 25 years after the recordation of the instrument, Owner may construct or install improvements on or under any Restricted Area, but only if the construction or installation does not involve excavation at a depth greater than 4 feet below the grade of the Restricted Area.

Restricted Area Depicted below.

December 3, 2004

Mr. Raymond Vose
Atlantic Richfield Company
P.O. Box 8385
La Crescenta, CA 91224-9977

**UNDERGROUND TANK PROGRAM – CASE CLOSURE
FORMER ARCO STATION NO. 510
125 EAST CALIFORNIA BOULEVARD, PASADENA (ID# 911050025)**

Dear Mr. Vose,

This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required. This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code.

You may decide to retain all or some of the existing groundwater monitoring wells for future monitoring purposes. However, if you choose to abandon the existing groundwater monitoring wells or vapor extractions wells at the subject property, you must comply with the following:

1. All wells must be properly located and abandoned.
2. Well abandonment permits and all other necessary permits must be obtained from the appropriate agencies prior to the start of work.
3. You must submit a report on the abandonment of the wells to this office by **February 3, 2005**. This report must include, at a minimum, a site map, a description of the well abandonment process, and copies of all signed permits.

California Environmental Protection Agency

Recycled Paper

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Subject: Underground Storage Tank Closure Activities at Southern California Public Radio, 474 S. Raymond Ave., in Pasadena, California

Dear Mr. Cousineau:

This letter confirms the completion of a closure project for the underground storage tank(s) formerly located at the above described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness is greatly appreciated.

Based upon information in the above referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action to the underground tank removal is required.

Additionally, while no further action is required at this time, this letter should not be viewed as a guarantee that the property is contamination-free and/or can be used without restriction. Each project proposed for this site should be evaluated to ensure that the specific project will not impact the health of workers at the site, off-site members of the community, water quality, or have other environmental impacts.

Please contact our office if you have any questions regarding this manner.

Sincerely,

Kim Nguyen
Hazardous Materials Inspector

Subject: Underground Storage Tank Closure Activities at Southern California Public Radio, 474 S. Raymond Ave., in Pasadena, California

Dear Mr. Cousineau:

This letter contains some important clarifications that you should consider in addition to the accompanying "closure" or "no further action" letter. These letters should always be filed and reviewed together in order to accurately reflect the status of this property.

The "no further action" letter indicates that you have complied with the regulatory requirements for site investigation and/or site remediation at this site, at this time. It does not indicate that the site is free from contamination. In fact, contamination is present at the site. The contamination, as it currently exists, is below the level of regulatory concern. However, if the site is excavated or subsurface work is conducted, excavated materials may be regulated and site workers may require protective equipment.

Additionally, while no further action is required relating to the contamination at this time, neither this letter nor the accompanying letter should be viewed as a guarantee that the property can be used without restriction. Each project proposed for this site should be evaluated to ensure that the specific project will not impact the health of workers at the site, off-site members of the community, water quality, or have other environmental impacts.

To restate, this letter is provided to merely clarify some issues not fully addressed in the accompanying "no further action" letter. This letter does not change the determination that no further action is required at this site, at this time.

If you have any questions, please contact this office at (626) 744-4115.

Sincerely,

Kim Nguyen
Hazardous Materials Inspector

**HAZARDOUS MATERIALS UNDERGROUND STORAGE
SITE ASSESSMENT/REMEDIAL ACTION PLAN
FACILITY LOCATION: 474 SOUTH RAYMOND AVENUE**

This office has reviewed the soil/groundwater assessment report submitted on 3/15/90 required as a part of the subject site assessment/remedial action plan. Based on the information submitted, we find that:

- ☐ The use of excavated soils is unrestricted. The site assessment/remedial action is final and no further action is required at this time.
- ☐ Excavated soils may be a hazardous waste and are not suitable for fill material or disposal on site. Contaminated soils must be manifested, transported and disposed of pursuant to Chapter 6.5, California Health and Safety Code, unless evidence is presented indicating that disposal is proper at a less restricted facility. Copies of completed manifests or other appropriate evidence indicating legal disposal must be submitted to this office before this project can be considered closed.
- ☐ The site assessment/remedial action is final and no further action is required at this time.
- ☒ Closure Permit No. 5298 is final and no further action is required at this time.
- ☐ Other _____

This letter is not intended and shall not be interpreted to indicate that this site is totally free from contamination, or that the site is appropriate for any intended future use.

Any questions regarding this matter should be directed to Byron Brown at the Pasadena Fire Department, Hazardous Materials Section, 175 North Marengo Avenue, Pasadena, CA 91101, (818) 405-4115.

KAYA K. PEKEROL
Fire Chief

RE: CITY DIRECTORY RESEARCH
465,491,503,525 & 577 South Arroyo Parkway
465 Pasadena, CA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

350-650 of South Arroyo Parkway

**REPORT OF LIMITED SUBSURFACE INVESTIGATION
511 SOUTH ARROYO PARKWAY
PASADENA, CALIFORNIA**

Dear Mr. Kutzer:

Date March 12, 2018

At your request, Ramboll US Corporation (Ramboll) has prepared this report to document the limited subsurface investigation conducted at 511 South Arroyo Parkway, Pasadena, California (herein referred to as the "site" or "property", Figures 1 and 2). It is Ramboll's understanding that the site is slated for redevelopment.

Ramboll
350 South Grand Avenue
Suite 2800
Los Angeles, CA 90071
USA

BACKGROUND

The property is located in a commercial area along Arroyo Parkway in Pasadena, California, which is slated for potential redevelopment including excavation to approximately 22 feet. A Phase I environmental site assessment (ESA) for the entire block including this property was recently completed EMG in January 2018. According to the EMG Phase I ESA, a "gasol" pump was identified in the southeastern corner of 511 South Arroyo Parkway based on Sanborn maps dated 1950 and 1970. "Gasol" is an abbreviated term for gasoline, which is used on Sanborn maps during this time period. A "gasol" pump generally consists of a fuel dispenser and most commonly a mechanical pump and nozzle.

T +1 213 943 6300
F +1 213 943 6301
www.ramboll.com

OBJECTIVE

The objective of the limited subsurface investigation was to evaluate current soil conditions in the area of the former "gasol" pump.

SCOPE OF WORK AND FINDINGS

The scope of work associated with the subsurface investigation included: 1) pre-field activities and site visit; and 2) soil sampling and analyses. A summary of the findings, data evaluation, conclusions and recommendations are presented below.

Pre-field Activities and Site Visit

As part of the pre-field activities, Ramboll performed a site visit on February 7, 2018 to confirm proposed soil sampling locations and made adjustments to proposed sampling locations as appropriate. Ramboll contracted with the appropriate

subcontractors for the planned fieldwork (utility locators, drillers, and analytical laboratory). Drilling and sampling activities were directed by Ramboll field personnel working under the supervision of a California Registered Professional Geologist.

Ramboll prepared a Site-specific Health and Safety Plan (HASP) prior to the start of work. The HASP is designed to minimize exposure of Ramboll's field personnel to potentially hazardous materials. All field personnel involved in the project conducted the field work in accordance with the HASP. Ramboll also notified Underground Service Alert (USA) 48 hours prior to the start of drilling activities to mark the locations of all major utilities in the proposed boring locations.

Soil Sampling and Analyses

On February 13, 2018, Ramboll retained Spectrum Geophysics of Chatsworth, California, a private utility locator, to conduct a geophysical survey to mark subsurface utility lines, subsurface structures, and underground obstructions during the site visit. Upon completion of the utility locating, under Ramboll oversight, Millennium Environmental, Inc. (MEI) of Anaheim, California, advanced two soil borings, designated as Borings SB-6 and SB-7¹, to a depth of approximately 20 feet below ground surface (bgs) at the locations shown on Figure 3. Prior to drilling, borings were concrete cored and hand augered to approximately five feet bgs. The initial borehole was advanced using a skid-steer-mounted direct push drilling rig; however, refusal was encountered at an approximate depth of 10 feet and this borehole was abandoned. Borings SB-6 and SB-7 were advanced using a truck mounted direct push drill rig to a total approximate depth of 20 feet.

Soil samples were collected from borings at approximate depths of 5, 10, 15, and 20 feet and submitted for chemical analysis (see below for details), and monitored for organic vapors with a photoionization detector (PID).

In accordance with USEPA Method 5035, soil samples were collected by extracting aliquots from the designated sampling sleeve using TerraCores®. Soil samples selected for other analytical methods were collected jars capped with Teflon® caps. Soil samples were analyzed for volatile organic compounds (VOCs), oxygenates and methyl-tert-butyl-ether (MTBE) by USEPA Method 8260B, total petroleum hydrocarbons (TPH)-gasoline range organics (GRO), TPH-diesel range organics (DRO), TPH-oil range organics (ORO) by USEPA Method 8015M, and lead by USEPA Method 6010. All soil samples were stored in a chilled cooler and delivered to a California state-certified laboratory under strict chain-of-custody procedures.

After the collection of soil samples, the borings were backfilled with a bentonite/cement slurry and completed to surface to match the existing surface material. Investigation derived waste consisting of soil cuttings and decontamination water were containerized in two Department of Transportation-rated 55 gallon drums and stored at a nearby site pending characterization and disposal.

Findings

During the geophysical survey, two approximately 2-inch diameter metal conduits were observed extending above ground surface in the general vicinity of the "gasol" pump (Figure 3). One conduit was located within

¹ Note that this work at this site was performed in conjunction with work on other properties, which included advancing Borings SB-1 through SB-5.

an elevated concrete pad, extended approximately three inches above the ground surface, and was backfilled with concrete. The second conduit extended approximately two inches above ground surface and was open to an approximate depth of five feet bgs. A petroleum-like odor was noted on the measuring tape used to measure the total depth of the open conduit. Finally, a subsurface metallic anomaly, suggestive of piping, was detected approximately 0.5 foot bgs and extended laterally between the two aforementioned conduits (see Figure 3).

In general, the lithology of the upper 20 feet of Borings SB-6 and SB-7 is comprised of mostly fine to coarse grain sands with silts. According to the historical environmental reports, groundwater is present in the vicinity of the site at approximately 147 feet bgs and was not encountered during this investigation. PID readings collected from soil samples ranged from 0.0 parts per million by volume (ppmv) to 3.1 ppmv at Boring SB-7 (depth of 20 feet).

Soil Analyses

A summary of analytical results are presented in Tables 1A and 1B. Complete laboratory reports are included in Attachment A and data validation is included in Attachment B. In summary:

- VOCs, TPH-GRO and TPH-DRO were not detected in soil samples.
- TPH-ORO was detected at concentrations ranging from 5.2U milligrams per kilogram (mg/kg) (Boring SB-7 at 10 feet bgs) to 6.9U mg/kg² (Boring SB-6 at 15 feet bgs). The TPH-ORO data was qualified as "U" based on the data validation (see Attachment B). The "U" qualification indicates that the analyte was analyzed for and not detected above the laboratory reporting limit. Therefore, the concentrations reported as TPH-ORO are considered non-detect.
- Lead was detected at concentrations ranging from 3.8 mg/kg at Boring SB-6 (depth of 5 and 10 feet) to 10 mg/kg at SB-7 (depth of 20 feet).

Data Evaluation

As part of the data evaluation, concentrations of lead in soil were compared to USEPA regional screening levels for chemical contaminants for residential and commercial/industrial use scenarios and background concentrations in California soils (see Table 1B). The concentrations of lead in soil are below regional screening levels for residential and commercial/industrial use scenarios and considered to be within the range of background concentrations.

CONCLUSIONS AND RECOMMENDATIONS

Ramboll understands that redevelopment plans for the site will likely include demolition of current site buildings and earthwork may include excavation to approximately 22 feet bgs for construction of the parking structure. In summary:

- No VOCs or TPH were reported in the soil samples. The concentrations of lead in soil are considered to be within the range of background conditions.
- Two metal above ground conduits were observed in the vicinity of the "gasol" pump and a petroleum-like odor was detected at the base of the conduit extending to an approximate depth of

² TPH-ORO detections were qualified as "B" by the laboratory (indicating that ORO was detected in the laboratory blank samples).

5 feet bgs. A subsurface metallic anomaly, suggestive of piping, was detected in the area between the two conduits.

Based on observations of the conduits and the subsurface metallic anomaly identified near the historic "gasol" pump described above, as a precautionary measure Ramboll recommends that the contractor takes appropriate measures prior to removing the conduits and excavating soil in that area of the site.

CLOSURE

Ramboll appreciates the opportunity to work with you on this project. If you have any questions, please contact Eddie Arslanian at 213.943.6326.

Yours sincerely,

Eddie Arslanian, PE
Principal

SB-7-5	5	2/13/2018	<0.320	<4.9	5.3 U
SB-7-10	10		<0.320	<5.0	5.2 U
SB-7-15	15		<0.340	<4.8	<4.8
SB-7-20	20		<0.290	<4.9	5.2 U

Notes:

TPH: total petroleum hydrocarbons

USEPA: United States Environmental Protection Agency

GRO: Gasoline Range Organics

DRO: Diesel Range Organics

ORO: Oil Range Organics

bgs: below ground surface

ug/kg: micrograms per kilogram

mg/kg: milligrams per kilogram

<Reporting Limit: analyte not detected above laboratory reporting limit

"U" qualification indicates that the analyte was analyzed for and not detected above the laboratory reporting limit. As a result, the concentrations reported as TPH-ORO are considered non-detect.

Samples were also analyzed for volatile organic compounds (VOCs) by USEPA Method 8260B. No VOC detections were reported above laboratory reporting limits. See Attachment A for laboratory analytical report.

Comments

This report was revised to show DRO/ORO results for EPA 8015B-extractable test. Only the results for borings SB6 and SB7 are included in this report.

Receipt

The samples were received on 2/13/2018 6:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.3° C and 2.9° C.

GC/MS VOA

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and/or precision for selected analytes in analytical batch 440-457637 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015B: The method blank for preparation batch 440-457571 and analytical batch 440-457450 contained ORO (C24-C40) above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed. The sample results for ORO (C24-C40) range should be considered possible high bias.

Method(s) 8015B: Surrogate recovery for the following 8015-DRO batch QC sample was outside control limits due to the "dark clay-like" matrix: (440-203436-H-1-A MS). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

**ATTACHMENT B
DATA VALIDATION**

Ramboll reviewed one laboratory report, dated March 6, 2018, by TestAmerica for the 1690006935 project. The report contains analytical data for soil and field quality control (QC) samples collected on February 13, 2018. All samples were analyzed for Volatile Organic Compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260B, for Gasoline Range Organics (GRO) and Diesel Range Organics/Oil Range Organics (DRO/ORO) by USEPA Method 8015B, and for lead by USEPA Method 6010B.

Ramboll's validation review was based on procedures published by the USEPA Contract Laboratory Program in their National Functional Guidelines for both organic and inorganic data review (USEPA 2017). The guidelines provide the criteria to review laboratory and field quality control information and attach the appropriate data qualifiers to the laboratory data. The QC information checked by Ramboll included chain-of-custody (COC) forms, holding times, reporting limits, matrix spike/matrix spike duplicate (MS/MSD) analyses, laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses, surrogate recoveries, duplicates, and blanks.

Ramboll noted the following findings based on our review:

- The laboratory noted that this report was revised to show only the results for borings SB6 and SB7, and include the DRO/ORO results for EPA 8015B-extractable test. Samples SB-1 through SB-5, although present on the COC, will be reported separately. No data qualification is necessary.

VOCs

- For the Method 8260B MS/MSD analysis, the laboratory noted that the Percent Recovery (%R) value for 1,1,2,2-tetrachloroethane (1,1,2,2-PCA) was below the lower acceptable laboratory limit of 40%, at 14% (MS) and 4% (MSD) in analytical batch 457637. The Relative Percent Difference (RPD) limit exceeded the acceptable laboratory limit of 30%, at 119%. The laboratory noted that sample matrix interference is suspected because the associated LCS %R value was acceptable. Because 1,1,2,2-PCA was not detected above the reporting limit in the associated samples, the results for this analyte are "R"-qualified (results unusable).
- For the Method 8260B analysis, the laboratory noted that the MS/MSD %R value for trichloroethene (TCE) exceeded the upper acceptable laboratory limit of 140%, at 174% (MS) and 191% (MSD) in analytical batch 457637. The laboratory noted that sample matrix interference is suspected because the associated LCS recovery was acceptable. Because TCE was not detected above the reporting limit in the associated samples, no data qualification is necessary.
- For the Method 8015 analysis, the laboratory noted that ORO (C24-C40) was reported in the method blank in preparation batch 457571 at 5.11 mg/kg. The EPA Guidelines state that any reported concentration less than ten times the reported concentration in an associated blank (in this case, any concentrations less than 10 x 5.11 mg/kg, or 51.1 mg/kg) should be qualified as not detected. Because ORO was not detected above the reporting limit or was detected above the reporting limit in the associated samples but at less than 51.1 mg/kg, the results for ORO in Samples SB-6-15, SB-6-20, SB-7-5, SB-7-10, SB-7-20 are "U"-qualified (analyte was analyzed for, but not detected above the reporting limit).
- For the Method 8015-DRO analysis, the laboratory noted that the MS %R value for the surrogate n-octacosane in preparation batch 457571 was below the lower acceptable laboratory limit of 40%, at 37%. The laboratory noted that evidence of matrix interference is present due to the "dark clay-like" matrix and re-extraction and/or re-analysis was not performed. Because surrogate %R values were acceptable in the individual analytical samples, no data qualification is necessary.

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violations

Violation Date: 9/6/2017
Violation Division: Pasadena Fire Department
Violation Program: HMRRP
Violation Source: CERS
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 10/18/2017.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Evaluations

Eval Date: 9/6/2017
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Pasadena Fire Department
Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

; Note: data in [EVAL Notes] field for some records is truncated from the source.

Gen Status Universe: Conditionally Exempt Small Quantity Generator
Contact Name: ROY FEINBERG
Contact Address: 2201 , ALTON PARKWAY , , IRVINE , CA, 92606 , US
Contact Phone No and Ext: 949-442-2326
Contact Email: FEINBERGR@ROGERSON.COM
Contact Country: US
County Name: LOS ANGELES
EPA Region: 09
Land Type: Private
Receive Date: 20180302

Violation/Evaluation Summary

Note: NO RECORDS: As of Dec 2018, there are no Compliance Monitoring and Enforcement (violation) records associated with this facility (EPA ID).

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner Exemption: No
Furnace Exemption: No
Underground Injection Activity: No
Commercial TSD: No
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: No
Used Oil Burner: No
Used Oil Market Burner: No
Used Oil Spec Marketer: No

Hazardous Waste Handler Details

CYANIDE (FREE), METALS, UNCATEGORIZED

Site History:

In the early 1900's this 2.4 acre site was used by the gas company for the production of manufactured gas which is made from coal and oil. The former gas plant property is presently occupied by several industrial and warehouse structures. Byproduct residues have been found in soils at this former gas plant site. PAH's and heavy metals such as lead and arsenic were found at this site. In January 2006 a removal action was completed at the site.

Document Type:					Site Screening	
Date Completed:					4/6/1992	
Comments:					The site consists of 2.4 acres. The former gas plant prop- erty is presently occupied by several industrial and warehousing concerns. The surrounding area is fully developed and occuipied by commercial and industrial uses. Black discolored soil was noted in the 1966 Site Recon- naissance. In the early 1900s, the site was used by gas companies for the production of 'manufactured gas,' made from coal and oil. The byproducts from this operation were tars, oils, sludges, lampblack, etc, which were sold for various industrial uses. Some of these byproduct residues have been found in soils at former towne gas plant sites. Out of these, polycyclic aromatic hydrocarbons (PAH) are hazardous. Also, elevated levels of heavy metals such as lead, arsenic, and cyanides were found at a few sites. A PEA is required at the site to determine if any emergency removal aciton is required to reduce the potential threat to public health & the environment. The Dept received a Notice of Intent dated March 20, 1992, to initiate the PEA.

Comments:		Remedial Action Completion report approved for all three parcels. Parcel 815 has been remediated to unrestricted land use standards. For Parcels 835 and 859 the accessible areas have been remediated to unrestricted land use standards however there remains some contamination beneath the existing structures. This contamination will be remediated at a later time when those soils become accessible. Institutional controls will be utilized for the remaining contamination at these two parcels to prevent inappropriate land uses.

Site History:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

In the early 1900's this 2.4 acre site was used by the gas company for the production of manufactured gas which is made from coal and oil. The former gas plant property is presently occupied by several industrial and warehouse structures. Byproduct residues have been found in soils at this former gas plant site. PAH's and heavy metals such as lead and arsenic were found at this site. In January 2006 a removal action was completed at the site.

Comments:		Remedial Action Completion report approved for all three parcels. Parcel 815 has been remediated to unrestricted land use standards. For Parcels 835 and 859 the accessible areas have been remediated to unrestricted land use standards however there remains some contamination beneath the existing structures. This contamination will be remediated at a later time when those soils become accessible. Institutional controls will be utilized for the remaining contamination at these two parcels to prevent inappropriate land uses.

Document Type:		Site Screening				
Date Completed:		4/6/1992				
Comments:		The site consists of 2.4 acres. The former gas plant prop- erty is presently occupied by several industrial and warehousing concerns. The surrounding area is fully developed and occuipied by commercial and industrial uses. Black discolored soil was noted in the 1966 Site Recon- naissance. In the early 1900s, the site was used by gas companies for the production of 'manufactured gas,' made from coal and oil. The byproducts from this operation were tars, oils, sludges, lampblack, etc, which were sold for various industrial uses. Some of these byproduct residues have been found in soils at former towne gas plant sites. Out of these, polycyclic aromatic hydrocarbons (PAH) are hazardous. Also, elevated levels of heavy metals such as lead, arsenic, and cyanides were found at a few sites. A PEA is required at the site to determine if any emergency removal aciton is required to reduce the potential threat to public health & the environment. The Dept received a Notice of Intent dated March 20, 1992, to initiate the PEA.

Potential Contaminant of Concern:						

CHROMIUM III, CHROMIUM VI, TETRACHLOROETHYLENE (PCE), TRICHLOROETHYLENE (TCE)

Site History:

Site History: Monitor Polishing and Plating, Inc. has been operating at the site for over 25 years anodizing and electroplating metals such as copper, brass, nickel, cadmium, chrome and tin. Established as a plating shop when environmental regulations were almost non-existent. Like most old plating operations Monitor Polishing and Plating did not concern itself with equipment set-up nor with the discharge of liquids onto the shop floor which drained directly into the shop's clarifier.

As regulatory standards and requirements has increased steadily thru the years, the shop has changed practices. Secondary containment was provided around plating, chemical and rinse tanks in addition to FVC tank liners. Electrical heaters were used instead of gas burners. The plating tanks were reconfigured so that the tanks were in line and always with a holding or rinse tank or both located next to the plating tank.

Pasadena City Fire Dept. provided the following information regarding the site history. Mr. James N. Nelson was living at 390 South Pasadena in April 1940 and had been cited by police for burning out of hours. In response, he later came to the city's offices and requested a new permit for a concrete incinerator. On May 4, 1951 a fire occurred on the property and twelve days later a citation was issued to remove rubbish. On January 21, 1960, an inspection was conducted on the site for an operational junkyard. The business was cited for bad electrical wiring, combustible rubbish, rat harborage, and a fence in need of repair. By December 6, 1977, the junkyard had already been replaced by a metal plating shop. A notice was issued to remove flammable liquids and discontinue a spray booth. In May of 1987, the first hazardous materials permit was issued for the site.

The site has been in use as a metal-plating facility for more than 25 years. Since being purchased by the owners in 1994, the site has undergone a number of improvements. During the upgrades, three areas of concern (AOCs) were identified within the facility building. Two AOCs were areas where the concrete floor was found to be etched from past solution releases. Water-based solutions of sulfuric acid and caustic soda were used in one of these areas, and nickel, chrome, cadmium, and copper metal solutions were used in the plating process in the other area. A third AOC was identified in the vicinity of the cyanide destruction unit and a lacquer spray booth.

On April 9, 2002 a fire incident occurred resulting in a total loss of business. Fire Department responded to the incident. All chemicals and debris were contained and manifested to be disposed at an offsite Facility. In 2002, the property was sold to the current owner. A Phase I Environmental Assessment verification inspection was conducted at the site on March 25, 2003. Four areas of concern were observed. On January 14, 2004 DTSC issued a draft Corrective Action Consent Agreement to RP for signature. On May 20, 2004 DTSC responded to a letter from the RP stating that the property does not have any environmental problems. DTSC concluded after review of a report by Black Rock Geosciences that a risk assessment is required and sent a draft Corrective Action Consent Agreement to the RP for signature.

On September 24, 2004 DTSC conducted a meeting with the company representative, attorney, consultant, DTSC OLC and TPCAB Branch Chief to discuss issues and concerns regarding the recent investigation, subcontractors, insurances coverage, owner and operator, subsurface contamination (metals and VOCs- PCE, TCA, TCE, DCE & xylene) at the site. On September 29, 2004 DTSC conducted a meeting with the Principal and Director of the School located next to the site. Purpose of the meeting was to inform the school regarding the issues and concerns at the site and conduct a walk through of the school. On October 1, 2004 DTSC collected Indoor Air Samples to find out if there is any impact of near by site on the school.

Groundwater Contamination is present beneath the site, but it is not known at this time if the release from Monitor the source or has contributed to the groundwater contamination.

Project Description: Phase 1 Assessment, soil vapor extraction system installed and operated.

On May 16, 2014, Monitor submitted the Soil Vapor Assessment Report. The Report concluded that the likelihood of vapor intrusion of VOCs into the proposed warehouse building at concentrations that may present an unacceptable health risk appears to be low and proposed warehouse building design that would further reduce the risk: installation of a minimum 10 millimeter thick multi-layer polyolefin resin plastic vapor barrier between the refurbished concrete slab and a second 6-inch thick concrete slab; building height will be 30 feet; and building would also utilize numerous vented skylights as part of the design. DTSC concurred with the Report conclusions and approved the Report provided Monitor Plating complies with the enclosed comments during future activities and/or submittals. DTSC also notified as follows:

1. Pursuant to the CACA, the next step in the corrective action process is submittal of an Interim Measure Proposal (IMP). The purpose of the IMP is to present the measures proposed in the Report for public review and comment. The IMP process includes public participation activities and compliance with the California Environmental Quality Act (CEQA) requirements. At the end of the public comment period, DTSC will modify and/or approve the IMP.
2. A land use covenant (LUC) should be placed on the property restricting the use of the property for industrial/commercial. The LUC should be signed by the current property owners and DTSC, and recorded with the County of Los Angeles.
3. An operation and maintenance agreement should be signed with DTSC and a proper financial assurance mechanism should be in place.
4. In order to close the data gaps, off-site soil vapor investigation needs to be completed. Further soil vapor samples need to be collected from the adjacent property south of Monitor Polishing. If further investigation reveals that the neighboring property is impacted, then mitigation measures should be implemented according to DTSC standards and guidelines.
5. The existing vapor extraction wells should be accessible for future extractions if necessary.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

6. Selected vapor probes and the groundwater monitoring wells should be protected during construction and placed in flush-mounted well boxes within the final concrete slab for future sampling.

7. Groundwater investigation is required to determine whether the site has impacted groundwater. If groundwater investigation shows significant impact from the Site to the underlying groundwater, then corrective measure for groundwater would be necessary.

8. If the planned groundwater investigation shows significant impact from the Site to the down-gradient groundwater, Soil vapor extraction (SVE) would be necessary to address on-site VOC source in soil.

As of March 11, 2015, the DTSC and the RP have not reached an agreement on payment of DTSC's oversight. This project is pending the resolution of payment issue.

The request for PPS supported is cancelled by the PM on April 24, 2015 after a conversation with Maya Akula, explaining that the project is currently on suspend.

Site History:

Site Description according to RFA dated 08/18/1991- The Monitor Polishing and Plating (Monitor) site is located on a parcel of land at 390 South Pasadena Avenue in Pasadena, California. A second non-contiguous parcel of land on the same block with an address ,of 166 Vaverly Drive is also being considered as part of the site. The site covers less than 1 acre in a commercial and residential area.

The site consists of two buildings separated by a privately owned property. Plating and polishing facilities are located at 390 South Pasadena Avenue; a painting facility, the office, and building supplies are located at 166 Vaverly Drive. The property on South Pasadena Avenue is owned by Mr. Robert Ingrassita and the property located at Vaverly Drive is owned by Mr. Richard Hard.

This facility electroplates the following metals: cadmium, brass, chrome, copper, nickel and tin. Aluminum anodizing, spray painting, and polishing are also part of facility operations. The majority of electroplating is done for industrial parts for a variety of industries.

3/26/2018 update--This facility submitted a Part A on 12/1/1980 and was issued an ISD on 8/30/1983. The facility requested a variance from permitting requirements both on 4/19/84 and 2/3/87 but were denied. EPA requested a Part B on 4/29/1988. As of 4/1991, Monitor Polishing has not submitted a Part B. On 08/24/2006, the facility entered into a Corrective Action Consent Agreement with DTSC. As of now, the corrective action still has not been completed.

4/25/2018- Previous Project Manager, Shahir Hadid, confirmed that the facility is inactive and the current owner does not plan to proceed. However, cleanup work is not entirely done so this facility is still undergoing closure.

DIOXIN (AS 2,3,7,8-TCDD TEQ)						
Site History:						
The Site is located at he southeast corner of the intersection of South Fair Oaks Avenue and East Glenarm Street in Pasadena. The Site was first developed in the early 20th century with the existing warehouse building in it southwest corner the Site currently contains an inactive oil and natural gas-fired electric generating station used by the Pasadena Water and Power Department from 1906 through 1977.						
City of Pasadena is responsible for supplying electricity to its residents. Pasadena will install a new electric generating unit (GT-5 Combined Cycle Installation)to replace the oldest unit on the Site. Back in the 1940's the City of Pasadena operated a municipal incinerator in the Broadway Facility until it was demolished in 1966. The former incinerator site is now the site of the gas compressor for one of the generating unit. The project site is located about 500 feet away from the former incinerator site. The California Union for Reliable Energy (CURE) and the City of Pasadena will be doing the investigation via a Project Labor Agreement (PLA). The City of Pasadena has agreed to consider the use of PLA and entered into an Environmental Settlement Agreement with CURE to do the dioxin testing. City of Pasadena, Department of Water and Power and DTSC have entered into a Voluntary Cleanup Agreement for DTSC to Provide oversight on the focused dioxin sampling Workplan, investigation and report for the GT-5 Combined Cycle Installation (Repowering project) site that is approximately 500 feet away from the former municipal incinerator. If appropriate, DTSC will issue a "No						

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

Further Action" letter for the Site.

The City of Pasadena, Department of Water and Power and DTSC entered into a Voluntary Cleanup Agreement October 28, 2013 for DTSC to oversee the Dioxin investigation at the site. After the investigation was completed, DTSC reviewed the Limited Soil Sampling and Analysis for Dioxin Report and issues a No Further Action Required letter with regard to Dioxin investigation on March 5, 2013.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Dec 12, 2018

National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Dec 12, 2018

Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Dec 12, 2018

SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Nov 14, 2018

Inventory of Open Dumps, June 1985:

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Nov 14, 2018

Comprehensive Environmental Response, Compensation and Liability Information System -

CERCLIS

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Dec 17, 2018

RCRA non-CORRACTS TSD Facilities:

RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Dec 17, 2018

RCRA Generator List:

RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Dec 17, 2018

RCRA Small Quantity Generators List:

RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Dec 17, 2018

RCRA Conditionally Exempt Small Quantity Generators List:[RCRA CESQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

Government Publication Date: Dec 17, 2018

RCRA Non-Generators:[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Dec 17, 2018

Federal Engineering Controls-ECs:[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 20, 2016

Federal Institutional Controls- ICs:[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Jan 20, 2016

Emergency Response Notification System:[ERNS 1982 TO 1986](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:[ERNS 1987 TO 1989](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:[ERNS](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Sep 24, 2018

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:[FED BROWNFIELDS](#)

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 11, 2019

FEMA Underground Storage Tank Listing:[FEMA UST](#)

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

LIEN on Property:

SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Nov 14, 2018

Superfund Decision Documents:

SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Nov 14, 2018

State**State Response Sites:**

RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Dec 20, 2018

EnviroStor Database:

ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Dec 20, 2018

Delisted State Response Sites:

DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Dec 20, 2018

Solid Waste Information System (SWIS):

SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Feb 11, 2019

EnviroStor Hazardous Waste Facilities:

HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Dec 20, 2018

Land Disposal Sites:

LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Nov 30, 2018

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report:

SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Leaking Underground Fuel Tank Reports:

LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Delisted Leaking Storage Tanks:

[DELISTED LST](#)

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Nov 30, 2018

Permitted Underground Storage Tank (UST) in GeoTracker:

[UST](#)

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Nov 30, 2018

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels:

[SWRCB SWF](#)

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Proposed Closure of Underground Storage Tank Cases:

[UST CLOSURE](#)

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Dec 11, 2018

Historical Hazardous Substance Storage Information Database:

[HHSS](#)

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Aboveground Storage Tanks:

[AST](#)

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

Delisted Storage Tanks:

[DELISTED TNK](#)

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Nov 30, 2018

California Environmental Reporting System (CERS) Tanks:

[CERS TANK](#)

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Nov 29, 2018

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions:

[LUR](#)

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Dec 20, 2018

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions:

[HLUR](#)

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Deed Restrictions and Land Use Restrictions:

[DEED](#)

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 30, 2018

Voluntary Cleanup Program:

[VCP](#)

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Dec 20, 2018

GeoTracker Cleanup Sites Data:

[CLEANUP SITES](#)

A list of cleanup sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Nov 30, 2018

Delisted California Environmental Reporting System (CERS) Tanks:

[DELISTED CTNK](#)

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Nov 29, 2018

Historical Hazardous Substance Storage Container Information - Facility Summary:

[HIST TANK](#)

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in the 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands:

[INDIAN LUST](#)

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Dec 31, 2017

Underground Storage Tanks (USTs) on Indian Lands:

[INDIAN UST](#)

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Dec 31, 2017

Delisted Tribal Leaking Storage Tanks:

[DELISTED ILST](#)

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

Delisted Tribal Underground Storage Tanks:

[DELISTED IUST](#)

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

County

Delisted County Records:

[DELISTED COUNTY](#)

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Los Angeles County - Burbank City CUPA List:

[BURBANK CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Burbank. This list is made available by the City of Burbank Fire Department.

Government Publication Date: Feb 4, 2019

Los Angeles County - El Segundo City Underground Storage Tanks List:

[UST ELSEGUNDO](#)

List of registered Underground Storage Tanks (USTs) in the City of El Segundo of Los Angeles County, made available by El Segundo City Fire Department.

Government Publication Date: Jan 17, 2017

Los Angeles County - Santa Fe Springs Underground Storage Tank:

[UST SANTAFESP](#)

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Fe Springs. This list is made available by Santa Fe Springs Department of Fire-Rescue.

Government Publication Date: Jun 30, 2017

Los Angeles County - Santa Monica City Aboveground Storage Tank List:

[SANTAMON AST](#)

List of registered Aboveground Storage Tanks (ASTs) made available by the Santa Monica Fire Department in the City of Santa Monica of Los Angeles County, California.

Government Publication Date: Aug 21, 2018

Los Angeles County - Santa Monica City CUPA Facilities List:

[SANTAMON CUPA](#)

The Santa Monica Fire Department's office maintains a list of CUPA Facilities located in Santa Monica city.

Government Publication Date: Aug 21, 2018

Los Angeles County - Santa Monica City Underground Storage Tank List:

[UST SANTA MONICA](#)

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Monica made available by Santa Monica Fire Prevention Division.

Government Publication Date: Nov 21, 2018

Los Angeles County - Torrance City Underground Storage Tanks:

[UST TORRANCE](#)

A list of registered Underground Storage Tank (UST) sites in Torrance City of Los Angeles County. This list is made available by Torrance City Office of Clerk.

Government Publication Date: Oct 2, 2018

Los Angeles County - Vernon City CUPA List:

[VERNON CUPA](#)

The Vernon City Fire Department's office maintains a list of CUPA Facilities located in Vernon city.

Government Publication Date: Oct 23, 2018

Los Angeles County - Vernon City UST List:

[UST VERNON](#)

A list of Underground Storage Tanks (UST) in Vernon City provided by the Vernon City Fire Department.

Government Publication Date: Jan 16, 2019

Los Angeles County - HMS List:

[LA HMS](#)

List of sites in the Los Angeles County Department of Public Works Hazardous Materials System (HMS) Database which have or have had permits for Industrial Waste, Underground Storage Tanks, or Stormwater in the county of Los Angeles.

Government Publication Date: Dec 12, 2018

Los Angeles County - Long Beach UST List:

[UST LONGB](#)

List of registered Underground Storage Tanks (USTs) in the City of Long Beach, Los Angeles County, made available by the Long Beach Certified Unified Program Agency (CUPA). The Long Beach CUPA operates under oversight shared by the Long Beach Fire Department and Health Department.

Government Publication Date: Jul 9, 2018

Los Angeles County - Solid Waste Sites:

[LA SWF](#)

List of permitted solid waste facilities, closed landfills, historical dumpsites and other solid waste sites in Los Angeles County, made available by the Department of Public Works in Los Angeles County.

Orange County - Anaheim City UST Cleanup Cases:

UST CLEANUP

A list of UST Cleanup Cases in the City of Anaheim in Orange County. As part of its Groundwater Protection Program, the City of Anaheim managed the UST Cleanup Oversight Program from April 1991 to June 2014. This list is published by the City of Anaheim Underground Storage Tank Cleanup Program.

Government Publication Date: May 26, 2015

San Francisco County - Maher Ordinance:

MAHER SF

List of development projects that are located on sites with known or suspected soil and/or groundwater contamination are subject to the provisions of Health Code Article 22A, which is administered by the San Francisco County Department of Public Health (DPH).

Government Publication Date: Jan 23, 2019

Los Angeles County - City of Los Angeles UST List:

UST LA CITY

A list of active and inactive underground storage tank facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jan 1, 2019

Los Angeles County - City of Los Angeles AST List:

AST LA CITY

A list of active and inactive above ground petroleum storage tanks made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jan 1, 2019

Los Angeles County - City of Los Angeles Hazardous Materials Facilities:

LA CITY HAZMAT

A list of active and inactive hazardous materials facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jan 1, 2019

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index:

FINDS/FRS

The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.

Government Publication Date: Oct 17, 2018

Toxics Release Inventory (TRI) Program:

TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Dec 31, 2017

Hazardous Materials Information Reporting System:

HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: May 23, 2018

National Clandestine Drug Labs:

NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Jul 18, 2018

Toxic Substances Control Act:

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Jun 30, 2017

Hist TSCA:

[HIST TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

[FTTS ADMIN](#)

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

[PRP](#)

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Dec 20, 2018

State Coalition for Remediation of Drycleaners Listing:

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 29, 2018

Delisted Drycleaner Facilities:

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 29, 2018

Formerly Used Defense Sites:

FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Oct 23, 2018

Material Licensing Tracking System (MLTS):

MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Nov 1, 2018

Historic Material Licensing Tracking System (MLTS) sites:

HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Jan 30, 2018

Alternative Fueling Stations:

ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jan 15, 2019

Registered Pesticide Establishments:

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 1, 2018

Polychlorinated Biphenyl (PCB) Notifiers:

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Sep 14, 2018

State**Dry Cleaning Facilities:**

DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Jan 18, 2019

Delisted Drycleaners:

DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Jan 18, 2019

Non-Toxic Dry Cleaning Incentive Program:

DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Hazardous Waste and Substances Site List - Site Cleanup:

HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Dec 4, 2018

List of Hazardous Waste Facilities Subject to Corrective Action:

DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement:

INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Oct 2, 2018

School Property Evaluation Program Sites:

SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Dec 20, 2018

California Hazardous Material Incident Report System (CHMIRS):

CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jun 19, 2018

Hazardous Waste Manifest Data:

HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical California Hazardous Material Incident Report System (CHMIRS):

HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Historical Hazardous Waste Manifest Data:

HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

Historical Cortese List:

HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders:

CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites:

[CERS HAZ](#)

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Nov 29, 2018

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites:

[DELISTED HAZ](#)

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Waste Discharge Requirements:

[WASTE DISCHG](#)

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 30, 2018

Toxic Pollutant Emissions Facilities:

[EMISSIONS](#)

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2016

Clandestine Drug Lab Sites:

[CDL](#)

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/ clandestine drug laboratories.

Government Publication Date: Dec 31, 2017

Tribal

No Tribal additional environmental record sources available for this State.

County

Los Angeles County - Site Mitigation List:

[LA SML](#)

A Site Mitigation List in the County of Los Angeles. The list is made available by Los Angeles County Fire Department. Site mitigation is handled by the Site Mitigation Unit (SMU) which facilitates completion of site clean-up projects of contaminated sites in an expeditious manner in all cities of the Los Angeles County except El Segundo, Glendale, Long Beach, Santa Fe Springs, and Vernon.

Government Publication Date: Jan 9, 2019

Los Angeles County - Santa Monica City Hazardous Materials Facilities:

[SANTAMON HAZ](#)

A list of Hazardous Materials Facilities in the City of Santa Monica, Los Angeles county. This list is made available by Santa Monica Fire Prevention Division which has been designated as the CUPA for the City.

Government Publication Date: Aug 21, 2018

Los Angeles County - Santa Monica City Hazardous Waste Facilities:

[SANTAMON HW](#)

A list of Hazardous Waste Facilities in Los Angeles County, City of Santa Monica. This list is made available by Santa Monica Fire Prevention Division.

Government Publication Date: Aug 21, 2018

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Property Information

Order Number: 20190215102p
Date Completed: February 16, 2019
Project Number: 136895.19R000-001.135
Project Property: 465,491,503,525 & 577 South Arroyo Parkway
465 Pasadena CA 91105

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information

Current USGS Topo

Quadrangle(s): Los Angeles, CA; Pasadena, CA

Source: USGS 7.5 Minute Topographic Map

Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

Topographic information at project property:

Elevation: 793.55 ft
Slope Direction: S

Hydrologic Information

Wetland

This map shows wetland existence using data from US Fish & Wildlife. Data coverage is shown to the right. Gray indicates no data available in the area.

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *LOS ANGELES* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L

Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L

Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *LOS ANGELES* County

No Measures/Homes:	69
Geometric Mean:	0.4
Arithmetic Mean:	0.7
Median:	0.5
Standard Deviation:	1
Maximum:	5.6
% >4 pCi/L:	1
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the EPA/State Residential Radon Survey of California conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SDWIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells

OGW

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of

Appendix

Oil, Gas and Geothermal Resources.

Public Water Supply Wells

PWSW

List of community water supply wells in California. This data was made available by California Department of Water Resources, Division of Statewide Integrated Water Management, who indicates that the management of the data in an ongoing project, and some county data is not represented. Location information is provided using the Public Land Survey System (PLSS) and is subject to the accuracy limitations inherent to the PLSS system.

Water Wells

WATER WELLS

A list of water wells maintained by the Department of Water Resources (DWR) Water Data Library.

Well Investigation Program Case List

WIP

The Well Investigation Program (WIP) was developed by the State Water Resources Control Board (SWRCB) to locate, assess and remediate sources of solvent contamination impacting drinking water wells. This list contains WIP cases (active and historical) for the San Gabriel and San Fernando Valley area and was provided by the Los Angeles Regional Water Quality Control Board.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Appendix I: Key Personnel Resumes

Kelly Hoover

Senior Environmental Consultant

Education

BS, Animal Biology, University of Glasgow

Project Experience

Phase I Environmental Site Assessments, Nationwide, Environmental

- Ms. Hoover had been performing, writing and reviewing Phase I Environmental Site Assessments for various types of national and international properties for over 14 years. Ms. Hoover has also been performing various other environmental assessments such as asbestos surveys, mold assessments and indoor air quality assessments for over 16 years.

Portfolio Management, Various, Environmental

- Ms. Hoover has managed over 40 Phase I Environmental Site Assessment portfolios, including large scale portfolios, nursing home properties, industrial facilities, gas stations, hotels, retail properties, self-storage facilities, multi-family residential properties, and department stores. Ms. Hoover has managed portfolios within the United States, Canada and the United Kingdom since joining EMG in 2014.

Gas Station Portfolio, Nationwide, Environmental

- Ms. Hoover managed a Phase I ESA portfolio of 717 retail fueling stations located throughout multiple states. The properties included gasoline filling stations with convenience stores, highway rest stop facilities and auto repair/service stations using a report format specifically developed to meet the Client's Scope of Work. Under Ms. Hoover's leadership, EMG's thorough and timely work facilitated the smooth completion of a multi-million-dollar transaction, completing the work ahead of schedule.

Hotel Portfolio, Nationwide, Environmental

- Ms. Hoover managed a portfolio of over 300 hotel properties throughout the United States. The assessments included observations of the facilities, review of previous assessment reports, review of regulatory records, interviews with property staff and research of municipal records. Ms. Hoover provided technical guidance to the team, report reviews, management of the schedule and deliverable targets, with all reports completed within two months of engagement.

Project Experience Cont.

Industrial Development, Deland, Florida, Environmental

- Ms. Hoover performed a Phase I Environmental Site Assessment of a 47.70 acre industrial facility that was constructed in phases between 1971 and 2002. Previous occupants had included an aluminum fence manufacturing company, and a defense related manufacturing facility, which developed ultra-lightweight camouflage nets, chemical and biological warfare alarms and detectors, carbon fiber resin reinforced aircraft components, and equipment/ordnance components.

Marina Property, Key West, Florida, Environmental

- Ms. Hoover performed a Phase I Environmental Site Assessment of a former marina in Key West, Florida as part of the refinance of the property. During review of regulatory files, Ms. Hoover identified that the Project was listed as a Leaking Underground Storage Tank (LUST) site; however, through file review determined that the LUST case had been attributed to the wrong property in error. Ms. Hoover was able to resolve the discrepancy with the regulators, which led to the release being rescinded and the case was closed prior to foreclosure.

Project Experience

School District Portfolio; Orange County, CA – As a Project Manager, Ms. Schulz performed assessments of multiple schools covering over 200+/- acres and 80+/- structures. Ms. Schulz performed environmental assessments, environmental audits, various NEPA reports, assessed condition of the building structures and systems and developed thorough reports. Ms. Schulz also developed Phase II recommendations, including scopes of works and work plans related to subsurface investigations. Ms. Schulz' work help complete this project on schedule and within the budget

Hotel Portfolio; Various Cities, CA, OR, WA, ID – Ms. Schulz served as the Project Manager and performed environmental assessments on multiple hotel sites as part of a portfolio. Her observations were critical in assisting the client in their final business decision.

Assisted Living Portfolio; Various Cities, CA, NV, UT, TX, AL – As a Project Manager, Ms. Schulz performed environmental assessments on various assisted living facilities across the United States. Ms. Schulz' involvement in this portfolio was crucial to the decision-making process of the client by providing the necessary information to negotiate the purchase of these properties.

REGIONAL LOCATION

Portland, OR

Project Experience Cont.

Retail/Commercial Strip Center; Whittier, CA – As a Project Manager, Ms. Schulz performed an environmental assessment on a retail/commercial strip center containing both current and former service stations and current and former dry cleaning operations. Ms. Schulz also developed and implemented Phase II recommendations and agency file reviews at the appropriate federal, state and local regulatory agencies. Additionally, Ms. Schulz assisted in the development, review and submittal of a closure request/reports to these agencies.

Multiple Dry Cleaners, Various Cities, CA, AZ, NV – As a Project Manager, Ms. Schulz performed environmental assessments on multiple current and former dry cleaning facilities across several states. Additionally, Ms. Schulz both developed work plans and conducted Phase II subsurface investigations and submitted of closure reports and formal requests to appropriate regulatory agencies.

Multiple Service Stations, Various Cities, CA, AZ, NV – As a Project Manager, Ms. Schulz performed environmental assessments on multiple current and former service station facilities across several states and both developed work plans and conducted Phase II subsurface investigations. Additionally, Ms. Schulz supervised underground storage tank removals and managed the applicable regulatory closure processes including the development and submittal of closure reports and formal requests to appropriate regulatory agencies.

I. Study Objective

This report analyzed the impact the development will have on the City transportation system by estimating incremental changes in vehicle miles traveled (VMT) per capita, vehicle trips per capita (VT), the project impact on service population proximity access to transit and bike facilities, and walk accessibility score.

II. Project Description

The City of Pasadena Department of Transportation reviewed the application of a Planned Development and a variance for preserving two existing historic resources for a project involving the demolition of approximately 46,000 sf commercial and the construction of 151,000 sf medical office, 3,000 sf commercial, 184,376 sf senior living facility with 95 independent living units, 85,800 sf assisted living, 5,882 sf restaurant, and subterranean parking.

Figure 1 depicts the project's site plan. Two driveways are located along Arroyo Parkway, and one driveway is located along California Boulevard.

III. Existing Transportation Network

Street System Classifications

Raymond Avenue is a north/south **Neighborhood Connector** between Corson Street to Del Mar Boulevard, and a **City Connector** between Del Mar Boulevard to Glenarm Street. Raymond Avenue does not have bike lanes south of Maple Street. It has a speed limit of 35 mph between California Boulevard and Glenarm Street, and 30 mph between California Boulevard and Green Street.

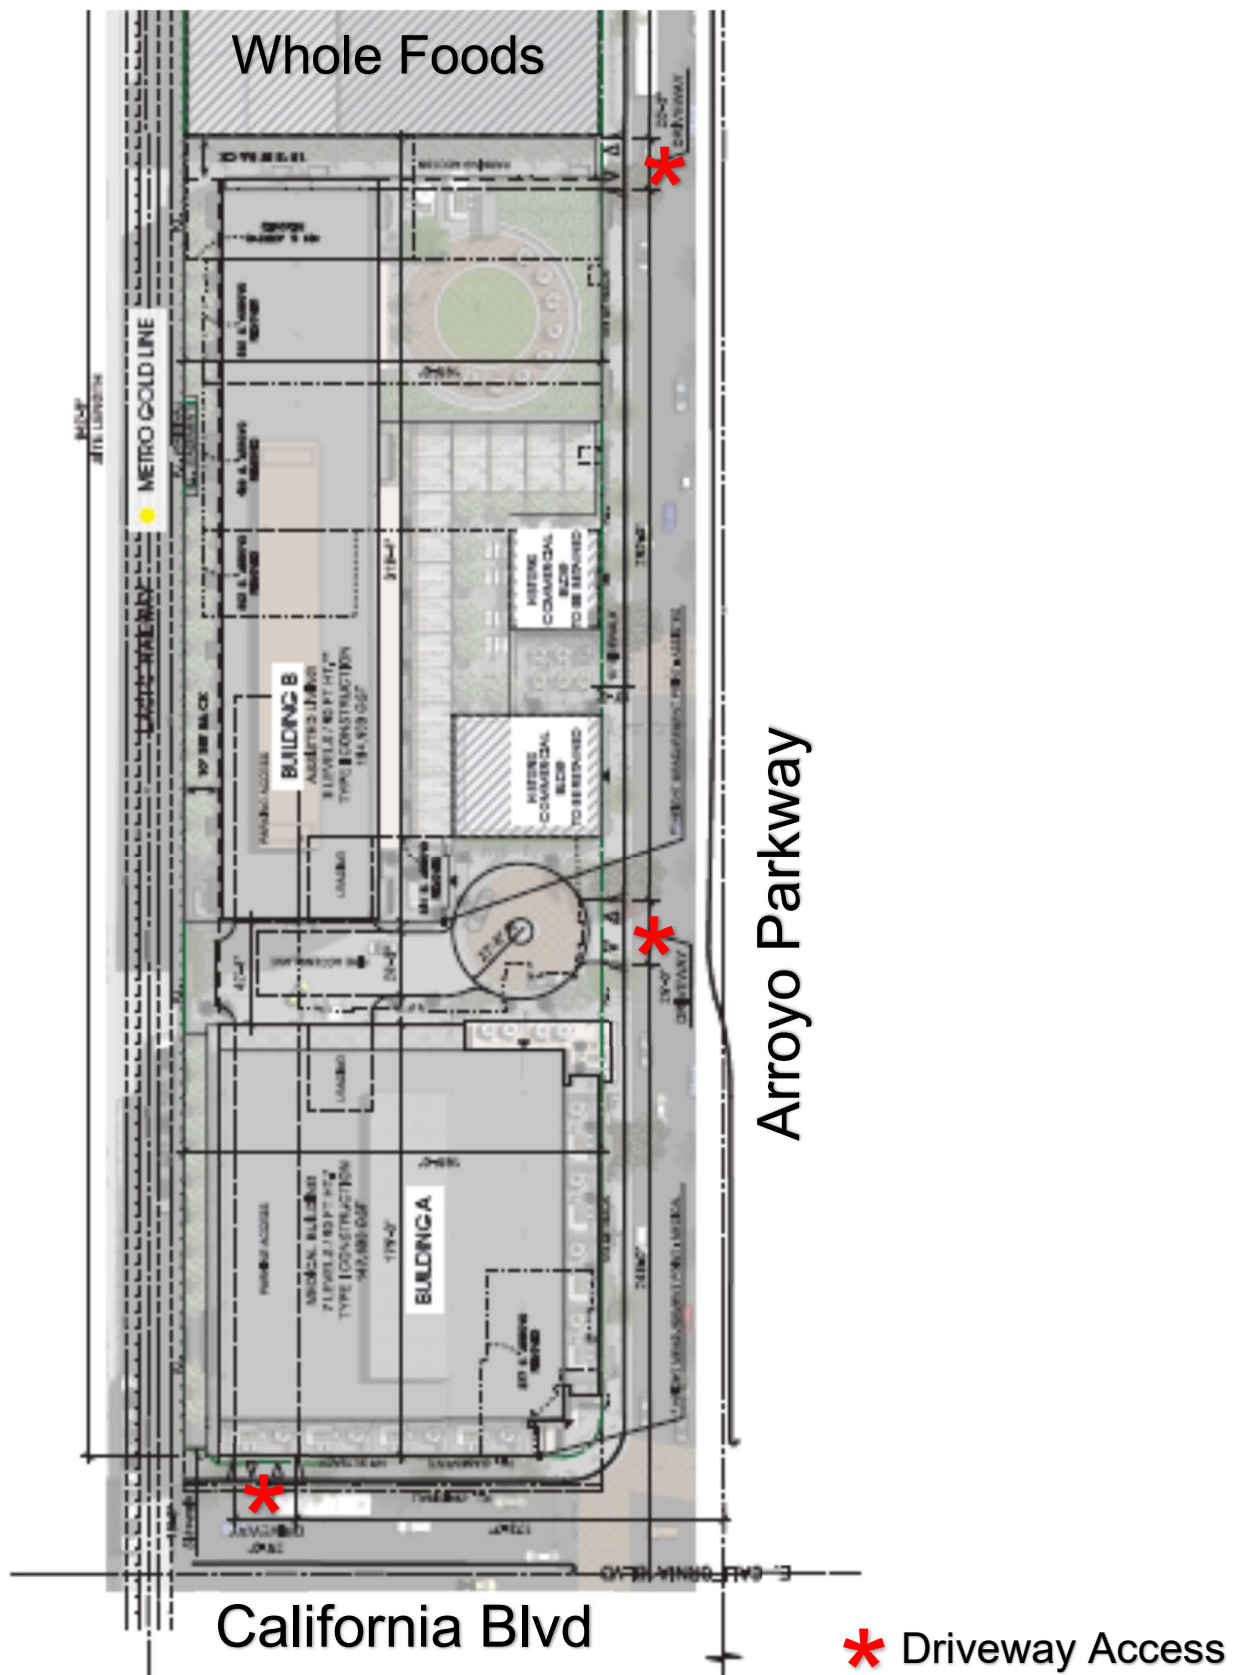

Arroyo Parkway is a north/south **Access Road** between Holly Street to Colorado Boulevard, and a **City Connector** between Colorado Boulevard to the SR-110 freeway. In the vicinity of the project, Arroyo Parkway is a four-lane divided roadway with time limited parking on both sides of the roadway. It has a 35 mph speed limit in the project vicinity. Arroyo Parkway is not designated as a bike lane or route.

Marengo Avenue is a north/south **City Connector** between Orange Grove Boulevard and Del Mar Boulevard, and a **Neighborhood Connector** north of Orange Grove Boulevard to the northern City limits and south of Del Mar Boulevard to the southern City limits. Bike lanes are present south of Cordova Street to Glenarm Street.

Cordova Street is a four-lane, east/west **Neighborhood Connector** with two lanes in each direction. The posted speed limit on Cordova Street is 35 mph. A future road diet is proposed along a section of this roadway, which will include bike lanes.

Del Mar Boulevard is an east/west **City Connector** that generally offers two lanes in each direction. The speed limit is 35 mph. Del Mar Boulevard is designated as a Class III Bike Route between Saint John Avenue and Wilson Avenue, and a Class III Enhanced Bike Route east of Wilson Avenue.

Figure 1. Project Site Plan

Bellevue Drive is an east/west Access Road between Arroyo Parkway and Marengo Avenue with parking on both sides of the street. The Arroyo Parkway at Bellevue Drive intersection is a signalized offset intersection.

California Boulevard is an east/west **City Connector** posted with a 30 mph speed limit. California Boulevard is designated as a Class III Bike Route between Marengo Avenue and Lake Avenue, and a Class III Enhanced Bike Route between Lake Avenue and Allen Avenue.

Glenarm Street is an east/west oriented roadway that is classified as an **Access Road** between Pasadena Avenue to Fair Oaks Avenue, a **City Connector** between Fair Oaks Avenue to Arroyo Parkway, and a **Neighborhood Connector** between Arroyo Parkway to El Molino Avenue. Glenarm Street is designated as a Class III Bike Route between Pasadena Avenue and Marengo Avenue, and a Class II Bike Lane east of Marengo Avenue.

Figure 2 depicts the project in the City of Pasadena's Adopted Street Types map.

Existing Transit Service

Public transit service within the project study area is currently provided by LA Metro and Pasadena Transit (PT). The transit stops near the project are summarized:

Location	Route
Raymond Ave at Del Mar Blvd – East side	PT 20,51,52; Metro 177,256,501,686,687,Gold Line
Raymond Ave at California Blvd – Northeast corner	PT 51,52; Metro 686,687
Raymond Ave at Fillmore St – East side	Metro Gold Line
Raymond Ave at Fillmore St – Northeast corner	PT 51,52; Metro 686, 687
Raymond Ave at Glenarm St – Northeast corner	PT 51, 52; Metro 686, 687
Arroyo Parkway at Del Mar Blvd – West side	Metro Gold Line
Arroyo Parkway at Del Mar Blvd – Southwest corner	Metro 256
Arroyo Parkway at Bellevue Dr – Southwest corner	Metro 256
Arroyo Parkway at California Blvd – Northside on California Blvd	Metro 256
Arroyo Parkway at California Blvd – Southwest corner – Southeast corner	PT 20
Arroyo Parkway at Fillmore St – Northeast corner – Southwest corner	PT 20

Arroyo Parkway at Fillmore St – West side at cul-de-sac	Metro Gold Line
Arroyo Parkway at Glenarm St – East side – Northwest side	PT 20
Marengo Ave at California Blvd – Southeast corner	PT 20

IV. Transportation Analysis Methodology

With the City of Pasadena General Plan, the City's guiding principles cumulatively represent the community's vision for the future:

- Growth will be targeted to serve community needs and enhance quality of life.
- New construction that could affect the integrity of historic resources will be compatible with, and differentiated from, the existing historic resource.
- Economic vitality will be promoted to provide jobs, services, revenues, and opportunities.
- Pasadena will be a socially, economically, and environmentally sustainable community.
- Pasadena will be a city where people can circulate without cars.
- Pasadena will be promoted as a cultural, scientific, corporate, entertainment, and educational center for the region.
- Community participation will be a permanent part of achieving a greater city.
- Pasadena is committed to public education and a diverse educational system responsive to the broad needs of the community.

Understanding the goals and objectives of the General Plan, the Pasadena Department of Transportation sets forth goals and policies to improve overall transportation in Pasadena and create "a community where people can circulate without cars." Inherent in this vision statement is to accommodate different modes of transportation including vehicle, pedestrian, bicycle, and transit. This report will assess accessibility of these different modes of travel and the project's transportation impacts using the City's adopted transportation performance measures.

Analysis Purpose

Pasadena reviews several types and sizes of projects that could be subject to environmental review under the California Environmental Quality Act (CEQA). Transportation impact analyses are an integral part of the environmental review process that is required for all proposed projects not categorically exempt under CEQA.

Analysis Cap Criteria - Transportation Performance Measures

The Pasadena Department of Transportation adopted a set of performance measures and CEQA thresholds that are closely aligned with the Mobility Element objectives and policies. Pasadena Department of Transportation's mobility performance measures assess the quality of walking, biking, transit, and vehicular travel in the City. A combination

of vehicular and multimodal performance measures are employed to evaluate system performance in reviewing new development projects. They are:

- Vehicle Miles Traveled per Capita
- Vehicle Trips per Capita
- Proximity and Quality of the Bicycle Network
- Proximity and Quality of the Transit Network
- Pedestrian Accessibility

These performance measures align with the sustainability goals of the General Plan by evaluating the “efficiency” of projects by analyzing the per capita length and number of trips associated with changes in land use. With the expanded emphasis on sustainability and a continued focus on livability, the proposed performance measures will assist in determining how to balance travel modes as well as understand the mobility needs of the community.

Definitions

VT Per Capita

The Vehicle Miles Traveled (VMT) per Capita measure sums the miles traveled for trips within the City of Pasadena Travel Demand Model (that is based on the SCAG regional model). The VMT total considers 100% of the mileage of trips that begin and end inside Pasadena and 50% of the distance travelled for trips with one end outside of Pasadena. The City’s VMT is then divided by the City’s total service population, defined as the population plus the number of jobs.

Although VMT itself will likely increase with the addition of new residents, the City can reduce VMT on a per-capita basis with land use policies that help Pasadena residents meet their daily needs within a short distance of home, reducing trip lengths, and by encouraging development in areas with access to various modes of transportation other than auto.

VT Per Capita

Vehicle Trips (VT) per Capita is a measure of motor vehicle trips associated with the City. The measure sums the trips with origins and destination within the City of Pasadena, as generated by the 2013 Trip-based citywide Travel Demand Model. The regional VT is calculated by adding the VT associated with trips generated and attracted within City of Pasadena boundaries, and 50% of the VT associated with trips that either begin or end in the City, but have one trip end outside of the City. The City’s VT is then divided by the City’s total service population, defined as the population plus the number of jobs.

As with VMT, VT itself will likely increase with the addition of new residents, but the City can reduce VT on a per-capita basis with land use policies that help Pasadena residents meet their daily needs within a short distance of home, reducing trip lengths, and by encouraging development in areas with access to various modes of transportation other than auto.

Proximity and Quality of Bicycle Network

The Proximity and Quality of Bicycle Network provides a measure of the percent of the City's service population (population + jobs) within a quarter mile of bicycle facility types. The facility types are aggregated into three hierarchy levels, obtained from the City's (Draft) Bicycle Transportation Plan categories as shown in the following table:

Table 1. Bicycle Facilities Hierarchy

LEVEL	DESCRIPTION	FACILITIES INCLUDED
1	Advanced Facilities	Bike Paths Multipurpose Paths Cycle Tracks/Protected Bike Lanes
2	Dedicated Facilities	Buffered Bike Lanes Bike Lanes Bike Boulevards
3	Basic Facilities	Bike Routes Enhanced Bike Routes Emphasized Bikeways

For each bike facility level, a quarter-mile network distance buffer is calculated and the total service population (population + jobs) within the buffer is identified.

The City can improve measures of Bike Facility Access by improving and expanding existing bike facilities and by encouraging residential and commercial development in areas with high-quality bike facilities.

Proximity and Quality of Transit Network

The Proximity and Quality of Transit Network provides a measure of the percent of the City's service population (population + jobs) within a quarter mile of each of each of three transit facility types, as defined in the following table:

Table 2. Description of Transit Facilities

TRANSIT FACILITIES HIERARCHY	
LEVEL	FACILITIES INCLUDED
1	Includes all Gold Line stops as well as corridors with transit service, whether it be a single route or multiple routes combined, with headways of five minutes or less during the peak periods.
2	Includes corridors with transit headways of between six and 15 minutes in peak periods.
3	Includes corridors with transit headways of 16 minutes or more at peak periods.

For each facility level, a quarter-mile network distance buffer is calculated and the total service population (population + jobs) within the buffer is identified. The City can improve the measures of Transit Proximity and Quality by reducing headways on existing transit routes, by expanding transit routes to cover new areas, and by encouraging residential and commercial development to occur in areas with an already high-quality transit service.

Pedestrian Accessibility Score

Proximity and Quality of Pedestrian Environment score provides a measure of the average walkability in the TAZ surrounding Pasadena residents, based on a Pedestrian Accessibility metric. The Pedestrian proximity metric is a simple count of the number of land use types accessible to a Pasadena resident or employee in a given TAZ within a 5-minute walk.

The ten categories of land uses are:

- Retail
- Personal Services
- Restaurant
- Entertainment
- Office (including private sector and government offices)
- Medical (including medical office and hospital uses)
- Culture (including churches, religious and other cultural uses)
- Park and Open Space
- School (including elementary and high schools)
- College

The following table summarizes the City's Metrics for determining CEQA Caps:

Table 3. City of Pasadena CEQA Thresholds of Significance

METRIC	DESCRIPTION	IMPACT THRESHOLD
1. VMT Per Capita	Vehicle Miles Traveled (VMT) in the City of Pasadena per service population (population + jobs).	CEQA Threshold: An <u>increase</u> over existing Citywide VMT per Capita of 22.6.
2. VT Per Capita	Vehicle Trips (VT) in the City of Pasadena per service population (population + jobs).	CEQA Threshold: An <u>increase</u> over existing Citywide VT per Capita of 2.8.
3. Proximity and Quality of Bicycle Network	Percent of service population (population + jobs) within a quarter mile of bicycle facility types	CEQA Threshold: Any <u>decrease</u> in existing citywide 31.7% of service population (population + jobs) within a quarter mile of Level 1 & 2 bike facilities.
4. Proximity and Quality of Transit Network	Percent of service population (population + jobs) located within a quarter mile of transit facility types.	CEQA Threshold: Any <u>decrease</u> in existing citywide 66.6% of service population (population +

		jobs) within a quarter mile of Level 1 & 2 transit facilities.
5. Pedestrian Accessibility	The Pedestrian Accessibility Score uses the mix of destinations, and a network-based walk shed to evaluate walkability	CEQA Threshold: Any <u>decrease</u> in the Citywide Pedestrian Accessibility Score

V. Project Transportation Impact Analysis

Project analyses are based on the City's Transportation Impact Analysis Guidelines. Proposed projects are analyzed using the City's calibrated travel demand forecasting model (TDF) built on SCAG's regional model.

The City's TDF model uses TransCAD software to simulate traffic levels and travel patterns for the City of Pasadena. The program consists of input files that summarize the City's land uses, street network, travel characteristics, and other key factors. Using this data, the model performs a series of calculations to determine the amount of trips generated, the beginning and ending location of each trip, and the route taken by the trip. To be deemed accurate for project transportation impact on the transportation system, a model must be calibrated to a year in which actual land use data and traffic volumes are available and well documented. The Pasadena TDF has been calibrated to 2013 base year conditions using actual traffic counts, Census data, and land use data compiled by City staff with land uses' associated population and job increase estimates.

Projects with proposed land uses that are consistent with the General Plan and complimentary to their surrounding land uses are expected to reduce the trip length associated with adjacent land uses; and/or increase the service population access to pedestrians, bike, and transit facilities if the project is within a quarter mile of those facilities.

Table 4 summarizes the following analyses of the proposed project's impacts on the transportation system using the calibrated TDF model. The results are based on the project's vehicular and non-vehicular trip making characteristics, trip length, and its interaction with other surrounding/citywide land uses, and the City's transportation network.

Table 4. Transportation Performance Metrics Summary

Transportation Performance Metrics	Significant Impact Cap (existing)	Incremental change (existing + project)	Significant Impact?
VMT per Capita	>22.6	19.5	No
VT per Capita	>2.8	2.0	No
Proximity and Quality of Bicycle Network	<31.7%	32.0	No
Proximity and Quality of Transit Network	<66.6%	66.8	No
Pedestrian Accessibility	<3.9	3.9	No

The TDF model calculation results indicate that the project does not exceed any of the adopted CEQA thresholds of significance.

VI. Conclusion

The City of Pasadena Department of Transportation reviewed the application of a Planned Development and a variance for preserving two existing historic resources for a project involving the demolition of approximately 46,000 sf commercial and the construction of 151,000 sf medical office, 3,000 sf commercial, 184,376 sf senior living facility with 95 independent living units, 85,800 sf assisted living, 5,882 sf restaurant, and subterranean parking.

Using the City's Transportation Demand Model, DOT found that the proposed project did not exceed any of the CEQA transportation impact threshold metrics outlined in the City's guidelines.

Subject: Final Project Description

Conrad and Luis,

We have finalized the project description with square footages for each component. Please use these updated numbers for analysis.

Thank you and let me know if you have any questions.

RM

DEMOLITION

Demolition (total): 45,912 sf commercial

- ~12,676 sf Animal Hospital (491 S. Arroyo Parkway)
- ~21,437 sf Event Rentals (503 S. Arroyo Parkway)
- ~7,493 sf former Margarita Jones that is currently a catering kitchen (525 S. Arroyo Parkway)
- ~4,306 sf former Dona Rosa that is currently a restaurant (577 S. Arroyo Parkway)

CONSTRUCTION

MEDICAL OFFICE BUILDING

- 151,000 sf medical office
- 3,000 sf ground-floor commercial space

SENIOR LIVING FACILITY

- 184,376 sf senior living facility consisting of 98,576 sf of independent living units (up to 95 units) and 85,800 sf of assisted living.

EXISTING COMMERCIAL (Two existing historic buildings to remain)

- 5,882 sf commercial (use restaurant land use in analysis)

I. Study Objective

This report analyzed the impact the development will have on the City transportation system by estimating incremental changes in vehicle miles traveled (VMT) per capita, vehicle trips per capita (VT), the project impact on service population proximity access to transit and bike facilities, and walk accessibility score.

II. Project Description

The City of Pasadena Department of Transportation reviewed the application of a Planned Development and a variance for preserving two existing historic resources for a project involving the demolition of approximately 46,000 sf commercial and the construction of a 151,000 sf residential building with up to 197 units, 3,000 sf commercial, 184,376 sf senior living facility with 95 independent living units, 85,800 sf assisted living, 5,882 sf restaurant, and subterranean parking.

Figure 1 depicts the project's site plan. Two driveways are located along Arroyo Parkway, and one driveway is located along California Boulevard.

III. Existing Transportation Network

Street System Classifications

Raymond Avenue is a north/south **Neighborhood Connector** between Corson Street to Del Mar Boulevard, and a **City Connector** between Del Mar Boulevard to Glenarm Street. Raymond Avenue does not have bike lanes south of Maple Street. It has a speed limit of 35 mph between California Boulevard and Glenarm Street, and 30 mph between California Boulevard and Green Street.

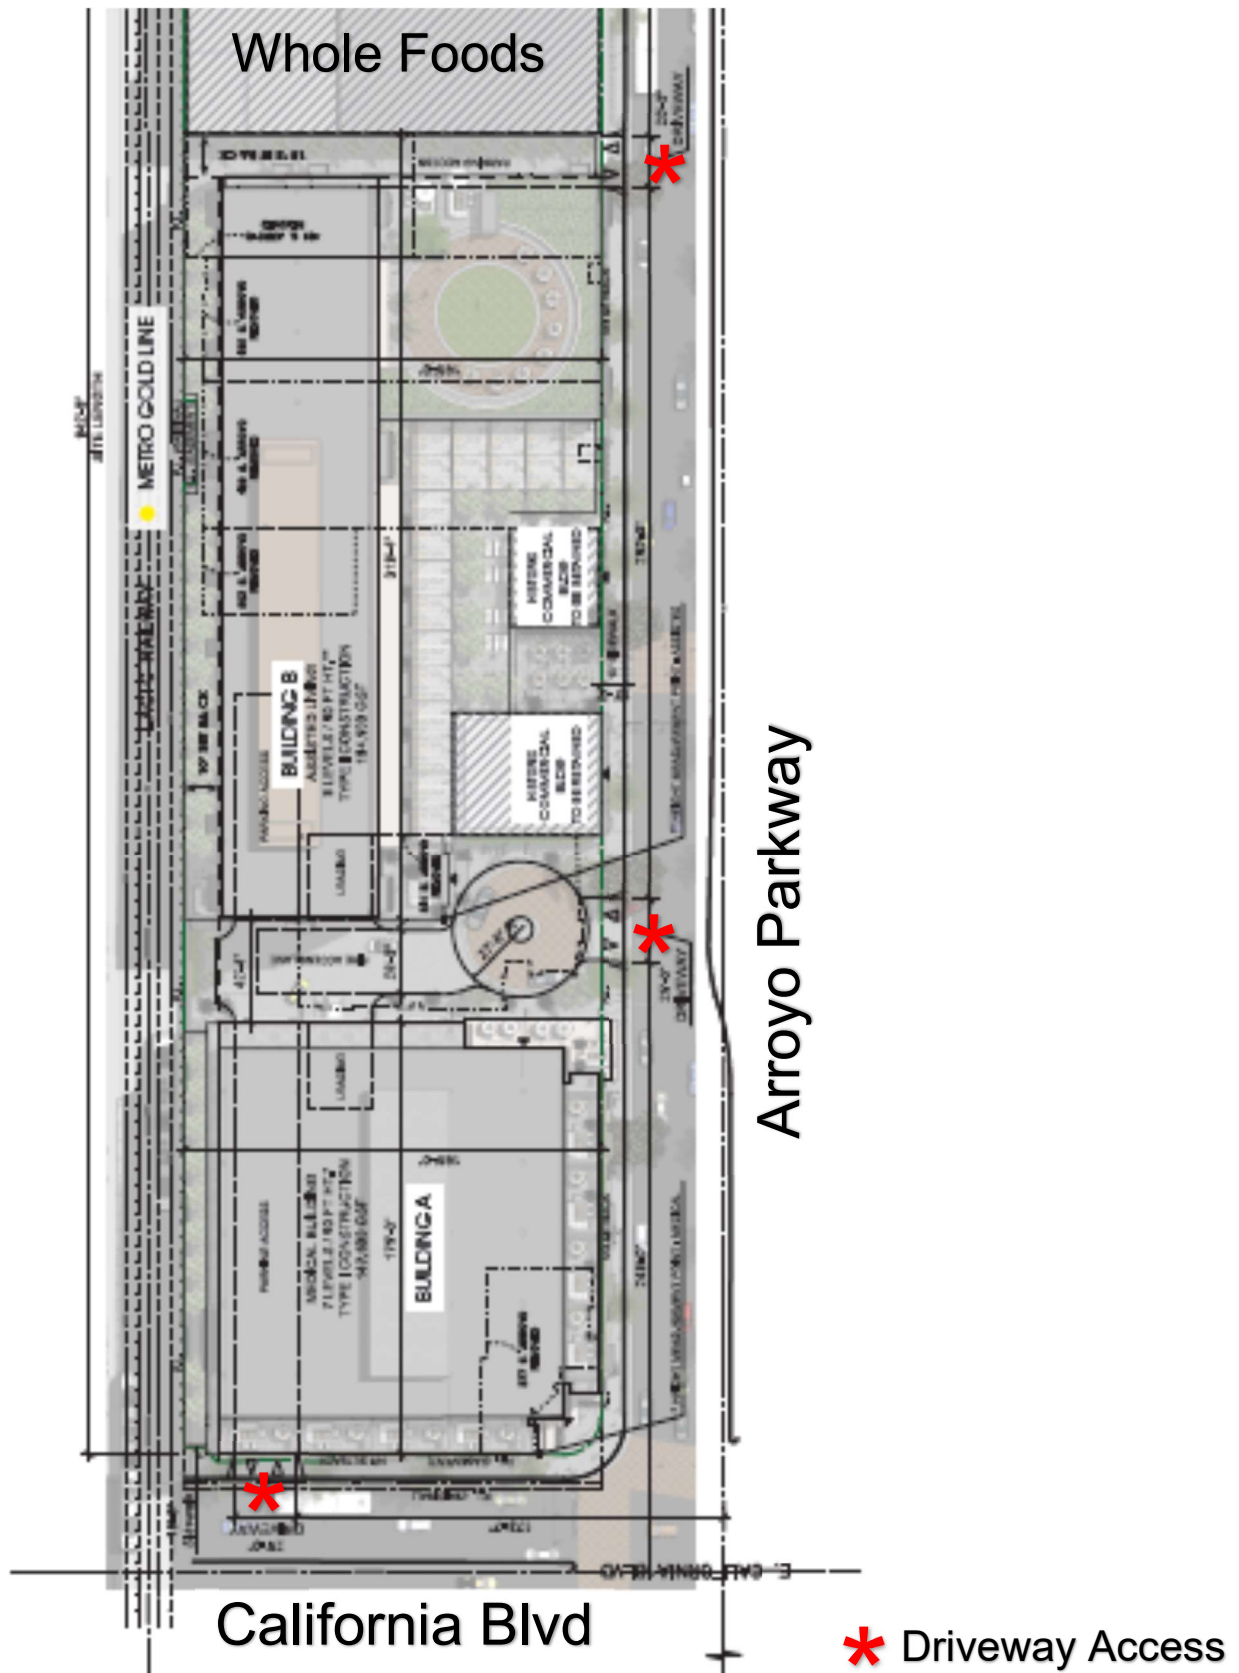

Arroyo Parkway is a north/south **Access Road** between Holly Street to Colorado Boulevard, and a **City Connector** between Colorado Boulevard to the SR-110 freeway. In the vicinity of the project, Arroyo Parkway is a four-lane divided roadway with time limited parking on both sides of the roadway. It has a 35 mph speed limit in the project vicinity. Arroyo Parkway is not designated as a bike lane or route.

Marengo Avenue is a north/south **City Connector** between Orange Grove Boulevard and Del Mar Boulevard, and a **Neighborhood Connector** north of Orange Grove Boulevard to the northern City limits and south of Del Mar Boulevard to the southern City limits. Bike lanes are present south of Cordova Street to Glenarm Street.

Cordova Street is a four-lane, east/west **Neighborhood Connector** with two lanes in each direction. The posted speed limit on Cordova Street is 35 mph. A future road diet is proposed along a section of this roadway, which will include bike lanes.

Del Mar Boulevard is an east/west **City Connector** that generally offers two lanes in each direction. The speed limit is 35 mph. Del Mar Boulevard is designated as a Class III Bike Route between Saint John Avenue and Wilson Avenue, and a Class III Enhanced Bike Route east of Wilson Avenue.

Figure 1. Project Site Plan

Bellevue Drive is an east/west Access Road between Arroyo Parkway and Marengo Avenue with parking on both sides of the street. The Arroyo Parkway at Bellevue Drive intersection is a signalized offset intersection.

California Boulevard is an east/west **City Connector** posted with a 30 mph speed limit. California Boulevard is designated as a Class III Bike Route between Marengo Avenue and Lake Avenue, and a Class III Enhanced Bike Route between Lake Avenue and Allen Avenue.

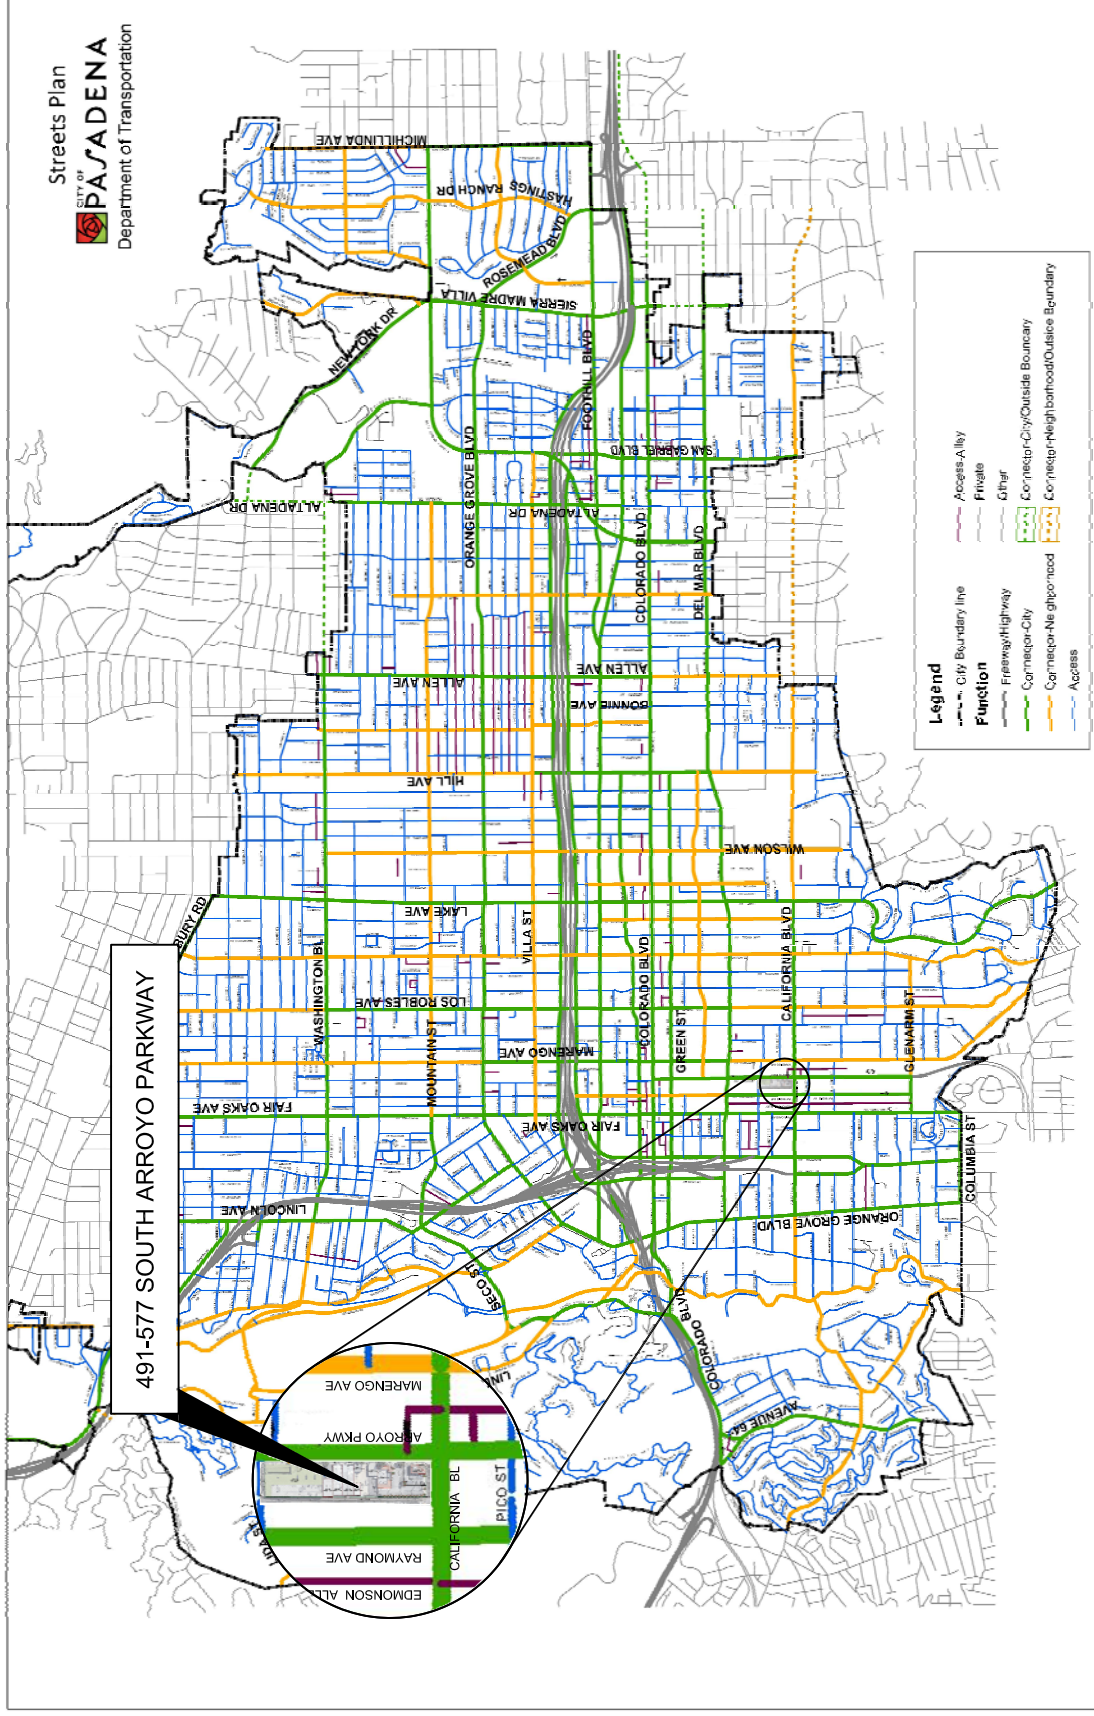

Glenarm Street is an east/west oriented roadway that is classified as an **Access Road** between Pasadena Avenue to Fair Oaks Avenue, a **City Connector** between Fair Oaks Avenue to Arroyo Parkway, and a **Neighborhood Connector** between Arroyo Parkway to El Molino Avenue. Glenarm Street is designated as a Class III Bike Route between Pasadena Avenue and Marengo Avenue, and a Class II Bike Lane east of Marengo Avenue.

Figure 2 depicts the project in the City of Pasadena's Adopted Street Types map.

Existing Transit Service

Public transit service within the project study area is currently provided by LA Metro and Pasadena Transit (PT). The transit stops near the project are summarized:

Location	Route
Raymond Ave at Del Mar Blvd – East side	PT 20,51,52; Metro 177,256,501,686,687,Gold Line
Raymond Ave at California Blvd – Northeast corner	PT 51,52; Metro 686,687
Raymond Ave at Fillmore St – East side	Metro Gold Line
Raymond Ave at Fillmore St – Northeast corner	PT 51,52; Metro 686, 687
Raymond Ave at Glenarm St – Northeast corner	PT 51, 52; Metro 686, 687
Arroyo Parkway at Del Mar Blvd – West side	Metro Gold Line
Arroyo Parkway at Del Mar Blvd – Southwest corner	Metro 256
Arroyo Parkway at Bellevue Dr – Southwest corner	Metro 256
Arroyo Parkway at California Blvd – Northside on California Blvd	Metro 256
Arroyo Parkway at California Blvd – Southwest corner – Southeast corner	PT 20
Arroyo Parkway at Fillmore St – Northeast corner – Southwest corner	PT 20

NO SCALE

Marengo Ave at California Blvd – Southeast corner	PT 20

IV. Transportation Analysis Methodology

With the City of Pasadena General Plan, the City's guiding principles cumulatively represent the community's vision for the future:

- Growth will be targeted to serve community needs and enhance quality of life.
- New construction that could affect the integrity of historic resources will be compatible with, and differentiated from, the existing historic resource.
- Economic vitality will be promoted to provide jobs, services, revenues, and opportunities.
- Pasadena will be a socially, economically, and environmentally sustainable community.
- Pasadena will be a city where people can circulate without cars.
- Pasadena will be promoted as a cultural, scientific, corporate, entertainment, and educational center for the region.
- Community participation will be a permanent part of achieving a greater city.
- Pasadena is committed to public education and a diverse educational system responsive to the broad needs of the community.

Understanding the goals and objectives of the General Plan, the Pasadena Department of Transportation sets forth goals and policies to improve overall transportation in Pasadena and create "a community where people can circulate without cars." Inherent in this vision statement is to accommodate different modes of transportation including vehicle, pedestrian, bicycle, and transit. This report will assess accessibility of these different modes of travel and the project's transportation impacts using the City's adopted transportation performance measures.

Analysis Purpose

Pasadena reviews several types and sizes of projects that could be subject to environmental review under the California Environmental Quality Act (CEQA). Transportation impact analyses are an integral part of the environmental review process that is required for all proposed projects not categorically exempt under CEQA.

Analysis Cap Criteria - Transportation Performance Measures

The Pasadena Department of Transportation adopted a set of performance measures and CEQA thresholds that are closely aligned with the Mobility Element objectives and policies. Pasadena Department of Transportation's mobility performance measures assess the quality of walking, biking, transit, and vehicular travel in the City. A combination

of vehicular and multimodal performance measures are employed to evaluate system performance in reviewing new development projects. They are:

- Vehicle Miles Traveled per Capita
- Vehicle Trips per Capita
- Proximity and Quality of the Bicycle Network
- Proximity and Quality of the Transit Network
- Pedestrian Accessibility

These performance measures align with the sustainability goals of the General Plan by evaluating the “efficiency” of projects by analyzing the per capita length and number of trips associated with changes in land use. With the expanded emphasis on sustainability and a continued focus on livability, the proposed performance measures will assist in determining how to balance travel modes as well as understand the mobility needs of the community.

Definitions

VT Per Capita

The Vehicle Miles Traveled (VMT) per Capita measure sums the miles traveled for trips within the City of Pasadena Travel Demand Model (that is based on the SCAG regional model). The VMT total considers 100% of the mileage of trips that begin and end inside Pasadena and 50% of the distance travelled for trips with one end outside of Pasadena. The City’s VMT is then divided by the City’s total service population, defined as the population plus the number of jobs.

Although VMT itself will likely increase with the addition of new residents, the City can reduce VMT on a per-capita basis with land use policies that help Pasadena residents meet their daily needs within a short distance of home, reducing trip lengths, and by encouraging development in areas with access to various modes of transportation other than auto.

VT Per Capita

Vehicle Trips (VT) per Capita is a measure of motor vehicle trips associated with the City. The measure sums the trips with origins and destination within the City of Pasadena, as generated by the 2013 Trip-based citywide Travel Demand Model. The regional VT is calculated by adding the VT associated with trips generated and attracted within City of Pasadena boundaries, and 50% of the VT associated with trips that either begin or end in the City, but have one trip end outside of the City. The City’s VT is then divided by the City’s total service population, defined as the population plus the number of jobs.

As with VMT, VT itself will likely increase with the addition of new residents, but the City can reduce VT on a per-capita basis with land use policies that help Pasadena residents meet their daily needs within a short distance of home, reducing trip lengths, and by encouraging development in areas with access to various modes of transportation other than auto.

Proximity and Quality of Bicycle Network

The Proximity and Quality of Bicycle Network provides a measure of the percent of the City's service population (population + jobs) within a quarter mile of bicycle facility types. The facility types are aggregated into three hierarchy levels, obtained from the City's (Draft) Bicycle Transportation Plan categories as shown in the following table:

Table 1. Bicycle Facilities Hierarchy

LEVEL	DESCRIPTION	FACILITIES INCLUDED
1	Advanced Facilities	Bike Paths Multipurpose Paths Cycle Tracks/Protected Bike Lanes
2	Dedicated Facilities	Buffered Bike Lanes Bike Lanes Bike Boulevards
3	Basic Facilities	Bike Routes Enhanced Bike Routes Emphasized Bikeways

For each bike facility level, a quarter-mile network distance buffer is calculated and the total service population (population + jobs) within the buffer is identified.

The City can improve measures of Bike Facility Access by improving and expanding existing bike facilities and by encouraging residential and commercial development in areas with high-quality bike facilities.

Proximity and Quality of Transit Network

The Proximity and Quality of Transit Network provides a measure of the percent of the City's service population (population + jobs) within a quarter mile of each of each of three transit facility types, as defined in the following table:

Table 2. Description of Transit Facilities

TRANSIT FACILITIES HIERARCHY	
LEVEL	FACILITIES INCLUDED
1	Includes all Gold Line stops as well as corridors with transit service, whether it be a single route or multiple routes combined, with headways of five minutes or less during the peak periods.
2	Includes corridors with transit headways of between six and 15 minutes in peak periods.
3	Includes corridors with transit headways of 16 minutes or more at peak periods.

For each facility level, a quarter-mile network distance buffer is calculated and the total service population (population + jobs) within the buffer is identified. The City can improve the measures of Transit Proximity and Quality by reducing headways on existing transit routes, by expanding transit routes to cover new areas, and by encouraging residential and commercial development to occur in areas with an already high-quality transit service.

Pedestrian Accessibility Score

Proximity and Quality of Pedestrian Environment score provides a measure of the average walkability in the TAZ surrounding Pasadena residents, based on a Pedestrian Accessibility metric. The Pedestrian proximity metric is a simple count of the number of land use types accessible to a Pasadena resident or employee in a given TAZ within a 5-minute walk.

The ten categories of land uses are:

- Retail
- Personal Services
- Restaurant
- Entertainment
- Office (including private sector and government offices)
- Medical (including medical office and hospital uses)
- Culture (including churches, religious and other cultural uses)
- Park and Open Space
- School (including elementary and high schools)
- College

The following table summarizes the City's Metrics for determining CEQA Caps:

Table 3. City of Pasadena CEQA Thresholds of Significance

METRIC	DESCRIPTION	IMPACT THRESHOLD
1. VMT Per Capita	Vehicle Miles Traveled (VMT) in the City of Pasadena per service population (population + jobs).	CEQA Threshold: An <u>increase</u> over existing Citywide VMT per Capita of 22.6.
2. VT Per Capita	Vehicle Trips (VT) in the City of Pasadena per service population (population + jobs).	CEQA Threshold: An <u>increase</u> over existing Citywide VT per Capita of 2.8.
3. Proximity and Quality of Bicycle Network	Percent of service population (population + jobs) within a quarter mile of bicycle facility types	CEQA Threshold: Any <u>decrease</u> in existing citywide 31.7% of service population (population + jobs) within a quarter mile of Level 1 & 2 bike facilities.
4. Proximity and Quality of Transit Network	Percent of service population (population + jobs) located within a quarter mile of transit facility types.	CEQA Threshold: Any <u>decrease</u> in existing citywide 66.6% of service population (population +

		jobs) within a quarter mile of Level 1 & 2 transit facilities.
5. Pedestrian Accessibility	The Pedestrian Accessibility Score uses the mix of destinations, and a network-based walk shed to evaluate walkability	CEQA Threshold: Any <u>decrease</u> in the Citywide Pedestrian Accessibility Score

V. Project Transportation Impact Analysis

Project analyses are based on the City's Transportation Impact Analysis Guidelines. Proposed projects are analyzed using the City's calibrated travel demand forecasting model (TDF) built on SCAG's regional model.

The City's TDF model uses TransCAD software to simulate traffic levels and travel patterns for the City of Pasadena. The program consists of input files that summarize the City's land uses, street network, travel characteristics, and other key factors. Using this data, the model performs a series of calculations to determine the amount of trips generated, the beginning and ending location of each trip, and the route taken by the trip. To be deemed accurate for project transportation impact on the transportation system, a model must be calibrated to a year in which actual land use data and traffic volumes are available and well documented. The Pasadena TDF has been calibrated to 2013 base year conditions using actual traffic counts, Census data, and land use data compiled by City staff with land uses' associated population and job increase estimates.

Projects with proposed land uses that are consistent with the General Plan and complimentary to their surrounding land uses are expected to reduce the trip length associated with adjacent land uses; and/or increase the service population access to pedestrians, bike, and transit facilities if the project is within a quarter mile of those facilities.

Table 4 summarizes the following analyses of the proposed project's impacts on the transportation system using the calibrated TDF model. The results are based on the project's vehicular and non-vehicular trip making characteristics, trip length, and its interaction with other surrounding/citywide land uses, and the City's transportation network.

Table 4. Transportation Performance Metrics Summary

Transportation Performance Metrics	Significant Impact Cap (existing)	Incremental change (existing + project)	Significant Impact?
VMT per Capita	>22.6	8.2	No
VT per Capita	>2.8	1.4	No
Proximity and Quality of Bicycle Network	<31.7%	32.0	No
Proximity and Quality of Transit Network	<66.6%	66.8	No
Pedestrian Accessibility	<3.9	3.9	No

The TDF model calculation results indicate that the project does not exceed any of the adopted CEQA thresholds of significance.

VI. Conclusion

The City of Pasadena Department of Transportation reviewed the application of a Planned Development and a variance for preserving two existing historic resources for a project involving the demolition of approximately 46,000 sf commercial and the construction of a 151,000 sf residential building with up to 197 units, 3,000 sf commercial, 184,376 sf senior living facility with 95 independent living units, 85,800 sf assisted living, 5,882 sf restaurant, and subterranean parking.

Using the City's 2013 Transportation Demand Model, DOT found that the proposed project did not exceed any of the CEQA transportation impact threshold metrics outlined in the City's guidelines.

Hi Conrad,

As requested, please see the information below required for the traffic study.

Project Address

491-577 South Arroyo Parkway
Pasadena, CA 91105

Project Description

Demolition: 45,912 sf commercial

~12,676 sf Animal Hospital (491 S. Arroyo Parkway)

~21,437 sf Event Rentals (503 S. Arroyo Parkway)

~7,493 sf former Margarita Jones that is currently a restaurant (525 S. Arroyo Parkway)

~4,306 sf former Dona Rosa that is currently a restaurant (577 S. Arroyo Parkway)

Construction:

Residential Building

151,000 sf with up to 197 residential units
3,000 sf ground-floor commercial space

Senior Living Facility

184,376 sf senior living facility consisting of 98,576 sf of independent living units (up to 95 units)
and 85,800 sf of assisted living.

Existing Commercial (Two existing historic buildings)

5,882 sf commercial (use restaurant land use in analysis)

Gabrielino-Tongva Tribe
Email: TongvaTCR@gmail.com

Subject: Assembly Bill (AB) 52 (Public Resources Code §21080.3.1): The Affinity Project
located in the City of Pasadena, Los Angeles County, California

Dear Mr. Dunlap,

The City of Pasadena (City) is the lead agency, pursuant to the California Environmental Quality Act (CEQA), for the Environmental Impact Report (EIR) being prepared for The Affinity Project (Project). The Project proposes partial redevelopment of an approximate 3.3-acre site encompassing the nine commercial properties located between 465 and 557 South Arroyo Parkway. As illustrated on Exhibit 1, the site is bound by East California Boulevard on the north, the Metro Gold Line on the west, East Bellevue Drive on the south, and South Arroyo Parkway on the east. The Project Applicant proposes demolishing six of the nine existing structures and constructing a 147,500-gross square feet (gsf), 7-story building with 144,500 gsf of medical office uses and 3,000-gsf of ground-floor commercial uses; and a 184,500-gsf, 8-story assisted living facility that would include 90 independent senior housing units. Three of the existing structures would be retained and integrated into the Project, including the Whole Foods grocery store and subterranean parking and the two historic structures at 501 and 523 South Arroyo Parkway. Four levels of subterranean parking would be constructed to serve the proposed land uses. The Project would not require a General Plan Amendment or Zone Change.

AB 52 requires lead agencies to consult with California Native American tribes that request such consultation in writing prior to the agency's release of a Notice of Preparation (NOP) of an EIR or notice of a Mitigated Negative Declaration (MND), or Negative Declaration (ND). To that end, the City is notifying you of this Project. AB 52 allows tribes 30 days after receiving notification to request consultation. However, the State of California also recognizes that due to the COVID-19 pandemic, some local governments and California Native American tribes may find it difficult to engage in the consultation required by the CEQA. In response to these difficulties, and pursuant to Executive Order (EO) N-54-20, signed April 22, 2020, certain timeframes for tribal consultation required under AB 52 have been suspended for 60 days. Specifically, the EO suspends the timeframes governing when a tribe must request consultation and when lead agencies must begin the consultation process for an EIR, ND, or MND. These provisions remain in effect through June 21, 2020 and grant the tribes until June 22 before requesting consultation from a lead agency.

Your participation in this local planning process is important. If you possess any information or knowledge regarding Native American Sacred Lands or other tribal cultural resources in and around the Project site and wish to consult with the City regarding these resources or mitigation measures to reduce the Project's impacts on them, please direct your email to Luis Rocha at lrocha@cityofpasadena.net or submit your written correspondence on this matter to:

Subject: Assembly Bill (AB) 52 (Public Resources Code §21080.3.1): The Affinity Project
located in the City of Pasadena, Los Angeles County, California

Dear Mr. Salas,

The City of Pasadena (City) is the lead agency, pursuant to the California Environmental Quality Act (CEQA), for the Environmental Impact Report (EIR) being prepared for The Affinity Project (Project). The Project proposes partial redevelopment of an approximate 3.3-acre site encompassing the nine commercial properties located between 465 and 557 South Arroyo Parkway. As illustrated on Exhibit 1, the site is bound by East California Boulevard on the north, the Metro Gold Line on the west, East Bellevue Drive on the south, and South Arroyo Parkway on the east. The Project Applicant proposes demolishing six of the nine existing structures and constructing a 147,500-gross square feet (gsf), 7-story building with 144,500 gsf of medical office uses and 3,000-gsf of ground-floor commercial uses; and a 184,500-gsf, 8-story assisted living facility that would include 90 independent senior housing units. Three of the existing structures would be retained and integrated into the Project, including the Whole Foods grocery store and subterranean parking and the two historic structures at 501 and 523 South Arroyo Parkway. Four levels of subterranean parking would be constructed to serve the proposed land uses. The Project would not require a General Plan Amendment or Zone Change.

AB 52 requires lead agencies to consult with California Native American tribes that request such consultation in writing prior to the agency's release of a Notice of Preparation (NOP) of an EIR or notice of a Mitigated Negative Declaration (MND), or Negative Declaration (ND). To that end, the City is notifying you of this Project. AB 52 allows tribes 30 days after receiving notification to request consultation. However, the State of California also recognizes that due to the COVID-19 pandemic, some local governments and California Native American tribes may find it difficult to engage in the consultation required by the CEQA. In response to these difficulties, and pursuant to Executive Order (EO) N-54-20, signed April 22, 2020, certain timeframes for tribal consultation required under AB 52 have been suspended for 60 days. Specifically, the EO suspends the timeframes governing when a tribe must request consultation and when lead agencies must begin the consultation process for an EIR, ND, or MND. These provisions remain in effect through June 21, 2020 and grant the tribes until June 22 before requesting consultation from a lead agency.

Your participation in this local planning process is important. If you possess any information or knowledge regarding Native American Sacred Lands or other tribal cultural resources in and around the Project site and wish to consult with the City regarding these resources or mitigation measures to reduce the Project's impacts on them, please direct your email to Luis Rocha at lrocha@cityofpasadena.net or submit your written correspondence on this matter to:

SECTION 1

Introduction

In 2001, California adopted Senate Bill (SB) 610¹ and SB 221, thereby amending the California Water Code (Water Code). Under these new laws, certain types of development projects are now required to provide detailed water supply assessments to planning agencies. Any proposed project that is subject to CEQA and meets specific land use criteria or would generate new water demands equal to or greater than 500 dwelling units, is subject to SB 610 and is required to prepare a Water Supply Assessment (WSA).

The primary purpose of a WSA is to determine whether the identified water supply or water supplier will be able to meet projected demands for a proposed project, in addition to existing and planned future uses, over a 20-year planning period in normal, single-dry, and multiple-dry water years. Secondly, a WSA provides decision-makers a regional framework on which to base a decision about the sufficiency of water supplies for a proposed project.

The proposed Project is subject to the California Environmental Quality Act (CEQA) and is a mixed-use development that includes one or more elements within a large-scale development that align with Water Code Section 10912(a) (refer to Section 3). However, upon review of the Project description, proposed land use and square footages (see section 1.1.2 below and potential water demand generated by the Project, it was determined that a WSA is not required. *Therefore, for conservative water supply planning purposes and to demonstrate water supply reliability, this WSA is provided for informational purposes and follows the SB 610 guidance with references to specific Water Code sections.*

This WSA assesses the availability of identified water supplies under normal-, single-dry-, and multiple-dry-year conditions, accounting for the projected water demand of the Proposed Project in addition to other existing and planned future uses of the identified water supply. This WSA examines the regional water providers and their supplies (Section 4.2), the reliability of these sources (Section 4.4), the projected short- and long-term water demand of the Project (Section 5), and the supply versus demand as required in a WSA (Section 6).

¹ An act to amend Public Resources Code Section 21151.9; to amend Water Code Sections 10631, 10656, 10910, 10911, 10912, and 10915; to repeal Water Code Section 10913; and to add and repeal Water Code Section 10657 relating to water.

1.1 Project Overview

1.1.1 Project Location

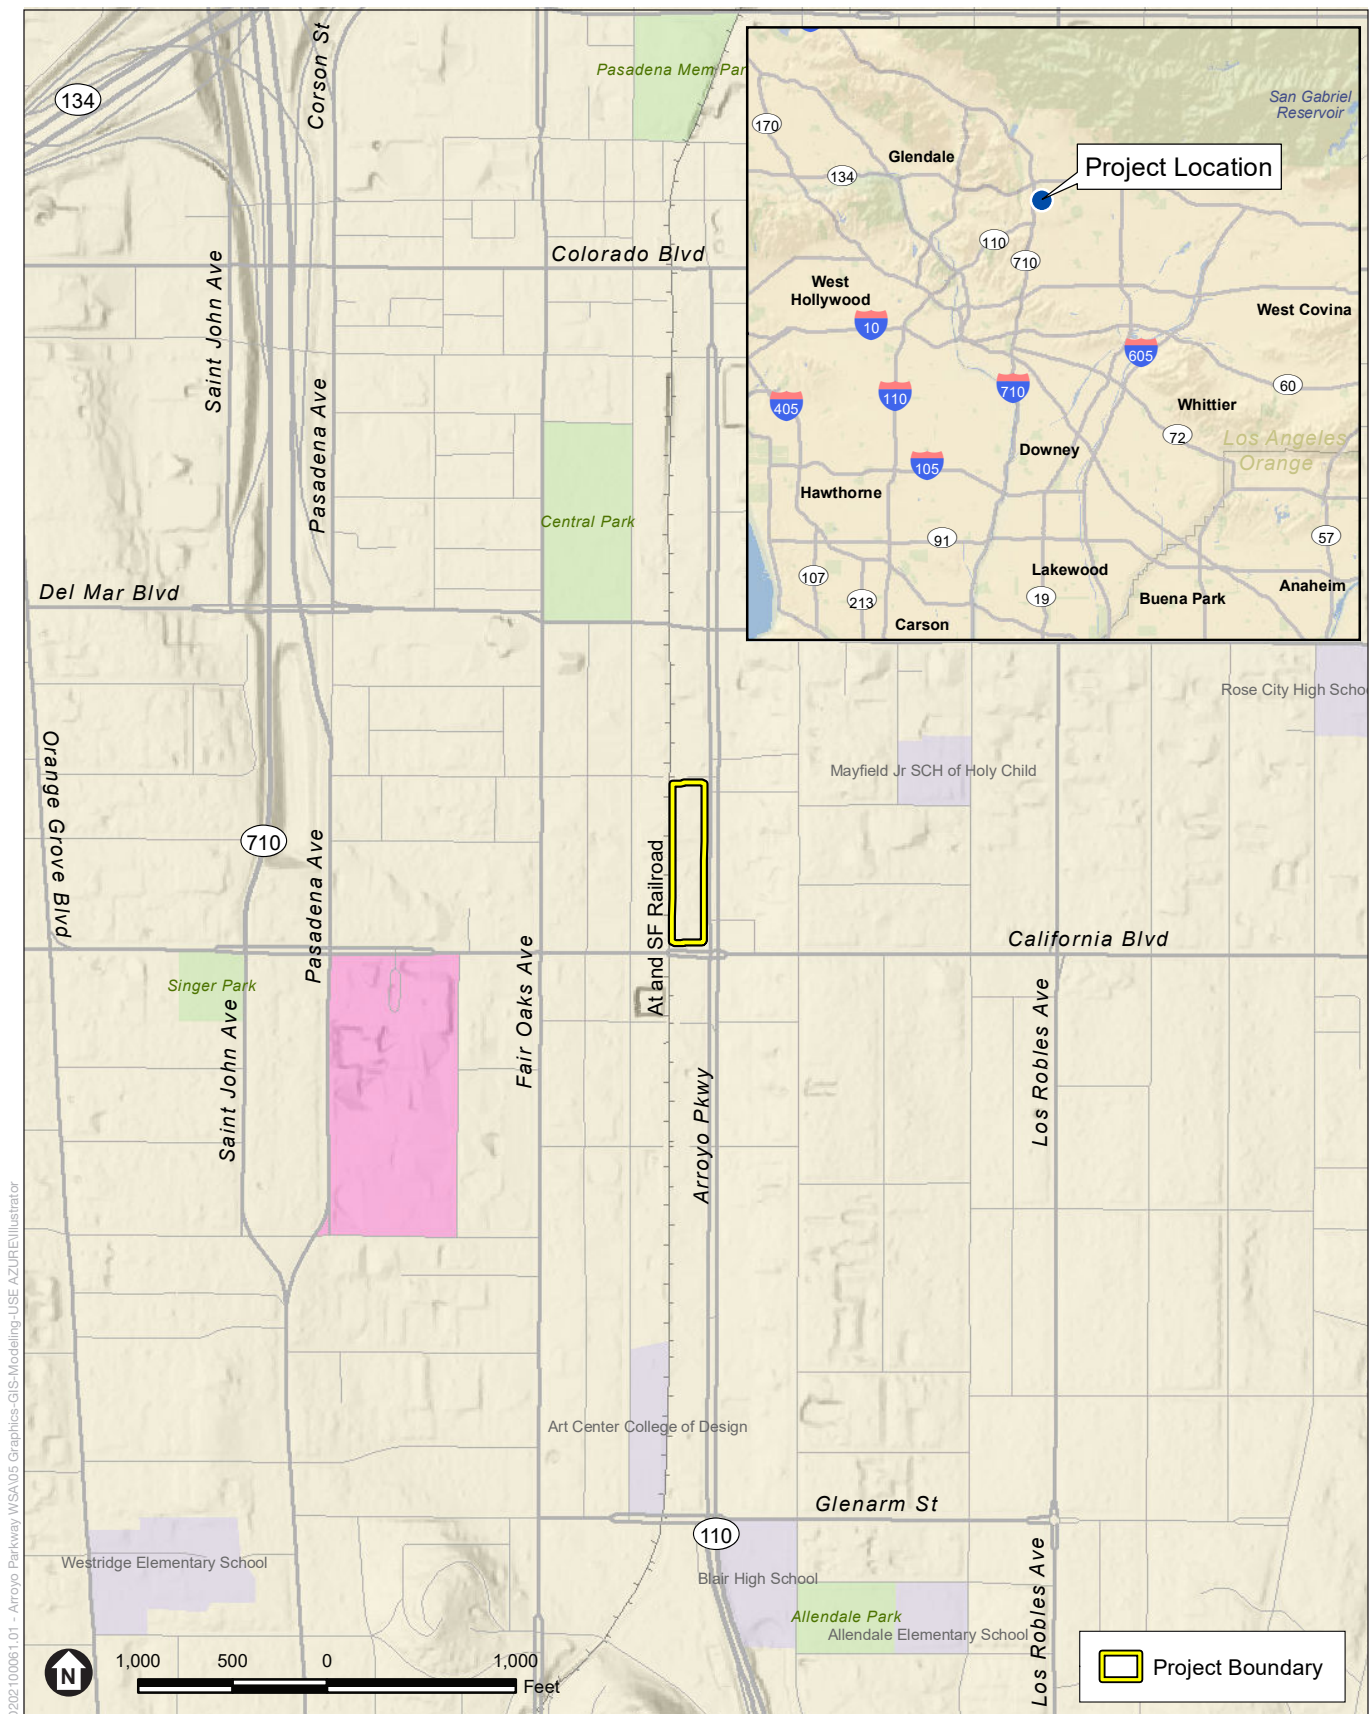

The Project site consists of an approximately 3.3-acre site located between 465 and 577 South Arroyo Parkway, City of Pasadena, within the County of Los Angeles, California. The Project site is bound by East Bellevue Drive on the north, South Arroyo Parkway on the east, East California Boulevard on the south, and the Metro L (Gold) Line on the west. Regional access to the site is provided by State Route (SR) 110 approximately 0.6-mile due south on Arroyo Parkway and SR 134 and I-210 approximately 1.0-mile north on Fair Oaks Avenue. The general vicinity and relationship of the Project site to surrounding streets is illustrated in **Figure 1-1**.

1.1.2 Project Description

The Project would rezone the Project site from CD-6 (Central District Specific Plan [CDSP], Arroyo Corridor/Fair Oaks subdistrict), to a Planned Development (PD) zone with a corresponding PD Plan. The Project involves demolition of six existing buildings totaling approximately 45,912 square feet (sf), located at 491, 495, 499, 503, 541, and 577 South Arroyo Parkway and construction of two new buildings: (1) a 154,000-square foot (sf), 7-story medical office building with ground-floor commercial uses (Building A); and (2) a 184,376-sf, 7-story assisted living building with 85,800 sf of assisted living uses and 98,576 sf of independent living uses including up to 95 one- and two-bedroom senior housing units (Building B). There would be up to five subterranean levels providing up to 850 parking spaces. Approximately 31,605 sf of open space, including public and private (for solely resident and staff use) space would be provided across the Project site. See **Table 1-1** below.

TABLE 1-1
PROPOSED PROJECT DEVELOPMENT PLANS

	Medical Office Building (A) sf	Assisted Living Facility (B) sf
Ground	14,635	25,377
2 nd	23,028	31,269
3 rd	26,671	29,107
4 th	26,671	29,107
5 th	26,671	29,107
6 th	21,162	21,299
7 th	21,162	19,110
Total Gross Square Footage	154,000	184,376
753,439 (Including five subterranean levels spanning both buildings)		
Parking	Up to 850 spaces	
Open Space	8,676	22,929
Total Aboveground Built Area (Existing + Proposed)	417,929	
Source: Affinity Development Plan		

SOURCE: Psomas, 2021

Affinity Project WSA

Figure 1-1
Regional Location and Local Vicinity

Alternatively, the corresponding PD Plan would provide the flexibility to exchange the uses in Building A from medical office and ground floor commercial to the following:

- 3,000 sf of commercial and a sales/leasing management office on the ground floor;
- Up to 197 residential dwelling units; and
- Up to 650 parking spaces in four subterranean levels (one less than the Project as proposed).

The flexibility to exchange uses in Building A would enable the Project to respond to the economic needs and demands of the City at the time of Project implementation. The site layout and the aboveground height, mass, and other parameters of the Building A design would remain the same. The PD Plan would define all aspects of site design and provide limits on the types and amounts of allowable land uses, regardless of whether Building A is developed with medical office or residential dwelling units. It is noted that based on the development limit of 87 dwelling units per acre (du/acre), a total of 289 units could be constructed. Therefore, if a total of 197 units were constructed in Building A, only 92 independent living units could be constructed in Building B. Conversely, if 95 independent living units were constructed in Building B, only 194 units could be constructed in Building A. See **Table 1-2** below.

TABLE 1-2
BUILDING A RESIDENTIAL/COMMERCIAL DEVELOPMENT PLANS

	Residential/Commercial Building (A)	Assisted Living Facility (B)
Differences from Project Scenario	Up to 197 dwelling units 3,000 sf of ground-floor commercial	Same as Project
Total Square Footages	154,000	184,376
670,427 (Including four subterranean levels spanning both buildings) ^a		
Parking	Up to 650 spaces	
Open Space	8,676	22,929
Total Aboveground Built Area (Existing + Proposed)	417,929	

NOTES:

^a Reflects one less subterranean parking level, all other floor area sizes are the same.
sf: square feet; N/A: not applicable; FAR: floor area ratio

Source: Affinity Project Development Plan

Throughout this WSA, these two planned development scenarios are referred to as:

- Project (development of Building A with medical office/commercial); and
- Project with Building A Residential/Commercial (development of Building A with residential/commercial).

Approximately 79,553 sf of the existing development would be retained and integrated into the Proposed Project, including the Whole Foods grocery store and associated 275-space subterranean parking structure at 465 South Arroyo Parkway and the two historic structures at 501 and 523 South Arroyo Parkway. Restaurant uses are anticipated to occupy the approximately 5,882 sf of space in the existing buildings to be retained at 501 and 523 South Arroyo Parkway.

A total of five levels of subterranean parking spanning both proposed buildings would also be constructed to serve the new development as well as the existing structures at 501 and 523 Arroyo Parkway under the Project. For the Project with Building A Residential/Commercial, a total of four levels of subterranean parking spanning both proposed buildings with up to 650 parking spaces would be constructed.

The Project site is situated within the Central District Specific Plan and zoned CD-6 (Central District Specific Plan, Arroyo Corridor/Fair Oaks subdistrict). The City General Plan land use designation for the Project site is High Mixed Use. As mentioned, the Project involves approval to rezone the site as a PD district. The Project includes a request for a zoning variance for historic resources related to building height. Specifically, the request involves an increase in allowable building height to offset the reduction in developable area due to preserving the two historic structures on the Project site.

The Project is anticipated to be constructed beginning in 2023 and extending over a period of approximately 34 months. Project construction would occur from Monday through Saturday, without activity on Sundays or holidays, between the hours defined in Section 9.36.070 (Construction Projects) of the City of Pasadena Municipal Code (PMC) (7:00 AM to 7:00 PM Monday through Friday and 8:00 AM to 5:00 PM on Saturday). The Project is anticipated to be opened to the public in 2026.

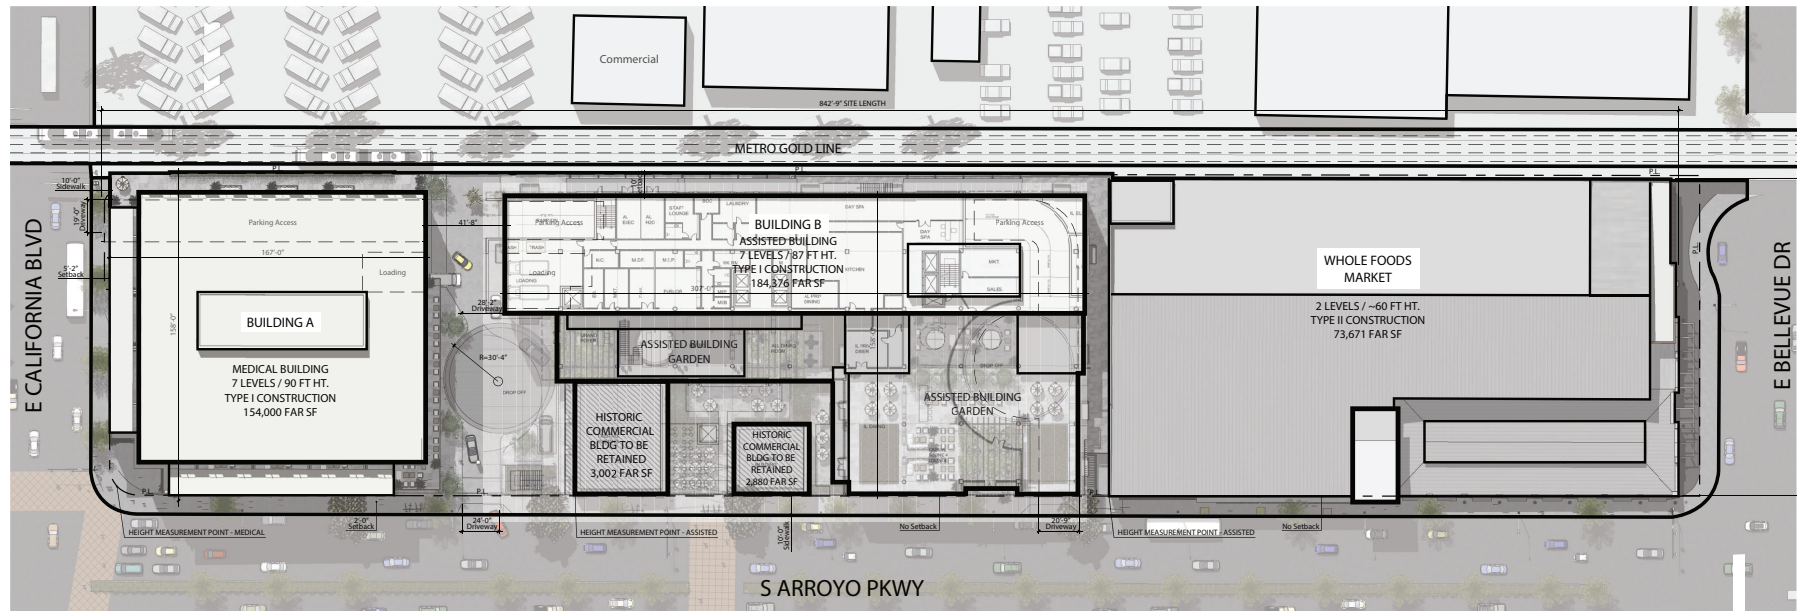

Figure 1-2 shows the proposed layout of the Project site. As detailed in Table 1-1 and Table 1-2, the Project would develop a total of approximately 338,376 sf of new medical office, commercial, restaurant and residential uses across the Project site. As previously mentioned, 79,553 sf of the existing development will remain on site.

1.2 Document Structure

This WSA is organized following a basic hierarchy to describe each issue: regional context (PWP service area and the underlying groundwater basin); local context (City service area), Project-level analysis for the Proposed Project; and the WSA that includes a comparison of water supply and demand for the Project, and existing and future demand for all water year types. The report organization is as follows:

1. Introduction; project overview, location, and description; and document structure
2. City background information and land use planning
3. General information on water supply planning under SB 610
4. Water supply setting – including local climate, surface and groundwater supplies, capacities, and reliability
5. Regional, City, and project water demands – historical, projected, and projected dry-year demands
6. Supply-demand comparisons on a regional, City, and project-level basis
7. Conclusions

Affinity Project WSA

Figure 1-2
Project Site Plan

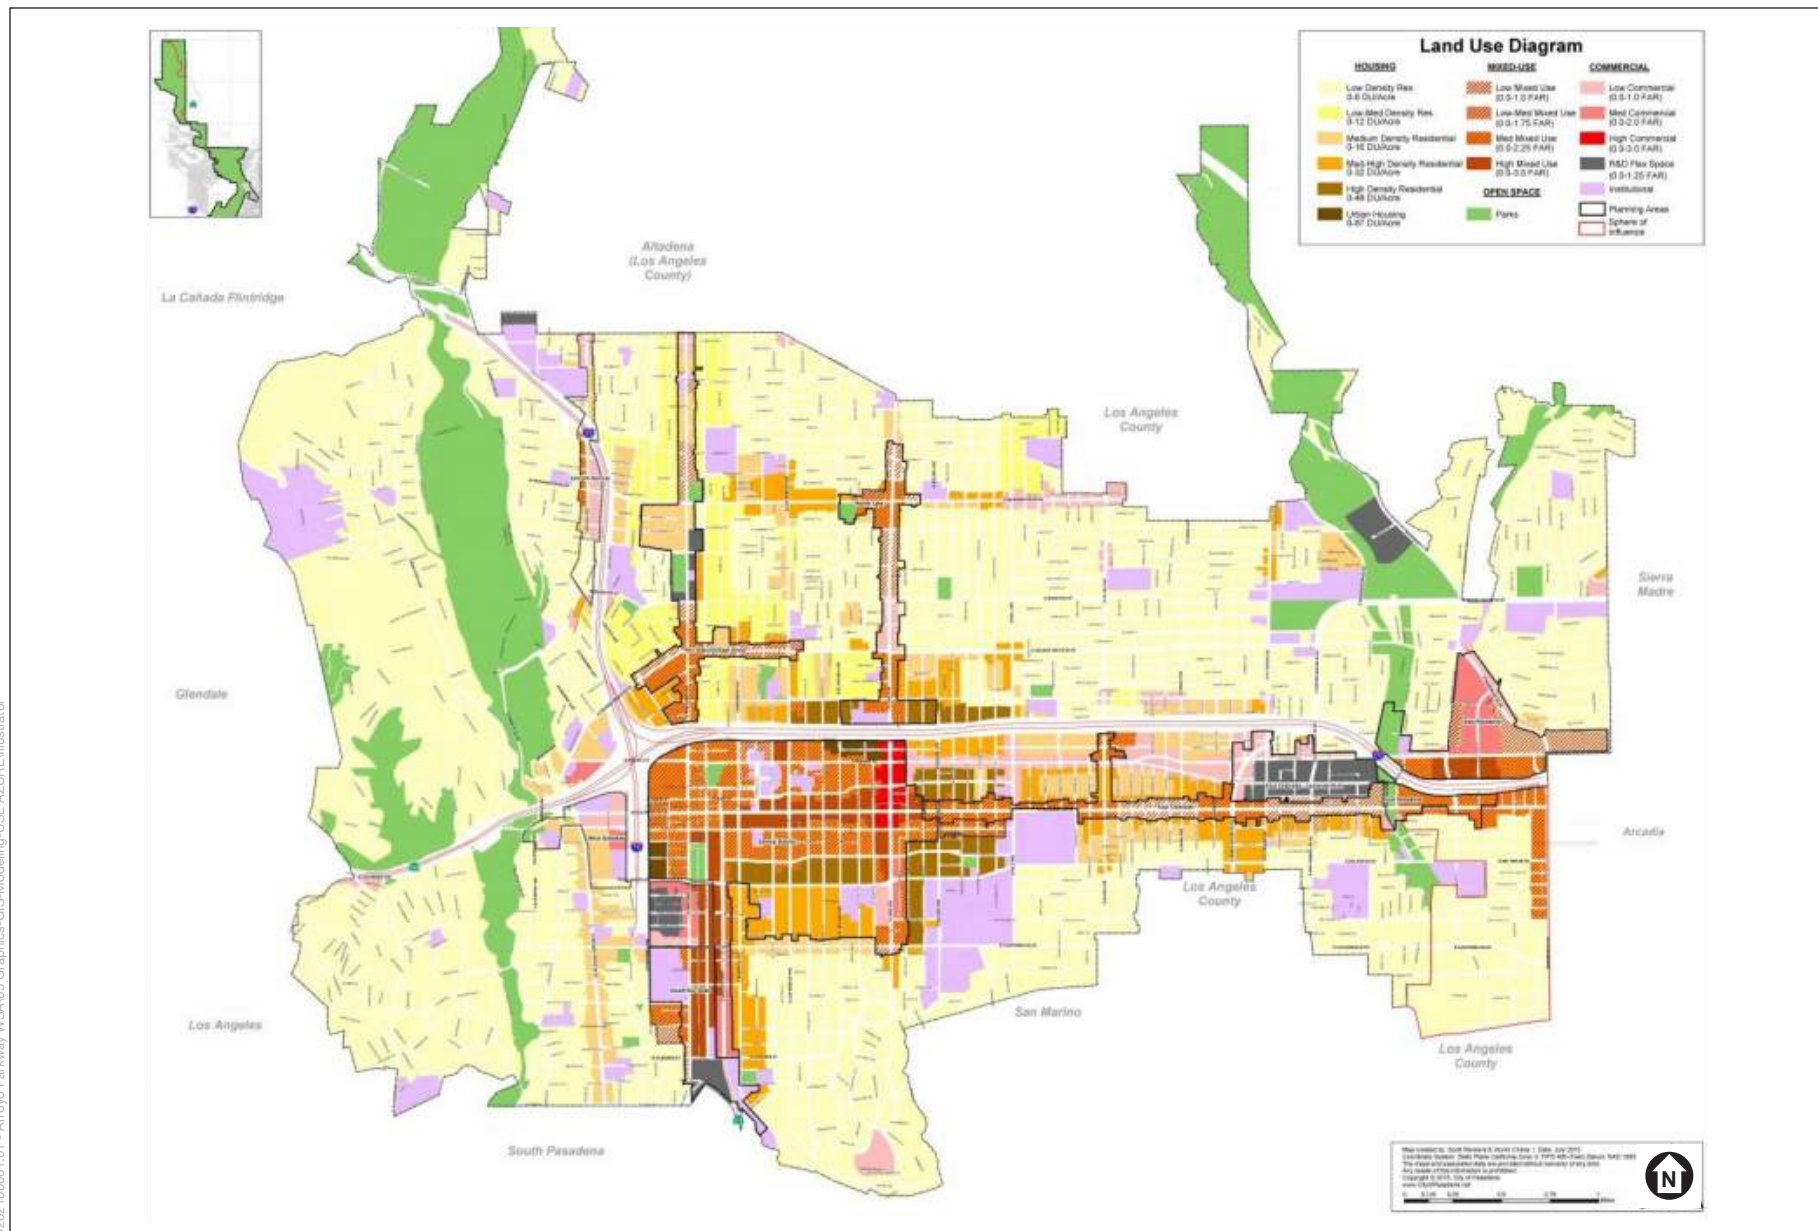

SECTION 2

City Information and Proposed Project Land Use Designation

2.1 Local Land Use Designations

This section describes background information and land use planning for the City of Pasadena (City). According to PWP's 2020 Urban Water Management Plan (UWMP), in 2020, PWP provided water service to a population of approximately 170,400 as well as non-residential customer in its service area. The population is roughly 15 percent or 20,000 more persons than the current population residing within the City's boundaries. PWP's water service area encompasses approximately 25 square miles (Figure 2-1) and includes the City and portions of the unincorporated areas of Altadena, East Pasadena, and San Gabriel. As shown in the Figure 2-1, PWP's service area is bordered on the north by the unincorporated community of Altadena and the Angeles National Forest, on the east by Arcadia and Sierra Madre, on the south by South Pasadena and San Marino, and the west by Los Angeles, Glendale, and La Cañada Flintridge.

Land use in the PWP service area is largely low and medium density residential, with single family and multi-family residential units. High-density residential, commercial and mixed land uses are generally located along major corridors, such as Fair Oaks Avenue and Washington Boulevard, and in Special Districts such as Central Pasadena, East Colorado and South Fair Oaks (Figure 3-1). Areas designated as parks in the General Plan are designated as government in the current land use database. The *2015 General Plan Update* explains that the long-term vision for growth in the City is to encourage development along major corridors. According to the *2015 General Plan Update*, future growth will occur through urban infill, which means increasing the number of residential units or mixed-use units per acre typically through the replacement of single-story structures with multi-story structures. The projected General Land Use diagram (Figure 3-4 of PWP 2020 UWMP) functions as a guide to the general public, planners, and decision-makers, depicting the ultimate pattern of development for Pasadena in 2035, consistent with the requirements of State planning law (Government Code §65302(a)). It depicts the distribution of various uses and intensity of development that shall be permitted as the physical representation of *2015 General Plan Update* goals and policies and updated in the most recent Housing Element. These are implemented through the Zoning Code, Zoning Map, and Specific Plan.

SOURCE: Pasadena Water & Power, 2021

Affinity Project WSA

Figure 2-1
General Plan Land Use

Population growth in the Pasadena area is not expected to increase significantly between 2020 and 2045. This assumes average growth of only approximately 0.5 percent per year, based on the PWP 2020 UWMP, which incorporates growth projections provided by the Southern California Association of Governments (SCAG) and California Department of Finance for current and projected regional demographics, including annual estimates of population, employment, and housing units for cities and counties in California.

2.1.1 Existing General Plan Land Use and Zoning Designations

The Project site is located within the Central District Specific Plan, is zoned CD-6, and has a General Plan Land Use Designation of High Mixed-Use. Figure 2-1 shows the City's General Plan Land Use with land use categories.

2.2 City Population and Community

Recent population growth for the PWP water service area has been slow but steady as PWP's service area, which also includes areas outside and adjoining the City, is largely built-out. According to PWP's 2020 UWMP, the service area population increased from 146,840 to 170,400 between 1990 and 2020, representing an annual average growth rate of 0.5 percent. According to the SCAG and population projections provided by the California Department of Finance, minimal population growth is expected through 2045 in PWP's service area. According to PWP's 2020 UWMP, service area population is forecast to increase by approximately 0.5 percent annually, consistent with the City's 2015 General Plan Update growth estimates. As shown in **Table 2-1**, the service area population is expected to increase through 2045. Primary developments of infill projects consisting of multi-family units is the current trend and will contribute to increasing population density within the City.

TABLE 2-1
POPULATION – CURRENT AND PROJECTED

Year	2020	2025	2030	2035	2040	2045 ^a
Population (SCAG)	170,400	173,508	181,466	185,702	189,927	194,723

NOTE:

^a The 2045 service area population is projected based on an anticipated annual average growth rate of 0.5 percent as stated in the PWP Final 2020 Urban Water Management Plan. The anticipated 2045 service area population projected in this table may differ from PWP's official projection in future updates to its Urban Water Management Plan.

SECTION 3

Water Supply Planning

California has different processes to plan for the development or maintenance of water supplies on a regional level. UWMPs, Groundwater Management Plans (GMPs), Integrated Regional Water Management Plans (IRWMPs), Municipal Service Reviews (MSRs) and water resources components of General Plans all integrate some degree of regional planning of water supply and demand.

To complement these large-scale planning processes, the Governor signed into law SB 610 and SB 221 in 2002, which emphasize the incorporation of water supply and demand analysis at the earliest possible stage in the planning process for projects undergoing more specific or detailed planning level analysis. These legislations primarily apply to the planning of water supplies and sources for individual subdivision projects, and are completed at the time the project is being proposed and permitted. SB 610 amended portions of the Water Code, including Section 10631, which contains the Urban Water Management Planning Act, and added Sections 10910, 10911, 10912, 10913, and 10915, which describe the required elements of a WSA. SB 221, which requires completion of a Water Supply Verification (WSV), amended Section 65867.5 and added Sections 66455.3 and 66473.7 to the Government Code.²

3.1 Water Supply Planning under SB 610 and SB 221

As the public water system that will supply water to the Project, PWP is required to prepare WSAs and WSVs, under the requirements of SB 610 and SB 221, codified in Government Code Sections 65867.5, 66455.3, and 66473.7 if a proposed project meets certain criteria. There are three primary areas to be addressed in a WSA: (1) a description of all relevant water supply entitlements, water rights, and water contracts; (2) a description of the available water supplies and the infrastructure, either existing or proposed, to deliver the water; and (3) an analysis of the demand placed on those supplies, by the project, and relevant existing and planned future uses in the area. In addition to these items, WSVs incorporate more detailed confirmation that the appropriate infrastructure planning and funding are in place to fully commit water supplies to a project. The Project does not include a “subdivision” as defined by Government Code Section 66473.7(a)(1);³ therefore, a WSV is not required for the Project pursuant to Government Code 66473.7(b).

² Department of Water Resources, *Guidebook for Implementation of SB 610 and SB 221 of 2001*, 2003.

³ Government Code Section 66473.7(a)(1) states: “‘Subdivision’ means a proposed residential development of more than 500 dwelling units, except that for a public water system that has fewer than 5,000 service connections, ‘subdivision’ means any proposed residential development that would account for an increase of 10 percent or more in the number of the public water system’s existing service connections.” As noted in Section 1.1.2 above, the Project would not result in more than 500 dwelling units, and as noted in Section 3.1.3 below, PWP, which is the public water system that would supply the Project, has more than 5,000 service connections.

SB 610 is applicable to projects subject to the CEQA or considered a “project” under Water Code Section 10912(a) or (b), and builds on the information that is typically contained in a UWMP. The amendments to Water Code Section 10631 were designed to make WSAs and UWMPs consistent. A key difference between the WSAs and UWMPs is that UWMPs are required to be revised every five years, in years ending with either zero or five for those water systems that meet the specific connection criteria, while WSAs are required as part of the environmental review process for each individually qualifying project. As a result, the 20-year planning horizons for each qualifying project may cover slightly different planning periods than other WSAs or the current UWMP. Additionally, not all water providers who must prepare a WSA for a qualifying project under SB 610 are required to prepare an UWMP as defined in the Urban Water Management Planning Act.

Especially pertinent to this WSA for the Project, and all projects to be served by PWP, are the provisions under SB 610 that involve documentation of supply if groundwater is to be used as a source. A detailed discussion of the groundwater basin and groundwater production can be found in Sections 4.2 and 4.3.

The SB 610 WSA process involves answering the following questions:

- Is the project subject to CEQA?
- Is it a project under SB 610?
- Is there a public water system?
- Is there a current UWMP that accounts for the project demand?
- Is groundwater a component of the supplies for the project?
- Are there sufficient supplies available to serve the project over the next 20 years?

3.1.1 “Is the Project Subject to CEQA?”

The first step in the SB 610 process is determining whether the project is subject to CEQA. SB 610 amended Public Resources Code Section 21151.9 to read: “Whenever a city or county determines that a project, as defined in Section 10912 of the Water Code, is subject to this division [i.e., CEQA], it shall comply with part 2.10 (commencing with Section 10910) of Division 6 of the Water Code.” The City has determined that the Project is subject to environmental review pursuant to the requirements of CEQA, and a Notice of Preparation for an Environmental Impact Report was published on August 5, 2021. The information contained in this assessment is intended to be used to inform the environmental analysis for the Project.

3.1.2 “Is It a Project under SB 610?”

The second step in the SB 610 process is to determine if a project meets the definition of a “Project” under Water Code Section 10912(a). Under this section, a “Project” is defined as meeting any of the following criteria:

1. A proposed residential development of more than 500 dwelling units;

2. A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet (ft²) of floor space;
3. A commercial building employing more than 1,000 persons or having more than 250,000 ft² of floor space;
4. A hotel or motel with more than 500 rooms;
5. A proposed industrial, manufacturing, or processing plant, or industrial park, planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 ft² of floor area;
6. A mixed-use project that includes one or more of these elements; or
7. A project creating the equivalent demand of 500 residential units.

Alternately, if a public water system has less than 5,000 service connections, the definition of a “Project” also includes any proposed residential, business, commercial, hotel or motel, or industrial development that would account for an increase of 10 percent or more in the number of service connections for the public water system. The Project does not qualify as a “Project” under Water Code Section 10912(a) according to any of the above criteria. However, this WSA has nonetheless been prepared for informational purposes to inform the environmental analysis and assess if PWP as the water provider has sufficient and reliable supplies to meet the projected water demand for the Project and PWP water service area in normal, single-dry and multiple-dry water years.

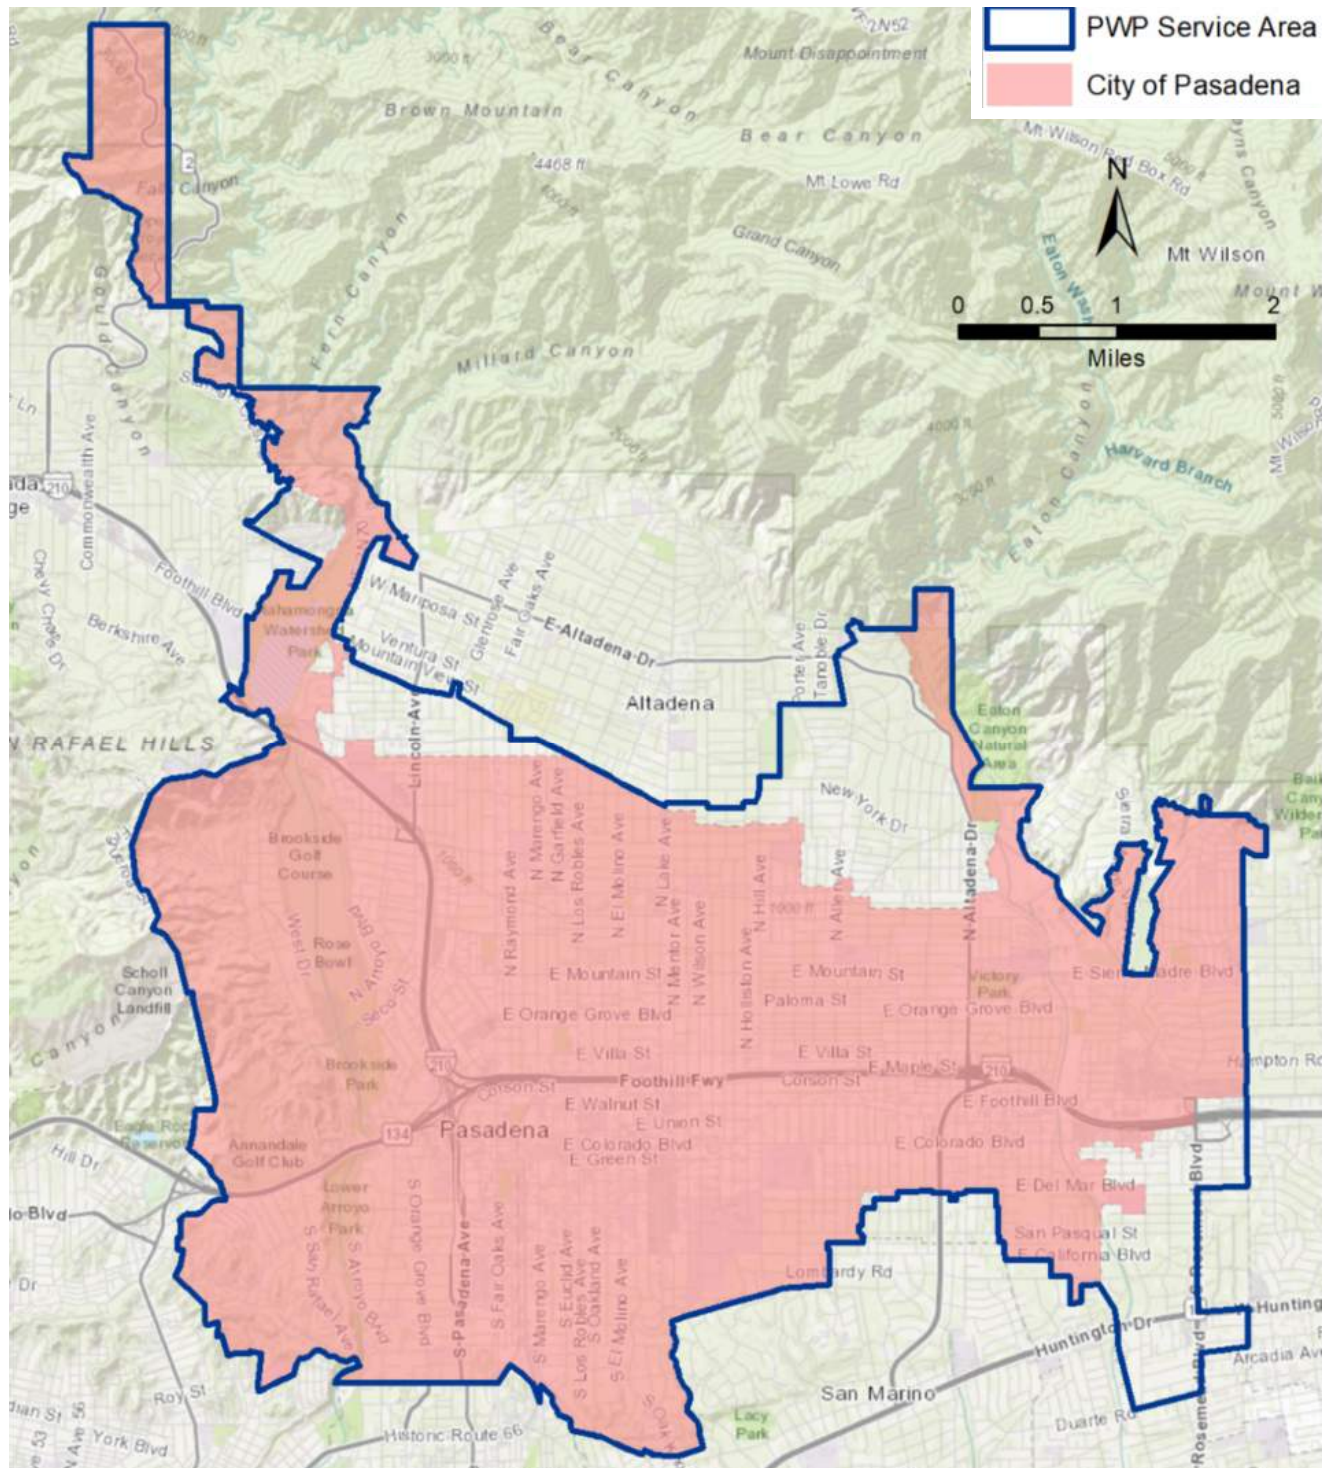

3.1.3 “Is There a Public Water System?”

The third step in the SB 610 process is determining if there is a “public water system” to serve the project. Water Code Section 10912(c) states: “[A] public water system means a system for the provision of piped water to the public for human consumption that has 3,000 or more service connections.”

PWP is identified as the public water supplier for the Project site. The City is situated between the Arroyo Seco to the west and Eaton Wash to the east, overlaying the Raymond Groundwater Basin. This combination of surface water and groundwater provided the basis for Pasadena’s establishment and early development. PWP’s water service area encompasses approximately 25 square miles and is larger than the legal boundary of the City (**Figure 3-1**). It includes portions of the unincorporated areas of Altadena, East Pasadena, and San Gabriel. Approximately 15% of the total population served by PWP is located outside of the City’s legal boundary. The service area is bordered on the north by the unincorporated community of Altadena and the Angeles National Forest, on the east by Arcadia and Sierra Madre, on the south by South Pasadena and San Marino, and the west by Los Angeles, Glendale, and La Cañada Flintridge.

PWP’s water supply consisted solely of groundwater and some local surface water along with San Gabriel River water after the construction of Morris Dam that included a transmission line to Pasadena. However, after becoming one of the thirteen original members of Metropolitan Water District of Southern California (MWD), PWP began receiving imported water, and Pasadena was the first city to receive water supplies from the Colorado River through the Colorado River Aqueduct (CRA) in 1941.

SOURCE: Pasadena Water & Power, 2021

Affinity Project WSA

Figure 3-1
PWP Service Area

Today, PWP's water supply consists of groundwater, surface water, and imported water that is purchased from MWD. PWP is continuing to diversify its water supply portfolio to increase water supply reliability and use non-potable supply sources. PWP serves approximately 38,000 water service connections through its potable water system that includes approximately 520 miles of pipelines ranging in size from 36 inches to 4 inches in diameter, 19 booster pump stations, 14 tanks and reservoirs, 18 wells, and five connections to the MWD system.⁴ As such, PWP is a public water system pursuant to Water Code Section 10912(c), and would supply water to the Project.

3.1.4 “Is There a Current UWMP That Accounts for the Project Demand?”

Step four in the SB 610 process involves determining if there is a current UWMP that considers the projected water demand for the project area. The Water Code requires that all public water systems providing water for municipal purposes to more than 3,000 customers, or supplying more than 3,000 acre-feet (af) annually, must prepare an UWMP, and this plan must be updated at least every five years on or before December 31, in years ending in five and zero. Water Code Section 10910(c)(2) states, “If the projected water demand associated with the Project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f), and (g) [i.e., the WSA].”

In its 2020 UWMP (adopted June 2021),⁵ PWP anticipates an increase in mixed-use developments along transportation corridors in the next several decades and consistent with the City's growth projections as reported in its adopted 2020 UWMP. Moreover, the Proposed Project is consistent with SCAG's growth forecasts, which were used to calculate service area water demands in PWP's 2020 UWMP and also MWD's 2020 UWMP⁶ and its supporting documents. Accordingly, PWP's 2020 UWMP accounts for the water demand of the Proposed Project. Water supply availability and demand data relevant to this WSA is provided in PWP's 2020 UWMP and MWD's 2020 UWMP.

This WSA relied on data and information contained in PWP's 2020 UWMP as it includes the most recent and up-to-date water resources planning information, regional water supplies, service area information and potential water demands that would be generated by land uses associated with the Project. With that understanding, this WSA, per the requirements of SB 610 calculates the water demands of the current Project by assigning water demands factors associated with these proposed uses.

⁵ PWP *Final 2020 Urban Water Management Plan*, adopted June 2021.

⁶ MWD *2020 Urban Water Management Plan*, June 2021.

3.1.5 “Is Groundwater a Component of the Supplies for the Project?”

The requirements of Water Code Section 10910(f), Parts 1 through 5, apply if groundwater is a source of supply for a Project. PWP extracts groundwater to supplement imported water supply sources. PWP pumps its groundwater from the Raymond Basin (RB), a large aquifer underlying the City and the surrounding areas. The RB Judgement (December 1944) resolved conflicts within the groundwater pumping entities overlying the RB. The RB Judgement provides groundwater management for the RB and is discussed in Section 4.2.4.

The large aquifer underlying the City and the surrounding areas is referred to as the RB. The alluvial gravel, sand, and silt are the main water-bearing materials in the RB. The RB can be highly productive some areas and less productive in others, as wells produce groundwater at rates ranging from a few hundred gallons per minute (gpm) to several thousand gpm. The alluvium resides upon impervious bedrock. The alluvial valley slopes to the south, ranging in elevation from 2,000 feet above mean sea level (MSL) near the mountains to between 500 and 700 feet MSL at the Raymond fault. The fault acts as groundwater barrier along the southern boundary of the Basin.

3.1.6 “Are There Sufficient Supplies to Serve the Project over the Next Twenty Years?”

The final step in the SB 610 process pursuant to Water Code Section 10910(c)(4) is to illustrate the available water supplies, including the availability of these supplies in all water-year conditions (normal, single-dry year and multiple-dry years) over a 20-year planning horizon, and an assessment of how these supplies relate to project-specific and cumulative demands over that same 20-year period. In this case, the period is projected to 2045. The water supply and demand comparisons are presented and discussed in Section 6. The sufficiency of water supply sources to serve the Project is assessed in the following sections, which address surface water as imported and delivered through MWD’s water supply systems and local groundwater supplies underlying the City. The PWP 2020 UWMP relies on the City’s General Plan 2035, within which the Project was included in overall growth in the City and water demand generated by anticipated mixed-use development along transportation corridors and/or similar commercial and residential developments. The Proposed Project does not include a General Plan Amendment and is consistent with SCAG’s growth forecasts, which were used to calculate water demand forecasts in the PWP 2020 UWMP and MWD’s 2020 UWMP. Therefore, through these processes the Proposed Project’s water demand has been accounted for in the PWP 2020 UWMP.

Based on the information provided in this WSA, there are sufficient water supplies in the Project area to meet the needs of the Project over the next 20 years (the assessment period required per SB 610). As described in Section 7, Conclusions, there is sufficient available water supply to meet existing and Project demand in the near-term and over the next 20 years.

SECTION 4

Water Supply Setting

This section presents a discussion of PWP and its service area. PWP would serve the Proposed Project's domestic water needs. The City's water supplies are provided from two sources: local groundwater from the RB and water purchased from MWD. MWD is a regional wholesaler in Southern California. MWD provides the City with water imported from the Colorado River Aqueduct (CRA) and the State Water Project (SWP). PWP does not have ownership rights to the naturally occurring groundwater underlying the City's service area. However, PWP receives a right to pump additional groundwater through groundwater credits, which are described in detail under Section 4.2.5. under *Local Groundwater Supplies*.

4.1 Climate

Pasadena's weather is characterized as a Mediterranean climate. Temperatures are mild in the winter, spring and fall, and hot and dry during summer months. Water demand in the PWP service area increases in the summer months due to increased demands for outdoor irrigation. The average annual precipitation in Pasadena is about 20 inches per year. Between 1928 and 2019, precipitation varied between 5 and 48 inches per year. Approximately 75 percent of the average annual precipitation falls during the months of December through March. Typically, August is the hottest month of the year with an average daily maximum temperature of 90 degrees Fahrenheit. Evapotranspiration follows a similar trend as temperature, peaking in July and decreasing in December. A summary of monthly climate data is contained in **Table 4-1** and shows the average annual precipitation, evapotranspiration and irrigation demands in and around the Project area.

The historical annual average precipitation in the City is 19.9 inches. Winter months tend to be wetter than summer months. The wettest month of the year is February with an average rainfall of 4.5 inches. As described in PWP's 2020 UWMP, climate change adds uncertainties to the projection of water supply planning. The effects of higher temperatures and precipitation changes induced by climate change may impact water supplies in a number of ways including:

- Reduction in Sierra Nevada snowpack and consequent reductions in imported water sources for the MWD
- Changes in runoff pattern and amount
- Increased intensity and frequency of extreme weather events
- Prolonged drought periods
- Water quality issues associated with increase in wildfires
- Rising sea levels resulting in potential pumping cutbacks on the State Water Project

- Effects on the groundwater basin
- Changes in demand levels and patterns
- Increased evapotranspiration from higher temperatures

TABLE 4-1
AVERAGE ANNUAL PRECIPITATION, EVAPOTRANSPIRATION, AND IRRIGATION DEMANDS

Month	ET _o (in) ^a	Average of Daily Maximum (F)	Average Total Precipitation (in) ^a
January	2.2	67.1	4.1
February	2.4	68.6	4.5

Annual			19.9

NOTE:

ET_o = evapotranspiration

Source: PWP Final 2020 Urban Water Management Plan, Table 3-1

While it is unknown what the magnitude and timing of these impacts will be, the City is participating in regional planning efforts that incorporate climate change into long range supply planning.

4.2 Supply Sources

The City's water is provided through two sources: local groundwater from the RB and imported water purchased from MWD. MWD is a regional wholesaler in Southern California. MWD provides the City with water imported from the CRA and the SWP. **Table 4-2** summarizes water supply sources and estimated volumes available now and through 2045.

The following section discusses the PWP's water supply sources available to meet the needs of the Proposed Project.

TABLE 4-2
PASADENA WATER SUPPLY SOURCES AND QUANTITIES (AFY)

	2025	2030	2035	2040	2045 ^a
Imported Water	19,248	19,362	19,454	19,527	19,579
Groundwater	11,830	11,830	11,830	11,830	11,830
Total Supplies	31,078	31,192	31,284	31,357	31,409

NOTES:

afy = acre-feet per year

^a The 2045 imported water is projected based on a second order polynomial extrapolation (e.g., curve of best fit) from year 2025, 2030, 2035, and 2040 data in the PWP Final 2020 Urban Water Management Plan. The anticipated 2045 imported water projected in this table may differ from PWP's official projection in future updates to its Urban Water Management Plan. Refer to Attachment 1 for calculation details regarding the projected 2045 extrapolation.

SOURCE: PWP FINAL 2020 URBAN WATER MANAGEMENT PLAN, TABLE 6-5

4.2.1 Imported Water Supplies

The water supply for the City is imported from outside the region through the City's membership in MWD. MWD delivers both treated and untreated water to Southern California via two sources. Water from Northern California is imported by way of the SWP, and water from the Colorado River reaches the region through the CRA. MWD has five treatment plants, which supply most of Southern California with treated water through their regional distribution system. As shown in **Table 4-3**, the City obtains about 63 percent of its treated potable water from MWD. PWP receives treated water via five turnouts from MWD's Upper Feeder. Water served to PWP is treated at MWD's Weymouth Water Treatment Plant (WTP). During outages at the Weymouth WTP, PWP can receive treated water from MWD's Jensen WTP. Sufficient turnout capacity exists to meet existing and projected PWP demands. According to PWP 2020 UWMP, while connection capacity is sufficient, reliability of this supply is insufficient, as such, PWP would be unable to meet local demand in the event of a service disruption from MWD.

TABLE 4-3
IMPORTED WATER SUPPLIES (AFY)

Source	2020 (actual)	2025	2030	2035	2040	2045 ^a
MWD Treated Potable	17,940	19,248	19,362	19,454	19,527	19,579

NOTES:

af = acre-feet per year

^a The 2045 imported water is projected based on a second order polynomial extrapolation (e.g., curve of best fit) from year 2025, 2030, 2035, and 2040 data in the PWP Final 2020 Urban Water Management Plan. The anticipated 2045 imported water projected in this table may differ from PWP's official projection in future updates to its Urban Water Management Plan. Refer to Attachment 1 for calculation details regarding the projected 2045 extrapolation.

SOURCE: PWP FINAL 2020 URBAN WATER MANAGEMENT PLAN, TABLE 6-1 AND TABLE 6-2

4.2.2 Local Groundwater

Groundwater production is obtained from the Raymond Basin (RB). The RB is an adjudicated basin and PWP has groundwater pumping rights to extract groundwater based on the adjudication and decree. PWP is also credited with additional pumping rights for infiltrating surface water.

PWP can use the RB for long-term supply storage as an emergency supply. PWP manages its pumping rights, spreading credits, and long-term storage to maintain a reliable source.

4.2.3 Raymond Basin Description

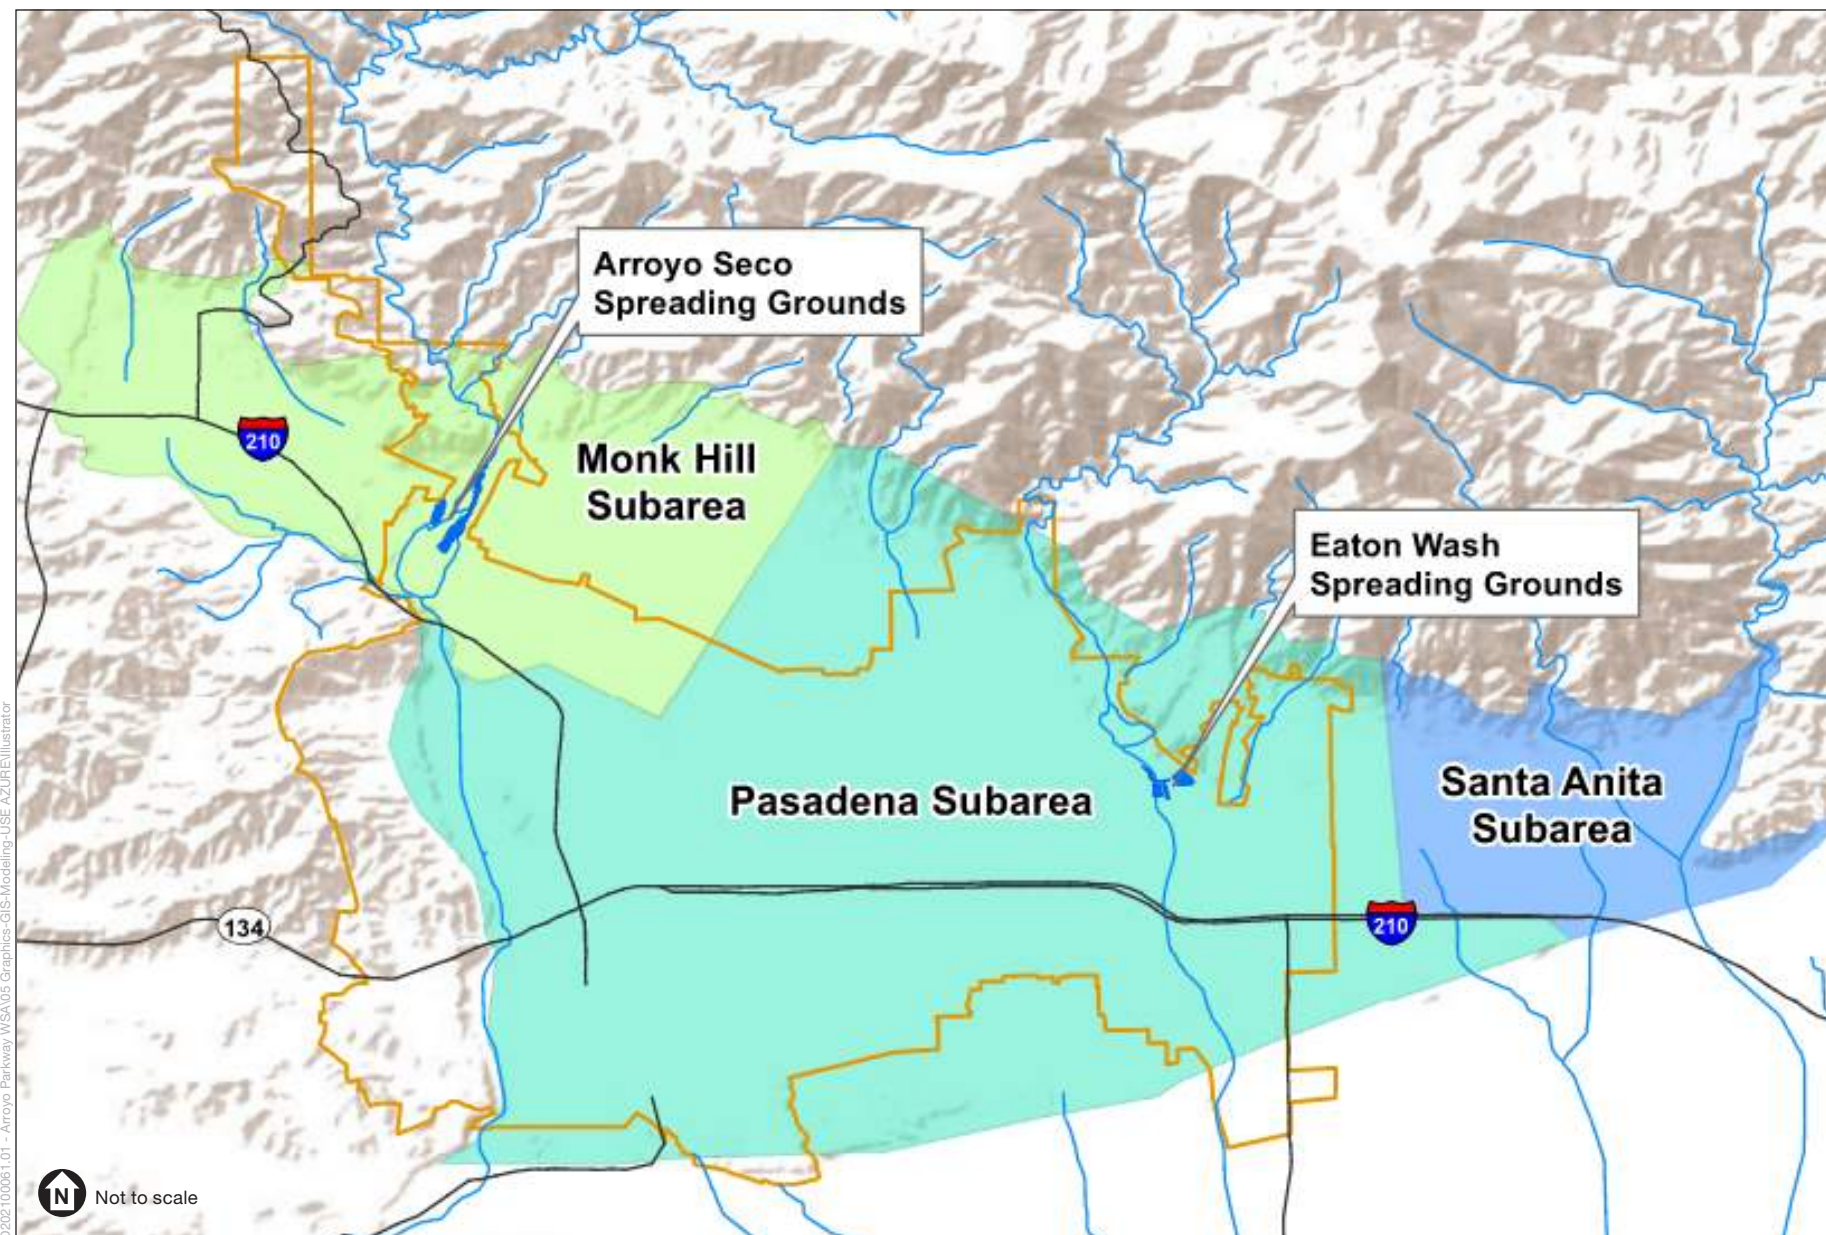

Pasadena overlies the RB. RB is an alluvial valley approximately 40 square miles in area underlain by deposits of gravel, sand, silt, and clay. The RB is located in the northwest portion of the San Gabriel Valley in Los Angeles County, California, and is bounded by the San Gabriel Mountains to the north, the San Rafael Hills to the west, and the Raymond Fault to the south/southeast. RB is divided into three subareas: the Monk Hill subarea in the northwest, the Pasadena subarea in the central portion of the basin, and the Santa Anita subarea in the east (**Figure 4-1**). PWP has water rights in the Monk Hill and Pasadena subareas of the RB.

The base of the water-bearing strata of the Raymond Basin is defined by bedrock material that is not considered to yield significant quantities of water. Overlying the bedrock are more than 1,200 feet of unconsolidated alluvial materials consisting of boulders, gravel, sand, silt, and clay. This alluvium is the principal water-bearing unit in the RB. Well yields in the alluvium range from a few hundred to several thousand gallons per minute (gpm). The alluvial aquifer system in the RB consists of many individual interconnected water-bearing zones.

Specific yield values in the RB are typical of alluvial sediments, and range from approximately 5 percent to 18 percent. Groundwater generally flows southerly from areas of recharge at the base of the San Gabriel Mountains to areas of discharge along Raymond Fault at hydraulic gradients ranging from approximately 0.040 feet to 0.090 feet.⁷ The Raymond Fault acts as a leaky hydrologic barrier and defines the boundary between the RB and the main San Gabriel Valley Groundwater Basin to the south. Currently, RB groundwater levels are relatively higher in the northern half of the basin and lower in the southern half of the basin compared with historical trends. Current sources of groundwater recharge to the Raymond Basin include:

- Natural infiltration and percolation of rainfall and surface water
- Percolation of applied water from irrigation and other return flows
- Subsurface inflow from adjacent groundwater basins, bedrock areas, and the San Gabriel Mountains
- Artificial recharge through surface water infiltration
- Percolation of water from septic tanks

Affinity Project WSA

Figure 4-1
Raymond Groundwater Basin Subareas

4.2.4 Raymond Basin Judgement

In December 1944, the RB was the first groundwater basin adjudicated in California. The adjudication known as the Raymond Basin Judgement (RB Judgement) was needed to resolve conflicts between the groundwater pumping entities. Under the adjudication, it was determined that 16 parties had the right to extract water. The court allocated groundwater pumping rights to each party. The decision is based on RB Judgement of “safe yield”. The safe yield was originally determined to be 21,900 afy but was modified in 1955 to 30,662 afy. These decreed rights were set in 1955 for recent wet weather conditions but were not reevaluated from time to time as then suggested. The authority to administer the RB Judgement and resolve future disputes and make binding judgments is vested in the RB Watermaster. The Watermaster is the Raymond Basin Management Board (RBMB), which is the representatives of the parties (pumping entities) of the RB Judgement.

PWP’s decreed groundwater pumping right was set at 12,807 afy; this is divided between the two underlying subareas: Monk Hill (4,464 afy) and Pasadena (8,343 afy).

As suggested in the decree to reevaluate the RB groundwater conditions, the RBMB implemented a resolution on July 1, 2009 that voluntarily reduced pumping from the Pasadena subarea to address declining water levels. As a result, PWP’s water pumping from the RB was decreased by 2,503 afy to 10,304 afy.

4.2.5 Surface Runoff Spreading Credits

PWP has pre-1914 rights to divert up to 25 cubic feet per second (cfs) of surface water from the Arroyo Seco and Millard Canyon streams and up to 8.9 cfs from the Eaton Wash. This surface water is currently used to recharge the Raymond Basin. The RB Judgment allows each pumper to take the surface water directly to meet demand, or use surface water to recharge the RB and then pump out a portion of the recharged volume in addition to their decreed groundwater pumping rights. PWP receives a pumping credit of 60 to 80 percent of the surface water recharged at the Arroyo Seco Spreading Grounds, and a credit of 80 percent of the surface water recharged at the Eaton Wash Spreading Grounds. From 2001 to 2020, groundwater pumping credits from the infiltration of surface water provided PWP an average of 1,675 afy. In dry years this was as low as 300 acre-feet (AF) to 5,115 AF in wet years.

4.2.6 Groundwater Production

For the past five years (2015 – 2020), PWP’s annual groundwater production has averaged approximately 11,000 afy, which includes decreed rights (10,304 afy) and annual surface water spreading credits. Currently PWP has 12 active wells and six wells are inactive due to contamination and other factors. Most of the operational wells are approaching 100 years old, which reduce the capacity or reliability. Because of contamination issues, groundwater requires treatment or a sequence of blending with imported water to dilute contamination levels low enough to comply with State and federal drinking water requirements. **Table 4-4** provides the pumping history for all PWP wells that produced groundwater between 2016 and 2020.

TABLE 4-4
GROUNDWATER VOLUME PUMPED (AF)

Groundwater	Location or Basin Name	2016	2017	2018	2019	2020
Alluvial Basin	Raymond Basin (Monk Hill and Pasadena subareas)	10,650	11,150	10,690	7,481	11,230
Total		10,650	11,150	10,690	7,481	11,230

NOTE:

af = acre-feet per year

4.3 Summary of Existing and Planned Sources of Water

The total water supplies produced or purchased by the City in 2020 are shown in **Table 4-5**. As indicated in Table 4-5, the water supply types available for use by the City are projected to remain unchanged between now and 2045, and increases in demands are largely expected to be met using treated, imported water.

TABLE 4-5
TOTAL WATER SUPPLIES PRODUCED OR PURCHASED BY PASADENA IN 2020

Water Supplies (acre-feet)	2020	2025	2030	2035	2040	2045 ^b
MWD imported	18,120	19,248	19,362	19,454	19,527	19,579
Supplier-Produced Groundwater	11,230	11,830	11,830	11,830	11,830	11,830
Totals	29,290^a	31,078	31,192	31,284	31,357	31,409

NOTES:

^a total is less 60 afy as sold to other water local supplier.^b The 2045 imported water is projected based on a second order polynomial extrapolation (e.g., curve of best fit) from year 2025, 2030, 2035, and 2040 data in the PWP Final 2020 Urban Water Management Plan. The anticipated 2045 imported water projected in this table may differ from PWP's official projection in future updates to its Urban Water Management Plan. Refer to Attachment 1 for calculation details regarding the projected 2045 extrapolation.

4.3.1 Water Management Plans and Programs

The Metropolitan Water District of Southern California Urban Water Management Plan

The Water Code requires any municipal water supplier serving over 3,000 connections or 3,000 afy to prepare an UWMP. MWD is a regional wholesaler with no retail customers; it provides treated and untreated water directly to its 26 member agencies. Member agencies include 14 cities, 11 municipal water districts, and one county water authority. MWD's service area covers the Southern California coastal plain, including the City (MWD 2020).

Each of MWD's qualifying member agencies is also responsible for submitting its own UWMP. MWD's 2015 UWMP therefore does not explicitly discuss specific activities undertaken by its member agencies unless they relate to one of MWD's programs. MWD's 2020 UWMP describes and evaluates sources of supply, efficient uses, water recycling, and conservation activities across the Southern California region (MWD 2020).

Pasadena Water and Power 2020 Urban Water Management Plan

The UWMP for PWP forecasts future water demands within the service area under average and dry year conditions, identifies future water supply projects, and evaluates future supply reliability. The UWMP discusses the provider's supply portfolio, including current and planned water conservation and recycling activities (PWP UWMP 2020).

The Greater Los Angeles County Region Integrated Regional Water Management Plan

The mission of the Greater Los Angeles County Integrated Regional Water Management Plan (IRWMP) is to address the water needs of the Region in an integrated and collaborative manner. The first IRWMP for the Greater Los Angeles County Region was published in 2006, following a multi-year collaborative effort between water retailers, wastewater agencies, stormwater and flood managers, watershed groups, businesses, tribes, the agriculture community, and non-profits. It provided a mechanism for improving water resources planning in the Los Angeles Basin. In 2014, the Integrated Regional Water Management (IRWM) group updated the IRWMP to comply with new State integrated planning requirements and update the content. (Leadership Committee of the GLAC IRWMP 2014)

MWD's Integrated Water Resources Plan

MWD's Integrated Water Resources Plan (IRP) was first developed in 1996 to establish targets for a diversified portfolio of supply investments. The 2015 Update planned for water supplies under a wide range of potential future conditions and risks. In the 2015 IRP update, MWD describes unprecedented challenges on both the SWP and the CRA imported water supplies. It identified supply actions including recycled water, seawater desalination, stormwater capture, conservation, and groundwater cleanup to ensure local water supply reliability. The 2015 Update was adopted by MWD's board of directors in January 2016 (MWD 2016b). The proposed 2020 IRP, which is still in process, will incorporate scenario planning components to capture a broader range of possible futures, both on the demand and supply side, than those included in MWD 2020 UWMP, but will share a common set of foundational data.⁸

4.4 Water Supply Reliability

Sustainable water supply is the aggregated quantities of the aforementioned sources; briefly, these include: imported water purchased from MWD and groundwater from the RB. Water reliability is impacted by numerous factors, including population, economic activity, land use, hydrologic

⁸ MWD 2021. *2020 Urban Water Management Plan*, adopted June 2021, page 2-5.

fluctuations, water quality, climate change, constraints on distribution facilities, aging water systems, more stringent policies and regulations, natural disasters, and emergencies.

Imported water supply availability was modeled from MWD’s databases and simulation models. MWD also uses a method of multiple hydrology simulation in their reliability analysis and provided a matrix of reliability under each historical year applied to each future planning year.

To determine local supply availability, PWP employed a model that simulated local hydrology using historical data from the Arroyo Seco and Eaton Wash and accounted for diversion rights, spreading credits and adjudicated pumping rights as well as capacity constraints on existing facilities in the region. This analysis was used to quantify the reliability of groundwater and surface water and determine the ability of the existing water supply portfolio to meet future water demands.

The water supply reliability analysis evaluates local demands, local supply and imported supply under variable conditions of hydrology and demand to determine reliability.

4.4.1 MWD Supply Reliability

The City’s location in MWD’s distribution system allows it to be supplied by two separate MWD treatment plants, Weymouth and Jensen. The Weymouth plant can treat water from the CRA and the SWP. The Jensen plant can only treat water from the SWP. MWD’s multiple supplies allow operational flexibility in case of a treatment plant shutdown or temporary problem within the distribution system.

MWD discusses regional water supply reliability in its final 2020 UWMP.⁹ The MWD UWMP uses lessons learned from their previous planning efforts to inform how uncertainty and reliability are evaluated. These plans include the previous 2015 IRP Update and proposed 2020 IRP, the 1999 Water Surplus and Drought Management (WSDM) Plan, and Water Supply Allocation Plan (WSAP). The 2020 IRP is different than previous IRPs in that scenario planning components are being implemented to capture a broader range of possible futures both on the demand and supply side. The reliability assessments included in MWD’s UWMP, including the Water Shortage Contingency Planning and Drought Risk Assessments, mirror a similar approach. The assumptions in their UWMP fall within the plausible future scenarios analyzed in the 2020 IRP to ensure the two efforts complement each other. To develop average year supply and demand estimates, MWD used the historic hydrology for 1922 through 2017. This 96-year period was selected based on the historical hydrology period reported in the 2019 SWP Delivery Capability Report, which represents MWD’s largest and most variable supply. During that period, the driest one-year period occurred in 1977. A five-consecutive year (1988–1992) dry period was additionally used for MWD’s water service reliability and drought risk assessments, representing the driest five-year consecutive period during that time frame.

MWD strives for a “diverse water portfolio” that allows it to meet demands even in years when its primary supplies would not be enough. Part of MWD’s 2020 UWMP is to have water storage

⁹ MWD 2021 2020 Urban Water Management Plan, adopted June 2021, page 2-5.

capacity to draw on when supplies are short. Using surplus water from normal and wet years, MWD's large storage portfolio contains both dry-year storage and emergency storage that can be used to meet demand in case of a shortage. MWD has completed extensive modeling to create management options that will handle future variations in supply and demand.

As discussed in PWP's 2020 UWMP, if MWD has a sufficient water supply, then through existing agreements and delivery systems PWP has sufficient supplies as well. In the 2015 IRP update, MWD describes unprecedented challenges on both the SWP and the CRA imported water supplies. The 2020 IRP will look beyond these previous challenges and expand the range of planning scenarios that MWD considers in their supply and demand modeling, which will increase the reliability of this resource for PWP. MWD does not anticipate any reductions in water supply availability from SWP and CRA supplies due to water quality concerns over the study period.

4.4.2 Groundwater Supply Reliability

PWP uses groundwater to meet up to 40 percent of demand in its service area. The capacity and reliability of PWP's groundwater supply requires consideration of many issues including:

- Water rights
- Aquifer storage capacity
- Physical well and pump capacity
- Treatment capacity
- Water quality issues

In the Monk Hill and Pasadena subareas, pursuant to the decree PWP has adjudicated groundwater rights, additional groundwater pumping credits from infiltration of surface water, and long-term storage credits. PWP's total adjudicated groundwater rights in the RB are 12,807 afy: 8,343 afy in the Pasadena subarea and 4,464 afy in the Monk Hill subarea (prior to the voluntary reduction of 2,503 afy).

Currently, groundwater pumping is constrained by the limited pumping capacity of the active wells. For water supply planning purposes, this assumes that only the currently operational wells will be operable in the future. Currently, the Monk Hill subarea has a pumping capacity of approximately 2,800 afy. The Pasadena subarea pumping capacity is approximately 9,030 afy.

PWP uses historical flow data for Eaton Wash, PWP's surface water diversion right of 8.9 cfs, and the existing structural diversion capacity of 200 cfs to simulate the water available for recharge in the Eaton Wash Spreading Grounds into the Pasadena subarea and includes a local evaporation rate.¹⁰

A 20 percent administrative loss is applied to the volume of water recharged in Eaton Wash Spreading Grounds to calculate the spreading credits available to PWP. PWP used historical flow data for Arroyo Seco stream, PWP's surface water diversion right of 25 cfs, and the existing

¹⁰ California Irrigation Management Information System (CIMIS); station data.

structural diversion capacity of 18 cfs to simulate the water available for recharge in the Arroyo Seco Spreading Grounds into the Monk Hill subarea. PWP receives spreading credits of 60 to 80 percent of the diverted water spread in the basins in the Monk Hill subarea. To calculate this, a 30 percent administrative loss was used for spreading credits available to PWP in the Monk Hill subarea. In addition to the groundwater rights and spreading credits, PWP has long-term storage of groundwater in the Monk Hill and Pasadena sub-areas. PWP's current long-term storage is approximately 30,000 af.

4.4.3 Reliability Results

To meet water demand in PWP's service area, for water supply planning purposes PWP in its modelling prioritizes the use of groundwater rights, followed by spreading credits from surface water in the Arroyo Seco and Eaton Canyon, and finally imported water from MWD.

Groundwater was assessed as a resource by comparing its current production to potential production based on water rights. The limiting factor in groundwater production is the total capacity of the wells currently in operation. Current capacity is approximately 11,830 afy assuming year-round consistent pumping, while the adjudicated rights under voluntary reduction are 10,304 afy. At this capacity, only about 1,500 afy of spreading credits (or long-term storage) could be pumped in any year above the adjudicated rights.

Groundwater (including spreading credits from surface water diversions) and imported water compared to demand (scaled by weather) revealed the reliability under non-emergency conditions. Furthermore, model results indicate Pasadena will experience no supply deficits in normal or non-drought years. As discussed in section 7.1.5.1 of PWP's final 2020 UWMP its water supply and demand forecasting model projected that beginning in 2020 and extending to 2045, PWP can meet its service area water demand approximately 91 percent of the time (**Table 4-6**); while in the remaining 9 percent of this time period the projected water supply shortage could range from approximately 1,000 to 1,500 afy.

TABLE 4-6
BASIS OF WATER YEAR DATA (RELIABILITY ASSESSMENT)

	Year	afy	Percent Reliability
Average Year	2012	36,700	100%
Single-Dry Year	2018	33,700	92%
Consecutive Dry Years 1st Year	2014	34,100	93%
Consecutive Dry Years 2nd Year	2015	35,000	95%
Consecutive Dry Years 3rd Year	2016	33,700	92%
Consecutive Dry Years 4th Year	2017	34,200	93%
Consecutive Dry Years 5th Year	2018	33,700	92%

NOTE:

In 2012 pumped groundwater was 13,700 afy, available imported water was 23,000 afy. In 2018, pumped groundwater was about 10,700 afy, available imported water was 23,000 afy. For the 5 consecutive historic dry years pumped groundwater was from about 10,700 to 12,000 afy, the available imported water from MWD was 23,000 afy.

Source: PWP Final 2020 Urban Water Management Plan

PWP and similar water providers are able to manage supply shortages of 10 percent with temporary conservation measures as discussed below. According to PWP's final 2020 UWMP, this reliability analysis assumes existing wells are maintained and that investment in replacement production capacity is sustained over the planning period. It should be noted that additional investment needed to pursue additional supply and production solutions based on these forecasted deficits would be accomplished through new water supply projects as discussed in Chapter 6, *Water Supply Characterization*, specifically sections 6.3 through 6.7 that discusses new or additional water supplies that could be available to meet non-potable demand within PWP's service area.

Chapter 8, Water Shortage Contingency Plan (WSCP), of the PWP 2020 UWMP, explains how PWP intends to act in the case of an actual water shortage condition. The WSCP anticipates a water supply shortage and provides pre-planned guidance for managing and mitigating a shortage. Prior to invoking the WSCP, PWP can implement voluntary or mandatory demand management measures (DMMs) as described in detail in Chapter 9 of its final 2020 UWMP. PWP has continuously implemented a water conservation program since 1991. Voluntary and mandatory DMMs can reduce demand by 10, 15, 20 and as much as 25 percent in some years.

PWP's available water resources, in combination with the DMMs described in the WSCP included with the PWP 2020 UWMP, will ensure reliable water supplies to service area users within the 20-year planning timeframe.

SECTION 5

Water Demands

Analysis of water demand, both historical and projected, is based on the same regional, local, areas as the analysis for supplies. The regional demand analysis addresses the greater regional demand which includes MWD demands; the local demand analysis addresses the City's water system specifically, and the Project-specific analysis demand calculations are based on the most recent land-use map and information from the Project Applicant.

5.1 Recent, Historical, and Projected Demands

5.1.1 City 2020 Demand

PWP provides potable and non-potable water for a mix of urban uses that includes residential, commercial, and governmental uses. There are no agricultural water services in the PWP's service area; however, a portion of water delivered is provided exclusively for landscape irrigation purposes.

The total water demands are based on water use sectors by starting with 2020 records of water sales by customer class, then using projected growth numbers for housing units and employment. Demands incorporate passive conservation (code-based and price-effect savings) and active conservation (for installed active devices through 2020). Losses are assumed to be equal to the five-year average of losses from 2015 to 2019, which is approximately 6 to 9 percent of potable direct use demand. It is assumed that existing codes and ordinances will remain in place, which include those codes related to water conservation. In calendar year 2020 as shown in **Table 5-1**, water deliveries were comprised of residential and commercial, volume of water deliveries to customers are shown in Table 5-1.

Water losses in calendar year 2020 are estimated as approximately 6 to 9 percent of water delivered and is based on data regarding unaccounted-for water from 2015 to 2019. Unaccounted-for water is calculated as the difference between water delivered to the system and metered sales to customers, accounting for changes in reservoir storage. Unaccounted-for water is lost through unmetered use (flow testing, reservoir cleaning, main flushing, firefighting, etc.), faulty meters, evaporation, sheared hydrants, and system leaks. The industry average for unaccounted-for water is 7 percent, PWP's unaccounted-for water is less than unaccounted-for water losses for a municipal utility that serves 26,000 connections.

In 2009, the California Water Conservation Act (also known as Senate Bill X7-7 or SBX7-7) was passed into law and requires urban water suppliers to reduce per capita water use 20 percent by

2020 (20x2020). To assist water purveyors, DWR provides a guidance manual with methodologies for calculating water use targets to reduce water demands and meet the 20X2020 goals.

TABLE 5-1
PWP'S 2020 WATER DEMANDS

Water Use Category	Total Volume (af)
Single-family residential	13,593
Multi-family residential	5,190
Commercial	6,530
Institutional/Governmental	1,311
Other Potable	80
Losses	2,586
Total Direct Use Demand	29,290
NOTE: af = acre-feet	
Source: <i>PWP Final 2020 Urban Water Management Plan, Table 4-1</i>	

The gross water use entering PWP's distribution system is the total volume of water produced by PWP from local groundwater, plus the water imported from MWD, plus the groundwater purchased from local water agencies, minus the water delivered to other suppliers.

Projected water use can be determined by examining past and current water use trends, along with consideration of land use planning data, climate change, and other factors relevant to sector-specific water use. This section provides a detailed description of the current demands and the methodology used to project demands, including the following:

- Land use and demographic projections: Overview of current land use and how land use changes are expected to change demand for water in the future.
- Demand forecast: Provides the methodology used to forecast demand to year 2040 based on 2020 demands.

5.1.2 City Projected Demands

Land Use and Population

The City consists of a mix of land uses, including residential, commercial, industrial, institutional and open space, with residential and commercial being the dominating uses. The City is largely built-out, meaning there are few vacant sites available for new developments and growth is expected to be due primarily to increases in housing density and land use intensity.

Past water use as it relates to PWP's service area is detailed in its 2020 UWMP water use is tracked by PWP's billing system, which categorizes customers into four primary types: residential (including single-family and multi-family residential), commercial and industrial, city accounts, and miscellaneous. The single-family residential customers include individually metered houses, whereas historically the multi-family residential customers include apartments and condominiums that have master meters for the entire building or complex. However, since

January 1, 2018, the SB 7 legislation requires all new multi-family residential units to have individual water meters per unit, sometimes referred to as submetering. In addition to these uses, there is non-revenue water that represents system-wide water losses. These losses are discussed in Section 4.3.

In 2020, PWP's water use totaled approximately 29,290 afy as shown in Table 5-1. Water demand during this period decreased through 2016 even though population increased during this same period. Single family residential customers achieved more than 25 percent reduction. This decrease in water consumption is likely the result of the state's conservation measures implemented in 2014 to mitigate drought impacts, as well as social awareness, outreach campaigns by state and water agencies, the economy and weather. Water demand has slightly increased since 2017 following the end of the drought and the relaxing of water use restrictions, yet remains well below historical levels. A breakdown of 2020 water use by sector is provided in Table 5-1.

MWD as the regional wholesale water supplier, prepares water resources reports, studies and plans necessary to manage its regional water supplies based on current and future supply and demand scenarios. As part of its 2020 UWMP, MWD provided PWP and other member agencies with population and supply and demand calculations. Potable water demand for 2025, 2030, 2035, and 2040 are estimated by using the total retail demand projections provided by MWD as part of the regional planning process as provided in the 2020 UWMP. Potable water demand for 2045 is based on the City's adopted 2020 Water System and Resource Plan, Appendix A. **Table 5-2** contains the projected demands by water use classes. In general, as shown in Table 5-2, total demands are expected to evolve over time with a trend towards lower demand relative to 2020 and near-term 2025 conditions due to the reductions imposed by SB 606 and Assembly Bill (AB) 1668, which require a reduction in indoor water use, tempered by the expected increase in housing units as discussed in Section 2.1. The values in Table 5-2 are not reduced to reflect additional water savings from PWP's conservation programs; therefore, actual water demand values may be lower when accounting for PWP's conservation programs.

TABLE 5-2
PROJECTED WATER DEMAND (AF)

Water Use Category	2025	2030	2035	2040	2045
Single Family	12,800	12,000	11,900	11,800	Not Available
Multi-Family	4,800	4,550	5,000	5,250	
Other	100	100	150	180	
Commercial	6,500	5,900	5,850	6,000	
Institutional/Governmental	900	850	870	900	
Unaccounted-for Losses	1,650	1,600	1,550	1,500	
Total	26,750	25,000	25,320	25,630	25,950

NOTE:

af = acre-feet

Source: PWP Final 2020 Urban Water Management Plan, Table 4-4 (2025, 2030, 2035, 2040 data); PWP, 2020 Water System and Resource Plan, Appendix A, p. A-6 (2045 data).

5.1.3 Proposed Project Demands

Proposed Project Demand – Construction and Operation

Proposed Project construction activities are anticipated to commence in 2023 and be completed in 2026. Over this period, water would be used for dust control purposes during demolition, solid excavation, grading activities, equipment cleaning, vehicle wash downs, washout basins, and re-compaction of backfill materials, concrete pouring and other construction-related uses. Based on construction projects of similar size and duration, a conservative estimate of construction water use could be up to 50 gallons per day per 1000 square-feet (gpd/1000 sf). Construction activities for the Project would occur on approximately 90,400 square feet. Based on water use of 50 gpd/1000 sf of construction activities at the project site, water use during construction is assumed to be 4,520 gallons per day (gpd). Water use during the 34-month (approximately 1,020 days) construction period would be up to approximately 4.61 million-gallons (MG) or 14.1 acre-feet (AF). Calculated annually, this would be 1.63 MG/year or 4.99 afy.

The expected water use of the Project once fully operational was determined by analyzing demand based on planned uses as described in Section 1 and as shown in Table 1-1, and with water demand shown in **Tables 5-3 and 5-4**. To determine the water demand factors of the Project, water use demand factors were formulated based on data from the PWP 2020 UWMP as well as current and historical uses at similar facilities along with information similar mixed-use projects. The Project water demand includes all indoor (commercial and residential) uses in all water year types.

**TABLE 5-3
BUILDING A WITH MEDICAL OFFICE/COMMERCIAL WATER DEMAND**

Refer to Attachment 2 for calculation details regarding the landscaping water demand.^c Existing structure and land use to be retained.

Source: Affinity Project Development Plan. Calculated water demands based on Los Angeles Bureau of Sanitation, 2020 wastewater generation rates.

Historical Project-Site Demands

Historically, the Project site has been used for commercial uses. Based on conservative water resources planning estimates for these existing uses, as shown in **Table 5-5**, existing water demand at the Project site is calculated to be approximately 30.72 afy. Demand currently generated by would be replaced by the demand associated with the Project or Building A residential/commercial development. Whole Foods would remain on the Project site and would continue to generate water demands throughout construction and operation of the Project. Two existing buildings totaling approximately 5,882 square feet would also remain on the Project site; fast-casual restaurant uses are proposed and analyzed in these two buildings as part of the Project water demand analysis. As a conservative assumption, landscape water is not included in the historical water demands, which results in a slight overestimation of the Project's net increase in water demand relative to existing conditions.

**TABLE 5-5
HISTORICAL WATER DEMANDS (CALCULATED)**

Land Use Category	Square feet	Generation Unit	GPD	GPY	AFY
Existing Land Use to Remain under the Project					
Whole Foods Grocery ^a	73,671	150 gpd/1,000 ft	11,051	4,033,487	12.38
Existing Land Uses to be Removed under the Project

NOTES:

gpd = gallons per day; gpy = gallons per year; afy – acre-feet per year

^a Existing structure and land use to be retained.^b Existing structure to be retained. The existing Fitness (2,880 square feet) and Event Rentals (3,002 square feet) land uses would be repurposed for the Commercial (Fast Casual Restaurant, 5,882 square feet) land use under the Project.

Source: Affinity Project, Notice to Proceed and Initial Study Project Description, August 2021. Affinity Project Development Plan. Calculated water demands based on Los Angeles Bureau of Sanitation, 2020 wastewater generation rates.

Net Total Project-Site Demands

As shown in Table 5-3 and Table 5-5, the Project with Building A Medical Office/Commercial would result in a net total demand of approximately 75.57 afy ($106.29 - 30.72 = 75.57$ afy). As shown in Table 5-4 and Table 5-5, the Project with Building A Residential/Commercial would result in a net total demand of approximately 67.86 afy ($98.58 - 30.72 = 67.86$ afy).

Projected Single-Dry and Multiple-Dry Year Demand

In all water year types including single-dry and multiple-dry years, it is anticipated that the worst case (conservative estimate) Project net demand of approximately 76 afy or 68 afy under the development scenario with Building A Residential/Commercial instead of the Medical Office Building (A) will remain unchanged, unless consumers within the City's service area are specifically asked to reduce water use through active conservation measures described in Section 8 of PWP's 2020 UWMP.

SECTION 6

Supply-Demand Comparison

This section reviews the regional, local, and Project-level supply and demand considerations.

6.1 MWD’s Water Supply Sufficiency

MWD strives for a “diverse water portfolio” that allows it to meet demands even in years when its primary supplies would be inadequate. In fact, MWD has developed a water supply portfolio capable of meeting all demands in any given year. As documented in MWD’s 2020 UWMP that it plans for drought conditions and potential water shortages, and therefore has taken measures to have water in storage within its existing water supply systems and facilities to use during years when SWP and CRA supplies are curtailed. Using surplus water from normal and wet years, MWD’s large storage portfolio contains both dry-year storage and emergency storage that can be used to meet demand in case of shortages. As documented in its 2020 IRP scenario planning components are being used to predict a broader range of possible water supply and demand futures. As previously discussed, MWD’s UWMP, its Water Shortage Contingency Planning and Drought Risk Assessments use a similar approach to assess reliability of water supplies and sufficiency to meet demand. Operational studies used in this assessment demonstrate that MWD has sufficient water supply to meet the anticipated future demand for every hydrologic year on record. Therefore, MWD does not anticipate any reductions in water supply availability even if SWP and/or CRA supplies are curtailed due to drought and/or water quality concerns over the study period.

Tables 6-1, 6-2 and 6-3 illustrate the available water supplies as hydrologic conditions change when compared to demand changes through 2045. In years of above-average rainfall, MWD can store more water throughout its storage system effectively building up more supplies for single-dry or multiple-dry years.

6.2 Local Water Supply Sufficiency

Table 6-1 compares the City’s projected supply and demand over a 20-year planning horizon (in this case, projected out to 2045) under normal water year conditions. As shown in Table 6-1, the City can satisfy all customer demands in each year.

TABLE 6-1
PASADENA NORMAL-YEAR SUPPLY AND DEMAND COMPARISON – POTABLE (AFY)

	2025	2030	2035	2040	2045
Supply Totals	31,078	31,192	31,284	31,537	31,409 ^a
Demand Totals	26,750	25,000	25,320	25,630	25,950 ^b
Difference	4,328	6,192	5,964	5,907	5,459

NOTES:

afy = acre-feet per year

^a The 2045 supply total is projected based on a second order polynomial extrapolation (e.g., curve of best fit) from year 2025, 2030, 2035, and 2040 data in the PWP Final 2020 Urban Water Management Plan. The anticipated 2045 supply total projected in this table may differ from PWP's official projection in future updates to its Urban Water Management Plan. Refer to Attachment 1 for calculation details regarding the projected 2045 extrapolation.

^b PWP, 2020 Water System and Resource Plan, Appendix A, p. A-6 (2045 data).

Source: *PWP Final 2020 Urban Water Management Plan, Table 7-2*

The future water demands for the City and the entire region have been estimated by MWD using its new Econometric Demand Model. This model uses forecast data from SCAG for variables including population, housing units, and employment. Although the City is using lower demand projections which take into account the reductions to meet 20x2020 targets, these MWD projections provide the basis for dry-year reliability planning.

Generally, dry weather, especially hot, dry weather, causes an increase in water demand, mostly for landscape irrigation. However, water use efficiencies and conservation practices during past droughts have successfully lowered water demand.

For water supply planning purposes, PWP in its final 2020 UWMP presented a comparison of projected water supply and demand for over a 20-year planning horizon. Based on this information, PWP's final 2020 UWMP projects that neither PWP nor its customers will experience supply deficits in normal or non-drought years through the year 2040. As a result, PWP does not expect critical shortages during the 20-year planning period in PWP's current 2020 UWMP. When taking dry and multiple dry years into account, as discussed in section 4.4.3 above PWP's water supply and demand forecasting model projected that beginning in 2020 and extending to 2040, PWP can meet its service area water demand without implementing conservation measures approximately 91 percent of the time; while in the remaining 9 percent of this period, the projected water supply shortage could range from approximately 1,000 to 1,500 afy. Based on extrapolated data from PWP's final 2020 UWMP, critical shortages would not be expected through 2045.

Chapter 8, Water Shortage Contingency Plan (WSCP), of the PWP 2020 UWMP, explains how PWP intends to act in the case of an actual water shortage condition. The WSCP anticipates a water supply shortage and provides pre-planned guidance for managing and mitigating a shortage. Prior to invoking the WSCP, PWP can implement voluntary or mandatory demand management measures (DMMs) as described in detail in Chapter 9 of its final 2020 UWMP. Through planned implementation of DMMs, PWP forecasts that no critical shortages will take place during the 20-year planning period and no critical shortages are expected through 2045.

PWP has continuously implemented a water conservation program since 1991. Voluntary and mandatory DMMs can reduce demand by 10, 15, 20 and as much as 25 percent in some years.

Table 6-2, and **Table 6-3**, provide a comparison of supply to demand during single-dry- and multiple-dry-year periods. As shown in these tables, water demand in the City will increase over the 20-year planning period (in this case, projected out to 2045). Water supplies provided by MWD and supplemented by groundwater supplies are sufficient to meet demand. As shown in Table 6-2, PWP can meet existing demand, in addition to new demands created by the Project, and no shortfall will occur.

TABLE 6-2
SINGLE-DRY-YEAR SUPPLY AND DEMAND COMPARISON – POTABLE (AFY)

Source: *PWP Final 2020 Urban Water Management Plan, Table 7-3*

6.2.1 Multiple-Dry Years

As shown in Table 6-3, PWP uses MWD's projections to provide the basis for dry year reliability planning. PWP's draft 2020 UWMP evaluates supply and demand comparisons for multiple-dry years. The City's water supply during a dry period could exceed the supplies used during a normal year given the ability to purchase additional imported supplies from its wholesaler, MWD. Furthermore, MWD projects sufficient supplies and storage to meet demands in future single- and multiple-dry-year scenarios (Tables 6-2 and 6-3).

TABLE 6-3
MULTIPLE-DRY-YEAR SUPPLY AND DEMAND COMPARISON (AFY)

Years	2025	2030	2035	2040	2045

NOTES:

afy = acre-feet per year

^a The 2045 supply total is projected based on a second order polynomial extrapolation (e.g., curve of best fit) from year 2025, 2030, 2035, and 2040 data in the PWP Final 2020 Urban Water Management Plan. The anticipated 2045 supply total projected in this table may differ from PWP's official projection in future updates to its Urban Water Management Plan. Refer to Attachment 1 for calculation details regarding the projected 2045 extrapolation.

^b PWP, 2020 Water System and Resource Plan, Appendix A, p. A-6 (2045 data).

Source: PWP Final 2020 Urban Water Management Plan, Table 7-4

Furthermore, MWD's contingency plan for responding to water shortages is the Water Supply Allocation Plan (WSAP).¹¹ WSAP is based on a guiding principle for allocating shortages across MWD's service area. The WSAP formula uses different adjustments and credits to balance impacts of water shortage at the retail level, where local supplies can vary dramatically, and provide equity on the wholesale level among member agencies. It also takes into account the following: growth in demand, local investments, change in local supply conditions, the reduction

¹¹ WSAP approved by MWD Board of Directors in February 2008.

in potable water demand from recycled water, and the implementation of water conservation programs.¹²

Furthermore, as shown in Table 6-4 PWP has chosen to use the same dry year hydrologic scenarios as selected by MWD, which will allow PWP to use information about imported water supply reliability derived from modeling completed through the 2015 IRP Update process. Due to MWD's investments in continued reliability and sustainability programs that consider climate change issues the projections shown in Table 6-4 do not vary. The City's supply is determined to be reliable in normal-, single-dry-, and multiple-dry-year scenarios, with additional supplies purchased from MWD to meet demands in dry years as needed.

Even though Tables 6-2 and 6-3 show available MWD supply is sufficient to meet PWP's demands, based on MWD's IRP model simulations for the future under different hydrology conditions, it is possible that some extreme dry years could result in MWD allocations. MWD's model does in fact show some potential years in which allocations would be applied, reducing supply to PWP. For the years in which MWD supply could be reduced, a WSCP is in place. Table 6-4 provides the data for a five-year drought risk assessment with and without the WSCP in place.

TABLE 6-4
FIVE-YEAR DROUGHT RISK ASSESSMENT

	2021	2022	2023	2024	2025
Total Water Use	28,500	28,065	27,625	27,200	26,750
Total Supplies	29,290	31,533	31,533	31,533	31,533
Surplus/Shortfall w/o WSCP Action	790	3,468	3,908	4,333	4,783

Resulting % Use Reduction from WSCP action	0%	4%	4%	4%	4%

Source: PWP Final 2020 Urban Water Management Plan, Table 7-5

This WSA finds that the City has sufficient water supplies under all hydrologic conditions, through agreements with and provided by MWD and use of its existing groundwater pumping rights from the RB. Because of MWD's long-term success of delivery of water to all customers and commitment to continue to serve treated water to all retailers, when SWP and CRA curtailments occur, MWD has supply flexibility through its vast network of water supply facilities and long-term water management programs to continue to meet all demands. In addition, PWP could pump additional local groundwater during drought, emergency or other surface supply reductions to meet demands in the future. Furthermore, consumers and retailers could effectively reduce demands by 10 or 25 percent to relieve demand pressure on local and regional supplies. It

¹² WSAP and the WSDM were incorporated into MWD's 2020 WSCP and prepared in conjunction with MWD's 2020 UWMP.

is reasonable to assume, based on the consumer demand reductions that PWP customers would continue to curb per-capita use and when necessary based on water supply allocations, customers could reduce per capita demands by up to 25 percent.

Project Water Supply Sufficiency

In normal years, the Project with Building A Medical Office/Commercial as detailed in Section 5 would create an estimated net demand of approximately 76 afy¹³ of new water demand (a conservative estimate), or about 0.24 percent of the City's anticipated total system supply of 31,078 afy in 2025, 0.24 percent of the supply of 31,357 afy in 2040, and 0.24 percent of the supply of 31,409 afy in 2045. If the Project with Building A Residential/Commercial is pursued, this development scenario would use up to an estimated net demand of approximately 68 afy (a conservative estimate)¹⁴, or about 0.22 percent of the City's anticipated total system supply of 31,078 afy in 2025, 0.22 percent of the supply of 31,357 afy in 2040, and 0.22 percent of the supply of 31,409 afy in 2045.

As stated previously, the 2020 UWMP aligns with Pasadena's population and land use and consistent with SCAG population and employment projections includes potential water demands that would be generated by land use changes and new commercial and residential developments similar to the Project. To convey water to the Project site, this WSA assumes the Project would use treated water delivered through existing or upgraded infrastructure connected to and expanded upon the City's existing water conveyance systems.

¹³ Calculated water demands based on Los Angeles Bureau of Sanitation, 2020 wastewater generation rates

¹⁴ Calculated water demands based on Los Angeles Bureau of Sanitation, 2020 wastewater generation rates

SECTION 7

Conclusion

According to the requirements of Water Code Section 10910(c)(3) “the water supply assessment for the project shall include a discussion with regard to whether the public water system's total projected water supplies available during normal, single-dry, and multiple-dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses.”

As previously shown in Tables 6-1, 6-2 and 6-3, MWD can meet all water demands in normal, single-dry, and multiple-dry years by utilizing its current and diverse water portfolio. Voluntary measures and, when required, demand reduction measures during dry years would alleviate system demand capacities during periods of SWP and CRA curtailments (for drought, emergency, or environmental mitigation reasons). As discussed, customers in the PWP’s service area successfully reduced water uses and curbed demand in previous multiple-year droughts in 1990–1992 and 2008–2010 and significantly reduced demand by 25 percent in the most recent drought. Therefore, it is reasonable to assume that this level of conservation could be achieved again. As shown in Table 5-1, the total demand in PWP’s service area in 2020 was 29,290, or 153 gallons per capita per day (gpcd), which is much lower than its 169 gpcd target—demand hardening is expected to occur over time; however, some level of conservation measures can still successfully reduce demand if necessary.

The current Project site water use is already included in existing demand. Therefore, net new demand would range from approximately 68 to 76 afy depending on land use scenario. As previously discussed, the Project would contribute to about 0.24 percent of the City’s anticipated total system supply of 31,078 afy in 2025, 0.24 percent of the supply of 31,357 afy in 2040, and 0.24 percent of the supply of 31,409 afy in 2045. If the Project with Building A Residential/Commercial is pursued, this development scenario would use up about 0.22 percent of the City’s anticipated total system supply of 31,078 afy in 2025, 0.22 percent of the supply of 31,357 afy in 2040, and 0.22 percent of the supply of 31,409 afy in 2045. As the Project with Building A Medical Office/Commercial and the Project with Building A Residential/Commercial would be consistent with the Project’s land use designation in Pasadena’s 2035 General Plan as part of planned growth within the City’s Central District, potential demand for the Project is considered as part of the PWP 2020 UWMP. Therefore, this WSA finds that MWD, as the wholesale potable water supplier has sufficient water supplies available to serve its member agencies, including PWP, now and through the 2045 planning horizon. In addition, PWP’s groundwater, including its annual groundwater credits stored in the RB, are reliable in all water year types. With that understanding, this WSA finds that PWP has sufficient water supplies in all

water year types provided through MWD and supplemented with local groundwater to meet existing demands combined with the Project demands and cumulative demands of the PWP 2020 UWMP.
