DRAFT EIR

Draft Environmental Impact Report SCH No. 2021080103

Affinity Project

Prepared for | City of Pasadena
Planning and Community Development Department
175 North Garfield
Pasadena, California 91101

Prepared by | Psomas
225 South Lake Avenue, Suite 1000
Pasadena, California 91101

January 2022

TABLE OF CONTENTS

<u>Section</u>	<u>Page</u>
Executive Summary	ES-1
Introduction.....	ES-1
Project Location and Setting	ES-1
Project Description	ES-2
Project Alternatives	ES-3
Issues to be Resolved	ES-4
Areas of Controversy.....	ES-4
Summary of Significant Environmental Impacts	ES-5
Section 1.0 Introduction	1-1
1.1 Purpose of the EIR	1-1
1.1.1 Regulatory Framework.....	1-1
1.1.2 Lead Agency.....	1-1
1.1.3 Incorporation by Reference.....	1-1
1.2 EIR Focus	1-2
1.2.1 Scoping Process.....	1-2
1.3 Project Applicant and Contact Person	1-7
1.4 Public Review of the Draft EIR	1-7
1.5 Decision-Making process.....	1-8
Section 2.0 Environmental Setting and Project Description	2-1
2.1 Project Location	2-1
2.2 Project Setting and Characteristics.....	2-1
2.2.1 On-site and Surrounding Land Uses.....	2-1
2.2.2 Physical Characteristics.....	2-2
2.2.3 Relevant Planning Considerations.....	2-4
2.3 Project Objectives.....	2-5
2.4 Project Description.....	2-6
2.4.1 Proposed Land Uses	2-7
2.4.2 Construction Scenario.....	2-12
2.4.3 Project Operation	2-13
2.5 Planned Development Plan and Exchange Program	2-14
2.6 Approach to Cumulative Impact Analysis	2-15
2.7 Intended Uses of the EIR.....	2-18
2.7.1 City of Pasadena.....	2-18
2.7.2 Responsible and Trustee Agencies	2-18
2.8 References	2-19

Section 3.0	Environmental Analysis.....	3-1
3.1	Air Quality	3.1-1
3.1.1	Existing Conditions	3.1-1
3.1.2	Relevant Programs and Regulations	3.1-7
3.1.3	Thresholds of Significance.....	3.1-12
3.1.4	Methodology	3.1-12
3.1.5	Environmental Impacts	3.1-14
3.1.6	Cumulative Impacts	3.1-27
3.1.7	Mitigation Measures.....	3.1-27
3.1.8	Level of Significance After Mitigation	3.1-28
3.1.9	Summary of Analysis	3.1-28
3.1.10	References.....	3.1-28
3.2	Cultural and Paleontological Resources.....	3.2-1
3.2.1	Existing Conditions	3.2-1
3.2.2	Relevant Cultural Resource Regulations	3.2-4
3.2.3	Thresholds of Significance.....	3.2-11
3.2.4	Methodology	3.2-12
3.2.5	Environmental Impacts	3.2-12
3.2.6	Cumulative Impacts	3.2-15
3.2.7	Mitigation Measures.....	3.2-16
3.2.8	Level of Significance After Mitigation	3.2-17
3.2.9	Summary of Analysis	3.2-17
3.2.10	References.....	3.2-18
3.3	Energy	3.3-1
3.3.1	Existing Conditions	3.3-1
3.3.2	Relevant Programs and Regulations	3.3-1
3.3.3	Thresholds of Significance.....	3.3-3
3.3.4	Methodology	3.3-3
3.3.5	Environmental Impacts	3.3-4
3.3.6	Cumulative Impacts	3.3-8
3.3.7	Mitigation Measures.....	3.3-8
3.3.8	Level of Significance After Mitigation	3.3-8
3.3.9	Summary of Analysis	3.3-9
3.3.10	References.....	3.3-9
3.4	Greenhouse Gas Emissions	3.4-1
3.4.1	Existing Conditions	3.4-1
3.4.2	Relevant Programs and Regulations	3.4-5
3.4.3	Thresholds of Significance.....	3.4-13
3.4.4	Methodology	3.4-14
3.4.5	Environmental Impacts	3.4-14
3.4.6	Cumulative Impacts	3.4-22
3.4.7	Mitigation Measures.....	3.4-22
3.4.8	Level of Significance After Mitigation	3.4-22
3.4.9	Summary of Analysis	3.4-22
3.4.10	References.....	3.4-23
3.5	Hazards and Hazardous Materials	3.5-1
3.5.1	Existing Conditions	3.5-1
3.5.2	Relevant Programs and Regulations	3.5-5
3.5.3	Thresholds of Significance.....	3.5-9

3.5.4	<i>Methodology</i>	3.5-10
3.5.5	<i>Environmental Impacts</i>	3.5-10
3.5.6	<i>Cumulative Impacts</i>	3.5-13
3.5.7	<i>Mitigation Measures</i>	3.5-14
3.5.8	<i>Level of Significance After Mitigation</i>	3.5-14
3.5.9	<i>Summary of Analysis</i>	3.5-14
3.5.10	<i>References</i>	3.5-14
3.6	<i>Land Use and Planning</i>	3.6-1
3.6.1	<i>Existing Conditions</i>	3.6-1
3.6.2	<i>Relevant Programs and Regulations</i>	3.6-2
3.6.3	<i>Thresholds of Significance</i>	3.6-6
3.6.4	<i>Methodology</i>	3.6-6
3.6.5	<i>Environmental Impacts</i>	3.6-6
3.6.6	<i>Cumulative Impacts</i>	3.6-25
3.6.7	<i>Mitigation Measures</i>	3.6-25
3.6.8	<i>Level of Significance After Mitigation</i>	3.6-25
3.6.9	<i>Summary of Analysis</i>	3.6-25
3.6.10	<i>References</i>	3.6-26
3.7	<i>Noise</i>	3.7-1
3.7.1	<i>Existing Conditions</i>	3.7-1
3.7.2	<i>Relevant Programs and Regulations</i>	3.7-5
3.7.3	<i>Thresholds of Significance</i>	3.7-10
3.7.4	<i>Methodology</i>	3.7-10
3.7.5	<i>Environmental Impacts</i>	3.7-11
3.7.6	<i>Cumulative Impacts</i>	3.7-19
3.7.7	<i>Mitigation Measures</i>	3.7-20
3.7.8	<i>Level of Significance After Mitigation</i>	3.7-21
3.7.9	<i>Summary of Analysis</i>	3.7-21
3.7.10	<i>References</i>	3.7-22
3.8	<i>Public Services and Recreation</i>	3.8-1
3.8.1	<i>Existing Conditions</i>	3.8-1
3.8.2	<i>Relevant Programs and Regulations</i>	3.8-6
3.8.3	<i>Thresholds of Significance</i>	3.8-9
3.8.4	<i>Methodology</i>	3.8-10
3.8.5	<i>Environmental Impacts</i>	3.8-10
3.8.6	<i>Cumulative Impacts</i>	3.8-14
3.8.7	<i>Mitigation Measures</i>	3.8-16
3.8.8	<i>Level of Significance After Mitigation</i>	3.8-16
3.8.9	<i>Summary of Analysis</i>	3.8-16

TABLES

<u>Table</u>	<u>Page</u>
ES-1 Summary of Project Impacts, Mitigation, and Level of Significance After Mitigation	7
1-1 Summary of Comments Received During Scoping Period	1-2
2-1 Summary of Existing Land Uses	2-1
2-2 Tree Inventory Summary	2-3
2-3 Summary of Proposed Land Uses	2-8
2-4 City of Pasadena General Plan Development Caps	2-17
2-5 City of Pasadena Remaining Development Capacity	2-17
2-6 Other Agency Approvals and Requirements	2-18
3.1-1 Air Quality Monitoring Data From the Pasadena-South Wilson Avenue Monitoring Station	3.1-5
3.1-2 Attainment Status of Criteria Pollutants in the South Coast Air Basin	3.1-6
3.1-3 Peak Daily Existing Emissions	3.1-7
3.1-4 California and Federal Ambient Air Quality Standards	3.1-8
3.1-5 SCAQMD Air Quality Significance Thresholds	3.1-13
3.1-6 Estimated Maximum Daily Construction Emissions for the Project	3.1-17
3.1-7 Localized Construction Emissions for the Project	3.1-18
3.1-8 Net Operational Emissions for the Project	3.1-19
3.1-9 Localized Operational Emissions for the PProject	3.1-20
3.1-10 Estimated Maximum Daily Construction Emissions for the Project with Building A Residential/Commercial	3.1-21
3.1-11 Localized Construction Emissions for the Project with Building A Residential/Commercial	3.1-22
3.1-12 Net Operational Emissions for the Project with Building A Residential/Commercial	3.1-23
3.1-13 Localized Operational Emissions for the Project with Building A Residential/Commercial	3.1-24
3.2-1 Previously Recorded Historical Resources on the Project Site	3.2-2
3.2-2 Previously Recorded Historical Resources in the Project Vicinity	3.2-3
3.3-1 Construction-Related Energy Use for the Project	3.3-4
3.3-2 Energy Use During Operation of the Project	3.3-5
3.3-3 Construction-Related Energy Use for the Project With Building A Residential/Commercial	3.3-6
3.3-4 Energy Use During Operation of the Project with Building A Residential/Commercial	3.3-7
3.4-1 Comparison of Worldwide GHG Emissions	3.4-3
3.4-2 Estimated Annual GHG Emissions for Uses to be Removed	3.4-4
3.4-3 City of Pasadena Climate Action Plan Efficiency Thresholds	3.4-14
3.4-4 Estimated GHG Emissions from Construction of the Project	3.4-15
3.4-5 Estimated Annual Net GHG Emissions from Operation of the Project	3.4-16
3.4-6 GHG Efficiency Metric for the Project	3.4-16

3.4-7	Estimated GHG Emissions from Construction of the Project with Building A Residential/Commercial	3.4-17
3.4-8	Estimated Annual Net GHG Emissions from Operation of the Project with Building A Residential/Commercial	3.4-18
3.4-9	GHG Efficiency Metric for the Project with Building A Residential/Commercial	3.4-19
3.5-1	Summary of Existing Land Uses	3.5-1
3.5-2	Land Use History	3.5-2
3.6-1	Summary of Existing Land Uses	3.6-1
3.7-1	Short-Term Ambient Noise Measurements	3.7-4
3.7-2	City of Pasadena Guidelines for Noise Compatible Land Use	3.7-7
3.7-3	Construction Vibration Damage Criteria	3.7-10
3.7-4	Construction Noise Levels at Surrounding Receptors	3.7-12
3.7-5	Net Trip Generation for the Project	3.7-13
3.7-6	Net Street Segment Volumes with the Project (Year 2026)	3.7-14
3.7-7	Net Trip Generation for the Project with Building A Residential/Commercial	3.7-16
3.7-8	Vibration Levels for Construction Equipment	3.7-17
3.7-9	Vibration Levels and Building Damage at Surrounding Uses	3.7-18
3.8-1	Pasadena Fire Department Facilities Serving the Project Site	3.8-2
3.8-2	Pasadena Unified School District Facilities Serving the Project Site	3.8-4
3.8-3	City of Pasadena Parks and Recreation Facilities Serving the Project Site	3.8-5
3.9-1	Transit Facilities Hierarchy	3.9-2
3.9-2	Existing Transit Service in the Project Area	3.9-3
3.9-3	Bicycle Facilities Hierarchy	3.9-4
3.9-4	City of Pasadena CEQA Transportation Thresholds	3.9-7
3.9-5	Transportation Impact Analysis Summary for the Project	3.9-10
3.9-6	Transportation Impact Analysis Summary for the Project with Building A Residential/Commercial	3.9-10
3.11-1	Pasadena Water Supply Sources and Quantities (AFY)	3.11-2
3.11-2	PWP Imported Water Supplies (AFY)	3.11-2
3.11-3	Groundwater Volume Pumped (AFY)	3.11-4
3.11-4	Historic Project Site Water Demand	3.11-5
3.11-5	Existing Wastewater Generation	3.11-6
3.11-6	PWP's 2020 Water Demands	3.11-16
3.11-7	PWP Projected Water Demand (AF)	3.11-17
3.11-8	Project Water Demand	3.11-18
3.11-9	PWP Normal-Year Potable Water Supply and Demand Comparison (AFY)	3.11-19
3.11-10	PWP Single-Dry-Year Potable Water Supply and Demand Comparison (AFY)	3.11-21
3.11-11	PWP Multiple-Dry-Year Potable Water Supply and Demand Comparison (AFY)	3.11-22
3.11-12	Five-Year Drought Risk Assessment	3.11-22
3.11-13	Project with Building A with Residential/Commercial Water Demand	3.11-24
4-1	Summary of Alternatives	4-4
4-2	Alternative 2 Transportation Analysis Comparison	4-14
4-3	Alternative 3 Transportation Analysis Comparison	4-19
4-4	Alternative 3 Utility Comparison	4-20
4-5	Alternative 4 Transportation Analysis Comparison	4-24
4-6	Alternative 4 Utility Comparison	4-25
4-7	Comparison of Impacts for Project Alternatives	4-28
4-8	Ability of Project Alternatives to Meet Objectives	4-29

EXECUTIVE SUMMARY

INTRODUCTION

The California Environmental Quality Act (CEQA) (Section 21000 et. seq. of the *California Public Resources Code*) requires that lead agencies consider the potential environmental consequences of projects over which they have discretionary approval authority prior to taking approval action on such projects. An Environmental Impact Report (EIR) is a public document designed to provide the City, trustee and responsible agencies, the general public, and other interested parties with an analysis of potential environmental consequences of a project and to support informed decision making by the Lead Agency. The City of Pasadena (City) is the Lead Agency under CEQA and is responsible for preparing the EIR. This determination is made in accordance with Sections 15051 and 15367 of the State CEQA Guidelines, which define the Lead Agency as the public agency that has the principal responsibility for carrying out or approving a project.

This EIR has been prepared to identify, analyze, and mitigate, to the extent feasible, the potential environmental effects associated with implementation of The Affinity Project (Project or Project with Building A Residential/Commercial). This EIR has been prepared pursuant to the requirements of CEQA and the Guidelines for the Implementation of CEQA (State CEQA Guidelines) (Title 14, *California Code of Regulations*, Chapter 3, Sections 15000 et. seq.).

This Executive Summary has been prepared in accordance with Section 15123(a)(b) of the State CEQA Guidelines, which states that an EIR should contain a brief summary of the proposed actions and its consequences and should identify (1) each significant effect with proposed mitigation measures and alternatives that would reduce or avoid that effect; (2) areas of controversy known to the Lead Agency; and (3) issues to be resolved, including the choice among alternatives and whether or how to mitigate significant effects.

PROJECT LOCATION AND SETTING

The City of Pasadena (City) is situated along the western edge of the San Gabriel Valley and at the foothills of the San Gabriel Mountains. The Project site is in the southwestern quadrant of the City and to the southeast of the State Route (SR)-110 and Interstate-210 (I-210) intersection.

The Project site encompasses approximately 3.3 acres (144,853 square feet [sf]) located between 465 and 577 South Arroyo Parkway, City of Pasadena, Los Angeles County. The site is bound by East Bellevue Drive on the north, South Arroyo Parkway on the east, East California Boulevard on the south, and the Metro Gold (L) Line on the west.

The Project site consists of five parcels developed with a total of nine commercial buildings with seven businesses. All existing buildings on the site are one or two stories with heights ranging between 17 feet and 63 feet. All existing land uses have surface parking except for the Whole Foods Market, which has a 275-space subterranean parking structure for its sole use. Table 2-1, Summary of Existing Land Uses, summarizing the existing on-site land uses; and Exhibit 2-2, Existing Project Site, illustrating the addresses and locations of the nine existing buildings and other on-site land uses, is provided in Section 2.0, Project Description, of this EIR.

The Project area is an urban environment, and the site and surrounding area are fully built out with a broad mix of land uses. These land uses also represent a variety of ages, architectural styles, heights, and conditions. Exhibit 2-3, Aerial Photograph, depicting the site and existing land use types in the surrounding area is provided in Section 2.0, Project Description, of this EIR.

Commercial land uses are primarily located to the north, including retail, services, and restaurants. Other land uses to the north include medical offices; Pasadena Humane Society, located approximately 0.1-mile to the northwest; Central Park, located approximately 0.2-mile northwest of the site; and single- and multi-family residential land uses located, at the nearest, approximately 0.2-mile to the north on Del Mar Boulevard and approximately 0.1-mile to the north-northeast on Bellevue Drive. Commercial land uses are located opposite the Project site on Arroyo Parkway. Single- and multi-family residential land uses are situated less than 0.1-mile to the east along Marengo Avenue and Arroyo Parkway. Land uses to the south include a mix of commercial, medical office, and single- and multi-family residential land uses; the latter is located along Marengo Avenue and California Boulevard to the southeast. To the west, there is a mix of commercial and non-profit (i.e., npr/KPCC and Union Station Homeless Services) uses. Further from the site, land uses include a mix of commercial, medical, light industrial, single- and multi-family residential, and public (e.g., schools, churches, parks).

Regional access to the site is provided by SR-110 located approximately 0.6-mile due south on Arroyo Parkway. Local access is provided by adjacent surface streets and Metro's Del Mar Station located approximately 0.2-mile to the north. Exhibit 2-1, Regional Location and Local Vicinity, illustrates the Project site location and is provided in Section 2.0, Project Description, of this EIR.

PROJECT DESCRIPTION

The Applicant requests approval to rezone the Project site from CD-6 to a Planned Development (PD) zone, and approval of a PD Plan. The Project involves demolition of 6 (of the 9) existing buildings totaling 45,912 sf, located at 491, 495, 499, 503, 541, and 577 South Arroyo Parkway, and construction of 2 new buildings, as identified below:

- Building A: a 154,000-sf, 7-story (aboveground) medical office building with ground-floor commercial uses;
- Building B: a 184,376-sf, 7-story (aboveground) assisted living building with 85,800 sf of assisted living uses and 98,576 sf of independent living uses including up to 95 studio, one-, and two-bedroom senior housing units; and
- Up to 850 parking spaces in 5 subterranean levels.

Alternatively, the proposed PD Plan would provide the flexibility to exchange the uses in Building A from medical office and ground floor commercial for the following:

- 3,000 sf of commercial and a sales/leasing management office on the ground floor;
- Up to 197 residential dwelling units; and
- Up to 650 parking spaces in 4 subterranean levels (1 less parking level than the Project as proposed).

Although the Project described is anticipated to reflect the Project to be constructed, the flexibility to exchange the uses in Building A would enable the Project to respond to the economic needs and demands of the City at the time of Project implementation. The proposed site layout and the aboveground height, mass, and other parameters of the Building A design would remain the same. The PD Plan would define all aspects of site design and provide caps on the types and amounts of allowable land uses, regardless of whether Building A is developed with medical office or residential dwelling units. It is noted that based on the development cap of 87 dwelling units per acre (du/acre), a total of 289 units could be constructed. Therefore, if a total of 197 units were constructed in Building A, only 92 senior housing units (i.e., 3 fewer units than the Project as proposed) could be constructed in Building B. Conversely, if 95 senior housing (i.e., independent living) units were constructed in Building B, only 194 units could be constructed in Building A.

Throughout the CEQA documentation, these two development scenarios will be referred to as:

- Project (development of Building A with medical office/commercial), and
- Project with Building A Residential/Commercial (development of Building A with residential/commercial).

A total of 5 levels of subterranean parking spanning both proposed buildings with up to 850 parking spaces would be constructed to serve the new development as well as the existing structures at 501 and 523 South Arroyo Parkway under the Project scenario. When including the new subterranean parking, the Project would consist of approximately 753,439 sf of new construction. For the Project with Building A Residential/Commercial, a total of 4 levels of subterranean parking spanning both proposed buildings with up to 650 parking spaces would be constructed to serve the new development as well as the existing structures at 501 and 523 South Arroyo Parkway.

Approximately 79,553 sf of the existing development would be retained and integrated into the Project, including the Whole Foods Market and associated 275-space subterranean parking structure at 465 South Arroyo Parkway, and the 2 historic structures at 501 and 523 South Arroyo Parkway. The Applicant anticipates that restaurant uses would occupy the approximately 5,882 sf of space in the existing buildings to be retained at 501 and 523 South Arroyo Parkway. In retaining these structures, the Applicant is also requesting a zoning variance for historic resources related to building height. Specifically, the Applicant is requesting an increase in allowable building height of the two new buildings to offset the reduction in developable area due to preserving the two historic structures (i.e., 501 and 523 South Arroyo Parkway) on the Project site. Exhibit 2-4, Project Site Plan, provided in Section 2.0, Project Description, of this EIR, depicts a schematic overview of the Project design.

PROJECT ALTERNATIVES

Section 15126.6 of the State CEQA Guidelines requires an evaluation of the comparative effects of a reasonable range of alternatives to the proposed Project that would feasibly attain most of the proposed Project objectives and would avoid or substantially lessen any of the significant impacts of the proposed Project. A feasible alternative is one that can be accomplished successfully in a reasonable period of time, taking economic, legal, social, and technological factors into consideration. The range of alternatives is governed by the “rule of reason” that requires the EIR to set forth only those alternatives necessary to permit a reasonable choice.

In accordance with Section 15126.6 of the State CEQA Guidelines, Section 4.0, Alternatives, of this EIR addresses alternatives to the proposed Project. Section 4.0 provides a description of each alternative; a comparative analysis of the potential environmental effects of each alternative to those associated with the proposed Project; a discussion of each alternative’s ability to meet the Project objectives; and a discussion of the environmentally superior alternative. For complete description of all Project alternatives analyzed in this EIR, refer to Section 4.0. The following is a summary description of the alternatives evaluated in this EIR:

- **Alternative 1 – No Project/No Development.** This alternative addresses one of the two types of “No Project” alternatives identified by CEQA. Under the No Project/No Development Alternative, the existing environmental setting would remain unchanged. The City would not rezone the Project site from CD-6 (Central District Specific Plan [CDSP], Arroyo Corridor/Fair Oaks subdistrict), to a Planned Development (PD) zone, approve the PD Plan, nor would the City approve the Project or Project with Building A Residential/Commercial. This Alternative assumes the Project site would continue to remain in its existing state without demolition of any existing structures and site

improvements, and the continued use and operation of the existing land uses present at the time the NOP was distributed in August 2021.

- **Alternative 2 – Project Development with Existing Zoning.** Alternative 2 assumes the site is developed with the same land uses as the Project or Project with Building A Residential/Commercial but with application of existing zoning (i.e., no PD Plan). Alternative 2 would result in demolition of 6 (of the 9) existing buildings totaling 45,912 sf, same as the Project, and a total of 217,280 sf of aboveground development—including the 79,553 sf of existing development to be retained. As such, this alternative would result in construction of 2 new buildings with 137,727 sf of new development, a total of 387 parking spaces in 3 subterranean levels, and a maximum height of 50 feet or 65 feet with height averaging. Alternative 2 with Building A Residential/Commercial could result in up to 108 residential dwelling units and 3,000 sf of commercial, with up to 282 parking spaces in 2 subterranean levels.
- **Alternative 3 – All Residential Project with Variance for Historic Resources.** Alternative 3 assumes the demolition of 6 (of the 9) existing buildings totaling 45,912 sf, and a total of 417,929 sf of aboveground development – including the 79,553 sf of existing development to be retained, same as the Project. However, Alternative 3 assumes the new buildings would include up to 289 market-rate residential units (i.e., apartments and/or condominiums), except for ground-floor commercial in Building A, and a total of 607 parking spaces in 4 subterranean levels.
- **Alternative 4 – All Medical Office Project with Variance for Historic Resources.** Alternative 4 assumes the demolition of 6 (of the 9) existing buildings totaling 45,912 sf, and a total of 417,929 sf of aboveground development – including the 79,553 sf of existing development to be retained, same as the Project. However, Alternative 4 assumes the new buildings would include solely medical office uses except for ground-floor commercial in Building A, and a total of 1,218 parking spaces in 7 subterranean levels.

ISSUES TO BE RESOLVED

Section 15123(b)(3) of the State CEQA Guidelines requires that an EIR contain a discussion of issues to be resolved, including the choice among alternatives and whether or how to mitigate significant impacts. With respect to the proposed Project or Project with Building A Residential/Commercial, the key issues to be resolved include decisions by the City of Pasadena, as Lead Agency, pertaining to:

- Whether this environmental document adequately describes the potential environmental impacts of the proposed Project;
- Whether the recommended mitigation measures and the design of the Project should be modified and/or adopted as proposed;
- Whether the Project benefits override those environmental impacts that cannot be feasibly avoided or mitigated to a less than significant level;
- Whether there are other mitigation measures that should be applied to the Project besides those identified in the EIR; and
- Whether there are any alternatives to the proposed Project that would substantially lessen any of its significant impacts while achieving most of the basic Project objectives.

AREAS OF CONTROVERSY

Section 15123(b)(2) of the State CEQA Guidelines indicates that an EIR summary should identify areas of controversy known to the Lead Agency, including issues raised by the public agencies

and the public. This EIR has taken into consideration the written comments received from the public and various agencies in response to the IS and Notice of Preparation (NOP) distributed on August 3, 2021 (for a 30-day public review period from August 5, 2021 through September 3, 2021), and comments received during the two public virtual scoping meetings held on August 11, 2021, and August 26, 2021 via Zoom. A copy of the NOP comments received are provided in Appendix A-2 of this EIR. A summary of issues raised in response to the NOP, and where in the EIR they are discussed, is presented in Table 1-1 in Section 1.0, Introduction, of this EIR.

The primary environmental areas of controversy known to the City of Pasadena that have been raised to date related to implementation of the proposed Project include biological (tree removal), land use (context and scale of development), transportation (traffic generation and traffic safety), and water supply.

SUMMARY OF SIGNIFICANT ENVIRONMENTAL IMPACTS

Pursuant to Sections 15126.2 and 15126.4 of the State CEQA Guidelines, a Draft EIR is required to identify any potentially significant adverse impacts and recommend mitigation measures that would eliminate or reduce these impacts to levels of less than significant.

At the onset of the CEQA process, the City determined that an EIR is required for the proposed Project and prepared an IS in accordance with State CEQA Guidelines Sections 15063. The City determined there would be no impacts or less than significant impacts to the following environmental topics and/or thresholds (refer to the IS/NOP in Appendix A-1). Therefore, in accordance with Section 15128 of the State CEQA Guidelines, these are identified as topical areas that would not receive further evaluation in this EIR:

- Aesthetics
- Agricultural and Forestry Resources
- Biological Resources
- Geology and Soils
- Hydrology and Water Quality
- Mineral Resources
- Population and Housing
- Wildfire

Based on the results of the IS and comments received in response to the NOP, the City determined implementation of the proposed Project and/or Project with Building A Residential/Commercial has the potential to impact the following environmental topics, which are further addressed in this Draft EIR:

- Air Quality
- Cultural and Paleontological Resources
- Energy
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Land Use and Planning
- Noise
- Public Services and Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems

If the City of Pasadena, as Lead Agency, determines that unavoidable significant adverse impacts would result from the proposed Project, a Statement of Overriding Considerations must be prepared and adopted before it can approve the proposed Project. A Statement of Overriding Considerations states that the decision-making body has weighed the physical, social, and economic benefits of the Project against its unavoidable significant environmental effects and has determined that the benefits of the Project outweigh its adverse effects; therefore, the adverse effects are considered acceptable.

Although the level of significance after mitigation (if any) may be the same for each threshold and/or environmental topic, the degree or severity of impact may be slightly different under each alternative. The potentially significant adverse environmental impacts of the Project and Project with Building A Residential/Commercial, which require mitigation, include:

- **Cultural Resources** (historic resources [501 and 523 South Arroyo Parkway] and unknown archaeological resources),
- **Noise** (potential for vibration-related cosmetic building damage to Whole Foods Market and 501 and 523 South Arroyo Parkway), and
- **Tribal Cultural Resources** (unknown tribal cultural resources).

Table ES-1, Summary of Project Impacts, Mitigation, and Level of Significance after Mitigation, beginning on the following page, presents a summary of significant environmental impacts identified in Sections 3.1 through 3.11 of this EIR; Mitigation Measures (MMs) that reduce identified significant impacts; and the level of significance of each impact after mitigation. Significant irreversible environmental changes and growth-inducing impacts are addressed in Section 5.0, Other CEQA Considerations.

**TABLE ES-1
SUMMARY OF PROJECT IMPACTS, MITIGATION,
AND LEVEL OF SIGNIFICANCE AFTER MITIGATION**

Summary of Project Impacts	Mitigation Measures	Level of Significance After Mitigation
Section 3.2 – Cultural Resources		
<p>Tenant improvement plans for 501 and 523 South Arroyo Parkway do not anticipate demolishing, moving, or making major alterations to these historic resources, which would both be preserved in place. However, as tenant improvement plans remain conceptual and have not yet been finalized, there may be a potential for impact.</p>	<p>MM CUL-1. To the satisfaction of the City, the Project Applicant shall engage with a licensed architect and/or engineer that meets the Secretary of the Interior's Professional Qualifications Standards for historic architect to develop a series of protection interventions and protocols that will preserve the two historical resources on the Project site – 501 and 523 South Arroyo Parkway – during all construction activities in, on, and near these two buildings. These measures shall take into consideration the protection of and security of both resources, particularly the preservation of the character-defining features through the installation of physical protective barriers around each resource and the creation of site protocols that will eliminate the potential for physical damage resulting from impacts with construction and transport equipment.</p> <p>To ensure the protection of these resources and their character-defining features, all protective barriers (which shall be installed prior to the initiation of any construction activity) and protocols shall be compliant with the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings (Weeks and Grimmer 1995) (Standards) and be subject to review and approval by the City planning staff.</p> <p>Site protocols for protecting the historical resources shall outline issues related to site access and navigation by contractors and construction personnel to reduce the potential for any inadvertent accidents between equipment and the two on-site historical resources. Additionally, a series of emergency measures shall be developed that outlined specific step-by-step processes in the event that an accident involves one of the historical resources. This will likely include the following:</p> <ul style="list-style-type: none"> Stop-work protocols after an accident involving a historical resource occurs, (1) Notification procedures and identification key contacts, (2) Identification of qualified historic preservation professionals to investigate the historical resources following the determination that the area is safe, (3) Thorough conditions assessment of the resource by the qualified consultant to ascertain the level and extent of the damage, and 	<p>Less than significant</p>

**TABLE ES-1
SUMMARY OF PROJECT IMPACTS, MITIGATION,
AND LEVEL OF SIGNIFICANCE AFTER MITIGATION**

Summary of Project Impacts	Mitigation Measures	Level of Significance After Mitigation
	<p>(4) Preparation of a historical resource treatment plan to stabilize the historical resource and address the damage, which will be submitted to City staff for review and approval prior to completing the work and resumption of construction activities.</p> <p>Additionally, protocols shall include regular on-site monitoring during construction activities by historic preservation consultant, either a SOI Qualified historic architect or architectural historian. The historic preservation consultant shall document the existing conditions of each resource prior to the initiation of any construction activity and prior to installation of the protective barriers and implementation of the protection protocols. This documentation phase will include high resolution digital photographs of each facade, as well as details of character-defining features for each resource. During construction, the historic preservation consultant shall prepare field report memoranda to the City confirming that the Standards compliant protection barriers are installed in accordance with the Standards, and that agreed upon protocols are being followed throughout the course of the Project. These memoranda will be submitted to City staff for their records and review. A final report outlining the conditions of the historical resources prior, during, and following the Project's construction shall be issued to the City for approval following construction activities and prior to the issuance of a Certificate of Occupancy.</p>	
<p>There are no known archaeological resources on the Project site. However, based on the results on the cultural resources records searches conducted for the Project site and vicinity (Appendices C-2), unknown archaeological resources have potential to be present in native sediments beneath the Project site.</p>	<p>MM CUL-2. If cultural resources are discovered during construction of land development projects in Pasadena that may be eligible for listing in the California Register for Historic Resources, all ground disturbing activities in the immediate vicinity of the find shall be halted until the find is evaluated by a Registered Professional Archaeologist. If testing determines that significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates as applicable, and other special studies; and provide a comprehensive final report including site record to the City and the South-Central Coastal Information Center at California State University Fullerton. No further grading shall occur in the area of the discovery until Planning Department approves the report..</p>	<p>Less than significant</p>

**TABLE ES-1
SUMMARY OF PROJECT IMPACTS, MITIGATION,
AND LEVEL OF SIGNIFICANCE AFTER MITIGATION**

Summary of Project Impacts	Mitigation Measures	Level of Significance After Mitigation
Section 3.7 – Noise		
<p>The Whole Foods Market building and the structures at 501 and 523 South Arroyo Parkway may experience vibration levels during operation of a certain equipment that could cause cosmetic damage.</p>	<p>MM NOI-1. The potential for vibration-induced cosmetic (i.e., not structural) damage to the structures at 465, 501, and 523 South Arroyo Parkway shall be reduced by implementing the following three steps: (1) setbacks, (2) monitoring, and (3) restoration (if applicable).</p> <p>(1) The Project Applicant shall be responsible for ensuring the construction specifications include the following language: "Construction equipment shall observe setback distances of 30 feet from any of the three on-site buildings being retained (Whole Foods Market and 501 and 523 South Arroyo Parkway) for equipment equivalent to a large bulldozer (29,000 pounds or more) and 20 feet for jackhammers and loaded trucks. Small dozers and other equipment with vehicle weights of less (29,000 pounds) are not anticipated to result in substantial levels of vibration that could cause building damage".</p> <p>(2) The Project Applicant shall be responsible for placing a vibration monitor in each of the three on-site buildings to remain on the site. The contractor would need to have vibration measurements taken on the site when heavy equipment or vibration intensive activities occurs near (i.e., less than 30 feet horizontal distance) to these three buildings. Vibration measurements will be recorded and compared to the vibration thresholds appropriate for the building that may be impacted. Vibration records shall be submitted to the City once a week. The appropriate vibration thresholds are as follows: 0.12 peak particle velocity (PPV) for 501 and 523 South Arroyo Parkway and 0.30 PPV for Whole Foods Market. The Applicant shall be responsible for preparing a Monitoring Plan, describing the proposed location of vibration monitors, the timing of monitoring, collecting vibration records (including date, time, activity that precipitated the monitoring, and who recorded the vibration level), to whom and when the monitoring records will be submitted, and any remedial actions needed because of vibration readings. The Monitoring Plan is subject to review and approval by City staff and will be submitted prior to initiation of any construction activity on the site.</p> <p>If vibration levels are below these thresholds, it is permissible to have construction activity with large (over 29,000 pounds) equipment, jackhammers, and/or loaded trucks within the setback distances included in item 1 above. Additionally, vibration monitoring shall guide construction activity near the perimeter of these buildings during subterranean excavation and construction activity. If vibration levels are found to exceed the applicable threshold, then the associated construction activity</p>	<p>Less than significant</p>

**TABLE ES-1
SUMMARY OF PROJECT IMPACTS, MITIGATION,
AND LEVEL OF SIGNIFICANCE AFTER MITIGATION**

Summary of Project Impacts	Mitigation Measures	Level of Significance After Mitigation
	<p>shall immediately halt, and alternative methods for achieving the construction activity shall be determined and employed to reduce the construction-generated vibration exposure to the building(s) to less than the thresholds. While the specific alternative methods to be employed cannot be foreseen, as it would be depending on situation-specific factors, the performance objective of maintaining activity that results in vibration below the applicable thresholds shall guide all decisions.</p> <p>(3) If cosmetic damage does occur to one or more of these three buildings because of vibration from Project-related construction activities despite setbacks and monitoring, the Project Applicant shall be responsible for restoring the damage. Cosmetic damage includes things like, for example, cracks in paint/plaster, fallen plaster/stucco from a facade, and cracked glass. Specifically, any restorations to Whole Foods Market shall be implemented to return the damaged area to the same condition (e.g., materials, colors, style) as present at the start of construction. Any restorations to the buildings at 501 and 523 South Arroyo Parkway shall conform to the Secretary of the Interior's Standards for the Rehabilitation and Guidelines for Rehabilitating Historic Buildings (Weeks and Grimmer 1995) (Standards), and the determination of whether the planned restorations is consistent with the Standards shall be made by a qualified historic preservation professional meeting the Secretary of the Interior's Professional Qualifications Standards for architectural history or historic architecture (Professional) and to the satisfaction of the City. The restorations to the historic buildings, if necessary, may be either to the conditions present before construction was initiated or, if the planned updates to these buildings are underway may be conducted to meet proposal conditions.</p> <p>The City of Pasadena Planning & Community Development Department shall be responsible for ensuring these requirements are included in the construction specifications prior to any demolition activity on the site. The Project Applicant and the City's inspector assigned to the Project shall also be responsible for ensuring these measures are consistently implemented throughout the construction period.</p>	

**TABLE ES-1
SUMMARY OF PROJECT IMPACTS, MITIGATION,
AND LEVEL OF SIGNIFICANCE AFTER MITIGATION**

Summary of Project Impacts	Mitigation Measures	Level of Significance After Mitigation
Section 3.10 – Tribal Cultural Resources		
<p>Based on consultation with the Gabrieliño Tongva Tribe and Gabrieliño Band of Mission Indians – Kizh Nation pursuant with AB 52, there are no known tribal cultural resources on the Project site. However, there is always the possibility that undiscovered intact cultural resources, including tribal cultural resources, may be present below the surface in native (i.e., undisturbed) sediments.</p>	<p>MM TCR-1. Prior to the commencement of any ground disturbing activity at the Project site, the Project Applicant shall accommodate a Native American Monitor (Monitor) culturally affiliated with the site as recognized by the Native American Heritage Commission (NAHC). The Monitor contracted and retained shall be at the expense of the tribe(s) that consulted on this Project. The Tribal Monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching within the Project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified.</p> <p>The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources.</p> <p>Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 50 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project construction activities shall be evaluated by the Tribal Monitor approved by the Consulting Tribe and a qualified Archaeologist (if one is present).</p> <p>If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance in the immediate vicinity of the find shall be halted, and the County Coroner shall be notified per Section 5097.98 of the Public Resources Code and Section 7050.5 of the Health & Safety Code. Human remains and grave/burial goods shall be treated alike per Section 5097.98(d)(1) and (2) of the Public Resources Code. Work may continue in other parts of the Project site while evaluation and, if necessary, mitigation takes place (Section 15064.5[f] of the State CEQA Guidelines). Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with</p>	Less than significant

**TABLE ES-1
SUMMARY OF PROJECT IMPACTS, MITIGATION,
AND LEVEL OF SIGNIFICANCE AFTER MITIGATION**

Summary of Project Impacts	Mitigation Measures	Level of Significance After Mitigation
	subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin (non-Tribal Cultural Resource) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be donated to a local school or historical society in the area for educational purposes.	

SECTION 1.0 INTRODUCTION

1.1 PURPOSE OF THE EIR

1.1.1 REGULATORY FRAMEWORK

The California Environmental Quality Act (CEQA) (Section 21002.1 of the California Public Resources Code [PRC]) states that “the purpose of an environmental impact report (EIR) is to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided”. This EIR has been prepared in accordance with CEQA (Section 21000 et. seq. of the PRC) and the State CEQA Guidelines (Section 15000 et. seq. of Title 14, *California Code of Regulations* [CCR]).

An EIR is the most comprehensive form of environmental documentation identified in CEQA and the State CEQA Guidelines. EIRs are intended to provide an objective, factually supported analysis of the environmental consequences associated with a project that has the potential to result in significant, adverse environmental impacts, including after implementation of mitigation measures (MMs). In accordance with Section 15121(a) of the State CEQA Guidelines, this Draft EIR is an informational document that will inform public agency, decision makers, and the general public of (1) the significant environmental effects of the proposed Affinity Project (Project or Project with Building A Residential/Commercial); (2) possible ways to minimize the significant effects; and (3) reasonable alternatives to the Project and the Project with Building A Residential/Commercial.

1.1.2 LEAD AGENCY

Section 15051 of the State CEQA Guidelines identifies the Lead Agency as the public entity with the greatest responsibility for carrying out or approving the Project as a whole. The City has the primary authority to approve and adopt and subsequently implement the Affinity Project or the Project with Building A Residential/Commercial. As such, the City of Pasadena (City) is serving as the Lead Agency under CEQA and is responsible for preparing this EIR.

While this EIR has been prepared with consultant support, City staff have reviewed all submitted drafts, technical studies, and consistency with City regulations and policies and has commissioned the preparation of this EIR to reflect its own independent judgment, consistent with Section 15084 of the State CEQA Guidelines.

1.1.3 INCORPORATION BY REFERENCE

As permitted by Section 15150 of the State CEQA Guidelines, this Draft EIR has referenced several technical studies, analyses, and reports. Information from the documents, which have been incorporated by reference into this Draft EIR, has been briefly summarized in the appropriate sections and the relationship between the incorporated part of the referenced document and the EIR has been described. In addition, documents and other sources that have been used in the preparation of this EIR are identified at the end of each section of this Draft EIR. In accordance with Section 15150(b) of the State CEQA Guidelines, the locations where the public may obtain and review these referenced documents and other sources used in the preparation of the Draft EIR are also identified.

1.2 **EIR FOCUS**

1.2.1 **SCOPING PROCESS**

An Initial Study/Notice of Preparation (IS/NOP) was distributed on August 3, 2021, to applicable federal, State, regional, and local government agencies and interested parties for a 30-day public review period (August 5, 2021 through September 3, 2021) to solicit comments and to inform agencies and the public of the Project and the upcoming preparation of an EIR. The IS/NOP included a description of the proposed Project; potential environmental effects associated with Project implementation; and an invitation to agencies and the public to review and comment on the IS/NOP. A copy of the IS/NOP is provided in Appendix A-1 of this EIR. The City held two virtual scoping meetings for the Project:

Scoping Meeting No. 1
(Planning Commission)
August 11, 2021
6:30 PM

Scoping Meeting No. 2
August 26, 2021
6:30 PM

The purpose of the scoping meetings was to receive input on the environmental issues that should be addressed in the EIR. Comments received during the scoping period were received from 5 agencies, 10 organizations, and 21 individuals. Written comments are provided in Appendix A-2 of this EIR. Verbal comments received during the two scoping meetings are summarized below.

The issues raised by the comment letters and scoping meeting comments are summarized in Table 1-1, Summary of Comments on the IS/NOP, along with the primary EIR section(s) where each issue is addressed. It should be noted that the Draft EIR addresses all topical issues carried forward from the Initial Study consistent with the current environmental checklist questions in Appendix G of the State CEQA Guidelines, and current CEQA and State CEQA Guidelines requirements. NOP comments related to Project design preferences or other issues that are not environmentally related are not addressed in CEQA documentation; however, they are part of the Project record and will be seen by the decision-making body as part of their consideration of the Project and Project with Building A Residential/Commercial.

**TABLE 1-1
SUMMARY OF COMMENTS RECEIVED DURING SCOPING PERIOD**

Commentor	Comments/Issues Raised	Where Discussed
Agencies		
California Department of Transportation	Information on transportation impacts on the State highway system; heavy and oversized vehicles on State highways	Section 3.9, Transportation, summarizes the SB 743-compliant transportation analysis conducted for the Project and Project with Building A Residential/Commercial
Los Angeles County Metropolitan Transportation Authority (Metro)	Adjacency of Metro L (Gold) Line and measures to reduce potential impacts, transit-supportive planning, Metro Adjacent Development Handbook	Comments related to development adjacent to Metro's right-of-way along the L Line, and opportunities to facilitate use of nearby transit facilities are acknowledged. Section 3.9, Transportation, summarizes the SB 743-compliant transportation analysis conducted for the Project and Project with Building A Residential/ Commercial. Metro is identified as a Responsible Agency in Section 2.0 because of adjacency of light rail line
Los Angeles County Sanitation Districts	Wastewater generation and conveyance, wastewater generation estimate (Project only), connection fees, Air Quality Management Plan (AQMP) conformance	AQMP conformance is addressed in Section 3.1, Air Quality; wastewater generation, conveyance, and treatment is addressed in Section 3.11, Utilities and Service Systems

**TABLE 1-1
SUMMARY OF COMMENTS RECEIVED DURING SCOPING PERIOD**

Commentor	Comments/Issues Raised	Where Discussed
Native American Heritage Commission	Native American tribal consultation under AB 52 and SB 18; cultural resource assessment recommendations	AB 52 consultation was completed by the City. Because the Project would not involve the adoption of a Specific Plan or amendment of the General Plan, consultation under Senate Bill 18 is not required. Section 3.10, Tribal Cultural Resources, addresses potential impacts on tribal cultural resources and human remains based on the conduct of a Phase I Cultural Resource Assessment and Native American consultation
South Coast Air Quality Management District (SCAQMD)	Guidelines for air quality analysis, permits, mitigation measures, and data sources	Section 3.1, Air Quality, summarizes the air quality analysis conducted for the Project and Project with Building A Residential/ Commercial. SCAQMD is identified as a Responsible Agency in Section 2.0 because of proposed diesel backup generators
Organizations		
Advocacy No. 1 (Done, Feldmann, Marchioni, Old Pasadena Management District /Mulheim, Chamber of Commerce and Civic Association of Pasadena/Little, Schillaci, Smith, Worrell)	Support for the Project	Comment acknowledged
Advocacy No. 2 (Ficarra)	Support for the Project	Comment acknowledged
Livable Pasadena (Letter No. 1)	Land use pattern, proposed medical corridor, water supply, setbacks/project design, noise, lighting, traffic congestion, traffic safety, Prism traffic study, existing traffic level of service (LOS), Magnolia Landmark District comment support, proposed Planned Development moratorium support, General Plan/Mobility Element inconsistency	Land use issues are addressed in Section 3.6, Land Use and Planning; noise issues are addressed in Section 3.7, Noise; and transportation issues are addressed in Section 3.9, Transportation
Livable Pasadena (Letter No. 2)	Project description instability/inadequacy and EIR inappropriateness, water supply, proposed density, heat index and related health impacts, energy usage	CEQA project description standards and heat island/heat index are addressed in Section 2.0, Environmental Setting and Project Description; water supply issues are addressed in Section 3.11, Utilities and Service Systems; land use issues are addressed in Section 3.6, Land Use and Planning; energy usage is addressed in Section 3.3, Energy
Livable Pasadena (Prism)	Mobility Element inconsistency, traffic congestion/LOS affects, traffic safety, vehicle miles traveled (VMT) impact	Land use issues are addressed in Section 3.6, Land Use and Planning; and transportation issues are addressed in Section 3.9, Transportation
Madison Heights Neighborhood Association	Tree removal, number of parking spaces, traffic, loss of mountain views, limited walkability, minimal green space, community outreach deficiency, cumulative impacts, historic neighborhood and single-family neighborhood impacts, water supply	Tree removals were addressed under Threshold 2.4(e) in Section 2.4, Biological Resources, of the Initial Study (Appendix A-1); aesthetic issues were addressed in Section 2.1, Aesthetics, of the Initial Study; transportation issues are addressed in Section 3.9, Transportation; proposed landscaping (i.e., green space) is detailed in Section 2.4.1 in Section 2.0, Environmental Setting and Project Description; details of the City's noticing process consistent with CEQA requirements is addressed in this section (Section 1.0); the approach to the cumulative impact analysis is presented in Section 2.5 and the cumulative impact analysis is presented in Section 3.X.6 of each topical section in the EIR; historic resources issues are addressed in Section 3.2, Cultural and Paleontological Resources; off-site impacts, where relevant, are addressed in Sections 3.1 through 3.11; and water supply issues are

**TABLE 1-1
SUMMARY OF COMMENTS RECEIVED DURING SCOPING PERIOD**

Commentor	Comments/Issues Raised	Where Discussed
		addressed in Section 3.11, Utilities and Service Systems
Magnolia Avenue Landmark District	General Plan/Mobility Element inconsistency, location near historic/single-family neighborhood, proposed near Huntington Hospital, Marengo/California intersection safety issues, overabundance of nursing/assisted living facilities in City, proposed Planned Development moratorium support, public outreach, building heights, inadequate green space, inadequate infrastructure	Land use issues are addressed in Section 3.6, Land Use and Planning; transportation issues are addressed in Section 3.9, Transportation; historic resources issues are addressed in Section 3.2, Cultural and Paleontological Resources; off-site impacts, where relevant, are addressed in Sections 3.1 through 3.11; details of the City's noticing process consistent with CEQA requirements is addressed in this section (Section 1.0); proposed landscaping (i.e., green space) is detailed in Section 2.4.1 in Section 2.0, Environmental Setting and Project Description; infrastructure issues are addressed in Section 3.11, Utilities and Service Systems
Pasadena Beautiful Foundation (Chuck Livingstone)	Historic resources nearby; traffic; water supply; design compatibility with trees and gardens	Historic resources issues are addressed in Section 3.2, Cultural and Paleontological Resources; transportation issues are addressed in Section 3.9, Transportation; water supply issues are addressed in Section 3.11, Utilities and Service Systems; aesthetic issues were addressed in Section 2.1, Aesthetics, of the Initial Study; land use issues are addressed in Section 3.6, Land Use and Planning
Protect Pasadena Trees	New specific plan policies on tree planting and protection on public and private property, stronger tree protection/urban forestry views, setbacks, heat islands	Land use issues are addressed in Section 3.6, Land Use and Planning; tree removals were addressed under Threshold 2.4(e) in Section 2.4, Biological Resources, of the Initial Study (Appendix A-1); heat island/heat index are addressed in Section 2.0, Environmental Setting and Project Description
West Pasadena Residents' Association	Project description instability, water supply, traffic circulation, EIR premature	CEQA project description standards are addressed in Section 2.0, Environmental Setting and Project Description; water supply issues are addressed in Section 3.11, Utilities and Service Systems; transportation issues are addressed in Section 3.9, Transportation
Individuals		
Natalie Bazarevitsch	Support for the Project	Comment acknowledged
Nina Chomsky	Project description instability, historic resources analysis, historic buildings not historic enough to allow variance, Project design (height/massing), EIR should include aesthetics section or historic resources analysis and land use and planning section that addresses issues covered under aesthetics topic	CEQA project description standards are addressed in Section 2.0, Environmental Setting and Project Description; aesthetic issues were addressed in Section 2.1, Aesthetics, of the Initial Study (Appendix A-1); historic resources issues are addressed in Section 3.2, Cultural and Paleontological Resources
Maggie Crawford	Support for the Project	Comment acknowledged
Erika Foy	Traffic infrastructure; small-town feel; scale near historic neighborhoods; cumulative traffic impact; project height, density, setbacks; risks with high-density living—poor air quality, heat index; keep Pasadena special	Transportation issues, including cumulative impacts, are addressed in Section 3.9, Transportation; historic resources issues are addressed in Section 3.2, Cultural and Paleontological Resources; land use issues are addressed in Section 3.6, Land Use and Planning; air quality issues are addressed in Section 3.1, Air Quality; heat island/heat index are addressed in Section 2.0, Environmental Setting and Project Description

Scoping Meeting No. 1		
Commissioner Lambert Giessinger	Variance for historic resources	Staff explained the reason for the historic resources variance; description of PD Plan process, including variance for historic resources, is discussed in Section 2.0, Environmental Setting and Project Description, and Section 3.6, Land Use and Planning
Commissioner Andrea Rawlings	Historic resources and variance for historic resources; aesthetics	Staff explained the process for the historic resources variance for the Project and discussed that the findings of the aesthetics analysis in the Initial Study was in compliance with Senate Bill (SB) 743; nonetheless, aesthetics considerations solely as they relate to historic resources will be addressed (in Section 3.2, Cultural and Paleontological Resources) through preparation of a Historic Resources Assessment

**TABLE 1-1
SUMMARY OF COMMENTS RECEIVED DURING SCOPING PERIOD**

Commentor	Comments/Issues Raised	Where Discussed
Commissioner D. Jason Lyon	Hydrology; water runoff and groundwater	Staff explained the hydrologic analysis presented in the Initial Study; the impact finding is based on implementation of standard State and City regulations during both construction and operation that would fully manage runoff for this Project
Commissioner Mic Hansen	Water supply; construction phase impacts; transportation; utilities; EIR format; cumulative impacts approach and specific plans	Water supply is evaluated as part of Section 3.11, Utilities and Service Systems, consistent with Appendix G of the State CEQA Guidelines; construction-phase impacts are evaluated for every checklist question presented in Sections 3.1 through 3.11; Transportation is addressed in Section 3.9, Transportation; the narrative format of the EIR is consistent with the state of the practice and the requirements of CEQA and the State CEQA Guidelines; the Executive Summary and Section 4.0, Alternatives, provide an overall summary of the Draft EIR's findings; Section 2.5 of Section 2.0, Environmental Setting and Project Description, describes the approach to the cumulative impact analysis, which is provided for each topic addressed in Sections 3.1 through 3.11; the cumulative impacts are based on buildout of the adopted General Plan and related adopted Specific Plans.
Madison Heights Neighborhood Association (Rob Manske)	Project design (e.g., density, setbacks, aesthetics, building scale relative to residential, change in site use); water; traffic congestion and safety; noise; infrastructure; General Plan consistency	Aesthetic issues were addressed in Section 2.1, Aesthetics, of the Initial Study; and was evaluated consistent with SB 743; transportation and traffic safety are addressed in Section 3.9, Transportation; water supply and infrastructure requirements are addressed in Section 3.11, Utilities and Service Systems; noise issues are addressed in Section 3.7, Noise; land use issues, including consistency with the General Plan and the Central District Specific Plan, are addressed in Section 3.6, Land Use and Planning
Livable Pasadena (Megan Foker)	Water supply and use; cumulative impacts	Water supply, including cumulative impacts, is addressed in Section 3.11, Utilities and Service Systems
Magnolia Landmark District (Erika Foy)	Traffic; intersection safety; cumulative impacts	Transportation and traffic safety, including cumulative impacts, are addressed in Section 3.9, Transportation
Pasadena Heritage (Andrew Salimian)	Cultural resources; traffic; water supply and retention	Historic resources are addressed in Section 3.2, Cultural and Paleontological Resources; water supply is address in Section 3.11, Utilities and Service Systems;
Scoping Meeting No. 2		
Coalition for Responsible Equitable Economic Development (CREED) LA (representing coalition of labor unions)	Air quality; noise; GHG, on-site soil contamination	Air quality issues are addressed in Section 3.1, Air Quality; noise issues are addressed in Section 3.7, Noise; greenhouse gas issues are addressed in Section 3.4, GHG Emissions; on-site soil contamination issues are addressed in Section 3.5, Hazards and Hazardous Materials
LiUNA Southern California District Council of Laborers (Bill Quisenberry)	Stated no environmental-related comments to make; looking for opportunity to put membership to work on the project.	Comment acknowledged
Ross Selvidge	Support for the Project	Comment acknowledged

Based on the results of the IS and comments received on the NOP, the City determined that implementation of the proposed Project and/or Project with Building A Residential/Commercial has the potential to impact the following environmental topics, which are further addressed in this Draft EIR:

- Air Quality,
- Cultural and Paleontological Resources,
- Energy,
- Greenhouse Gas Emissions,
- Hazards and Hazardous Materials,
- Land Use and Planning,
- Noise,
- Public Services and Recreation,
- Transportation,
- Tribal Cultural Resources, and
- Utilities and Service Systems.

The City determined there would be no impacts or less than significant impacts to the following environmental topics and/or thresholds (refer to the IS/NOP in Appendix A-1). Therefore, in accordance with Section 15128 of the State CEQA Guidelines, these are identified as topical areas that would not receive further evaluation in this EIR:

- Aesthetics,
- Agricultural and Forestry Resources,
- Biological Resources,
- Geology and Soils,
- Hydrology and Water Quality,
- Mineral Resources,
- Population and Housing, and
- Wildfire.

1.3 PROJECT APPLICANT AND CONTACT PERSON

The Project Applicant is:

The Arroyo Parkway, LLC
716 Mission Street
South Pasadena, CA 91030

All inquiries regarding the Project and the EIR should be directed to:

Mr. Jason Van Patten
Senior Planner
City of Pasadena Planning and Community Development Department
175 North Garfield Avenue
Pasadena, CA 91101
jvanpatten@cityofpasadena.net
Phone: (626) 744-6760

1.4 PUBLIC REVIEW OF THE DRAFT EIR

The Draft EIR for the Project is being distributed to responsible and trustee agencies, other affected agencies, surrounding cities, interested parties, and all parties who requested a copy of the EIR in accordance with CEQA. During the 45-day public review period, this Draft EIR, including the technical appendices, is available for review online at

<https://www.cityofpasadena.net/planning/planned-development-39-affinity-project/> and hard copies are available at the following four locations during regular business hours:

City of Pasadena Permit Center (Window 3)
175 North Garfield Avenue
Pasadena, California 91101

Allendale Library
1130 S. Marengo Avenue
Pasadena, CA 91106

Office of the City Clerk
100 N. Garfield Avenue, Room S228
Pasadena, CA 91101

Comments on the Draft EIR from public agencies and interested individuals will be accepted during the 45-day public review period from Tuesday, January 18, 2022 to Thursday, March 3, 2022. Written comments on the Draft EIR should be sent to the Lead Agency contact identified above, via mail or email. Upon completion of the 45-day public review period, written responses will be prepared for all environmental issues raised in the comment letters, and the comments and responses will be included into the Final EIR. All responses to comments submitted on this Draft EIR by public agencies will also be provided to those agencies at least ten days prior to certification of the EIR, consistent with Section 15088(b) of the State CEQA Guidelines.

1.5 DECISION-MAKING PROCESS

An EIR is one of the various decision-making tools used by a Lead Agency to consider the merits and disadvantages of a project that is subject to its discretionary authority. For an EIR, in accordance with Section 21081 of CEQA and Section 15091 of the State CEQA Guidelines, public agencies are required to make written findings for each significant environmental impact identified in the EIR. If the Lead Agency and responsible agencies decide that the benefits of proposed Project outweigh any identified unmitigated significant environmental effects, the Lead Agency is required to adopt a Statement of Overriding Considerations supporting their actions.

Prior to approving a proposed Project, the Lead Agency must consider the information contained in the EIR; determine whether the EIR was properly prepared in accordance with CEQA and the State CEQA Guidelines; determine that the EIR reflects the independent judgment of the Lead Agency; adopt findings concerning the Project's significant environmental impacts and alternatives; and adopt a Statement of Overriding Considerations if the Project would result in significant impacts that cannot be reduced to a less than significant level.

The City Council is the decision-making body for the Project. Public hearings before both the City of Pasadena Planning Commission and then the City Council will be held. Prior to the Planning Commission and City Council hearings, the Project will go to the Design Commission. The role for Planned Developments is limited to recommendations to the Commission and Council on aesthetic and urban design issues related to elements such as architecture, landscaping, and site plan as well as historic preservation. Comments on the aesthetic/cultural resources of a draft environmental study are appropriate. Public hearings before the Commission and Council are to consider the Project and the adequacy of the Final EIR (which includes the Draft EIR, Responses to Comments on the Draft EIR, and revisions and clarifications to the Draft EIR), at which time public testimony will be received. The City Council will consider whether to certify the Final EIR and adopt a Mitigation Monitoring and Reporting Program, EIR Findings relative to the Project's environmental effects, and a Statement of Overriding Considerations, if applicable. The City Council, as the decision-making body of the Lead Agency, will then consider whether to approve, approve in modified form, or disapprove the proposed Project.

SECTION 2.0 ENVIRONMENTAL SETTING AND PROJECT DESCRIPTION

2.1 PROJECT LOCATION

The Affinity Project (Project or Project with Building A Residential/Commercial) site encompasses approximately 3.3 acres (144,853 square feet [sf]) located between 465 and 577 South Arroyo Parkway, City of Pasadena, Los Angeles County. The site is bound by East Bellevue Drive on the north, South Arroyo Parkway on the east, East California Boulevard on the south, and the Metro Gold (L) Line on the west. Regional access to the site is provided by State Route (SR) 110 located approximately 0.6-mile due south on Arroyo Parkway. Local access is provided by adjacent surface streets and Metro's Del Mar and Fillmore Stations located approximately 0.2-miles to the north and south, respectively. Exhibit 2-1, Regional Location and Local Vicinity, illustrates the Project site location.

2.2 PROJECT SETTING AND CHARACTERISTICS

2.2.1 ON-SITE AND SURROUNDING LAND USES

The City of Pasadena (City) is situated along the western edge of the San Gabriel Valley and at the foothills of the San Gabriel Mountains. The Project site is in the southwestern quadrant of the City and to the southeast of the SR-110 and Interstate-210 (I-210) intersection.

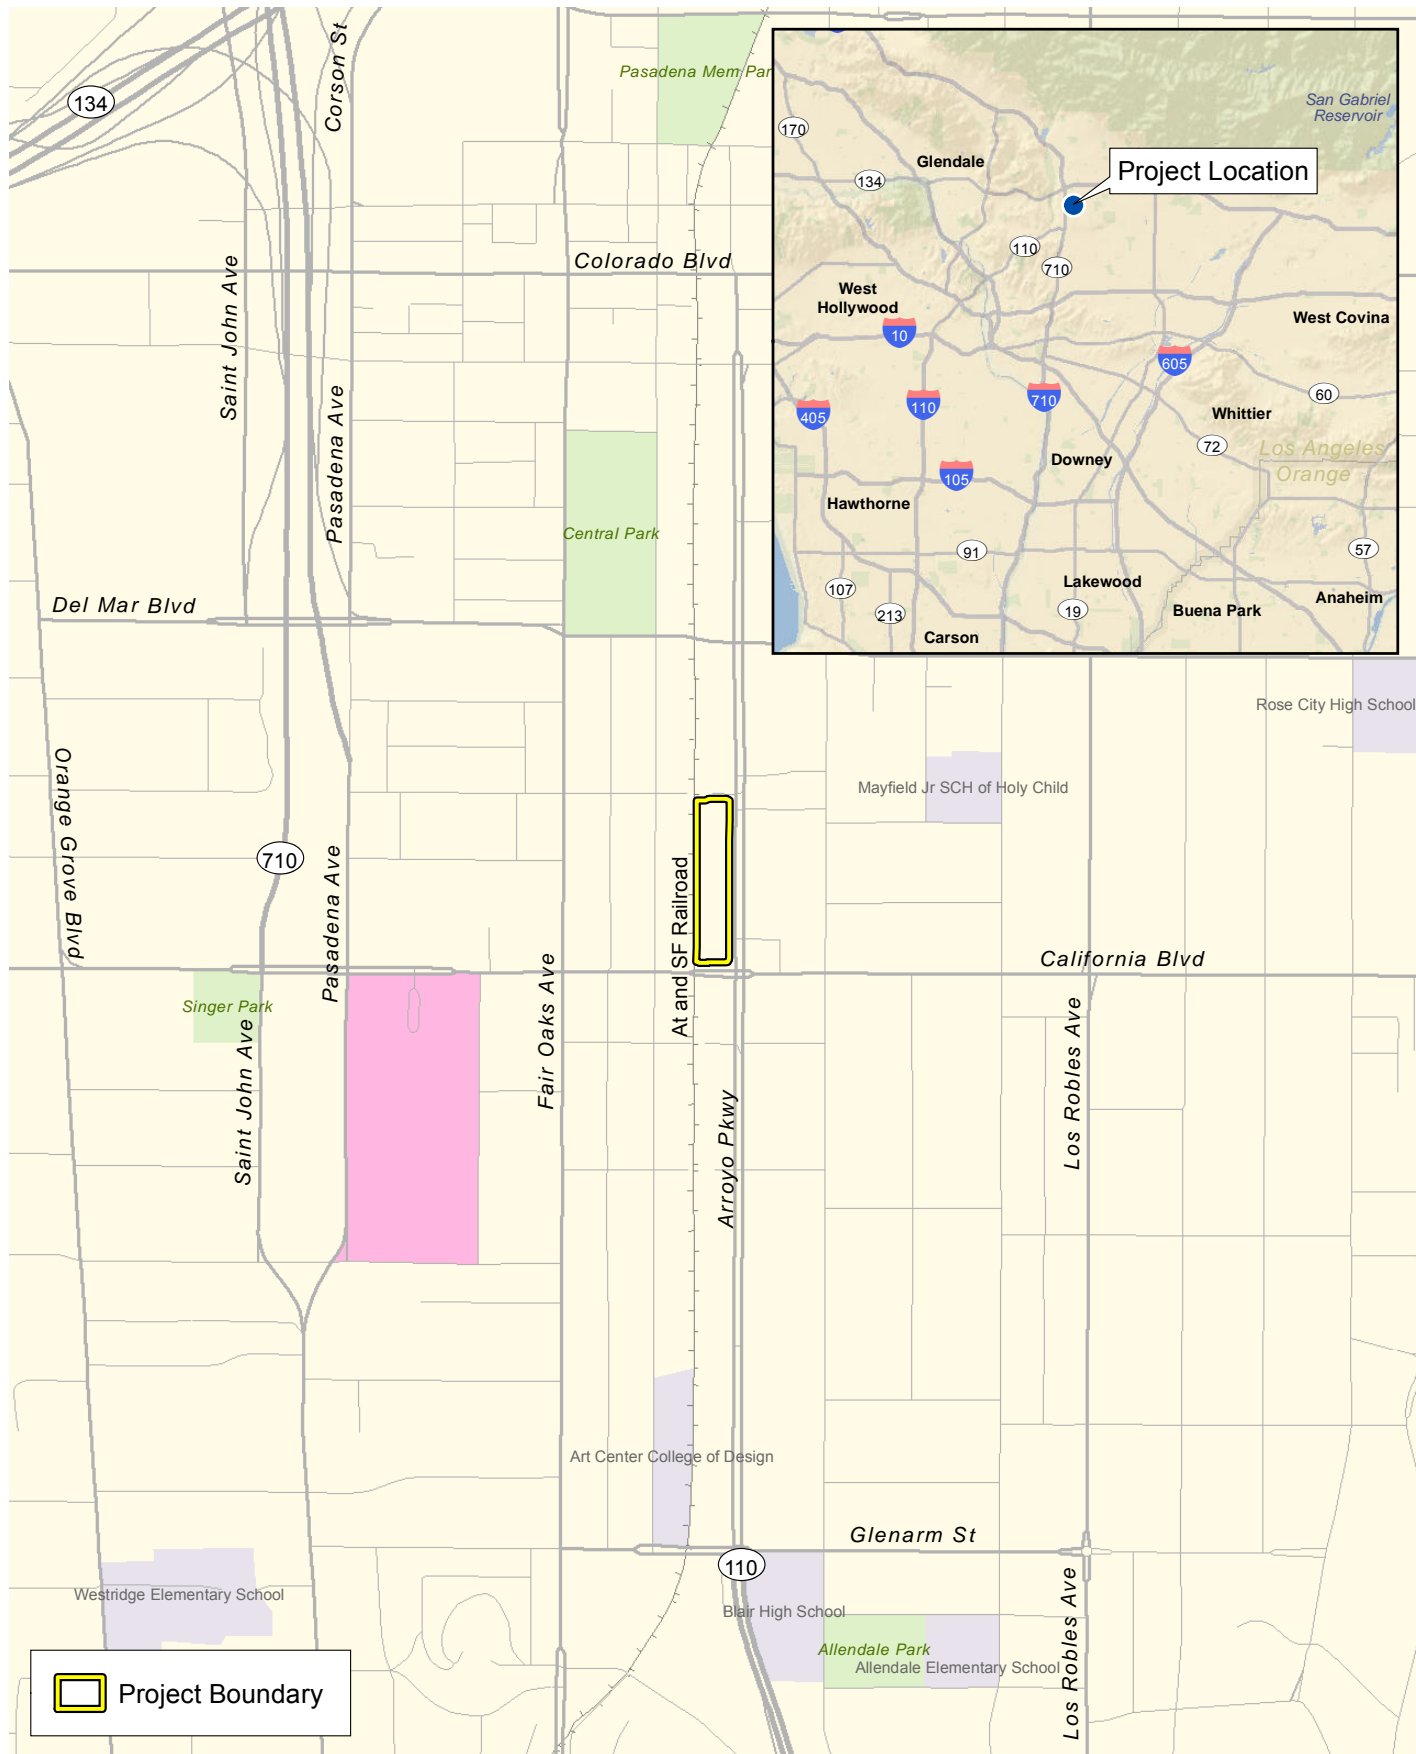

The Project site consists of five parcels developed with a total of nine commercial buildings with seven businesses. All existing buildings on the site are one or two stories with heights ranging between 17 feet and 63 feet. All existing land uses have surface parking except for the Whole Foods Market, which has a 275-space, subterranean parking structure for its sole use. Table 2-1, Summary of Existing Land Uses, summarizes the existing on-site land uses; and Exhibit 2-2, Existing Project Site, illustrates the addresses and locations of the nine existing buildings and other on-site land uses.

**TABLE 2-1
SUMMARY OF EXISTING LAND USES**

Address	Existing Use	Building Size	Disposition
465 S. Arroyo Parkway	Whole Foods Market	73,671 sf	To Be Retained
491/495 S. Arroyo Parkway	K9 Loft	12,676 sf	To Be Demolished
499/503 S. Arroyo Parkway	Corporate Furniture Resource	21,437 sf	To Be Demolished
501 S. Arroyo Parkway	Gold Line Pilates	2,880 sf	Historic Resource; To Be Retained
523 S. Arroyo Parkway	Town & Country Event Rentals	3,002 sf	Historic Resource; To Be Retained
541 S. Arroyo Parkway	Little Lily's Kitchen	7,493 sf	To Be Demolished
577 S. Arroyo Parkway	Guisado's Restaurant	4,306 sf	To Be Demolished
Total Existing Building Area		125,465 sf	
S.: South; sf: square feet			

The Project area is an urban environment, and the site and surrounding area are fully built out with a broad mix of land uses. These land uses also represent a variety of ages, architectural styles, heights, and conditions. Exhibit 2-3, Aerial Photograph, shows the site and existing land use types in the surrounding area.

Commercial land uses are primarily located to the north, including retail, services, and restaurants. Other land uses to the north include medical offices; Pasadena Humane Society,

located approximately 0.1-mile to the northwest; Central Park, located approximately 0.2-mile northwest of the site; and single- and multi-family residential land uses located, at the nearest, approximately 0.2-mile to the north on Del Mar Boulevard and approximately 0.1-mile to the north-northeast on Bellevue Drive. Commercial land uses are located opposite the Project site on Arroyo Parkway. Single- and multi-family residential land uses are situated less than 0.1-mile to the east along Marengo Avenue and Arroyo Parkway. Land uses to the south include a mix of commercial, medical office, and single- and multi-family residential land uses; the latter is located along Marengo Avenue and California Boulevard to the southeast. To the west, there is a mix of commercial and non-profit (i.e., npr/KPCC and Union Station Homeless Services) uses. Further from the site, land uses include a mix of commercial, medical, light industrial, single- and multi-family residential, and public (e.g., schools, churches, parks).

2.2.2 PHYSICAL CHARACTERISTICS

The Project site is relatively flat with a gentle slope of approximately two percent to the south and southeast. Elevations on the site range from approximately 800 feet above mean sea level (msl) along the northern site boundary to approximately 782 feet above msl in the southeast corner.

The site is entirely developed, with the portion of the site south of the Whole Foods Market having a 97 percent impervious surface area. The existing buildings primarily drain runoff via roof drains that either connect to an underground curb drain or release just above the pavement or sidewalk. The storm water runoff then outfalls through sheet flow along driveways and street-adjacent curb drains onto the Arroyo Parkway sidewalk or directly connects to the municipal storm drain system (Fusco Engineering 2021).

There is limited ornamental vegetation present on the Project site. As shown in Table 2-2, Tree Inventory Summary, on the following page, a total of 40 trees were inventoried on the Project site and the adjacent public right-of-way (ROW). Of these, 17 trees located in the ROW are protected under the City Trees and Tree Protection Ordinance. The remaining 23 trees are located on private property within the Project site and are not protected. These include 19 queen palms, 2 Canary Island pines, 1 pecan, and 1 African fern pine (Carlberg Associates 2021).

The site currently has seven points of access, including two on California Boulevard, one on Bellevue Drive, and five on Arroyo Parkway when including the Whole Foods Market exit. All of these access points, except the access from Bellevue Drive and the Whole Foods Market exit, are driveways leading to surface parking; the access point on Bellevue Drive leads into the subterranean parking structure serving Whole Foods Market.

Metro's Gold (L) Line runs adjacent to the western site boundary. The nearest light rail platforms are Del Mar Station and Fillmore Station, located approximately ¼-mile due north and due south of the Project site, respectively. Additional public transit service present near the site includes the California Boulevard/Arroyo Parkway Metro bus stop located in the ROW on the southern site boundary, and the Bellevue Drive/Arroyo Parkway Metro bus stop located in the ROW at the northeast corner of the site.

2.2.3 RELEVANT PLANNING CONSIDERATIONS

City of Pasadena

The City's General Plan land use designation for the Project site is High Mixed-Use, which is intended to support multi-story mixed-use buildings with a variety of compatible commercial and residential uses. Development within this designation is characterized by shared open spaces, extensive landscaping, minimal building separations, and shared driveways with parking located underground or to the rear of the street. The High Mixed-Use General Plan land use category allows maximum densities of 3.0 floor area ratio (FAR) and 87 dwelling units per acre (du/acre). Based on the lot size, the site would allow up to 434,559 sf of floor area and up to 289 dwelling units.

The Land Use Element of the City's General Plan establishes an overall pattern of development that directs growth "into specific areas in order to protect residential neighborhoods and create mixed-use urban environments." These areas are based on a concept of higher density, mixed-use environments that support transit- and pedestrian-oriented mobility strategies. The Central District is one of eight areas throughout the City requiring preparation of a specific plan to implement this goal. The site is zoned CD-6 (Central District, Arroyo Corridor/Fair Oaks subdistrict). The City considers the Central District to be Pasadena's urban core, and this Specific Plan (Central District Specific Plan [CDSP]) includes a "diverse mix of land uses designed to create the primary business, financial, retailing, and government center of the City" (Pasadena 2004).

The CDSP includes both Public Realm and Private Realm Design Guidelines, which apply to all development in this district, including the Project. The CDSP also provides District-wide land use, mobility, and urban design concepts. The CDSP identifies sub-districts, and within the sub-districts, precincts that include more specific goals, policies, and standards targeted toward the vision for each neighborhood. The site is in the Arroyo Corridor Transition precinct within the Arroyo Corridor/Fair Oaks sub-district, which is an important gateway to downtown that also supports a broad, but rather undefined, mixture of uses at the periphery of the urban core. The objective of the Arroyo Corridor/Fair Oaks sub-district is to establish Arroyo Parkway as a visually appealing entrance corridor. Additionally, the intent of sub-district is to provide an attractive opportunity for employment-generating uses adaptable to changing economic conditions—such as arts, technology, and knowledge-based enterprise—within a revitalized low-scale, mixed-use setting at the periphery of Downtown Pasadena. The emphasis of the Arroyo Corridor Transition precinct is the transitional character of the area towards more pedestrian and transit-oriented development with a mix of land uses including residential, commercial, and employment (Pasadena 2004). Within this Corridor, building height is limited to 50 feet, or 65 feet using height averaging.

As discussed further below and in Section 3.6, Land Use and Planning, of this Draft EIR, the Applicant seeks approval to rezone the site as a Planned Development (PD) district and approval of a PD Plan. The City's PD zone is a special purpose zoning district defined pursuant to Section 17.26.020(C) of the Pasadena Municipal Code. The PD zoning district is "intended for sites where an applicant proposes and the City desires to achieve a particular mix of uses, appearance, land use compatibility, or special sensitivity to neighborhood character." The Applicant is also requesting a zoning variance for historic resources related to building height. Specifically, the Applicant is requesting an increase in allowable building height to offset the reduction in developable area due to preserving the two historic structures (i.e., 501 and 523 South Arroyo Parkway) on the Project site.

Southern California Association of Governments

The Southern California Association of Governments (SCAG) is the Metropolitan Planning Organization (MPO) for six counties: Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial Counties, an area that encompasses more than 38,000 square miles. As the designated MPO, the federal government mandates that SCAG research and draw up plans for transportation, growth management, hazardous waste management, and air quality.

SCAG is responsible for maintaining a continuous, comprehensive, and coordinated planning process resulting in a Regional Transportation Plan (RTP) and a Federal Transportation Improvement Program (FTIP) and developing a Sustainable Communities Strategy (SCS) to reduce greenhouse gas emissions, as required by applicable State law (Senate Bill [SB] 375) as an element of the RTP. On September 3, 2020, the SCAG Regional Council adopted the 2020–2045 RTP/SCS. The 2020 RTP/SCS combines the need for mobility with a “sustainable future” through a reduction in the amount of emissions produced from transportation sources.

High-Quality Transit Areas (HQTAs) are areas within one-half mile of a fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes or less during peak commuting hours. Transit Priority Areas (TPAs) are areas within one-half mile of a major transit stop that is existing or planned (SCAG 2020). The Project site is within both a HQTA and TPA.

2.3 PROJECT OBJECTIVES

Section 15124(b) of the State CEQA Guidelines requires an EIR to include a statement of the proposed project’s objectives. This disclosure will assist in developing the range of Project alternatives to be investigated in the EIR and will provide a rationale for the adoption of a Statement of Overriding Considerations if one is needed. The Affinity Project seeks to achieve the following key objectives:

1. Reinforce and strengthen Arroyo Parkway as a major commercial corridor and the Central District’s economic vitality through the development of multi-story buildings with a variety of complementary commercial and/or residential uses in underutilized areas with higher development capacity.
2. Provide jobs, services, revenues, and opportunities that will support Pasadena as an economically vital city and allow for continued fiscal health.
3. Develop assisted living facilities that have access to local commercial services, health care facilities, community facilities, and public transit.
4. Satisfy local and regional demand for varying levels of care (independent living, residential care, continuing care) to individuals, depending on need, that are transit-accessible and pedestrian-friendly.
5. Improve Pasadena’s infrastructure and urban form through modernized buildings that are energy- and water-efficient.
6. Preserve and integrate Pasadena’s historic resources as part of a complementary development that reduces the risk of resource demolition, deterioration by neglect, and/or impacts from natural circumstances.
7. Invest sustainably by providing for the needs of existing and future residents and businesses while in proximity to transportation opportunities.

2.4 **PROJECT DESCRIPTION**

The Applicant requests approval to rezone the Project site from CD-6 to a Planned Development (PD) zone, and approval of a PD Plan. The Project involves demolition of 6 (of the 9) existing buildings totaling 45,912 sf, located at 491, 495, 499, 503, 541, and 577 South Arroyo Parkway, and construction of 2 new buildings, as identified below:

- Building A: a 154,000-sf, 7-story (aboveground) medical office building with ground-floor commercial uses;
- Building B: a 184,376-sf, 7-story (aboveground) assisted living building with 85,800 sf of assisted living uses and 98,576 sf of independent living uses including up to 95 studio, one-, and two-bedroom senior housing units; and
- Up to 850 parking spaces in 5 subterranean levels.

Alternatively, the proposed PD Plan would provide the flexibility to exchange the uses in Building A from medical office and ground floor commercial for the following:

- 3,000 sf of commercial and a sales/leasing management office on the ground floor;
- Up to 197 residential dwelling units; and
- Up to 650 parking spaces in 4 subterranean levels (1 less parking level than the Project as proposed).

Although the Project described is anticipated to reflect the Project to be constructed, the flexibility to exchange the uses in Building A would enable the Project to respond to the economic needs and demands of the City at the time of Project implementation. The proposed site layout and the aboveground height, mass, and other parameters of the Building A design would remain the same. The PD Plan would define all aspects of site design and provide caps on the types and amounts of allowable land uses, regardless of whether Building A is developed with medical office or residential dwelling units. It is noted that based on the development cap of 87 dwelling units per acre (du/acre), a total of 289 units could be constructed. Therefore, if a total of 197 units were constructed in Building A, only 92 senior housing units (i.e., 3 fewer units than the Project as proposed) could be constructed in Building B. Conversely, if 95 senior housing (i.e., independent living) units were constructed in Building B, only 194 units could be constructed in Building A.

Throughout the CEQA documentation, these two development scenarios will be referred to as:

- Project (development of Building A with medical office/commercial), and
- Project with Building A Residential/Commercial (development of Building A with residential/commercial).

A total of five levels of subterranean parking spanning both proposed buildings with up to 850 parking spaces would be constructed to serve the new development as well as the existing structures at 501 and 523 South Arroyo Parkway under the Project scenario. When including the new subterranean parking, the Project would consist of approximately 753,439 sf of new construction. For the Project with Building A Residential/Commercial, a total of 4 levels of subterranean parking spanning both proposed buildings with up to 650 parking spaces would be constructed to serve the new development as well as the existing structures at 501 and 523 South Arroyo Parkway.

Approximately 79,553 sf of the existing development would be retained and integrated into the Project, including the Whole Foods Market and associated 275-space subterranean parking

structure at 465 South Arroyo Parkway, and the 2 historic structures at 501 and 523 South Arroyo Parkway. The Applicant anticipates that restaurant uses would occupy the approximately 5,882 sf of space in the existing buildings to be retained at 501 and 523 South Arroyo Parkway. In retaining these structures, the Applicant is also requesting a zoning variance for historic resources related to building height. Specifically, the Applicant is requesting an increase in allowable building height of the two new buildings to offset the reduction in developable area due to preserving the two historic structures (i.e., 501 and 523 South Arroyo Parkway) on the Project site. Exhibit 2-4, Project Site Plan, provides a schematic overview of the Project design.

Section 15124 of the State CEQA Guidelines defines what information shall be contained in a project description for purposes of analysis in an EIR. The concept of a stable and finite project description is shaped by selected published CEQA court decisions. The project description provided in this Draft EIR meets the requirements of Section 15124 and is also stable and finite. A stable and finite project description, as interpreted in the relevant legal cases, is not synonymous with allowing only a single development scenario. The siting, mass, and outward appearance of the Project, regardless of scenario, is clearly defined both in this EIR and in the Initial Study. The upper limits of development of both buildings for both scenarios is clearly defined, and the Initial Study and this EIR address both scenarios in distinct, separate analyses. Therefore, the project description provided in this Draft EIR is legally adequate and allows for a full and robust analysis of all potential impacts of implementing either the Project or Project with Building A Residential/Commercial, if approved.

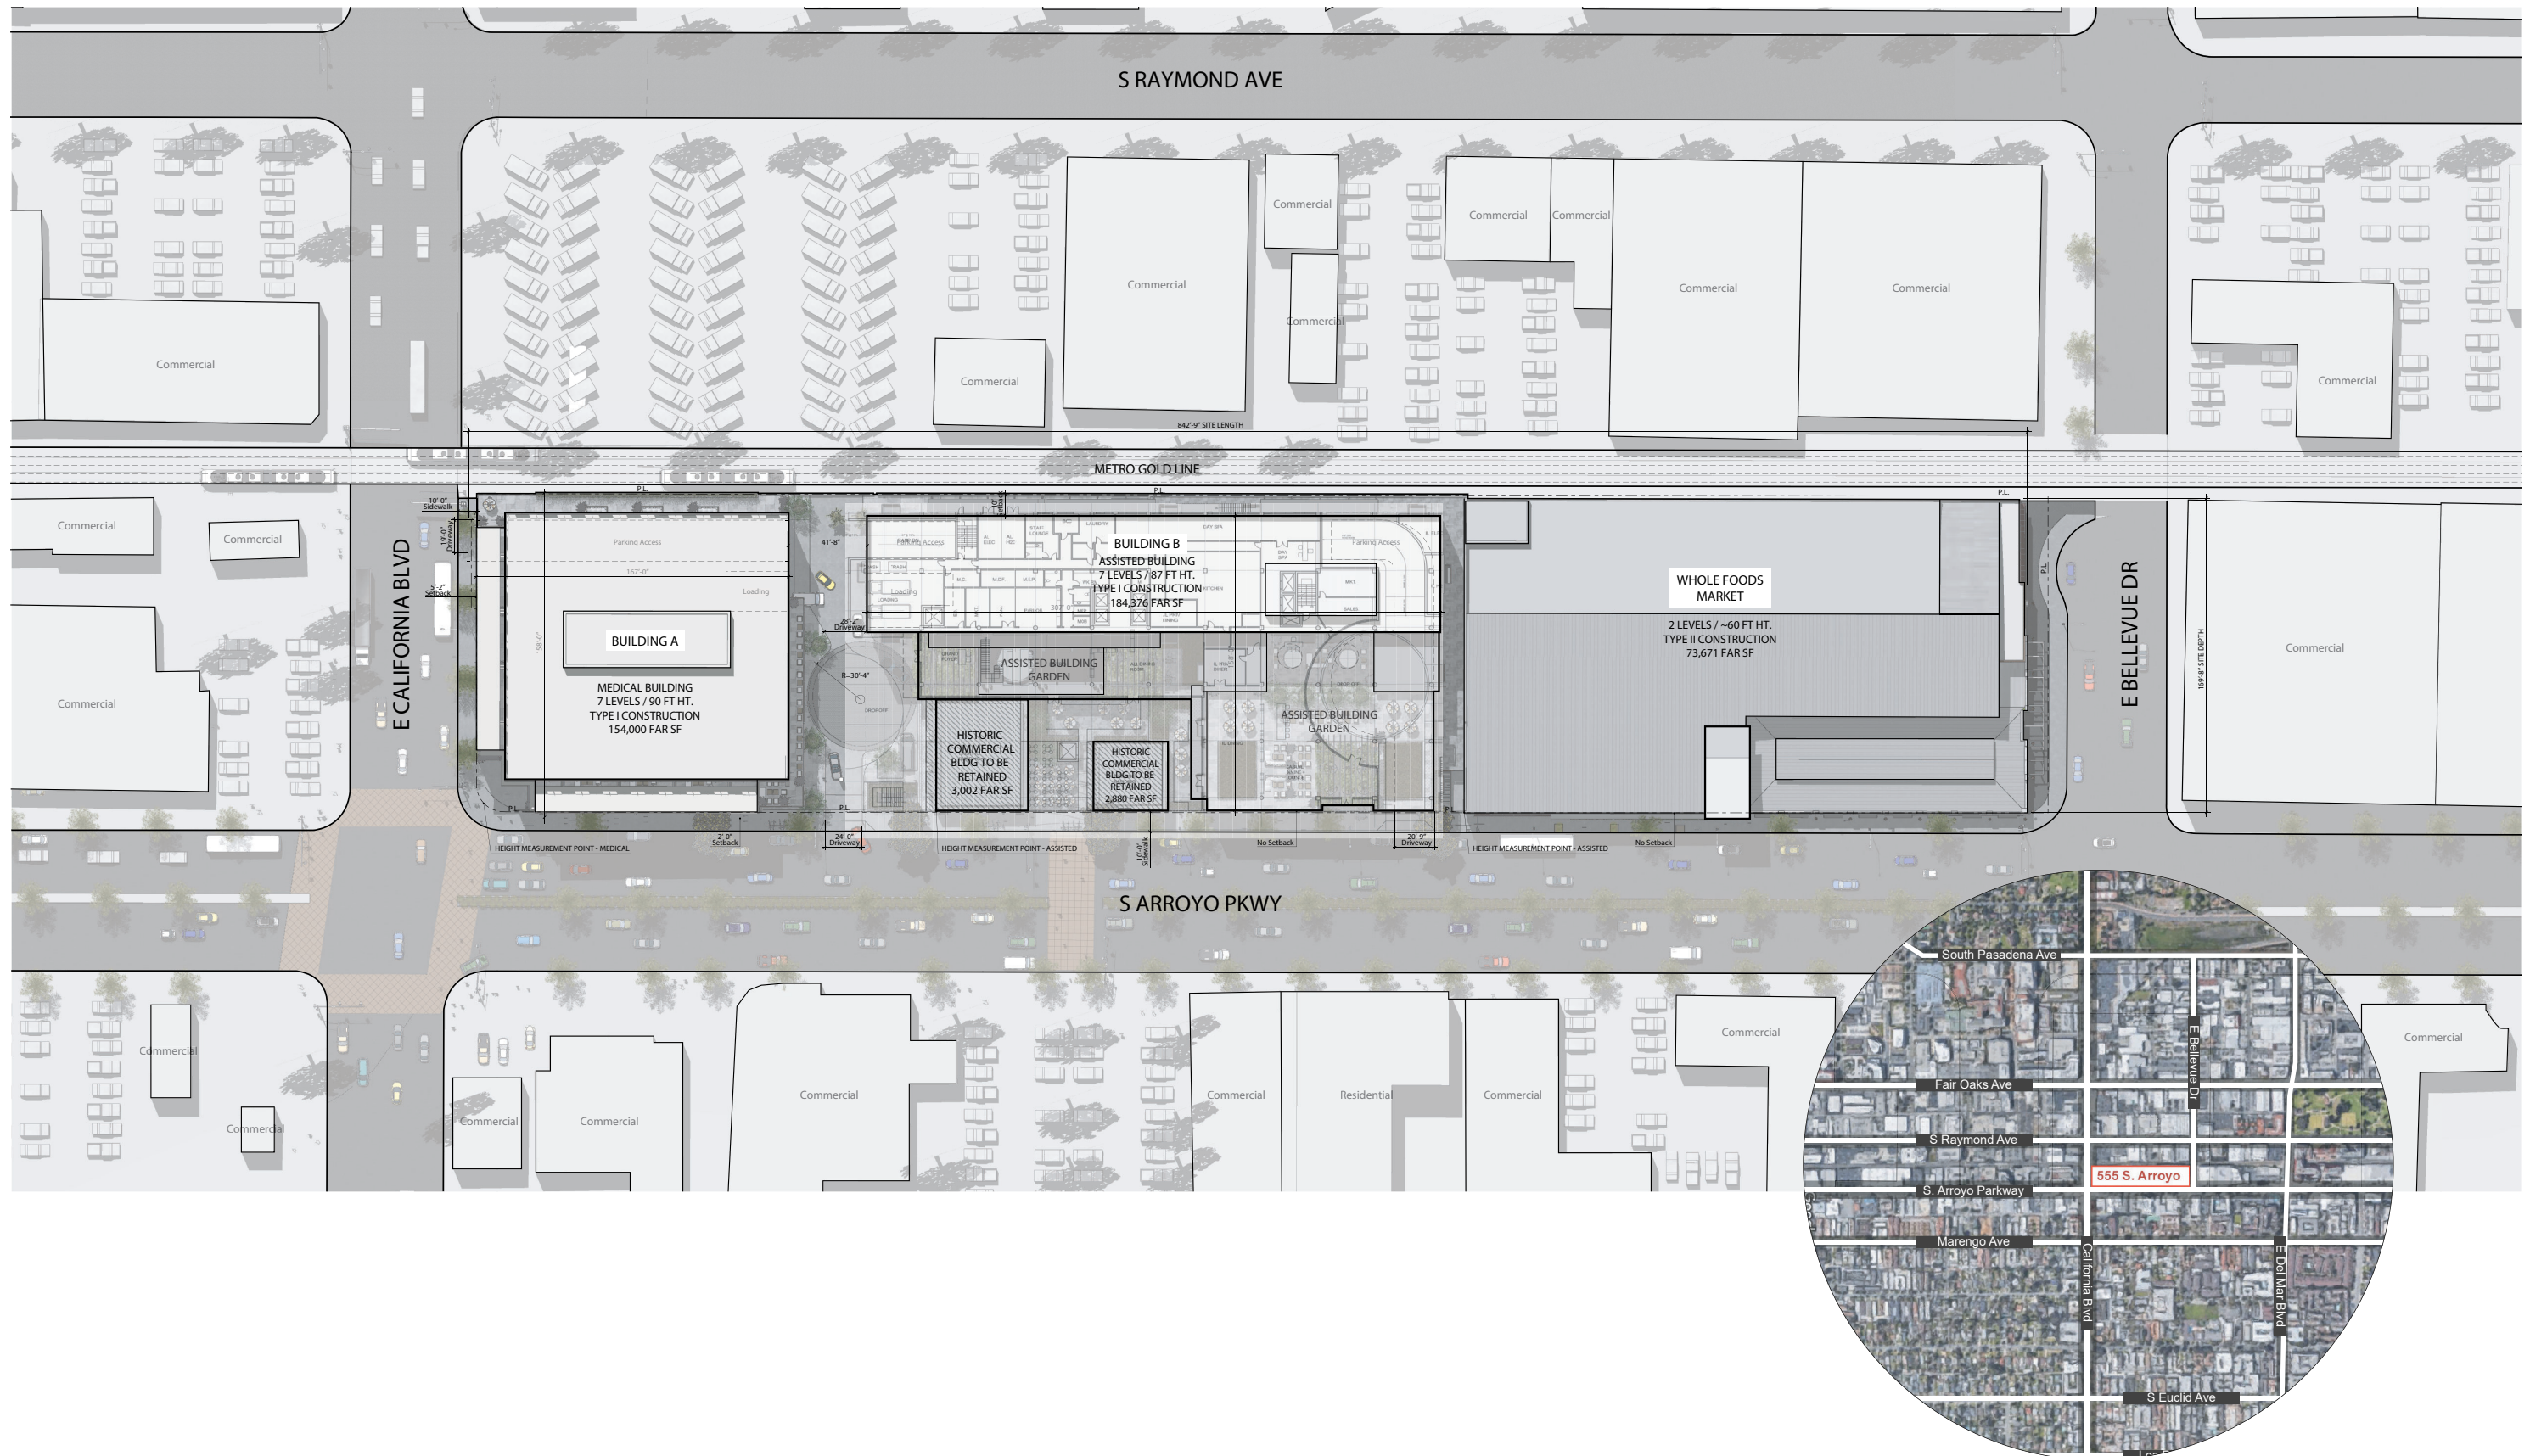

2.4.1 PROPOSED LAND USES

Table 2-3, Summary of Proposed Land Uses, on the following page summarizes the existing and proposed uses for the Project and the Project with Building A Residential/Commercial. Exhibit 2-5, First (Ground) Level Plan; Exhibit 2-6, Level 2 Plan; Exhibit 2-7, Level 3 Plan; Exhibit 2-8, Level 4 Plan; Exhibit 2-9, Level 5 Plan; Exhibit 2-10, Level 6 Plan; and Exhibit 2-11, Level 7 Plan present the floor plans from the ground floor through Level 7 for the Project.

Under the Project scenario, the medical office building would have commercial uses as well as a lobby, loading bay, and circulation areas on the Ground (first) level and medical office uses on Levels 2 through 7.

On the Ground (first) Level of the assisted living building, there would be a foyer, parlor, bistro, and dining room for open use; a private dining room for assisted living use; a casual dining/lounge, dining area, and private dining room for independent living use; and “back of house” facilities for the assisted living uses, such as a day spa, kitchen, laundry, staff lounge, and business offices; and a loading bay. There would be separate entrances and sets of elevator bays for use by assisted and independent living residents and guests. Levels 2 and 3 would be exclusively assisted living and include communal spaces; Level 4 would be a mix of assisted and independent living; and levels 5 through 7 would be exclusively independent living. Level 7 would also have a gym, billiard room, club room, and bistro lounge for independent living residents. As noted above, a total of 95 studio, one-, and two-bedroom senior housing units would be constructed as part of the assisted living building.

Under the Project with Building A Residential/Commercial scenario, the floor levels, building envelope, site layout, and open space would be the same as presented for the medical office building. Detailed floor plans for development of residential uses and ground floor commercial and management office, if the land uses in Building A are exchanged, have not been developed at the time of preparation of this Draft EIR. However, the dwelling units are anticipated to be market-rate apartments and/or condominiums of various sizes.

**TABLE 2-3
SUMMARY OF PROPOSED LAND USES**

Existing Buildings to Remain		
Address	Use	Floor Area (Gross sf)
465 South Arroyo Parkway	Whole Foods Market	73,671 sf
501 South Arroyo Parkway (historic)	Gold Line Pilates	2,880 sf
523 South Arroyo Parkway (historic)	Town & Country Event Rentals	3,002 sf
<i>Total Square Footage</i>		<i>79,553 sf</i>
Parking (Whole Foods Structure)		275 spaces / 2 loading spaces
Project Development		
	Floor Area (Gross sf)	
	Medical Office Building (A)	Assisted Living Building (B)
Basement/Subterranean Levels	415,063	
Ground	14,635	25,377
2 nd	23,028	31,269
3 rd	26,671	29,107
4 th	26,671	29,107
5 th	26,671	29,107
6 th	21,162	21,299
7 th	21,162	19,110
Total Gross Square Footage	154,000 (Aboveground)	184,376 (Aboveground)
	753,439 (Including five subterranean levels spanning both buildings)	
Parking	Up to 850 spaces	
Total Aboveground Built Area (Existing + Proposed)	417,929	
Building Outline/Site Coverage	99,224 sf / 68 percent	
Proposed FAR	2.89	
Open Space	8,676	22,929
Project with Building A Residential/Commercial Development		
	Floor Area (Gross sf)	
	Residential/Commercial Building (A)	Assisted Living Building (B)
Differences from Project Scenario	Up to 197 dwelling units & 3,000 sf of ground-floor commercial	Same as Project
Total Square Footages	154,000 (Aboveground)	184,376 (Aboveground)
	670,427 (Including four subterranean levels spanning both buildings) ^a	
Parking	Up to 650 spaces	
Total Aboveground Built Area (Existing + Proposed)	417,929	
Building Outline/Site Coverage	99,224 sf / 68 percent	
Proposed FAR	2.89	
Open Space	8,676	22,929
^a Reflects one less subterranean parking level, all other floor area sizes are the same sf: square feet; N/A: not applicable; FAR: floor area ratio		

Design and Architecture

Exhibit 2-12, East and North Elevations, shows elevations of the Project from the east (Arroyo Parkway) and the north (Bellevue Drive); and Exhibit 2-13, West and South Elevations, shows elevations of the Project from the west (Gold Line tracks) and the south (California Boulevard). These elevations illustrate the massing and relative height of the proposed buildings among the existing buildings on the site to be retained and the adjacent streets and light rail line. The building configuration is further illustrated in the north-south cross-section presented on Exhibit 2-14, Cross Section (North-South). This shows a section of the Project as though viewing from South Arroyo Parkway, with the medical office building on the far left and the Whole Foods Market on the far right. The maximum building heights for the Project to the top of parapet, not including appurtenances, would range from 90 feet 6 inches to 93 feet 6 inches above ground level, as shown on Exhibits 2-12 through 2-14. As shown, portions of the Project step down in height, ranging approximately between 29 feet and 77 feet 6 inches in height, not including appurtenances. Consistent with the site zoning, roof mounted appurtenances covering not more than 25 percent of the roof area may exceed the established height limit by a maximum of 15 feet. As defined by the City, roof mounted appurtenances may include a tower, spire, cupola, chimney, penthouse, water tank, or other similar structures that are attached to a structure and not intended for human occupancy.

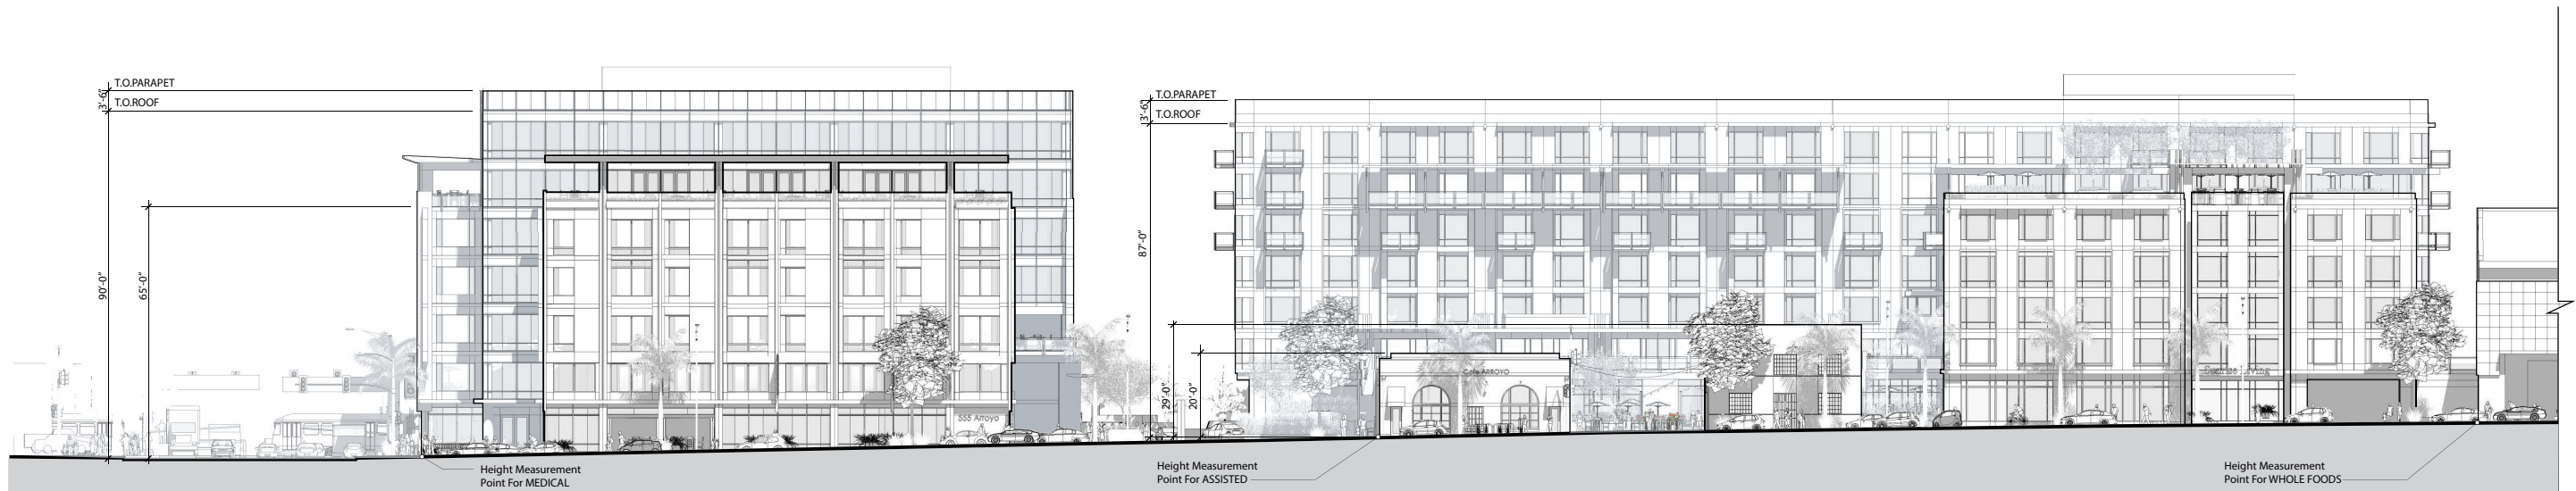

A shadow study was prepared by the Applicant to determine whether the proposed buildings would adversely affect the solar access of surrounding land uses. Specifically, Section 17.40.090(D) of the Pasadena Municipal Code (PMC) states:

Solar access. No structure shall be established or enlarged unless it has been reviewed by the Zoning Administrator for its effect on solar access to existing and future solar applications on adjacent properties subject to the following findings:

1. There are no conditions, covenants, and restrictions existing or proposed that are adverse to solar energy systems;
2. Solar access has been addressed within the context of any required Environmental Impact Report; and
3. The proposed structure will not prohibit or unreasonably restrict the use of solar energy systems on adjacent properties.

Exhibit 2-15, Affinity Project Shadow Study, illustrates the anticipated shade generated by the proposed buildings at 10:00 AM and 2:00 PM on both the Summer solstice (longest day of the year) and Winter equinox (shortest day of the year). As shown, at the Summer solstice the shade generated is limited to overlapping the public right-of-way (ROW) to the east and west. As expected, at the Winter equinox, the shade generated extends a greater distance to the north, east, and west. To the north and east, it extends only onto public ROW. To the west, in the morning hours the shade would extend to slightly overlap the rear of some of the existing structures facing South Raymond Avenue. These include the KPCC/Southern California Public Radio buildings at 474 South Raymond Avenue and the Self-Storage and U-Haul business at 552 South Raymond Avenue. Neither of these businesses depend on sun/solar access for their operations nor are there open areas for employee or visitor use near the rear of these buildings. Most importantly, there is abundant flat roof area remaining beyond the limited shade generated during a portion of the year for both businesses to implement solar energy systems, should it be desired in the future. Therefore, the Project would not prohibit or unreasonably restrict the use of solar energy systems on adjacent structures.

Exhibit 2-15

The proposed building facades incorporate numerous window openings to provide views and to avoid blank, massive-looking building faces. The facades would also be articulated with patios, window shades, and varying surface treatments to provide variation and break up the surface of the buildings. Portions of both the proposed buildings would be set back from the widest part of the building envelope and some portions of the buildings would extend only to Level 4 and Level 6. Additionally, the ground floor would be slightly taller than the remaining levels, at 15 feet high. This would act to differentiate the ground floor and, combined with some unique architectural features for this level, create a human-scale and pedestrian-friendly environment. The assisted living building would have a steel stud exterior wall clad with a combination of textured face brick and smooth plaster or precast concrete accents. Trellises and balcony railings would be painted steel with a cement fiber composite soffit and sealed concrete decking. Glazing would be factory finished aluminum or steel operable frames with bronze-, gray-, or green-tinted thermal glass and spandrel glass at floors and vision glass heads. Exterior decks would be a double slab construction with paver tiles. The medical office building would have a combination of aluminum frame glass curtain wall and steel stud exterior wall clad with a mixture of textured face brick and smooth plaster or glass fiber reinforced concrete precast accents on the lower floors of the building. Glazing would be a factory finished aluminum structural silicone glazing system with bronze-, gray-, or green-tinted thermal glass and spandrel glass at floors and vision glass heads. Exterior decks would be a double slab construction with paver tiles. The Project proposes to maintain visual continuity through the consistent application of high-quality building, landscape, and hardscape design and materials. Only non-reflective building materials would be used.

Under the Project with Building A Residential/Commercial, the setbacks, scale, massing, and other aspects of the architectural design would be the same as discussed for the Project with the medical office building.

The existing historic structures at 501 and 523 South Arroyo Parkway would be preserved in place. Specific future tenant improvement plans for these historical resources on the Project site are still in the conceptual phase as of the preparation of this Draft EIR. However, the plans do not anticipate demolishing, moving, or making major alterations to these structures. Proposed tenant improvements to the exterior of these two structures would be reviewed by an architectural historian meeting the Secretary of the Interior's Professional Qualifications Standards for architectural history or historic architecture. Specifically, these plans shall be reviewed by the qualified architectural historian for consistency with the Secretary of the Interior's Standards for the Treatment of Historic Properties.

As noted in Section 2.5 further below, the Project, or Project with Building A Residential/Commercial, would be required to undergo the Design Review process. The Design Review considers factors such as compatibility with surroundings, massing, proportion, siting, void-to-void relationships, and compliance with applicable design guidelines.

Landscape, Hardscape, and Lighting

Approximately 31,605 sf of open space, including public and private (for solely resident and staff use space), would be provided across the site for both the Project and Project with Building A Residential/Commercial scenarios. As discussed previously, the Project would result in the removal of 23 non-protected non-native trees on the Project site and 2 protected, non-native street trees. As shown on Exhibit 2-16a, Conceptual Landscape Plan, the Project would include a total of 25 trees in above-grade planters within the site. The 15 remaining protected street trees would be protected in place during construction and remain after the Project is implemented. As discussed in Section 2.4, Biological Resources, of the Initial Study, the Urban Forestry section of the City's Public Works Department typically requires a fee, dependent on the size of the tree(s) being removed, to be remitted into the City's street tree fund. For the Project, a planned condition of approval calls for planting of one new street tree along both Arroyo Parkway and California

Boulevard. The Project would also include a total of 25 trees in above-grade planters within the site.

Exhibits 2-16b through 2-16e present the conceptual landscape plan for Levels 1 through 6. As shown, each level of the Project would include placement of drought-tolerant species of ornamental trees, shrubs, and groundcovers near outdoor seating areas and passages on the ground level and on above-ground building levels. Regarding the creation of a heat island and/or increase of the local heat index, the Project would result in at worst a neutral contribution to the heat index in the area. Heat islands are created by a combination of heat-absorbing surfaces (such as dark pavement and roofing), heat-generating activities (such as engines and generators), and the absence of vegetation (which provides evaporative cooling).

It is noted that of the 23 on-site trees to be removed, 19 are queen palms (*Syagrus romanzoffiana*), which provide little shade. They do provide some measure of evaporative cooling, which can help offset the heat index, but not at ground level. Additionally, the site currently contributes to the urban heat island effect by consisting almost entirely of asphalt or concrete surface and buildings. The hydrology study prepared for the Project (and provided as Appendix C of the Initial Study) assessed that the site is currently 97 percent impervious surface area. With implementation of the Project, the site would be 98 percent ground-level impervious surface area. However, with the Project there is a net increase in vegetation on the site compared to the existing condition, with landscaping at the ground level and on levels 2, 3, and 6. All vegetation, whether in ground or planters, provides evaporative cooling. Under the Project with Building A Residential/Commercial, the landscape (including tree removal and planting), hardscape, and lighting would be the same as that discussed for the Project.

Project Circulation, Access, and Parking

As shown on Exhibit 2-5, the Project uses south of Whole Foods Market would have three ingress/egress points, one on California Boulevard and two on South Arroyo Parkway. Two circular drop-off areas would be constructed, with one situated on the north side of each proposed building. Under the Project, a total of 5 levels of subterranean parking with up to 850 parking spaces would be constructed to serve the proposed land uses and the existing structures at 501 and 523 South Arroyo Parkway. The ingress/egress on East Bellevue Drive to the 275-space Whole Foods Market parking structure would remain and continue serving the grocery store; this parking structure would be entirely separated from the proposed parking structure.

Under the Project with Building A Residential/Commercial, the circulation and access would be the same as that discussed for the Project. As noted above, this scenario would provide 200 fewer parking spaces with one less level of subterranean parking when compared to the Project.

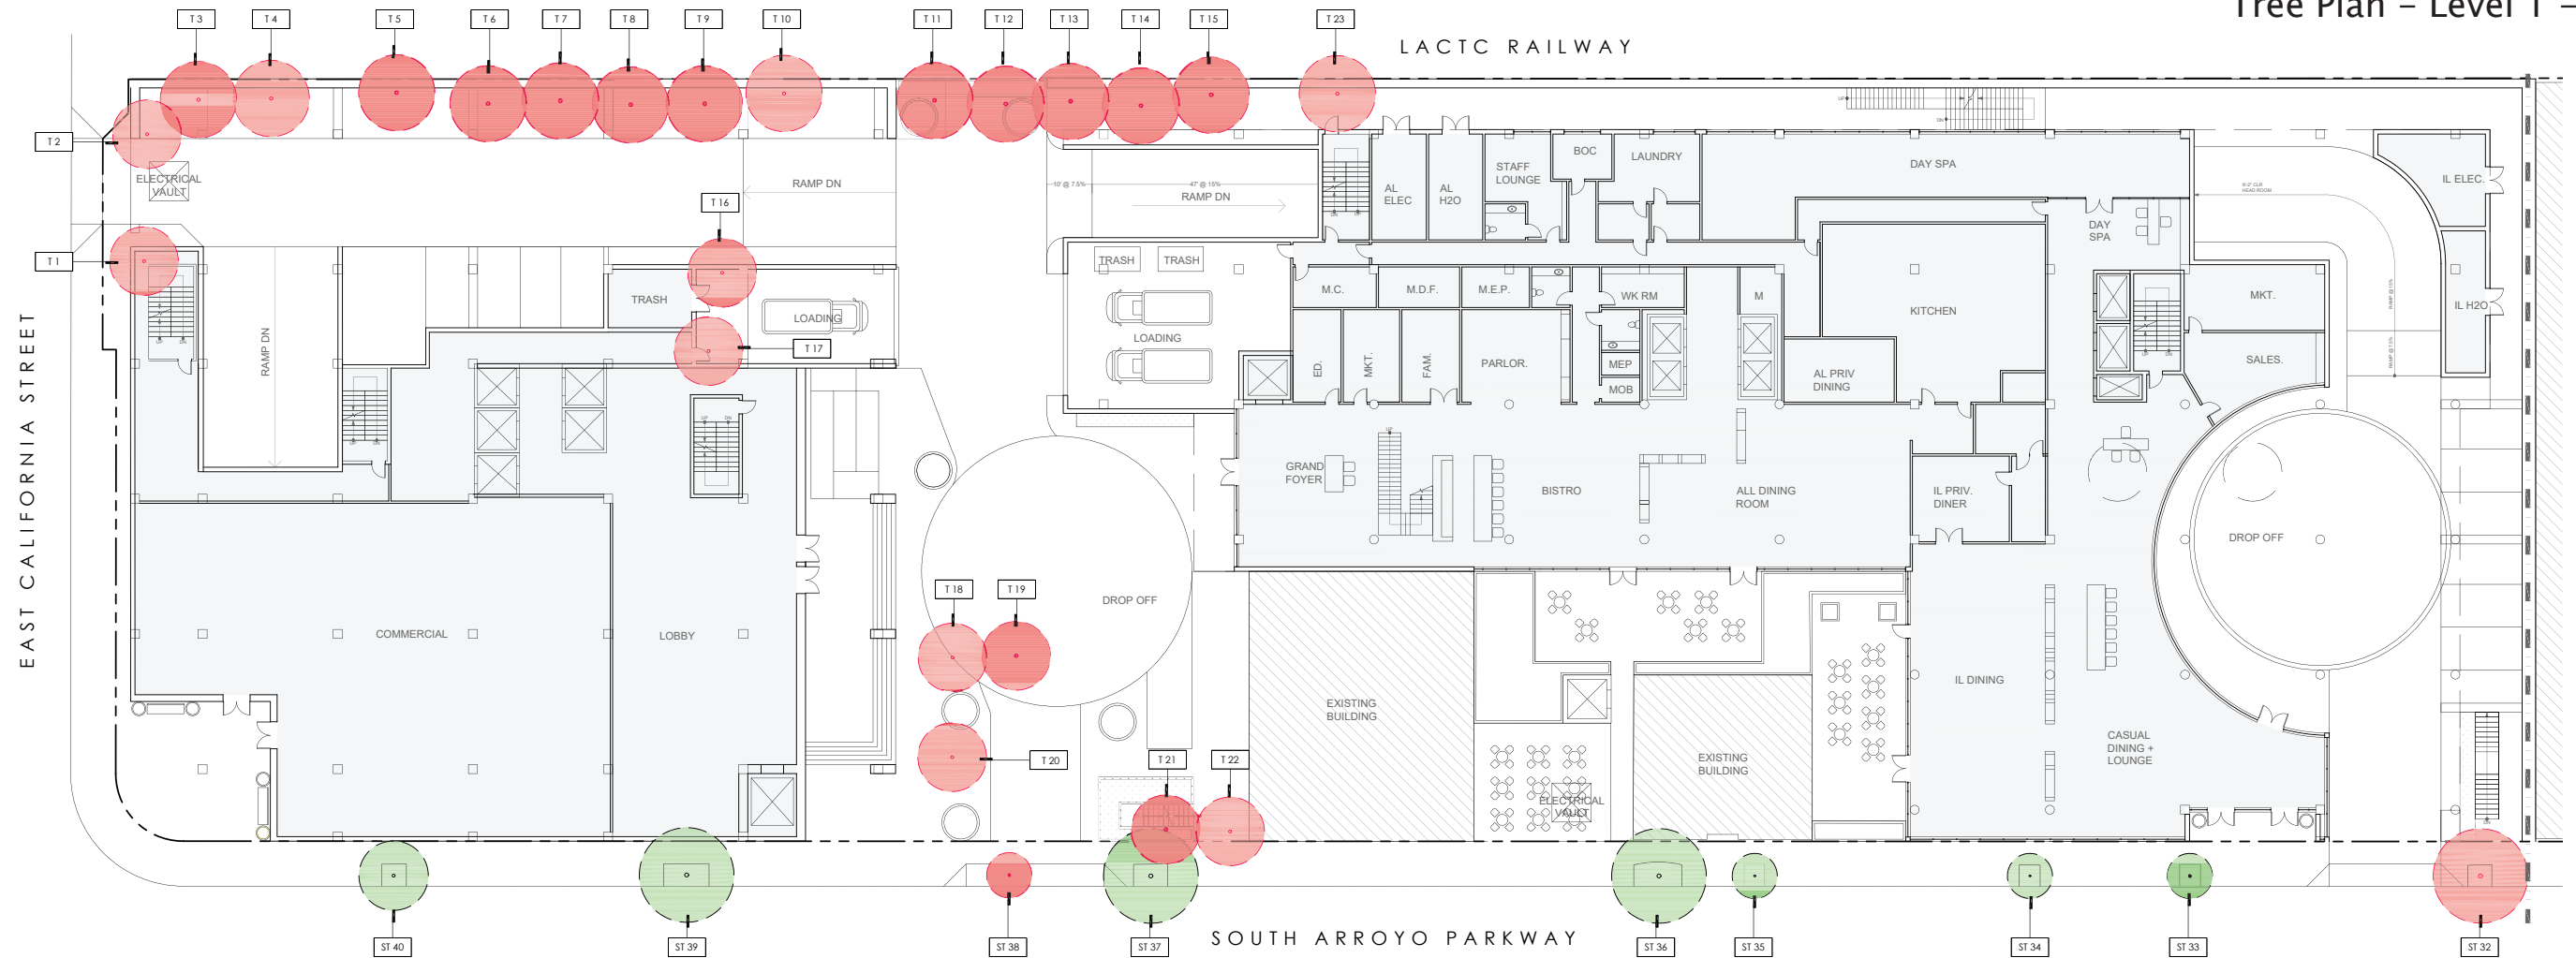

Utilities

Wet and dry utilities are currently provided to the Project site and surrounding area by various providers, as listed below. The agencies responsible for these services are in parentheses:

- Water facilities (Pasadena Water and Power [PWP]);
- Wastewater facilities (Los Angeles County Sanitation Districts and City of Pasadena Department of Public Works);
- Storm drain facilities (Los Angeles County Flood Control District and City of Pasadena Department of Public Works);
- Electricity (Southern California Edison); and
- Natural Gas (Southern California Gas Company).

Affinity Project

Map not to scale

Source: Adept 2021

Exhibit 2–16e

Existing utility infrastructure is located on site and in the surrounding roadways. Exhibits 2-17a and 2-17b, Conceptual Utility Plans, show the locations of existing wet and dry utilities and the locations of proposed connections to utilities. As shown, all connections to water and sewer utilities and all dry utilities would occur on Arroyo Parkway.

There are 2 existing, PWP, 8-inch diameter domestic water lines in Arroyo Parkway; a 6-inch diameter domestic water line in Bellevue Drive; and a 12-inch diameter domestic water line in California Boulevard. There are two existing City of Pasadena 8-inch diameter sewer lines in Arroyo Parkway and one 8-inch diameter sewer line in California Boulevard. The northern sewer line in Arroyo Parkway turns west at and connects to the line in California Boulevard; the southern line turns east.

As shown on Exhibit 2-17a, there is an existing City of Pasadena 10-foot diameter, reinforced concrete pipe (RCP) storm drain that parallels the site's eastern boundary in Arroyo Parkway. The 10-foot storm drain begins at an upstream network of storm drains beginning south of the I-210 and continues south to the City of South Pasadena. Here the pipe connects to a Los Angeles County Flood Control District (LACFCD) 10-foot diameter storm drain that outfalls into the Alhambra Wash Channel. There is an existing 45-inch diameter City-owned RCP storm drain in California Boulevard that connects to the 10-foot diameter storm drain in Arroyo Parkway. South of the 45-inch diameter storm drain is a 54-inch diameter LACFCD-owned RCP storm drain that also connects to the 10-foot diameter storm drain at Arroyo Parkway. With Project implementation, all on-site drainage would be collected in a proposed private storm drain system and treated before discharging to the soil below or Arroyo Parkway. Water quality treatment would be provided by either an infiltration system, a stormwater biofiltration system, or a combination of both. Storm water runoff would generally follow the same overall drainage pattern towards the south. Runoff would flow towards the proposed catch basins and trench drains throughout the outdoor areas. Storm water that falls onto building roofs would be collected with roof drains and routed either directly to the Project's subterranean levels for treatment or onto pavement surrounding the proposed uses.

Under the Project with Building A Residential/Commercial, the wet and dry utility infrastructure, including storm water management, would be the same as discussed for the Project.

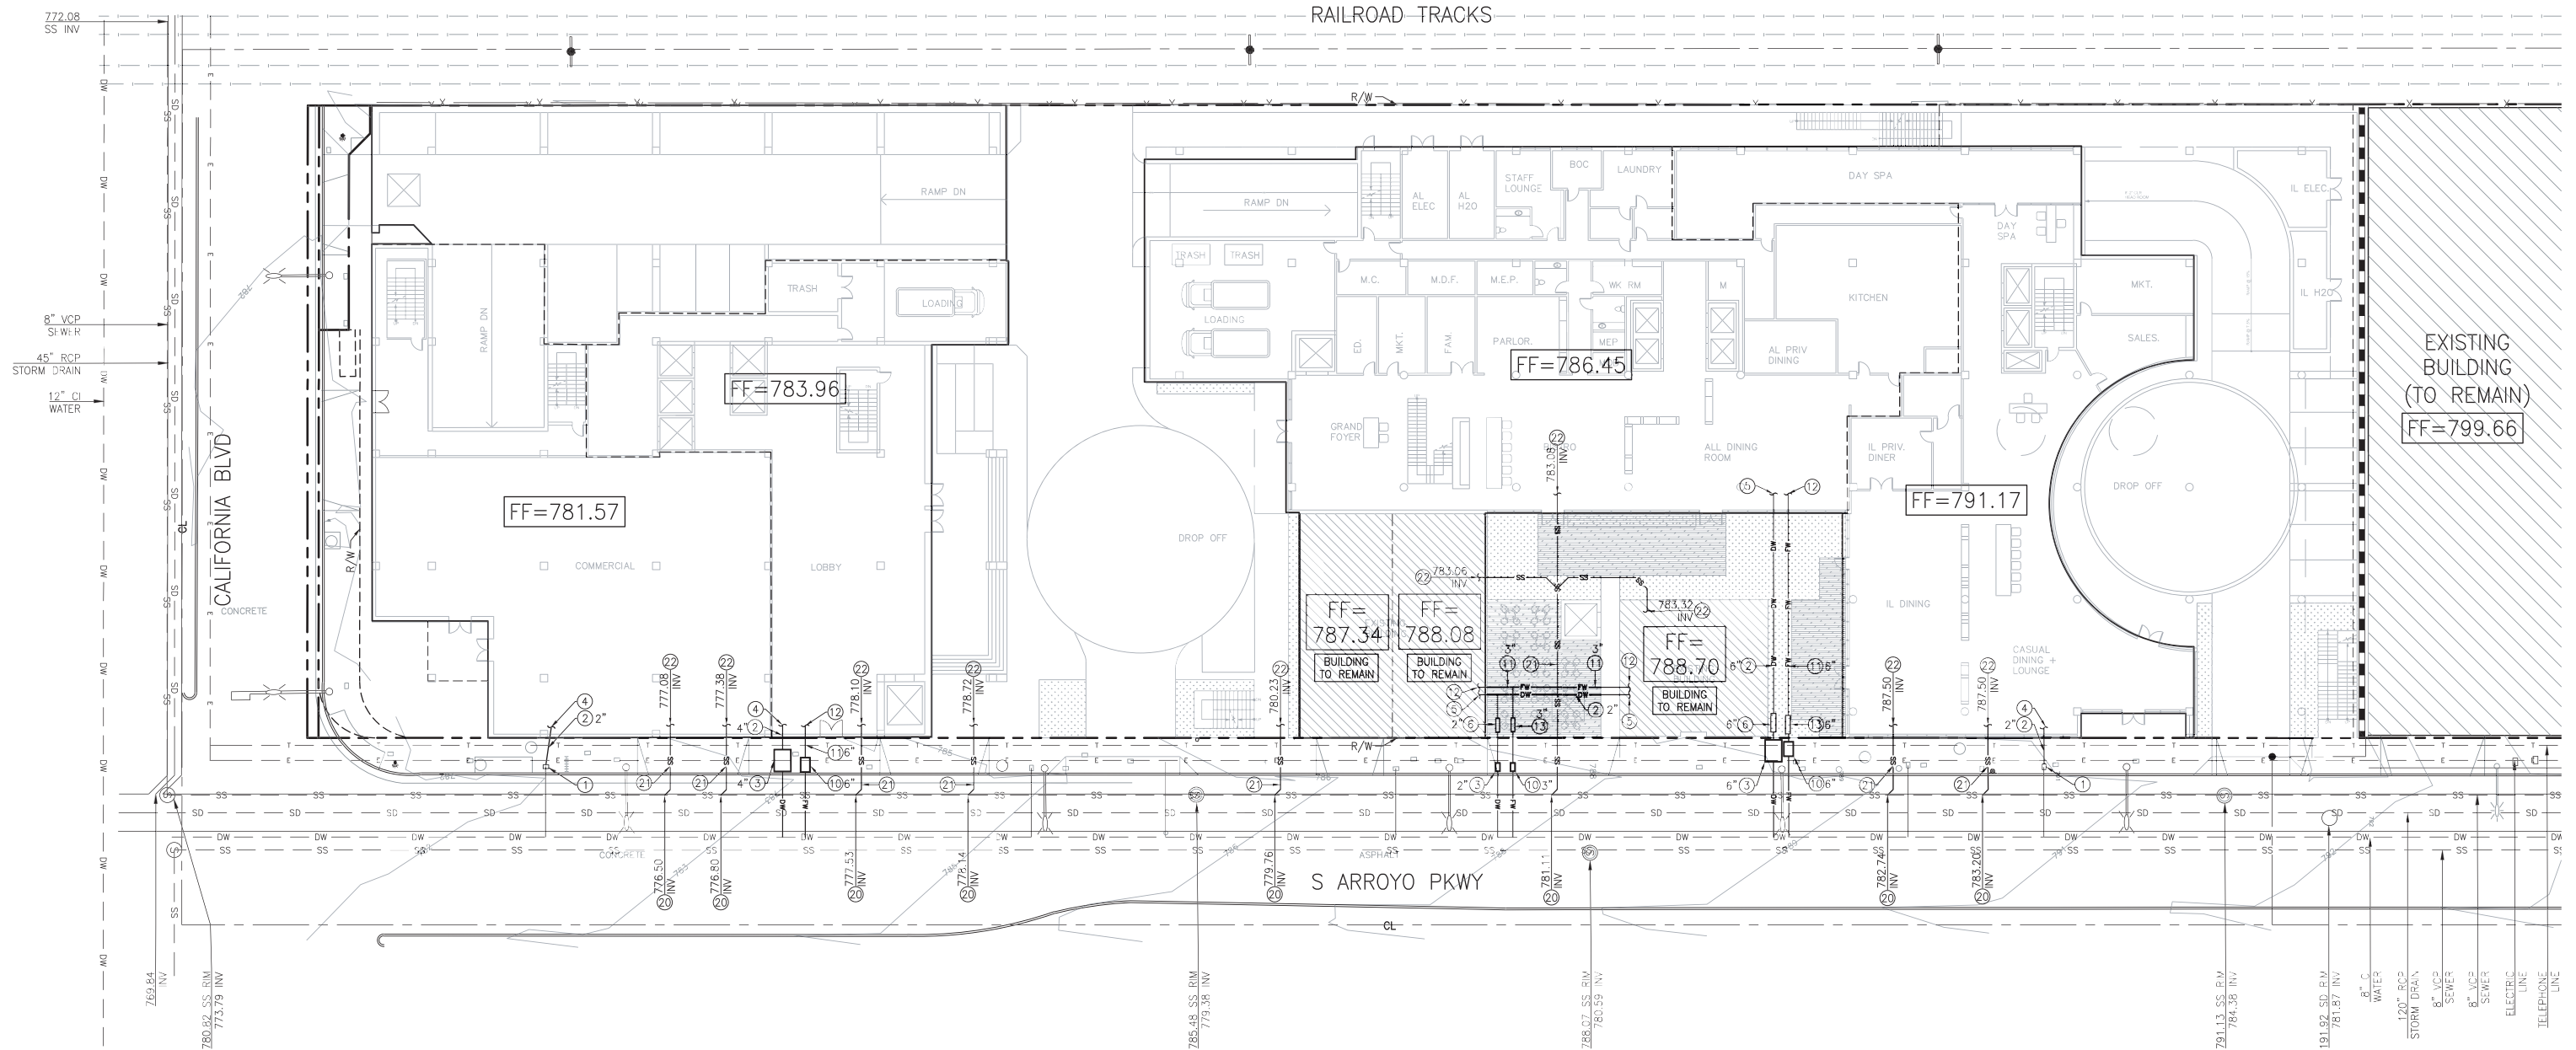

2.4.2 CONSTRUCTION SCENARIO

The Project, or Project with Building A Residential/Commercial, would be constructed beginning in 2023 over a period of approximately 34 months and would be completed in a single phase. Project construction would occur from Monday through Saturday, without activity on Sundays or holidays, between the hours defined in Section 9.36.070 (Construction Projects) of the PMC (7:00 AM to 7:00 PM Monday through Friday and 8:00 AM to 5:00 PM on Saturday).

Demolition of six of the existing buildings and other on-site improvements, such as paving, light fixtures, and signage, would generate an estimated 4,200 cubic yards (cy) of debris, generating an estimated 300 one-way haul truck trips, over the course of 2.5 months (68 workdays). This would result in an average of 4 and 5 one-way truck trips per workday. Site preparation would then generate an estimated 30 one-way truck trips over the course of 1 month (26 workdays). This would result in an average of just less than 1 truck trip per workday.

Implementation of the Project would involve the excavation and export of an estimated 184,013 cy of soil, generating an estimated 13,200 one-way truck trips, over the course of 4 months (103 workdays). The excavation is needed to accommodate the subterranean parking structure for the Project, which has maximum excavation depths between 54 and 58 feet below ground surface (bgs). This would equate to an average of 128 one-way trips per workday. These figures assume the use of 14-cy trucks.

Exhibit 2-17b

Excavation associated with the Project with Building A Residential/Commercial would generate 36,802 cy less soil than that required for the Project, commensurate with the 1 less subterranean level. Therefore, this scenario would involve the excavation and export of an estimated 147,211 cy of soil, generating an estimated 10,515 one-way truck trips, over the course of 4 months (103 workdays). This would equate to an average of 102 one-way trips per workday. All other aspects of construction would be essentially the same for both the Project and Project with Building A Residential/Commercial scenarios.

Building construction, including architectural coatings, would generate a waste stream requiring an estimated 795 one-way truck trips over the course of 26.5 months (691 workdays). This would result in an average of just over 1 truck trip per workday. Chapter 8.62 (Waste Management Plan for Certain Construction and Demolition Projects within the City of Pasadena) et. seq. of the PMC is the City's construction and demolition waste management ordinance (C&D ordinance), which requires at least 75 percent of the construction waste stream to be diverted from landfill disposal. Construction and demolition debris, after diversion, would be disposed at Scholl Canyon Landfill, located approximately 2.5 miles northwest of the site, at 3001 Scholl Canyon Road in Glendale. Construction and demolition debris being diverted from landfill disposal may be directed to many different facilities in the region that reuse or recycle this type of material.

2.4.3 PROJECT OPERATION

The Project is anticipated to be opened to the public in 2026. The medical office building would operate with hours typical of the land use—generally between 8:00 AM and 6:00 PM on weekdays and between 9:00 AM and 1:00 PM on Saturdays. However, operational hours of individual tenants of the medical office building would vary and may be longer or shorter than the typical hours. The non-commercial portion of the medical office building is expected to result in approximately 523 visitors per day and 646 employees. The commercial uses on the ground floor of the medical office building are expected to result in approximately 43 visitors per day and 9 employees. In total, Building A would generate an estimated 655 employees and 566 visitors per day. The assisted living building would also operate with hours typical of the land use. Assisted living facilities are generally operational 24 hours per day with visitation hours anticipated to be daily (Monday through Sunday) between 8:00 AM and 6:00 PM. The assisted living building is expected to result in approximately 20 to 45 visitors per day, approximately 66 employees, up to 113 assisted living residents being cared for, and up to 109 independent living residents (if the maximum of 95 independent living units are constructed). In total, Building B would generate an estimated 66 employees, 222 residents, and up to 45 visitors per day.

The two historic buildings to be retained, total 5,882 sf, are assumed to operate as fast-casual restaurants as part of the Project or Project with Building A Residential/Commercial for purposes of this Draft EIR. These two buildings are expected to result in approximately 16 employees and 83 visitors per day. Therefore, the Project as a whole would generate an estimated 222 residents, 737 employees, and up to 694 visitors per day. For purposes of this Draft EIR, all employees are assumed to be full-time as a conservative approach.

If the Project with Building A Residential/Commercial is constructed, Building A would generate approximately 493 residents associated with up to 197 units¹. Under this development scenario, Building A would include a leasing/sales management office that would employ a small number of individuals—assumed to be 4 persons for purposes of this Draft EIR—and potentially employ maintenance personnel as well. As with the Project, the commercial uses on the ground floor of Building A are expected to result in approximately 43 visitors per day and 9 employees. In total, Building A with Residential Commercial would generate an estimated 493 residential and 20

¹ Based on a rate of 2.5 persons per household derived from the Southern California Association of Governments (SCAG) 2019 Profile for the City of Pasadena (SCAG 2019).

employees. The number of visitors to residential uses is not estimated as it is for business uses (e.g., medical, office, assisted living). Therefore, the Project with Building A Residential/Commercial as a whole would generate an estimated 715 residents, 95 employees, and up to 128 visitors per day.

2.5 PLANNED DEVELOPMENT PLAN AND EXCHANGE PROGRAM

Implementation of the Project or Project with Building A Residential/Commercial could occur subsequent to the adoption of the PD zone and accompanying PD Plan. According to the City of Pasadena Zoning Code, the specific purposes of the PD zoning district are to:

- Establish a procedure for the development of large parcels of land in order to reduce or eliminate the rigidity, delays, and inequities that otherwise would result from application of land use regulations and administrative procedures designed primarily for small parcels;
- Ensure orderly and thorough planning and review procedures that will result in quality urban design.
- Encourage variety and avoid monotony in large developments by allowing greater freedom in selecting the means to provide access, light, open space, and amenity;
- Allow certain types of development consistent with the general plan that can be acceptable at a specific location only under standards significantly more restrictive than those of a base district in which the use is permitted;
- Provide a mechanism whereby the city may authorize desirable developments in conformity with the general plan without inviting speculative rezoning applications that if granted, often could deprive subsequent owners of development opportunities that do not necessarily result in construction of the proposed facilities;
- Encourage allocation and improvement of common open space in residential areas, and provide for maintenance of the open space at the expense of those who will directly benefit from it;
- Encourage the preservation of serviceable existing structures of historic value or artistic merit by providing the opportunity to use them imaginatively for purposes other than that for which they were originally intended; and
- Encourage the assembly of properties that might otherwise be developed in unrelated increments to the detriment of surrounding neighborhoods.

Adoption of a PD zoning district would reclassify the Project site from CD-6 to PD-39, while simultaneously establishing applicable land use regulations and development standards that are specific to the newly established zoning district. The regulations and standards that dictate allowed and conditionally allowed land uses and development would be prescribed in the accompanying PD Plan. This ensures the Project or Project with Building A Residential/Commercial is developed as intended. PD Plans are developed in consideration of existing zoning requirements that are applicable to a project site while also providing flexibility in site usage and building design.

The City's process allows a property owner to initiate an amendment to reclassify a property two acres or larger to a PD zoning district. A proposed PD zoning district and the allowed or conditionally allowed land uses are required to be consistent with the City's General Plan. However, development cannot exceed maximums for floor area ratio or density on the Land Use Diagram unless approved by the City Council (but only as high as 3.0 FAR and 87 du/acre).

The review process of a new PD Application requires input from the City's Design Commission, Planning Commission, and City Council. The review process for a proposed Planned Development is outlined in Sections 17.26.020(C)(3)(d) (Commission and Council Action), 17.61.030(l)(5)(b) (Design Conditions), and 17.74 (Amendments) of the PMC. The role of the Design Commission is limited to recommendations to the Planning Commission and City Council on aesthetic and urban design issues related to architecture, landscaping, site plan, and related aesthetic issues, as well as historic preservation. Additionally, comments on the aesthetic/cultural resources of a draft environmental study are appropriate. Therefore, review and advisement by the Design Commission regarding the proposed PD zone and PD Plan would occur first at a public meeting.

A subsequent review of a proposed PD zone and PD Plan would occur at a public hearing by the Planning Commission. The Planning Commission's role is to make a written recommendation to the City Council to approve, approve with modifications, or disapprove the proposed reclassification and PD Plan. The City Council's role is to hold a public hearing to consider the recommendation of the Planning Commission and to hear evidence regarding the proposal. Upon receipt of the Planning Commission's recommendation, the City Council would move to approve, approve in modified form, or disapprove the proposed PD zoning district and PD Plan. Prior to any approval, the City Council is required to certify the Final EIR. Planned Developments and the accompanying PD Plan are made a part of the Zoning Code when approved to ensure implementation occurs as approved.

The basic design of a project, including compatibility with surroundings, massing, proportion, siting, solid-to-void relationships, and compliance with applicable design guidelines is evaluated through the City's Design Review process and is a role for the City's Design Commission. This phase of review generally occurs after approval of the PD application, if received. An approved PD zoning district and accompanying PD Plan cannot be later revised without requiring a formal application from the applicant, noticed public hearings before the Planning Commission and City Council, and the appropriate environmental review pursuant to CEQA.

2.6 APPROACH TO CUMULATIVE IMPACT ANALYSIS

Discussions of the cumulative impacts of the Project is provided in Sections 3.1 through 3.11, relative to each CEQA topical issue evaluated herein. The following is an overview and introduction to the cumulative analysis per the State CEQA Guidelines. This avoids the undue repetition of CEQA requirements relative to cumulative analysis within individual sections.

Section 15355 of the State CEQA Guidelines defines cumulative impacts as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts". Section 15355 also specifies:

- a) The individual effects may be changes resulting from a single project or a number of separate projects.
- b) The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.

Pursuant to Section 15130(b) of the State CEQA Guidelines:

The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail

as is provided for the effects attributable to the project alone. The discussion should be guided by standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of other projects which do not contribute to the cumulative impact.

Section 15130(b)(1) of the State CEQA Guidelines describes two allowable methods to determine the scope of projects considered in the cumulative impact analysis, as follows:

- (A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency; or
- (B) A summary of projections contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such plans may include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A summary of projections may also be contained in an adopted or certified prior environmental document for such a plan. Such projections may be supplemented with additional information such as a regional modeling program. Any such document shall be referenced and made available to the public at a location specified by the lead agency.

The cumulative impact analysis contained in this EIR uses method B, the projections method. The buildout of the City's General Plan will be used as the basis of growth projections to assess cumulative impacts. The Land Use Element of the *City of Pasadena General Plan* designates the intensity of development and the mix of allowed uses within each specific plan area. Specifically, Policy 1.3 states: "Regulate building intensity and population density consistently with the designations established by the Land Use Diagram. Within these, cumulative new development within the specific plan areas shall not exceed the number of housing units and commercial square feet specified in the following table". The referenced table is presented in Table 2-4, City of Pasadena General Plan Development Caps, on the following page.

These development caps are applicable as of the date of adoption of the Land Use Element, which was August 18, 2015. The City's development caps do not apply to affordable housing units, except for the Fair Oaks/Orange Grove specific plan area. Also, a shift of development cap from one specific plan to a different specific plan area is not permitted. It is noted that affordable housing units are not counted towards residential caps in any Specific Plan, except for the Fair Oaks/Orange Grove Specific Plan; and parking structures and structures tied to educational institutions also do not count towards non-residential development capacity limits.

**TABLE 2-4
CITY OF PASADENA GENERAL PLAN DEVELOPMENT CAPS**

Specific Plan Area	Residential Units	Commercial Square Feet
Central District	4,272	2,112,000
South Fair Oaks	802	988,000
East Pasadena	750	1,095,000
Lamanda Park	100	630,000
East Colorado	300	300,000
North Lake	250	250,000
Fair Oaks / Orange Grove	325	300,000
Lincoln Avenue	180	300,000
Totals	6,979	5,975,000
Source: Pasadena, City of. 2015b (August 18, adopted). <i>Land Use Element of Pasadena General Plan</i> . Pasadena, City of. Land-Use-Element-2016-01-25.pdf (cityofpasadena.net) .		

Table 2-5 summarizes the remaining development capacity throughout the City as of December 6, 2021 (the most recent available data). The remaining development capacity summarized above reflects all projects, including those currently in progress without entitlements. It is expected that some proportion of these projects will not come to fruition. However, to provide a conservative analysis, they have been reflected in the projections for purposes of cumulative impact analysis in this EIR. The cumulative impact analysis assumes buildout of all remaining development capacity in the City.

**TABLE 2-5
CITY OF PASADENA REMAINING DEVELOPMENT CAPACITY**

Specific Plan Area	Residential Units	Commercial Square Feet
Central District	1,018	778,357 ^a
South Fair Oaks	785	621,193
East Pasadena	57	1,284,029
Lamanda Park	101	562,867
East Colorado	199	6,534
North Lake	250	250,245
Fair Oaks / Orange Grove	(43)	253,721
Lincoln Avenue	116	363,422
Totals	2,483	3,342,011
^a Not including 105,020 net square feet of commercial land use associated with the Project in Building A (as proposed) (i.e., 154,000 sf – 48,980 sf). 2.7 **INTENDED USES OF THE EIR**

2.7.1 **CITY OF PASADENA**

The City of Pasadena is expected to use the information contained in the EIR for consideration of approvals related to and involved in Project implementation. Actions to be considered by the City, after implementation of the CEQA process, include, but not be limited to:

- Approval of the Planned Development (PD) Zoning District and PD Plan (this includes approval of the Affinity Project, zoning map amendment to rezone the property from CD-6 to PD-39, and variance for historic resources for building height);
- Certification of the Affinity Project Environmental Impact Report;
- Public Street Tree Removal Approval;
- Design Review;
- Vesting Tentative Tract Map or Tentative Tract Map Approval (only if residential units for sale); and
- Other discretionary and ministerial permits and approvals that may be deemed necessary, including but not limited to: master sign plan, temporary street closure permits, encroachment permits, grading permits, excavation permits, foundation permits, and building permits (including lot tie agreement).

2.7.2 **RESPONSIBLE AND TRUSTEE AGENCIES**

State law requires that all EIRs be reviewed by trustee and responsible agencies. A “Trustee Agency” is defined in Section 15386 of the State CEQA Guidelines as “a State agency having jurisdiction by law over natural resources affected by a project, which are held in trust for the people of the State of California”. Per Section 15381 of the State CEQA Guidelines, “the term ‘Responsible Agency’ includes all public agencies other than the Lead Agency which have discretionary approval power over the project”.

The EIR also provides environmental information to responsible agencies, trustee agencies, and other public agencies that may be required to grant approvals and permits or coordinate with the City as part of Project implementation. These agencies include, but are not limited to, those listed in Table 2-6, Other Agency Approvals and Requirements.

**TABLE 2-6
OTHER AGENCY APPROVALS AND REQUIREMENTS**

Agency	Approval Required
Los Angeles County Metropolitan Transportation Authority (Metro)	Construction within 100 feet of Metro light rail
Los Angeles Regional Water Quality Control Board	Construction General Permit
South Coast Air Quality Management District	Permit for Operation of Diesel Backup Generator

SECTION 3.0 ENVIRONMENTAL ANALYSIS

In accordance with Sections 15125 and 15126(a) to (c) of the California Environmental Quality Act (CEQA) Guidelines, this section of the Draft EIR analyzes those environmental topics where the Project could result in “potentially significant impacts”, as identified in the IS/NOP included in Appendix A-1 and based on comments received during the scoping period. The City identified the following topics as requiring detailed EIR analysis:

- Air Quality (Section 3.1),
- Cultural and Paleontological Resources (Section 3.2),
- Energy (Section 3.3),
- Greenhouse Gas Emissions (Section 3.4),
- Hazards and Hazardous Materials (Section 3.5),
- Land Use and Planning (Section 3.6),
- Noise (Section 3.7),
- Public Services and Recreation (Section 3.8),
- Transportation (Section 3.9),
- Tribal Cultural Resources (Section 3.10), and
- Utilities and Service Systems (Section 3.11).

Each topical section includes the information presented in the format described below.

As discussed in Section 1.0, Introduction, the City determined there would be no impacts or less than significant impacts to the following environmental topics:

- | | |
|--|--------------------------------|
| • Aesthetics, | • Hydrology and Water Quality, |
| • Agricultural and Forestry Resources, | • Mineral Resources, |
| • Biological Resources, | • Population and Housing, and |
| • Geology and Soils, | • Wildfire. |

Therefore, these topics do not require, and this Draft EIR will not set forth, any further analysis of these topics.

Where a potentially significant environmental effect has been identified and is not reduced to a level considered less than significant, including after incorporation of applicable regulations that are necessary independent of the CEQA process, Project-specific mitigation measures have been identified, consistent with Section 15126.4 of the State CEQA Guidelines. Any mitigation measure, and timing thereof, is subject to the approval of the City. Section 15126.4(a) of the State CEQA Guidelines requires lead agencies to consider feasible mitigation measures to avoid or substantially reduce a project’s significant environmental impacts. If determined necessary in the future, the City may substitute, at its discretion, any mitigation measure (and timing thereof) that has (1) the same or superior result as the original mitigation measure and (2) the same or superior effect on the environment (Section 21080(f) of CEQA).

Environmental Analysis Format

To facilitate the analysis of each topic presented in Section 3.0, a standard format was developed. This format is presented below, with a brief discussion of the information included within each heading.

Existing Conditions

This section describes the existing environmental conditions related to each topic analyzed. In accordance with Section 15125 of the State CEQA Guidelines, the existing local and regional setting is discussed as they existed when the IS/NOP was circulated from August 5, 2021, through September 3, 2021, unless otherwise noted. This section provides the baseline conditions with which environmental changes associated with the Project and Project with Building A Residential/Commercial would be compared and analyzed.

Relevant Programs and Regulations

This section includes a summary of the existing federal, State, regional, County, and/or local laws, regulations, and ordinances that directly relate to the environmental topic being analyzed. These are summarized to provide background information and to establish the regulatory setting under which the construction and operation of the Project or Project with Building A Residential/Commercial would occur.

Thresholds of Significance

Section 15126.2 of the State CEQA Guidelines requires an EIR to “identify and focus on the significant environmental effects of the proposed project”. “Effects” and “impacts” mean the same under CEQA and are used interchangeably in this EIR. A “significant effect” or “significant impact” on the environment is “a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project” (Section 15382 of the State CEQA Guidelines).

In determining whether an impact is “significant”, Section 15064.7 of the State CEQA Guidelines encourages each public agency to develop and publish thresholds of significance to use in determining the significance of an environmental impact. These thresholds may consist of identifiable quantitative, qualitative, or performance-level criteria used to determine non-compliance or compliance. Non-compliance means the effect would be significant, and compliance with the thresholds means the effect normally would be less than significant.

Like most municipalities, the City of Pasadena has not adopted thresholds of significance for every resource area but has adopted local thresholds for areas such as traffic. Nonetheless, a majority of the significance criteria used in the analysis in Section 3.0 of this EIR are derived from Appendix G of the State CEQA Guidelines. In addition, City policies and standards (such as the City’s noise ordinance), as well as thresholds adopted by other public agencies with jurisdiction over select issues, are used as thresholds of significance, where applicable. For example, the South Coast Air Quality Management District publishes numerical thresholds for criteria pollutant emissions. Also, accepted technical and scientific data are used in some instances to determine if an impact would be considered significant. These thresholds are identified under each environmental topic and have been used in analyzing the potential impacts of the Project and Project with Building A Residential/Commercial.

Methodology

This section describes the methods that were used in the process of analyzing impacts related to the implementation of the Project and Project with Building A Residential/Commercial in relation to the thresholds of significance for that environmental topic.

Environmental Impacts

The analysis of environmental impacts presented in this Draft EIR identifies direct and indirect, as well as short-term and long-term, environmental impacts of the Project and the comparative impacts of the Project with Building A Residential/Commercial. The thresholds of significance (discussed above) provide the basis for distinguishing between impacts that are determined to be significant (i.e., impact exceeds the threshold of significance) and those that are considered less than significant. The analysis is structured to address each threshold, while considering any residual impact after compliance with any applicable regulations pertinent to that topic. If there would be a significant environmental impact after regulatory compliance, feasible mitigation measure(s) are developed to reduce or avoid the identified impact.

Where the impact analysis demonstrates that a potential environmental effect is too speculative or subjective for evaluation, or that the effect is beneficial, that conclusion is noted. Where the impact analysis demonstrates that a potential environmental effect could have a substantial or potentially substantial and adverse impact on existing physical conditions within the City, that conclusion is noted and followed by a discussion of how the proposed mitigation would address the potential impact.

Cumulative Impacts

While the extent of environmental changes that would occur with individual projects that are proposed, planned, or under construction in the City or region may not be significant, the sum of the impacts of these cumulative projects and the Project or Project with Building A Residential/Commercial may be cumulatively considerable, as defined in Section 15065(c) of the State CEQA Guidelines. Section 2.6, Approach to Cumulative Impact Analysis, of this EIR contains a discussion of the overall methodology to determine the scope of projects and/or regional growth considered in the cumulative impact analysis. A discussion of the anticipated environmental changes resulting from the cumulative projects and the proposed development on a cumulative level, are addressed in each topical analysis presented in Section 3.0 of this Draft EIR, which contains a more detailed discussion of the cumulative impact analysis methodology for each environmental topic.

Mitigation Measures

The mitigation measures (MMs) for each topic have been developed, when necessary, to reduce or avoid significant adverse environmental impacts after incorporation of relevant regulations.

Level of Significance After Mitigation

This section identifies the level of significance of the identified impacts after implementation of the required mitigation measures, where applicable. Significant and unavoidable impacts are those adverse effects that either cannot be mitigated or that remain significant even after mitigation.

References

Documents and other sources that have been used in the preparation of each topical analysis are identified in this section.

Summary of Analysis

This section presents an overview of the topical analysis for the Project and Project with Building A Residential/Commercial, including identification of any MMs and level of significance after mitigation.

3.1 AIR QUALITY

3.1.1 EXISTING CONDITIONS

Climate and Meteorology

The Project site is located in the Los Angeles County portion of the South Coast Air Basin (SoCAB). The SoCAB is a 6,600-square-mile area bound by the Pacific Ocean to the west, the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east, and the San Diego County line to the south. The SoCAB includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to the San Geronimo Pass area of Riverside County.

The SoCAB's terrain and geographical location (i.e., a coastal plain with connecting broad valleys and low hills) determine its distinctive semi-arid climate, which is characterized by moderate temperatures, oceanic influences, and precipitation during winter (November through April).

According to the 2016 South Coast Air Quality Management District's (SCAQMD's) Air Quality Management Plan (AQMP), the SoCAB's air pollution problems are a consequence of the combination of emissions from the nation's second largest urban area, meteorological conditions adverse to the dispersion of those emissions, and mountainous terrain surrounding the Basin that traps pollutants as they are pushed inland with the sea breeze. The average wind speed for Los Angeles is the lowest of the nation's 10 largest urban areas. In addition, the summertime daily maximum mixing heights¹ in Southern California are the lowest, on average, due to strong temperature inversions in the lower atmosphere that effectively trap pollutants near the surface. Southern California also has abundant sunshine, which drives the photochemical reactions that form pollutants such as ozone (O₃) and a significant portion of fine particulate mass, equal to or smaller than 2.5 microns in size (PM_{2.5}).

With very light average wind speeds, the basin atmosphere has a limited capability to disperse air contaminants horizontally. The dominant daily wind pattern is a daytime sea breeze (onshore breeze) and a nighttime land breeze (offshore breeze), broken only occasionally by winter storms and infrequent strong Santa Ana winds from the Great Basin, Mojave, and deserts to the north.

The vertical dispersion of air pollutants in the SoCAB is hampered by the presence of a temperature inversion in the layers of the atmosphere near the surface of the Earth. In a normal situation, as temperatures decrease with altitude, air continues to rise as it remains warmer than the surrounding air. With an inversion layer, air cannot continue to expand upwards, as it is trapped by the warmer air above.

Criteria Air Pollutants

Air quality is defined by ambient air concentrations of seven criteria air pollutants, which are a group of common air pollutants identified by the U.S. Environmental Protection Agency (USEPA) to be of concern with respect to the health and welfare of the general public. Federal and State governments regulate criteria pollutants by using ambient standards based on criteria regarding the health and/or environmental effects of each pollutant. These pollutants include nitrogen dioxide (NO₂); ozone (O₃); particulate matter, including both particles equal to or smaller than 10 microns in size (PM₁₀) and particles equal to or smaller than 2.5 microns in size (PM_{2.5}); carbon monoxide (CO); sulfur dioxide (SO₂); and lead. Particulate matter size refers to the aerodynamic

¹ The maximum mixing height is an index of how well pollutants can be dispersed vertically in the atmosphere.

diameter of the particle. A description of each criteria pollutant, including source types and health effects, is provided below.

Nitrogen Dioxide

Nitrogen gas, normally relatively inert (i.e., nonreactive), comprises about 80 percent of the air. At high temperatures (e.g., in combustion processes) and under certain other conditions, nitrogen can combine with oxygen to form several different gaseous compounds collectively called nitrogen oxides (NO_x). Nitric oxide (NO), NO₂, and nitrous oxide (N₂O) are important constituents of NO_x. NO is converted to NO₂ in the atmosphere. Motor vehicle emissions are the main source of NO_x in urban areas.

NO₂ is a red-brown pungent gas and is toxic to various animals and to humans because of its ability to form nitric acid with water in the eyes, lungs, mucus membranes, and skin. In animals, long-term exposure to NO_x increases susceptibility to respiratory infections, lowering resistance to such diseases as pneumonia and influenza. Laboratory studies show that susceptible humans, such as asthmatics, who are exposed to high concentrations of NO₂ can suffer lung irritation and, potentially, lung damage. Epidemiological studies have also shown associations between NO₂ concentrations and daily mortality from respiratory and cardiovascular causes, and with hospital admissions for respiratory conditions.

While the National Ambient Air Quality Standards (NAAQS) only address NO₂, NO and NO₂ are both precursors in the formation of O₃ and PM_{2.5}, as discussed below. Because of this and the fact that NO emissions largely convert to NO₂, NO_x emissions are typically examined when assessing potential air quality impacts.

Ozone

Ozone is a secondary pollutant, meaning that it is not directly emitted. It is a gas that is formed when volatile organic compounds (VOCs) (also referred to as reactive organic gases) and NO_x undergo photochemical reactions that occur only in the presence of sunlight. The primary source of VOC emissions is unburned hydrocarbons in motor vehicle and other internal combustion engine exhaust. NO_x also form as a result of the combustion process, most notably due to the operation of motor vehicles. Sunlight and hot weather cause ground-level O₃ to form; as a result, ozone is known as a summertime air pollutant. Ground-level O₃ is not to be confused with atmospheric O₃ or the “ozone layer”, which occurs very high in the atmosphere and shields the planet from some ultraviolet rays. Ground-level O₃ is the primary constituent of smog. Because O₃ formation occurs over extended periods of time, both O₃ and its precursors are transported by wind, and high O₃ concentrations can occur in areas well away from sources of its constituent pollutants.

People with lung disease, children, older adults, and people who are active can be affected when ozone levels exceed ambient air quality standards. Numerous scientific studies have linked ground-level ozone exposure to a variety of problems, including the following:

- lung irritation that can cause inflammation much like a sunburn;
- wheezing, coughing, pain when taking a deep breath, and breathing difficulties during exercise or outdoor activities;
- permanent lung damage to those with repeated exposure to ozone pollution; and
- aggravated asthma, reduced lung capacity, and increased susceptibility to respiratory illnesses like pneumonia and bronchitis.

Particulate Matter

Particulate matter includes both aerosols and solid particles of a wide range of size and composition. Of particular concern are PM₁₀ and PM_{2.5}. Particulate matter tends to occur primarily in the form of fugitive dust. This dust appears to be generated by both local sources and by region-wide dust during moderate to high wind episodes. These regional episodes tend to be multi-district and sometimes interstate in scope. The principal sources of dust in urban areas are from grading, construction, disturbed areas of soil, and dust entrained by vehicles on roadways.

PM₁₀ is generally emitted directly as a result of mechanical processes that crush or grind larger particles or from the re-suspension of dusts, most typically through construction activities and vehicular travels. PM₁₀ generally settles out of the atmosphere rapidly and is not readily transported over large distances.

PM_{2.5} is directly emitted in combustion exhaust and is formed in atmospheric reactions between various gaseous pollutants including NO_x, sulfur oxides (SO_x), and VOCs. PM_{2.5} can remain suspended in the atmosphere for days and/or weeks and can be transported long distances, as many as several hundred miles.

The principal health effects of airborne particulate matter are on the respiratory system. Short-term exposure, lasting several days or weeks, to high PM_{2.5} and PM₁₀ levels is associated with premature mortality and increased hospital admissions and emergency room visits; increased respiratory symptoms are also associated with short-term exposure to high PM₁₀ levels. Long-term exposure, lasting years to decades, to high PM_{2.5} levels is associated with premature mortality and development of chronic respiratory disease. According to the USEPA, some people are much more sensitive than others to breathing PM₁₀ and PM_{2.5}. People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worse illnesses; people with bronchitis can expect aggravated symptoms; and children may experience decline in lung function due to breathing in PM₁₀ and PM_{2.5}. Other groups considered sensitive include smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive because many breathe through their mouths.

Carbon Monoxide

Carbon monoxide is a colorless and odorless gas which, in the urban environment, is associated primarily with the incomplete combustion of fossil fuels in motor vehicles. CO combines with hemoglobin in the bloodstream and reduces the amount of oxygen that can be circulated through the body. High CO concentrations can cause headaches; aggravate cardiovascular disease; and impair central nervous system functions.

CO concentrations can vary greatly over comparatively short distances. Relatively high concentrations are typically found near crowded intersections; along heavily used roadways carrying slow-moving traffic; and at or near ground level. Even under the most severe meteorological and traffic conditions, high concentrations of CO are limited to locations within a relatively short distance (i.e., up to 600 feet or 185 meters) of heavily traveled roadways.

Sulfur Dioxide

Sulfur oxides (SO_x) constitute a class of compounds of which SO₂ and sulfur trioxide (SO₃) are of greatest importance. Ninety-five percent of pollution-related SO_x emissions are in the form of SO₂. SO_x emissions are typically examined when assessing potential air quality impacts of SO₂. The primary contributor of SO_x emissions is fossil fuel combustion for generating electric power. Industrial processes, such as nonferrous metal smelting, also contribute to SO_x emissions. SO_x

is also formed during combustion of motor fuels; however, most of the sulfur has been removed from fuels, greatly reducing SO_x emissions from vehicles.

SO₂ combines easily with water vapor, forming aerosols of sulfurous acid (H₂SO₃), a colorless, mildly corrosive liquid. This liquid may then combine with oxygen in the air, forming the even more irritating and corrosive sulfuric acid (H₂SO₄). Peak levels of SO₂ in the air can cause temporary breathing difficulty for people with asthma who are active outdoors. Longer-term exposures, lasting years to decades, to high levels of SO₂ gas and particles cause respiratory illness and aggravate existing heart disease. SO₂ reacts with other chemicals in the air to form tiny sulfate particles which are measured as PM_{2.5}.

Lead

Lead is a stable compound, which persists and accumulates both in the environment and in animals. In humans, it affects the body's blood-forming (or hematopoietic), nervous, and renal systems. In addition, lead has been shown to affect the normal functions of the reproductive, endocrine, hepatic, cardiovascular, immunological and gastrointestinal systems, although there is significant individual variability in response to lead exposure. In general, an analysis of lead is limited to projects that emit significant quantities of the pollutant (i.e., lead smelters) and are not applied to residential projects.

Toxic Air Contaminants

Toxic air contaminants (TACs) are a diverse group of air pollutants that may cause or contribute to an increase in deaths or in serious illness, or that may pose a present or potential hazard to human health. TACs may be emitted from a variety of common sources, including motor vehicles, gasoline stations, dry cleaners, industrial operations, painting operations, and research and teaching facilities. The USEPA uses the term "hazardous air pollutants" for TACs.

TACs are different than the criteria pollutants previously discussed in that ambient air quality standards have not been established for them. TACs occurring at extremely low concentrations may still cause health effects, and it is typically difficult to identify levels of exposure that do not produce adverse health effects. TAC impacts are described by carcinogenic (*i.e.*, cancer) risk, chronic (*i.e.*, of long duration) and acute (*i.e.*, severe but of short duration) adverse effects on human health. Diesel particulate matter (DPM) is a TAC and is responsible for the majority of California's known cancer risk from outdoor air pollutants.

Existing Regional Air Quality

The nearest air quality monitoring to the Project site is the Pasadena-South Wilson Avenue monitoring station located approximately 1.2 miles southeast of the Project site. Pollutants measured at this monitoring station include O₃, PM_{2.5}, and NO₂. Monitoring data from the years 2017-2019 are shown in Table 3.1-1, Air Quality Monitoring Data from the Pasadena-South Wilson Avenue Monitoring Station. Federal and State air quality standards are presented with the number of times those each of those standards were exceeded.

**TABLE 3.1-1
AIR QUALITY MONITORING DATA FROM
THE PASADENA-SOUTH WILSON AVENUE MONITORING STATION**

Pollutant	California Standard	National Standard	Year	Max. Level ^a	State Standard Days Exceeded ^b	National Standard Days Exceeded ^{b, c}
O ₃ (1 hour)	0.09 ppm	None	2018	0.112	8	NA
			2019	0.120	11	NA
			2020	0.163	41	NA
O ₃ (8 hour)	0.070 ppm	0.070 ppm	2018	0.091	20	19
			2019	0.098	29	24
			2020	0.116	61	60
NO ₂ (1 Hour)	0.18 ppm	0.100 ppm	2018	0.068	0	0
			2019	0.059	0	0

			2019	8.7	No	No
			2020	11.9	No	No
O ₃ : ozone; ppm: parts per million; µg/m ³ : micrograms per cubic meter; AAM: annual arithmetic mean; NO ₂ : nitrogen dioxide. “—” indicates that the data are not reported or there is insufficient data available to determine the value. N/A indicates that there is no applicable standard. State and national data may differ because of differing methods for selecting hours for averaging. ^a California maximum levels were used. ^b For annual averaging times, a “Yes” or “No” response is given if the annual average concentration exceeded the applicable standard. ^c PM is measured once every 6 days. Where 2 values are shown for PM _{2.5} , the first is for the measured value, and the second is the estimated number of days. Source: CARB 2021						

When a region has air quality that fails to meet the standards, the USEPA and the California Air Resources Board (CARB) designate the region as “nonattainment” and the regional air quality agency must develop plans to attain the standards. These attainment designations are shown in Table 3.1-2, Attainment Status of Criteria Pollutants in the South Coast Air Basin. As identified in Table 3.1-2, all of Los Angeles County is designated as a nonattainment area for O₃, PM₁₀, and PM_{2.5}; portions of Los Angeles County, not including the Project site are designated nonattainment for NO₂ and lead.

**TABLE 3.1-2
ATTAINMENT STATUS OF CRITERIA POLLUTANTS
IN THE SOUTH COAST AIR BASIN**

Pollutant	State	Federal
O ₃ (1 hour)	Nonattainment	No standards
O ₃ (8 hour)	Nonattainment	Nonattainment
PM ₁₀	Nonattainment	Attainment/Maintenance

Existing Project Site Emissions

Pollutants are emitted from current operations at the Project site. Existing emissions were calculated for the businesses that would be removed from the site (i.e., 491/495, 499/503, 541, and 577 South Arroyo Parkway) and replaced by new uses associated with the Project or Project with Building A Residential/Commercial. In other words, the existing emissions in Table 3.1-3 do not include emissions from the buildings to be retained with implementation of the Project (i.e., 465, 501, and 523 South Arroyo Parkway). Existing vehicle trip data, an estimated 2,454 daily trips, are derived from the Transportation Impact Analysis – Outside of CEQA Analysis prepared for the Project (Pasadena DOT 2021a). The results of the analysis are shown in Table 3.1-3, Peak Daily Existing Emissions, on the following page.

Sensitive Air Quality Receptors

Sensitive receptors include, but are not limited to children, the elderly, persons with preexisting respiratory or cardiovascular illness, and athletes and others who engage in frequent exercise. Therefore, sensitive receptors land uses include, but are not limited to schools, parks, hospitals, residences, and convalescent homes. The nearest sensitive air quality receptors to the Project site are residences in a mixed-use, multi-story building at 482 South Arroyo Parkway, on the opposite side of the street approximately 100 feet from the Project site.

**TABLE 3.1-3
PEAK DAILY EXISTING EMISSIONS**

Source	Emissions (lbs/day)*					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Area sources	1	<1	<1	<1	<1	<1
Energy sources	<1	1	1	<1	<1	<1
Mobile sources	5	2	33	<1	6	2
Total Existing Operational Emissions**	6	3	34	<1	6	2

lbs/day: pounds per day; VOC: volatile organic compound; NO_x: nitrogen oxides; CO: carbon monoxide; SO_x: sulfur oxides; PM₁₀: respirable particulate matter 10 microns or less in diameter; PM_{2.5}: fine particulate matter 2.5 microns or less in diameter; SCAQMD: South Coast Air Quality Management District.

Totals may not add due to rounding.

* Existing emissions were quantified for uses to be demolished, and not for uses to be retained with implementation of the Project or Project with Building A Residential/Commercial. This provides a more conservative analysis of air quality and greenhouse gas emissions, as less emissions would be deducted from the proposed Project's emissions, as shown further below in Table 3.1-8, Net Operational Emissions for the Project and Table 3.1-12, Net Operational Emissions for the Project with Building A Residential/Commercial.

** Values are the higher of summer or winter.

See Appendix B, *Air Quality and Greenhouse Gas Emissions Modeling Data*, for CalEEMod model outputs.

3.1.2 RELEVANT PROGRAMS AND REGULATIONS

Federal

The USEPA defines seven “criteria” air pollutants, as described below. These pollutants are called criteria pollutants because the USEPA has established National Ambient Air Quality Standards (NAAQS) for the concentrations of these pollutants (USEPA 2021b). The CARB has also established standards for the criteria pollutants, known as California Ambient Air Quality Standards (CAAQS), and the State standards are generally more restrictive than the NAAQS. The NAAQS and CAAQS are shown in Table 3.1-4, California and Federal Ambient Air Quality Standards, on the following page.

**TABLE 3.1-4
CALIFORNIA AND FEDERAL AMBIENT AIR QUALITY STANDARDS**

Pollutant	Averaging Time	California Standards	Federal Standards	
			Primary ^a	Secondary ^b
O ₃	1 Hour	0.09 ppm (180 µg/m ³)	–	–
	8 Hour	0.070 ppm (137 µg/m ³)	0.070 ppm (137 µg/m ³)	Same as Primary
PM10	24 Hour	50 µg/m ³	150 µg/m ³	Same as Primary
	AAM	20 µg/m ³	–	Same as Primary
PM2.5	24 Hour	–	35 µg/m ³	Same as Primary
	AAM	12 µg/m ³	12.0 µg/m ³	15.0 µg/m ³
CO	1 Hour	20 ppm (23 mg/m ³)	35 ppm (40 mg/m ³)	–
	8 Hour	9.0 ppm (10 mg/m ³)	9 ppm (10 mg/m ³)	–
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m ³)	–	–
NO ₂	AAM	0.030 ppm (57 µg/m ³)	0.053 ppm (100 µg/m ³)	Same as Primary
	1 Hour	0.18 ppm (339 µg/m ³)	0.100 ppm (188 µg/m ³)	–
SO ₂	24 Hour	0.04 ppm (105 µg/m ³)	–	–
	3 Hour	–	–	0.5 ppm (1,300 µg/m ³)
	1 Hour	0.25 ppm (655 µg/m ³)	0.075 ppm (196 µg/m ³)	–
Lead	30-day Avg.	1.5 µg/m ³	–	–
	Calendar Quarter	–	1.5 µg/m ³	Same as Primary
	Rolling 3-month Avg.	–	0.15 µg/m ³	
Visibility Reducing Particles	8 Hour	Extinction coefficient of 0.23 per km – visibility ≥ 10 miles (0.07 per km – ≥30 miles for Lake Tahoe)	No Federal Standards	
Sulfates	24 Hour	25 µg/m ³		
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m ³)		
Vinyl Chloride	24 Hour	0.01 ppm (26 µg/m ³)		
O ₃ : ozone; ppm: parts per million; µg/m ³ : micrograms per cubic meter; PM10: respirable particulate matter 10 microns or less in diameter; AAM: Annual Arithmetic Mean; –: No Standard; PM2.5: fine particulate matter 2.5 microns or less in diameter; CO: carbon monoxide; mg/m ³ : milligrams per cubic meter; NO ₂ : nitrogen dioxide; SO ₂ : sulfur dioxide; km: kilometer.				
^a <i>National Primary Standards</i> : The levels of air quality necessary, within an adequate margin of safety, to protect the public health.				
^b <i>National Secondary Standards</i> : The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.				
Note: More detailed information in the data presented in this table can be found at the CARB website (www.arb.ca.gov).				
Source: USEPA 2021b, CARB 2016				

State

CARB, a part of the California Environmental Protection Agency (CalEPA), is responsible for coordinating and administering both the federal and State air pollution control programs in California. In this capacity, CARB conducts research, sets the CAAQS (as shown above in Table 3.1-4), compiles emission inventories, develops suggested control measures, oversees local programs, and prepares the State Implementation Plan (SIP) for California. For regions that

do not attain the CAAQS, CARB requires the air districts to prepare plans for attaining the standards. These plans are then integrated into the SIP. CARB establishes emissions standards for (1) motor vehicles sold in California, (2) consumer products (e.g., hair spray, aerosol paints, barbecue lighter fluid), and (3) various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

Advanced Clean Cars

In January 2012, CARB approved the Advanced Clean Cars program, an emissions-control program for model years 2017 through 2025. The program combines the control of smog, soot, and GHG emissions with requirements for greater numbers of zero-emission vehicles. By 2025, when the rules will be fully implemented, 2025 model year automobiles will emit 75 percent fewer smog-forming emissions and 34 percent fewer global warming gases than the average 2012 model year automobile.

Title 24 Energy Efficiency Standards

The Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24, Part 6 of the *California Code of Regulations*) were established in 1978 in response to a legislative mandate to reduce California's energy consumption. The current applicable standards are the 2019 Standards, effective January 1, 2020. The requirements of the energy efficiency standards result in the reduction of natural gas and electricity consumption. Since using natural gas produces criteria pollutant emissions, a reduction in natural gas consumption results in a related reduction in air quality emissions.² Additional discussion of the Title 24 energy efficiency standards is included in Section 3.4, Greenhouse Gas Emissions. The 2019 standards require that there is sufficient onsite electricity generation to meet the annual electricity usage for low rise residential buildings. The 2022 Energy Efficiency Standards are being developed and would improve upon the 2019 Energy Code for new construction of, and additions and alterations to, residential and nonresidential buildings. Proposed standards would have an effective date of January 1, 2023. The California Energy Commission (CEC) updates the standards every three years.

Title 24 Green Building Standards

The 2019 California Green Building Standards Code (Title 24, Part 6 of the *California Code of Regulations*), also known as the "CALGreen Code," contains mandatory requirements and voluntary measures for new residential and nonresidential buildings (including buildings for retail uses, office uses, public schools, and hospitals) throughout California. Development of the CALGreen Code is intended to (1) cause a reduction in GHG emissions from buildings; (2) promote environmentally responsible, cost-effective, healthier places to live and work; (3) reduce energy and water consumption; and (4) respond to the directives by the Governor. In short, the CALGreen Code is established to reduce construction waste; make buildings more efficient in the use of materials and energy; and reduce environmental impact during and after construction.

The CALGreen Code provides standards for bicycle parking, carpool/vanpool/electric vehicle spaces, light and glare reduction, grading and paving, energy-efficient appliances, renewable energy, graywater systems, water efficient plumbing fixtures, recycling and recycled materials, pollutant controls (including moisture control and indoor air quality), acoustical controls, storm water management, building design, insulation, flooring, and framing, among others. Implementation of the CALGreen Code measures reduces energy consumption and vehicle trips and encourages the use of alternative-fuel vehicles which, in turn, reduces pollutant emissions.

² Because electricity is not generated on site, the emissions associated with electricity generation are not included in the emissions calculations.

Regional

South Coast Air Quality Management District and Southern California Association of Governments

In the SoCAB, the South Coast Air Quality Management District (SCAQMD) is the agency responsible for protecting public health and welfare through the administration of federal and State air quality laws, regulations, and policies. Included in the SCAQMD's tasks are the monitoring of air pollution; the preparation of the Air Quality Management Plan (AQMP) for the SoCAB; and the promulgation of rules and regulations.

In the Project area, SCAG is the federally designated Metropolitan Planning Organization and the State-designated transportation planning agency for six counties: Riverside, San Bernardino, Los Angeles, Ventura, Imperial, and Orange.

The SCAQMD and SCAG are jointly responsible for formulating and implementing the AQMP for the SoCAB. SCAG's Regional Mobility Plan and Growth Management Plan form the basis for the land use and transportation control portion of the AQMP.

Air Quality Management Plans

The SCAQMD's current air quality planning document is the *2016 Air Quality Management Plan* (2016 AQMP). The SCAQMD adopted the 2016 AQMP on March 3, 2017 (SCAQMD 2021). The 2016 AQMP is a regional and multi-agency effort among the SCAQMD, CARB, SCAG, and USEPA. The SCAQMD is responsible for ensuring that the SoCAB meets the NAAQS and CAAQS by reducing emissions from stationary (area and point), mobile, and indirect sources. To accomplish this goal, the SCAQMD prepares AQMPs in conjunction with the SCAG, County transportation commissions, and local governments; develops rules and regulations; establishes permitting requirements for stationary sources; inspects emissions sources; and enforces such measures through educational programs or fines, when necessary.

The 2016 AQMP evaluates integrated strategies and measures to meet the following NAAQS (SCAQMD 2021):

- 8-hour O₃ (75 parts per billion [ppb]) by 2032³
- Annual PM_{2.5} (12 micrograms per cubic meter [µg/m³]) from 2021 to 2025
- 8-hour O₃ (80 ppb) by 2024
- 1-hour O₃ (120 ppb) by 2023
- 24-hour PM_{2.5} (35 µg/m³) by 2019

South Coast Air Quality Management District Rules

The proposed Project would be required to comply with existing SCAQMD rules for the reduction of fugitive dust and criteria pollutant emissions. The following rules are most relevant to the proposed Project:

SCAQMD Rule 201 requires a "Permit to Construct" prior to the installation of any equipment "the use of which may cause the issuance of air contaminants . . ." and Regulation II provides the

³ On October 1, 2015, the USEPA lowered the 8-hour O₃ standard to 0.070 ppm (70 ppb). The SIP (or AQMP) for the 70 ppb standard will be due 4 years after the attainment/nonattainment designations are issued by the USEPA, which is expected in 2017. Thus, meeting the 70 ppb standard will be addressed in a 2021 AQMP.

requirements for the application for a Permit to Construct. Rule 203 similarly requires a Permit to Operate. Rule 219, Equipment not Requiring a Written Permit Pursuant to Regulation II, identifies “equipment, processes, or operations that emit small amounts of contaminants that shall not require written permits . . .” This would apply to the diesel backup generators that are proposed for each new building.

SCAQMD Rule 402, Nuisance, states that a project shall not “discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.”

SCAQMD Rule 403, Fugitive Dust, requires actions to prevent, reduce, or mitigate fugitive particulate matter emissions. These actions include applying water or chemical stabilizers to disturbed soils; managing haul road dust by applying water; covering all haul vehicles before transporting materials; restricting vehicle speeds on unpaved roads to 15 miles per hour (mph); and sweeping loose dirt from paved site access roadways used by construction vehicles. In addition, Rule 403 requires that vegetative ground cover be established on disturbance areas that are inactive within 30 days after active operations have ceased. Alternatively, an application of dust suppressants can be applied in sufficient quantity and frequency to maintain a stable surface. Rule 403 also requires grading and excavation activities to cease when winds exceed 25 mph.

SCAQMD Rule 445 has been adopted to reduce the emissions of particulate matter from wood-burning devices and prohibits the installation of such devices in any new development.

SCAQMD Rule 1113 governs the sale of architectural coatings and limits the VOC content in paints and paint solvents. Although this rule does not directly apply to the Project, it does dictate the VOC content of paints available for use during building construction.

SCAQMD Rule 1403, Asbestos Emissions from Demolition/Renovation Activities, specifies work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials (ACMs). All operators are required to maintain records, including waste shipment records, and are required to use appropriate warning labels, signs, and markings. Handling of ACMs is discussed in the Initial Study and Section 3.5, Hazards and Hazardous Materials, of this Draft EIR.

City

The Open Space and Conservation Element of the City of Pasadena’s General Plan states, “. . . while air quality is not a state-mandated element, air quality is included in the Open Space and Conservation Element to address reducing pollutant levels through stationary source, mobile source, transportation and land use control, and energy conservation measures” (Pasadena 2012). There are no policies in the Open Space and Conservation Element that are directly applicable to the Project air quality emissions or issues. The goals and policies, where referenced to air quality, are directed towards reduction of greenhouse gas (GHG) emissions and the sequestration of CO₂. GHG emissions are discussed in Section 3.4, Greenhouse Gas Emissions, of this Draft EIR.

3.1.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse air quality impact if it would:

Threshold 3.1a: Conflict with or obstruct implementation of the applicable air quality plan;

Threshold 3.1b: Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard; and/or

Threshold 3.1c: Expose sensitive receptors to substantial pollutant concentrations.

Appendix G of the State CEQA Guidelines also states that the significance criteria established by the applicable air quality management district may be relied upon to make significance determinations. The SCAQMD has established significance thresholds to assess the regional and localized impacts of Project-related air pollutant emissions. Table 3.1-5, SCAQMD Air Quality Significance Thresholds, on the following page presents the significance thresholds applied to the Project.

The Initial Study (provided in Appendix A-1) concluded the following threshold related to air quality was determined to result in less than significant impacts and was not carried forward into the Draft EIR for further analysis:

- Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

3.1.4 METHODOLOGY

In June 2021, the SCAQMD in conjunction with the California Air Pollution Control Officers Association (CAPCOA) and other California air districts, released the latest version of the California Emissions Estimator Model™ (CalEEMod™), version 2020.4.0 (CAPCOA 2021). The purpose of this model is to calculate construction-source and operational-source pollutants (NO_x, VOC, PM₁₀, PM_{2.5}, SO_x, and CO) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures. CalEEMod version 2020.4.0 was used to estimate the criteria air pollutant emissions associated with the existing land uses to be removed and the proposed land uses for the Project and Project with Building A Residential/Commercial. The inputs and data for the modeling are described above for existing uses; below for proposed uses; and in Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data.

**TABLE 3.1-5
SCAQMD AIR QUALITY SIGNIFICANCE THRESHOLDS**

Mass Daily Thresholds ^a		
Pollutant	Construction	Operation
NOx	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM10	150 lbs/day	150 lbs/day
PM2.5	55 lbs/day	55 lbs/day
SOx	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day
TACs, Odor, and GHG Thresholds		
TACs (including carcinogens and non-carcinogens)	Maximum Incremental Cancer Risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Chronic & Acute Hazard Index ≥ 1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to SCAQMD Rule 402	
GHG	10,000 MT/yr CO ₂ e for industrial facilities	
Ambient Air Quality Standards for Criteria Pollutants ^{b, c}		
NO ₂ 1-hour average annual arithmetic mean	The SCAQMD is in attainment; the Project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.18 ppm (State) 0.03 ppm (State) and 0.0534 ppm (federal)	
PM10 24-hour average annual average	10.4 µg/m ³ (construction) ^c & 2.5 µg/m ³ (operation) 1.0 µg/m ³	
PM2.5 24-hour average	10.4 µg/m ³ (construction) ^c & 2.5 µg/m ³ (operation)	
SO ₂ 1-hour average 24-hour average	0.25 ppm (State) & 0.075 ppm (federal – 99 th percentile) 0.04 ppm (State)	
Sulfate 24-hour average	25 µg/m ³ (State)	
CO 1-hour average 8-hour average	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 20.0 ppm (State) and 35 ppm (federal) 9.0 ppm (State/federal)	
Lead 30-day average Rolling 3-month average	1.5 µg/m ³ (State) 0.15 µg/m ³ (federal)	
NO _x : nitrogen oxides, lbs/day: pounds per day, VOC: volatile organic compound, PM10: respirable particulate matter with a diameter of 10 microns or less, PM2.5: fine particulate matter with a diameter of 2.5 microns or less, SO _x : sulfur oxides, CO: carbon monoxide, TACs: toxic air contaminants, GHG: greenhouse gases, MT/yr CO ₂ e: metric tons per year of carbon dioxide equivalents, NO ₂ : nitrogen dioxide, ppm: parts per million, µg/m ³ : micrograms per cubic meter; SCAQMD: South Coast Air Quality Management District

3.1.5 ENVIRONMENTAL IMPACTS

Threshold 3.1a: Would the Project conflict with or obstruct implementation of the applicable air quality plan?

CEQA requires a discussion of any inconsistencies between a project and applicable General Plans (GPs) and regional plans (Section 15125 of the State CEQA Guidelines). The regional plan that applies to the Project and Project with Building A Residential/Commercial is the SCAQMD's AQMP, discussed above in Section 3.1.2.

The SCAQMD CEQA Handbook states that "New or amended GP Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP". The SCAQMD CEQA Handbook identifies two key indicators of consistency:

- (1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.
- (2) Whether the project will exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

Both of these criteria are evaluated below for the Project and Project with Building A Residential/Commercial.

Project

First Criterion of AQMP Consistency

With respect to the first criterion, based on the air quality modeling conducted for the Project (see the discussion provided below under Thresholds 3.1b and 3.1c), construction and operation of the Project would not exceed the SCAQMD's CEQA thresholds of significance and consequently would not result in an increase in the frequency or severity of existing air quality violations nor cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emissions reductions in the AQMP. This is demonstrated in Tables 3.1-6 and 3.1-7, below. Therefore, the Project is consistent with the first criterion.

Second Criterion of AQMP Consistency

With respect to the second criterion, the Project was assessed as to whether it would exceed the assumptions in the AQMP. The 2016 AQMP includes an analysis of emissions, meteorology, atmospheric chemistry, regional growth projections, and the impact of existing control measures. The purpose of the 2016 AQMP is to set forth a comprehensive program that would promote reductions in criteria pollutants, greenhouse gases, and toxic risk and efficiencies in energy use, transportation, and goods movement. The 2016 AQMP incorporates the latest scientific and technical information and planning assumptions, including SCAG's 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS); updated emission inventory methods for various source categories; and SCAG's latest growth forecasts.⁴ The 2016 AQMP includes strategies and measures necessary to meet the NAAQS. The AQMP is based on projections of energy usage and vehicle trips from land uses within the SoCAB.

⁴ It is noted that SCAG adopted the 2020-2045 RTP/SCS in September 2020 and that SCAQMD is in the process of developing a 2022 AQMP.

The Project site is within the CD-6 (Central District Specific Plan, Arroyo Corridor/Fair Oaks subdistrict) zoning district. This is discussed further in Section 2.0, Environmental Setting and Project Description, of this Draft EIR. As discussed in Section 2.0, High-Quality Transit Areas (HQTAs) are areas within one-half mile of a fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes or less during peak commuting hours. Transit Priority Areas (TPAs) are areas within one-half mile of a major transit stop that is existing or planned (SCAG 2020). The Project site is within both a HQTA and TPA. Metro's Gold Line runs adjacent to the western site boundary. The nearest light rail platforms are Del Mar Station located approximately ¼-mile due north and Fillmore Station located approximately ¼-mile due south. Additional public transit service present near the site includes the California Boulevard/Arroyo Parkway Metro bus stop located in the ROW on the southern site boundary, and the Bellevue Drive/Arroyo Parkway Metro bus stop located in the ROW at the northeast corner of the site. The proximity of the Project site to the station would encourage the use of mass transit which is consistent with the AQMP's goal of using non-single occupancy vehicles. The Project would be a mixed-use development, providing a mix of medical, commercial, restaurant, and residential uses. The Project site is suitably located to encourage the use of public transit and active transportation modes for the residences, employees, and visitors to the Project site.

As discussed in Section 3.6, Land Use and Planning, of this Draft EIR, the Applicant seeks approval to rezone the site as a Planned Development (PD) district and approval of a PD Plan. The City's PD zone is a special purpose zoning district defined pursuant to Section 17.26.020(C) of the Pasadena Municipal Code. However, the Project uses would not exceed the development cap of 87 dwelling units per acre and 3.0 floor area ratio (FAR), and as such, would be consistent with the existing High Mixed-Use General Plan land use designation of the Project site. Because the General Plans of cities within the SoCAB are used to determine the regional emissions of the Basin, emissions related to the development of the Project site are therefore consistent with the growth expectations for the region. As such, the Project would not exceed the anticipated growth accounted for within the Land Use Element of the General Plan which helped formed the basis of the AQMP. In addition, the emissions generated by the Project are below the SCAQMD's significance thresholds, as demonstrated below. As such, no conflict with the 2016 AQMP would occur with the Project. There would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

First Criterion of AQMP Consistency

The impact findings for the Project with Building A Residential/Commercial would not differ from the impact findings for the Project, regarding conflict with or obstruction of the applicable air quality management plan. As demonstrated for the Project, the Project with Building A Residential/Commercial would be consistent with the first criterion for consistency with the 2016 AQMP. The Project would also not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP. This is demonstrated in Tables 3.1-10 and 3.1-12 presented further below in response to Threshold 3.1b, which show that the Project with Building A Residential/Commercial would result in criteria pollutant emissions that are less than the SCAQMD's thresholds.

Second Criterion of AQMP Consistency

For the second criterion, the Project with Building A Residential/Commercial would also be located within a HQTA and TPA, and as such, encourages the use of mass transit, which is consistent with the AQMP's goal of using non-single occupancy vehicles. In fact, the Project with Building A Residential/Commercial would locate more residential uses proximate to uses that would

encourage the use of mass transit which is consistent with the AQMP's goal of using non-single occupancy vehicles. Additionally, the Project with Building A Residential/Commercial would not exceed the development cap of 87 dwelling units per acre or 3.0 FAR, and as such, would be also consistent with the High Mixed-Use General Plan land use designation of the Project. Consequently, the Project with Building A Residential/Commercial would be consistent with the second criterion for consistent with an applicable AQMP. There would be a less than significant impact and no mitigation is required.

Threshold 3.1b: Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard?

As shown above in Table 3.1-2, the Project site is in a nonattainment area for O₃, PM₁₀, and PM_{2.5}. The Project and Project with Building A Residential/Commercial would generate PM₁₀, PM_{2.5}, and O₃ precursors (NO_x and VOC) during short-term construction and long-term operations, as discussed below.

Project

Construction Impacts

Construction-Related Regional Emissions

A project may have a significant impact where project-related emissions would exceed federal, State, or regional standards or thresholds, or where project-related emissions would substantially contribute to an existing or projected air quality violation. Conversely, a project with daily emission rates below the SCAQMD's established air quality significance thresholds (shown in Table 3.1-5) would have a less than significant effect on regional air quality. Project emissions were estimated using CalEEMod version 2020.4.0 program, as described above.

Project construction is planned to occur from March 2023 to January 2026 with a six-day work week. The CalEEMod input for construction emissions was based on the Project's construction assumptions and default assumptions derived from CalEEMod. Demolition would include an estimated 45,912 square feet (sf) of buildings and the export of approximately 300 14-cubic yard (cy) truckloads of debris. Grading for the subterranean garage and other areas for improvement would require the export of an estimated 184,013 cy of soil, requiring approximately 13,200 truckloads for export.

Table 3.1-6, Estimated Maximum Daily Construction Emissions, presents the estimated maximum daily emissions occurring both onsite and offsite during construction of the Project and compares the estimated emissions with the SCAQMD's daily regional emission thresholds. As shown in Table 3.1-6, all pollutant emissions would be below the SCAQMD's respective thresholds.

**TABLE 3.1-6
ESTIMATED MAXIMUM DAILY CONSTRUCTION EMISSIONS
FOR THE PROJECT**

Year	Emissions (lbs/day)					
	VOC	NO _x	CO	SO _x	PM10	PM2.5
2023	6	42	57	<1	4	2
2024	5	39	57	<1	3	2
2025	52	37	56	<1	3	2
2026	52	5	8	<1	1	<1
Maximum Emissions	52	42	57	<1	4	2
SCAQMD Thresholds (Table 3.1-5)	75	100	550	150	150	55
Exceeds SCAQMD Thresholds?	No	No	No	No	No	No

lbs/day: pounds per day; VOC: volatile organic compound; NO_x: nitrogen oxides; CO: carbon monoxide; SO_x: sulfur oxides; PM10: respirable particulate matter 10 microns or less in diameter; PM2.5: fine particulate matter 2.5 microns or less in diameter; SCAQMD: South Coast Air Quality Management District.

Values are higher of summer or winter.

Source: SCAQMD 2019 (thresholds); see Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data, for CalEEMod model outputs.

Construction-Related Localized Emissions

In addition to the mass daily emissions thresholds established by the SCAQMD, short-term local impacts to nearby sensitive receptors from on-site emissions of NO₂, CO, PM10, and PM2.5 are examined based on SCAQMD's localized significance threshold (LST) methodology. To assess local air quality impacts for development projects without complex dispersion modeling, the SCAQMD developed screening (lookup) tables to assist lead agencies in evaluating impacts.

The LST method is limited to projects that are five acres or less. For the purposes of an LST analysis, the SCAQMD considers receptors where it is possible that an individual could remain for 1 hour for NO₂ and CO exposure and 24 hours for PM10 and PM2.5 exposure. The emissions screening thresholds in the lookup tables are based on the SCAQMD's Air Quality Significance Thresholds and CARB's 1-hour NO₂ AAQS (SCAQMD 2008). The nearest off-site receptors that could be exposed for 1 hour to NO₂ and CO during construction would be the commercial uses west of the site beyond the light rail tracks, approximately 40 feet from the Project's western boundary. The nearest *sensitive* air quality receptors that could be exposed to PM10 and PM2.5 for 24 hours are residences in a multi-story building at 482 South Arroyo Parkway, approximately 100 feet from the Project site.

The screening thresholds are for receptors within 25 meters (82 feet) of the Project site to account for non-sensitive receptors located closer than the nearest sensitive receptor. The screening thresholds for receptors farther away would be higher and the Project emissions would be a smaller fraction of the screening thresholds. Table 3.1-7, Localized Construction Emissions for the Project, shows the maximum daily on-site emissions for construction activities compared with the SCAQMD LST screening thresholds. It is noted that this LST analysis is conservative because the nearest sensitive receptor for PM10 and PM2.5 is approximately 30 meters (100 feet) away.

The Project's maximum daily on-site emissions would occur during the building construction phase in 2023. As shown in Table 3.1-7, Localized Construction Emissions for the Project, the local emissions from the Project would be below the LST screening thresholds. There would be a less than significant impact, and no mitigation is required.

**TABLE 3.1-7
LOCALIZED CONSTRUCTION EMISSIONS FOR THE PROJECT**

Emissions and Thresholds	Emissions (lbs/day)			
	NO _x	CO	PM10	PM2.5
Project maximum daily on-site emissions	41	52	2	2
SCAQMD LST Screening Threshold^a	69	535	4	3
Exceed threshold?	No	No	No	No
lbs/day: pounds per day; NO _x : nitrogen oxides; CO: carbon monoxide; PM10: respirable particulate matter 10 microns or less in diameter; PM2.5: fine particulate matter 2.5 microns or less in diameter; LST: localized significance threshold.

Source: SCAQMD 2009 (thresholds); see Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data, for CalEEMod outputs.				

Cumulative Construction Emissions

Construction activities associated with the Project would result in less than significant construction-related regional and localized air quality impacts, as quantified above in Tables 3.1-6 and 3.1-7, respectively. Short-term cumulative impacts related to air quality could occur if construction of the Project and other projects in the surrounding area were to occur simultaneously. In particular, with respect to local impacts, the consideration of cumulative construction particulate matter (i.e., PM10 and PM2.5) impacts is limited to cases when projects constructed simultaneously are within a few hundred yards of each other because of: (1) the combination of the short range (distance) of particulate dispersion (especially when compared to gaseous pollutants), and (2) the SCAQMD's required dust-control measures, which further limit particulate dispersion from the Project site. As of the preparation of this Draft EIR, there are no known nearby projects that would be concurrently under construction.

SCAQMD's policy with respect to cumulative impacts associated with the above-referenced pollutants and their precursors is that impacts that would be directly less than significant on a project level would also be cumulatively less than significant (SCAQMD 2003a). Because the Project's construction emissions are below the SCAQMD's regional and local significance thresholds, local construction emissions would not be cumulatively considerable. There would be a less than significant impact, and no mitigation is required.

Operational Impacts

The following section provides an analysis of potential long-term air quality impacts to regional air quality with the long-term operation of the Project. The potential operations-related air emissions have been assessed for both regional and local criteria pollutant emissions and cumulative impacts.

Operations-Related Regional Emissions

Operational emissions are comprised of area, energy, mobile, and stationary source emissions. The principal source of all long-term criteria pollutant emissions would be vehicle trips. Area source emissions are based on CalEEMod assumptions for the specific land uses and size. Energy emissions are based on the Applicant's estimate of natural gas use. Mobile source emissions are based on the estimated Project-related trip generation forecast of 6,366 daily trips, as provided in the Project TIA (Pasadena DOT 2021a) and the vehicle miles traveled (VMT) assumptions for the Project's trips (Pasadena DOT 2020). The emissions analyses for the Project also includes the anticipated electrical demand, natural gas demand, and mobile trips for the two historic buildings to be retained, which are assumed to operate as restaurants for the purposes of this Draft EIR. The peak daily Project long-term gross and net operational emissions are

summarized below in Table 3.1-8, Net Operational Emissions for the Project. The net operational emissions account for the emissions from the land uses to be demolished and/or replaced with the proposed Project uses on the site plus the land uses to be retained. As shown, all criteria pollutant emissions would be less than the SCAQMD mass regional daily emissions thresholds. It should be noted that operational emissions, without reductions from existing uses, would also be less than the SCAQMD mass regional daily emissions thresholds. There would be a less than significant operational regional impact, and no mitigation is required.

**TABLE 3.1-8
NET OPERATIONAL EMISSIONS FOR THE PROJECT**

Source	Emissions (lbs/day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Area sources	8	<1	15	<1	<1	<1
Energy sources	<1	1	1	<1	<1	<1

lbs/day: pounds per day; VOC: volatile organic compound; NO_x: nitrogen oxides; CO: carbon monoxide; SO_x: sulfur oxides; PM₁₀: respirable particulate matter 10 microns or less in diameter; PM_{2.5}: fine particulate matter 2.5 microns or less in diameter; SCAQMD: South Coast Air Quality Management District.

* Some totals do not add due to rounding. Highest of Winter or Summer model runs shown.

Source: SCAQMD 2019 (thresholds); see Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data, for CalEEMod model outputs.

Operations-Related Localized Emissions

Project-related air emissions from on-site sources such as emergency generators, vehicle usage (cars and trucks), landscaping equipment, and on-site usage of natural gas appliances may have the potential to generate emissions that exceed the State and federal air quality standards in the vicinity of the Project even though these pollutant emissions may not be significant enough to create a regional impact to the SoCAB.

The local air quality emissions from on-site operations were analyzed using the SCAQMD's Mass Rate LST Look-up Tables and the LST Methodology, as discussed further above. Table 3.1-9, Localized Operational Emissions for the Project, shows the on-site operational emissions from area sources, energy usage, vehicles operating on-site, and the calculated emissions screening thresholds.

**TABLE 3.1-9
LOCALIZED OPERATIONAL EMISSIONS FOR THE PROJECT**

On-Site Emission Source	Pollutant Emissions (pounds/day)			
	NO _x	CO	PM ₁₀	PM _{2.5}
Area Sources	0.2	15.0	0.1	0.1
Energy Sources	1.5	1.0	0.1	0.1
Mobile Sources ^a	0.2	2.2	0.4	0.1
Stationary Sources	2.0	1.8	0.1	0.1
Project's Total Maximum Daily On-Site Emissions	3.8	20.0	0.7	0.4
SCAQMD LST Screening Threshold^b	98.0	812.0	2.0	1.0
Exceeds Threshold?	No	No	No	No
lbs/day: pounds per day; NO _x : nitrogen oxides; CO: carbon monoxide; PM ₁₀ : respirable particulate matter 10 microns or less in diameter; PM _{2.5} : fine particulate matter 2.5 microns or less in diameter; LST: localized significance threshold.				
^a On-site vehicle emissions based on 2.5% of the gross vehicular emissions, which is the estimated portion of vehicle emissions occurring within a quarter mile of the Project site.				
^b Data is for SCAQMD Source Receptor Area 8, West San Gabriel Valley, with a source receptor distance of 25-meters, 2 acres.				
Source: SCAQMD 2009 (thresholds); see Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data, for CalEEMod outputs.				

As shown in Table 3.1-9, operation of the Project would not exceed the local NO_x, CO, PM₁₀, or PM_{2.5} LST screening thresholds. Operation of the Project would have a less than significant local operational impact to sensitive receptors, and no mitigation is required.

Cumulative Operational Emissions

As shown in Tables 3.1-8 and 3.1-9 above, operational regional emissions of VOC, NO_x, PM₁₀, and PM_{2.5} would be below the SCAQMD CEQA significance thresholds. Consistent with the approach described above (under the header "Cumulative Construction Impacts"), because the Project's operational emissions are less than the respective SCAQMD daily operational thresholds, the Project's operations phase activities would not contribute to a cumulatively considerable net increase of a pollutant for which the SoCAB is in nonattainment. Emissions of nonattainment pollutants or their precursors would not be cumulatively considerable. There would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

Construction Impacts

Construction-Related Regional Emissions

The Project with Building A Residential/Commercial construction is also planned to occur from March 2023 to January 2026 with a six-day work week. All Project with Building A Residential/Commercial construction assumptions would be consistent with those of the Project, except that grading for the subterranean garage and other areas for improvement would require 36,802 cy less of soil export than the Project (for a total of 147,211 cy of soil export) and 2,685 less truckloads than the Project (for a total of 10,515 truckloads for export). Table 3.1-10, Estimated Maximum Daily Construction Emissions for the Project with Building A Residential/Commercial, presents the estimated maximum daily emissions occurring both onsite and offsite during construction of the Project with Building A Residential/Commercial compared to the SCAQMD's daily regional emission thresholds. As shown in Table 3.1-10, all pollutant emissions would be below the SCAQMD's respective thresholds, consistent with the Project. The

emissions for the Project with Building A Residential/Commercial are comparable to those of the Project (refer to Table 3.1-6).

**TABLE 3.1-10
ESTIMATED MAXIMUM DAILY CONSTRUCTION EMISSIONS FOR THE
PROJECT WITH BUILDING A RESIDENTIAL/COMMERCIAL**

Year	Emissions (lbs/day)					
	VOC	NO _x	CO	SO _x	PM10	PM2.5
2023	6	42	58	<1	4	2
2024	5	39	57	<1	3	2
2025	48	37	57	<1	3	2
2026	48	5	8	<1	1	<1
Maximum Emissions	48	42	58	<1	4	2

Exceeds SCAQMD Thresholds?	No	No	No	No	No	No

lbs/day: pounds per day; VOC: volatile organic compound; NO_x: nitrogen oxides; CO: carbon monoxide; SO_x: sulfur oxides; PM10: respirable particulate matter 10 microns or less in diameter; PM2.5: fine particulate matter 2.5 microns or less in diameter; SCAQMD: South Coast Air Quality Management District.

Values are higher of summer or winter.

Source: SCAQMD 2019 (thresholds); see Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data, for CalEEMod model outputs.

Construction-Related Localized Emissions

Localized emissions for the Project with Building A Residential/Commercial were calculated to assess local air quality based on its construction assumptions. These were the same as the localized emissions for the Project. Consistent with the Project, the nearest off-site receptors that could be exposed for 1 hour to NO₂ and CO during construction would be the commercial uses west of the site, approximately 40 feet from the Project's western boundary. The nearest sensitive air quality receptors that could be exposed to PM10 and PM2.5 for 24 hours are residences in a multi-story building at 482 South Arroyo Parkway, approximately 100 feet from the Project site.

The emissions screening thresholds are for receptors within 25 meters (82 feet) of the Project site to account for non-sensitive receptors located closer than the nearest sensitive receptor. The screening thresholds for receptors farther away would be higher and the Project emissions would be a smaller fraction of the thresholds. Table 3.1-11, Localized Significance Threshold Construction Emissions for the Project with Building A Residential/Commercial, shows the maximum daily on-site emissions for construction activities compared with the SCAQMD LST screening thresholds. As with the Project, the LST analysis is conservative because the nearest sensitive receptor for PM10 and PM2.5 is approximately 30 meters (100 feet) away. The Project with Building A Residential/Commercial's maximum daily on-site emissions would also occur during the building construction phase in 2023, as for the Project. As shown in Table 3.1-11, the local emissions from the Project with Building A Residential/Commercial would be below the screening thresholds, and no significant impacts would result. No mitigation is required. The magnitude of emissions for the Project with Building A Residential/Commercial are comparable to the Project.

**TABLE 3.1-11
LOCALIZED CONSTRUCTION EMISSIONS FOR THE PROJECT WITH
BUILDING A RESIDENTIAL/COMMERCIAL**

Emissions and Thresholds	Emissions (lbs/day)

Source: SCAQMD 2009 (thresholds); see Appendix B, <i>Air Quality and Greenhouse Gas Emissions Modeling Data</i> , for CalEEMod outputs.				

Cumulative Construction Emissions

Construction activities associated with the Project with Building A Residential/Commercial would result in less than significant construction-related regional and localized air quality impacts, as quantified above in Tables 3.1-10 and 3.1-11, respectively. Consistent with the Project analysis above, because the construction emissions estimated for the Project with Building A Residential/Commercial are below the SCAQMD's regional and local significance thresholds, construction emissions would not be cumulatively considerable. There would be a less than significant impact, and no mitigation is required.

Operational Impacts

Operations-Related Regional Impacts

Implementation of the Project with Building A Residential/Commercial would result in increased residential dwelling units and no medical office building uses. As such, the emissions are quantified in Tables 3.1-12, Net Operational Emissions for the Project with Building A Residential/Commercial, and 3.1-13, Localized Operational Emissions for the Project with Building A Residential/Commercial, to provide a comparison.

Operational emissions are comprised of area, energy, mobile, and stationary source emissions, consistent with the Project. The principal source of all long-term criteria pollutant emissions would be vehicle trips, consistent with the Project. However, as there would be less trips with the Project with Building A Residential/Commercial, there would be lower mobile emissions. Area source emissions are based on CalEEMod assumptions for the specific land uses and size. Energy emissions are based on the Applicant's estimate of natural gas use. Mobile source emissions are based on the estimated Project with Building A Residential/Commercial-related trip generation forecast of 2,494 daily trips (with transit reductions), as provided in the TIA prepared for the Project with Building A Residential/Commercial uses (Pasadena DOT 2021b), and the vehicle miles traveled (VMT) assumptions for the Project with Building A Residential/Commercial's trips (Pasadena DOT 2021c). It should be noted that the emissions analyses also include the anticipated electrical demand, natural gas demand, and mobile trips for the conversion of the two historic buildings to commercial uses. The peak daily long-term gross and net operational emissions are summarized below in Table 3.1-12. The net operational emissions account for the emissions from the land uses to be removed from the Project site. The operational emissions are comparable to those of the Project. The net operational emissions would be less than the SCAQMD mass regional daily emissions thresholds. It should be noted that the total gross

operational emissions, without reductions from existing uses, would also be less than the SCAQMD mass regional daily emissions thresholds. There would be a less than significant impact, and no mitigation is required.

**TABLE 3.1-12
NET OPERATIONAL EMISSIONS FOR THE PROJECT
WITH BUILDING A RESIDENTIAL/COMMERCIAL**

Source	Emissions (lbs/day)*					
	VOC	NO _x	CO	SO _x	PM10	PM2.5

* Some totals do not add due to rounding.

Source: SCAQMD 2019 (thresholds); see Appendix B, *Air Quality and Greenhouse Gas Emissions Modeling Data*, for CalEEMod model outputs.

Operations-Related Localized Emissions

Same as the Project, Project with Building A Residential/Commercial-related air emissions from on-site sources such as emergency generators, vehicle usage (cars and trucks), landscaping equipment, and on-site usage of natural gas appliances may have the potential to generate emissions that exceed the State and federal air quality standards in the vicinity of the Project even though these pollutant emissions may not be significant enough to create a regional impact to the SoCAB.

The local air quality emissions from on-site operations were analyzed using the SCAQMD's Mass Rate LST Look-up Tables and the LST Methodology. Table 3.1-13 shows the on-site operational emissions from area sources, energy usage, vehicles operating on-site, and the calculated emissions screening thresholds.

**TABLE 3.1-13
LOCALIZED OPERATIONAL EMISSIONS FOR THE PROJECT
WITH BUILDING A RESIDENTIAL/COMMERCIAL**

On-Site Emission Source*	Pollutant Emissions (pounds/day)			
	NOx	CO	PM10	PM2.5
Area Sources	0.4	31.0	0.2	0.2
Energy Sources	1.1	0.5	0.1	0.1
Mobile Sources ^a	0.1	0.8	0.2	0.04

^a On-site vehicle emissions based on 2.5% of the gross vehicular emissions, which is the estimated portion of vehicle emissions occurring within a quarter mile of the Project site.				
^b Data is for SCAQMD Source Receptor Area 8, West San Gabriel Valley, with a source receptor distance of 25-meters, 2 acres.				
Source: SCAQMD 2009 (thresholds); see Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data, for CalEEMod outputs.				

The data provided in Table 3.1-13 shows that the operations of the Project with Building A Residential/Commercial would not exceed the local NOx, CO, PM10, or PM2.5 screening thresholds, consistent with the Project. The operational emissions are comparable to those of the Project. The emissions would be less than the SCAQMD LST screening thresholds. There would be a less than significant impact, and no mitigation is required.

Cumulative Operational Impacts

Same as the Project, as shown in Tables 3.1-12 and 3.1-13, operational emissions of VOC, NOx, PM10, and PM2.5 would be below the SCAQMD CEQA significance thresholds for the Project with Building A Residential/Commercial. Therefore, because the Project with Building A Residential/Commercial's operational emissions are less than the respective SCAQMD daily operational thresholds, the Project with Building A Residential/Commercial's operational activities would not contribute to a cumulatively considerable net increase of a pollutant for which the SoCAB is in nonattainment. Emissions of nonattainment pollutants or their precursors would not be cumulatively considerable. There would be a less than significant impact, and no mitigation is required. This is comparable to the findings for the Project.

Threshold 3.1c: Would the Project expose sensitive receptors to substantial pollutant concentrations?

A significant impact may occur when a project would generate pollutant concentrations to a degree that would significantly affect sensitive receptors, which include populations that are more susceptible to the effects of air pollution than the population at large. Exposure of sensitive receptors is addressed for emissions from construction and operation of the Project. To address construction activities, the analysis below includes the following issues: localized air quality impacts from construction; and toxic air contaminants (TACs), specifically diesel particulate matter (DPM) from on-site construction. To address operational emissions, the analysis evaluates potential exposure to sensitive receptors, the analysis below discusses local air quality impacts from on-site operations, and CO hotspots. Operational, long-term TACs may be generated by

some industrial land uses; commercial land uses (e.g., gas stations and dry cleaners); and diesel vehicles at bus stations or warehouses. The proposed residential and commercial uses do not generate substantial quantities of TACs and are therefore not addressed in this analysis.

Project

Construction

Localized Impacts from Construction

Localized impacts from construction were analyzed above in response to Threshold 3.1b; specifically, Table 3.1-7 and associated analysis. Emissions were found to be less than the applicable SCAQMD LST screening thresholds; therefore, there would be a less than significant impact related to localized impacts from construction of the Project, and no mitigation is required.

Toxic Air Contaminant Emissions from On-Site Construction

Construction activities would result in short-term, project-generated emissions of DPM from the exhaust of off-road, heavy-duty diesel equipment used for site preparation; paving; building construction; and other miscellaneous activities. CARB identified DPM as a TAC in 1998. The dose to which receptors are exposed is the primary factor used to determine health risk. Dose is a function of the concentration of a substance or substances in the environment and the duration of exposure to the substance. Thus, the risks estimated for a maximally exposed individual (MEI) are higher if a fixed exposure occurs over a longer time period. According to the Office of Environmental Health Hazard Assessment (OEHHHA), health risk assessments—which determine the exposure of sensitive receptors to TAC emissions—should be based on a 40-year exposure period; however, such assessments should be limited to the period/duration of activities associated with the Project.

There would be relatively few pieces of off-road, heavy-duty diesel equipment in operation, and the total construction period of approximately 34 months would be relatively short when compared to a 40-year exposure period. Combined with the highly dispersive properties of DPM and additional reductions in particulate emissions from newer construction equipment, as required by USEPA and CARB regulations, construction emissions of TACs would not expose sensitive receptors to substantial emissions of TACs. The impact would be less than significant, and no mitigation is required.

Operational

Localized Criteria Pollutants from On-site Operations

Localized impacts from construction were analyzed in response to Threshold 3.1b; specifically, Table 3.1-9 and associated analysis. Emissions were found to be less than the applicable SCAQMD LST screening thresholds. Therefore, there would be a less than significant impact related to localized impacts from operation of the Project, and no mitigation is required.

Carbon Monoxide Hotspot

In an urban setting, vehicle exhaust is the primary source of CO. Consequently, the highest CO concentrations generally are found close to congested intersections. Under typical meteorological conditions, CO concentrations tend to decrease as the distance from the emissions source (e.g., congested intersection) increases. Localized areas where ambient concentrations exceed federal and/or State standards for CO are termed CO “hotspots”. According to the *Transportation Project-Level Carbon Monoxide Protocol* (the Protocol), projects may worsen air quality if they worsen

traffic flow, defined for signalized intersections as increasing average delay at intersections operating at Level of Service (LOS) E or F or causing an intersection that would operate at LOS D or better without the Project, to operate at LOS E or F with the Project (UCD ITS 1997). If impacts are less than significant close to congested intersections, impacts also would be less than significant at more distant sensitive-receptor and other locations. The Project's Transportation Impact Analysis – Outside of CEQA Analysis identified one signalized intersection, Arroyo Parkway at California Boulevard, that would operate at LOS E in the AM and PM peak hours with increased delay under Existing Plus Project conditions when compared to existing conditions (Pasadena DOT 2021a).

The 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (SCAQMD 2003b) evaluated numerous intersections for the potential to result in CO hotspots and found that the 1-hour CO standard (20.0 ppm) would likely not be exceeded until the daily traffic at the intersection exceeded more than 400,000 vehicles per day. Based on data in the Project's Transportation Impact Analysis – Outside of CEQA Analysis, average daily traffic at the Arroyo Parkway/California Street intersection under Existing Plus Project conditions is conservatively estimated at 48,000 vehicles based on PM peak hour traffic volumes being approximately 10 percent of average daily trips. The 48,000 daily trips at this intersection is substantially less than the 400,000 vehicles per day needed to exceed the CO standards. Therefore, CO concentrations at the intersection would be substantially less than the CO ambient air quality standards. Moreover, vehicle emission standards have become increasingly more stringent since 1992 and background CO concentrations are less than in 1992. As such, the small contribution of Project-related traffic would not result in CO concentrations that would exceed either the State or federal ambient air quality standards. The Project would result in less than significant impacts related to CO hotspots, and no mitigation is required.

Project with Building A Residential/Commercial

Construction

Localized Impacts from Construction

Localized impacts from construction were analyzed in response to Threshold 3.1b; specifically, Table 3.1-11 and associated analysis. Emissions were found to be less than the applicable SCAQMD LST screening thresholds. Therefore, there would be a less than significant impact related to localized impacts from construction of the Project with Building A Residential/Commercial, and no mitigation is required. This is comparable to the findings of the Project.

Toxic Air Contaminant Emissions from On-Site Construction

As with the Project, for the Project with Building A Residential/Commercial there would be relatively few pieces of off-road, heavy-duty diesel equipment in operation, and the total construction period of approximately 34 months would be relatively short when compared to a 40-year exposure period. Combined with the highly dispersive properties of DPM and additional reductions in particulate emissions from newer construction equipment, as required by USEPA and CARB regulations, construction emissions of TACs would not expose sensitive receptors to substantial emissions of TACs. The impact would be less than significant, and no mitigation is required. This is comparable to the findings of the Project.

Operational

Localized Criteria Pollutants from On-site Operations

Localized impacts from construction were analyzed in response to Threshold 3.1b; specifically, Table 3.1-9 and associated analysis. Emissions were found to be less than the applicable SCAQMD LST screening thresholds. Therefore, there would be a less than significant impact related to localized impacts from operation of the Project with Building A Residential/Commercial, and no mitigation would be required. This is comparable to the finding for the Project.

Carbon Monoxide Hotspot

Consistent with the Project, the Project with Building A Residential/Commercial's Transportation Impact Analysis – Outside of CEQA Analysis identified one signalized intersection, Arroyo Parkway at California Boulevard, that would operate at LOS E in the AM and PM peak hours with increased delay under Existing Plus Project conditions when compared to existing conditions for the PM peak hour, and slightly reduced delay for the AM peak hour (Pasadena DOT 2021b). Based on data in the Project with Building A Residential/Commercial TIA (Pasadena DOT 2021c), average daily traffic at the Arroyo Parkway/California Street intersection under Existing Plus Project conditions is conservatively estimated at 45,000 vehicles. Therefore, CO concentrations at the intersection would be substantially less than the CO ambient air quality standards. Moreover, vehicle emission standards have become increasingly more stringent since 1992 and background CO concentrations are less than in 1992. As such, the small contribution of Project-related traffic would not result in CO concentrations that would exceed either the State or federal ambient air quality standards. The Project with Building A Residential/Commercial would result in less than significant impacts related to CO hotspots, and no mitigation is required. This is comparable to the findings for the Project.

3.1.6 CUMULATIVE IMPACTS

Project

Consistency with the AQMP, as analyzed in Threshold 3.1a, is not subject to cumulative impact analysis. Threshold 3.1b analyzed cumulative construction and operational impacts and found both to be less than significant. SCAQMD's policy with respect to cumulative impacts—impacts that would be directly less than significant on a project level would also be cumulatively less than significant—is applicable to the TAC analysis analyzed in response to Threshold 3.1c. Direct TAC impacts would be less than significant; therefore, cumulative TAC impacts would be less than significant for the Project. With respect to CO hotspot impacts, although cumulative traffic is not addressed in the TIA, the Existing Plus Project traffic volume at the Arroyo Parkway/California Street intersection is substantially below the level of concern such that cumulative traffic could not approach the level of significance. There would be no cumulatively considerable impacts with Project implementation, and no mitigation is required.

Project with Building A Residential/Commercial

The cumulative impact findings for the Project, as stated above, would be applicable to the Project with Building A Residential/Commercial. Therefore, there would be no cumulatively considerable impact for the Project with Building A Residential/Commercial, and no mitigation is required.

3.1.7 MITIGATION MEASURES

No significant impacts related to air quality would occur, and no mitigation is required.

3.1.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.1.9 SUMMARY OF ANALYSIS

Project

The Project would not result in a conflict with or obstruct implementation of the applicable air quality plan (the SCAQMD's 2016 AQMP); therefore, there would be less than significant impacts. The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or State AAQS, and impacts would be less than significant. The Project would not expose sensitive receptors to substantial pollutant concentrations, and as such, this impact would be less than significant.

Project with Building A Residential/Commercial

The summary of findings for the Project with Building A Residential/Commercial would be comparable to the findings for the Project. Specifically, the Project with Building A Residential/Commercial would not result in a conflict with or obstruct implementation of the applicable air quality plan (the SCAQMD's 2016 AQMP); therefore, there would be less than significant impacts. The Project with Building A Residential/Commercial would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or State AAQS, and impacts would be less than significant. The Project with Building A Residential/Commercial would not expose sensitive receptors to substantial pollutant concentrations, and as such, this impact would be less than significant.

3.2 CULTURAL AND PALEONTOLOGICAL RESOURCES

This section addresses potential impacts to cultural and paleontological resources that could result from the implementation of the Project or Project with Building A Residential/Commercial. Information in this section is derived from a *Historical Resource Assessment Report* (Historical Resource Assessment) prepared for the Project site by PaleoWest, LLC and dated January 14, 2022 (PaleoWest 2022, Appendix C-1); an archaeological records search conducted by the South Central Coastal Information Center (SCCIC) on July 24, 2020 (Appendix C-2); the Sacred Lands File search conducted by the Native American Heritage Commission (NAHC) received on July 15, 2020 and the Native American consultation initiated by the City on May 28, 2020 (Appendix C-2); and a paleontological resource record search conducted by the Natural History Museum of Los Angeles County (NHM) received on December 25, 2020 (Appendix C-3). Section 3.10, Tribal Cultural Resources, provides further information regarding the Native American consultation conducted pursuant to Assembly Bill (AB) 52.

3.2.1 EXISTING CONDITIONS

Archaeological and Historical Resources

Historical Resource Assessment Report

A pedestrian survey of the Project site was conducted as part of the Historical Resource Assessment by PaleoWest on May 4, 2020. During the field survey, the exteriors of the buildings within the Project site were analyzed, photographed, and recorded. Any building or structure determined to have been built prior to 1975 or to be potentially eligible for the CRHR were formally evaluated on Department of Parks and Recreation (DPR) 523 series forms. The Historical Resource Assessment from PaleoWest is presented in Appendix C-1.

In addition to the Project site, the general conditions and character of the surrounding area were observed during the field survey on May 4, 2020. Attention to building types, uses, spatial organization, periods of construction, architectural styles, and other characteristics were noted at this time. A subsequent desktop analysis of the previously documented historical resources identified within the Project vicinity was also conducted. This entailed using readily available digital tools, such as street views from February 2021, to confirm current conditions of these resources and to cross-reference this with existing documentation related to the historic status of each resource, including California Historical Resources Inventory Database (CHRID) entries, DPR 523 forms, and National Register of Historic Preservation (NRHP) nominations.

South Central Coastal Information Center Record Search

A literature review and records search were conducted by Psomas at the SCCIC at California State University, Fullerton on July 30, 2020. The SCCIC records were used by Psomas and provided to PaleoWest. This inventory effort included the Project site and a 0.5-mile radius around the Project site, collectively termed the "Project study area." The objective of this records search was to identify prehistoric or historical cultural resources that have been recorded within the broader context surrounding the Project site during prior cultural resource investigations.

The SCCIC search included a review of all recorded sites and cultural resources reports on file for the Project study area. The results from the information center indicated that 17 cultural resources investigations were previously conducted within the 0.5-mile radius. However, of the 17 previous investigations, the SCCIC indicated that none of the studies overlapped with the current Project site.

While no previous investigations included any portion of the Project site, there are individual resources documented outside the preparation of a cultural resources investigation that are present on site. The SCCIC search identified 63 historic built environment resources previously identified within the 0.5-mile radius. A copy of the records search results in is included in Appendix C-2.

Project Site

The SCCIC search did not identify any archaeological sites within the Project site but did identify three historic built environmental resources in the Project site, as shown in Table 3.2-1, below.

**TABLE 3.2-1
PREVIOUSLY RECORDED HISTORICAL RESOURCES ON THE PROJECT SITE**

Primary No	Resource Name/Address	Resource Type	Year Built	Year Recorded	Historic Status (NRHP, CRHR, Local)
P-19-183400	Pacific Electric Railroad Garage/465 S. Arroyo Parkway	Building	1923, 2007	1986	Potentially Local eligible
P-19-183401	Market Basket Warehouse/ 501-503 S. Arroyo Parkway	Building	1940	1989	Local eligible
P-19-183402	Lewis Iron Building/ 523 S. Arroyo Parkway	Building	1922	1989	Local eligible
Source: SCCIC 2020 and PaleoWest 2022.					

Preliminary desktop review of the resources identified within the Project site confirmed that both 501 South Arroyo Parkway and 523 South Arroyo Parkway appear to be extant (e.g., remain present on the site). These properties were previously recommended as eligible for the local register and are, therefore, considered historical resources for the purposes of CEQA. The former Pacific Electric Railroad Garage, which was also previously recommended eligible for the Local Register, appears to be partially extant. The building was integrated into the existing commercial building occupied by Whole Foods Market. Currently, the east and north facades of this building remain, while the remainder of the building was removed and replaced with new construction in 2007.

Project Vicinity

In addition to the resources located within the Project site, multiple historical resources were identified in the records in the surrounding vicinity. For the purposes of the Historical Resources Assessment, and the potential analysis of the Project and its indirect impact to the setting and adjacent and nearby historical resources, a separate overlay was outlined to identify those resources that have the potential to be impacted. Referred to herein as the "Project vicinity," this area was delineated to account for potential indirect impacts, such as visual or atmospheric alterations, resulting from the Project.

The Project vicinity is centered around the Project site, which corresponds with the entire subject block fronting South Arroyo Parkway to the east and is bounded by East Bellevue Drive to the north, East California Boulevard to the south, and the Los Angeles Metropolitan Transportation Authority (Metro) light rail alignment to the rear (i.e., west). The boundaries of the Project vicinity extend approximately one city block in each direction to align with East Del Mar Boulevard to the north, Edmondson Alley to the west, Pico Street to the south, and South Marengo Avenue to the east. Within the Project vicinity, nine historic resources were identified, including seven buildings and two historic districts; one historic district is fully within the Project vicinity whereas the other is only partially within the delineated area.

Table 3.2-2 below outlines those previously recorded historical resources located within the Project vicinity.

**TABLE 3.2-2
PREVIOUSLY RECORDED HISTORICAL RESOURCES
IN THE PROJECT VICINITY**

Primary Number	Resource Name/Address	Resource Type	Year Built	Year Recorded	Historic Status (NRHP, CRHR, Local)
P-19-180051	The Home Laundry	Building	1922	1987	NRHP-listed, CRHR-listed, Local-listed
P-19-180068	S. Marengo Historic District	Historic District	1901-1916	1981	NRHP-listed, CRHR-listed, Local-listed
P-19-180069	Don Carlos Court/ 374-386 S. Marengo Ave	Building	1927	1983	NRHP-listed, CRHR-listed, Local-listed
P-19-180070	Evanston Inn/ 385-395 S. Marengo Ave	Building	1897	1981	NRHP-listed, CRHR-listed, Local-listed
P-19-180680	Bryan Court, Adams Court/ 427 S. Marengo	Historic District	1916	1981	NRHP-listed, CRHR-listed, Local-listed
P-19-183343	George S. Hunt Studio & Shop Building/ 161 E. California Blvd.	Building	1927	1991, 2000	Local eligible
P-19-183344	Wallace Neff Office/ 180 E. California Blvd.	Building	1927	1991, 2011	NRHP eligible, Local-listed
P-19-183346	Raymond Flowers/ 62 E. California Blvd.	Building	1933	1991, 2004	NRHP eligible, Local eligible
P-19-183399	Cornet Building/ 411 S. Arroyo Parkway	Building	1945	1989, 2012	Potentially eligible for NRHP, CRHR, Local (needs re-evaluation)
P-19-183403	Bryan's Cleaners/ 544 S. Arroyo Parkway	Building	1938	1986	Local eligible
P-19-183407	Pasadena Humane Society/ 361 S. Raymond Ave	Building	1929	1989	NRHP-listed, CRHR-listed, Local-listed
P-19-183408	Royal Laundry, Milus Textile Service/ 443 S. Raymond Ave	Building	1927	1991, 2000, 2007	NRHP-listed, CRHR-listed, Local-listed
LD17 (City #)	Marengo-Pico Landmark District	Historic District	1912-1927	2008, 2011	Local-listed

Additional Sources

In addition to the records search, general contextual and site-specific research was conducted for the Project site and the surrounding area. Additional sources consulted include the NRHP, the Office of Historic Preservation Directory of Properties in the Historic Property Data File, Los Angeles County Assessor files, historical newspapers databases, historic Sanborn Fire Insurance Maps, Los Angeles Public Library databases, newspaper.com, ancestry.com, Pasadena city directories, and the City's CHRID system.

Historical maps consulted include the Los Angeles (USGS 1894, 1900), Altadena (USGS 1928), and Pasadena (USGS 1953, 1966, 1972, 1988, 1955) 7.5-minute USGS quadrangles. The 1894 and 1900 maps depicted the Project site as thoroughly built out, but no extant buildings within the Project site were depicted. The 1928 map showed two buildings within the Project site that roughly correspond with 495 South Arroyo Parkway and 501 South Arroyo Parkway. A review of available Sanborn Fire Insurance Maps from 1931 through 1951 was also conducted.

Native American Heritage Commission

Psomas submitted a request to the Native American Heritage Commission (NAHC) for a Sacred Lands File search on July 10, 2020. Results were received on July 15, 2020. The result of the Sacred Lands File (SLF) check conducted by the NAHC was positive for sacred places or objects with cultural value to a California Native American tribe. The NAHC recommended contacting the Gabrieleno Band of Mission Indians – Kizh Nation for more information. The Sacred Lands File results summary from the NAHC is presented in Appendix C-2. The results of Native American consultation pursuant to Assembly Bill 52 is presented in Section 3.10, Tribal Cultural Resources.

Paleontological Resources

Natural History Museum Los Angeles County

Psomas submitted a request to the NHM for a paleontological resource record search on December 16, 2020. Results were received on December 25, 2020. The results of the paleontological resources record search were negative for fossil localities within the Project site; however, the museum did identify several localities nearby from the same sedimentary deposits that occur in the Project site, either at the surface or at depth. These include mastodon (*Mammut*), Horse (*Equus*), Birds (*Aves*) from the Pleistocene Epoch, and several unidentifiable invertebrate specimens from the Pliocene Epoch. The records search results summary from the NHM is presented in Appendix C-3.

3.2.2 RELEVANT CULTURAL RESOURCE REGULATIONS

Federal

National Historic Preservation Act

The National Historic Preservation Act (NHPA) of 1966, as amended, promotes the preservation, enhancement, and productive use of historic resources. The NHPA established the Advisory Council on Historic Preservation (ACHP) and provided procedures for the ACHP and federal agencies in promoting historic preservation. Properties of traditional religious and cultural importance to Native Americans are protected under Section 101(d)(6)(A) of the NHPA.

Section 106 of the NHPA requires that federal actions and the use of federal funds take into account their potential effects on historic properties or those listed in or eligible for listing in the National Register of Historic Places (NRHP, National Register). Under Section 106, the significance of any adversely affected cultural resource is assessed and mitigation measures are proposed to reduce the impacts to an acceptable level.

National Register of Historic Places

Authorized by the NHPA, the U.S. Department of the Interior National Park Service's NRHP is part of a national program to coordinate and support public and private efforts to identify, evaluate, and protect America's historic and archaeological resources. The NRHP is the official list of the nation's historic places worthy of preservation. Listing on the National Register places no

obligations on private property owners. It places no restrictions on the use, treatment, transfer, or disposition of private property. Listing on the NRHP does, however, incentivize preservation. Property owners can become eligible to receive federal preservation grants and federal tax credits; they may utilize alternative methods of preservation in compliance with building code provisions. For a resource to qualify for listing on the NRHP, the quality of significance in American history, architecture, archaeology, engineering, and culture must be present in districts, sites, buildings, structures, and objects that possess integrity and:

- A. are associated with events that have made a significant contribution to the broad patterns of our history; or
- B. are associated with the lives of persons significant in our past; or
- C. embody distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. have yielded or may be likely to yield information important in prehistory or history.

Integrity

To be eligible for listing in the NRHP, a property must retain sufficient integrity to convey its significance. The NRHP publication *How to Apply the National Register Criteria for Evaluation* (National Register Bulletin 15) establishes how to evaluate the integrity of a property: “Integrity is the ability of a property to convey its significance”. The evaluation of integrity must be grounded in an understanding of a property’s physical features and how they relate to the concept of integrity. Determining which of these aspects are most important to a property requires knowing why, where, and when a property is significant. To retain historic integrity, a property must possess several, and usually most, aspects of integrity:

1. **Location** is the place where the historic property was constructed or the place where the historic event occurred.
2. **Design** is the combination of elements that create the form, plan, space, structure, and style of a property.
3. **Setting** is the physical environment of a historic property and refers to the character of the site and the relationship to surrounding features and open space. Setting often refers to the basic physical conditions under which a property was built and the functions it was intended to serve. These features can be either natural or man-made, including vegetation, paths, fences, and relationships between other features or open space.
4. **Materials** are the physical elements that were combined or deposited during a particular period or time and in a particular pattern or configuration to form a historic property.
5. **Workmanship** is the physical evidence of crafts of a particular culture or people during any given period of history or prehistory and can be applied to the property as a whole or to individual components.
6. **Feeling** is a property’s expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, when taken together, convey the property’s historic character.

7. **Association** is the direct link between the important historic event or person and a historic property.

Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation

The *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, and Reconstructing Historic Buildings* or the *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* (Weeks and Grimmer 1995) (both referred to as the SOI Standards were codified in 1995 (36 *Code of Federal Regulations* [CFR] Part 68) to establish professional standards that apply to all proposed development grant-in-aid projects assisted through the National Historic Preservation Fund and to serve as general guidance for work on any other historic building. The SOI Standards apply to historic properties of all periods, styles, types, materials, and sizes. The ten Standards for Rehabilitation are:

1. A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.
2. The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.
3. Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.
4. Changes to a property that have acquired historic significance in their own right will be retained and preserved.
5. Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.
6. Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.
7. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.
8. Archaeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.
9. New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work will be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.
10. New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

State

California Environmental Quality Act

The Project is subject to compliance with CEQA, as amended. Specifically, under Public Resources Code Section 21084.1, a “project that may cause a substantial adverse change in the significance of an historical resources is a project that may have a significant effect on the environment.” The first step in the CEQA compliance process in terms of historical resources is to identify any that may be impacted by the project.

“Historical resource” is a term with a defined statutory meaning (Public Resources Code Section 21084.1). The determination of significant impacts on historical and archaeological resources is described in Sections 15064.5(a) and 15064.5(b) of the State CEQA Guidelines. Section 15064.5(a) states that historical resources include the following:

1. A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the [CRHR] (Public Resources Code Section 5024.1).
2. A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, will be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency’s determination is supported by substantial evidence in light of the whole record. Generally, a resource will be considered by the lead agency to be historically significant if the resource meets the criteria for listing in the [CRHR] (Public Resources Code Section 5024.1).
4. The fact that a resource is not listed in or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to Section 5020.1(k) of the Public Resources Code), or identified in a historical resources survey (meeting the criteria in Section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code Section 5020.1(j) or 5024.1.

Cultural resources are buildings, sites, humanly modified landscapes, traditional cultural properties, structures, or objects that may have historical, architectural, cultural, or scientific importance based on established criteria. CEQA states that if a project will have a significant impact on important cultural resources, deemed “historically significant,” then project alternatives and mitigation measures must be considered.

California Register of Historical Resources

The CRHR established a list of properties that are to be protected from substantial adverse change (Public Resources Code Section 5024.1). A historical resource may be listed in the CRHR if it exhibits significance under one or more of the following criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.

2. It is associated with the lives of persons important in California's past.
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value.
4. It has yielded or is likely to yield information important in prehistory or history.

In addition to exhibiting significance under one or more of the above criteria, a resource must also retain sufficient historical integrity to convey its significance. Historical integrity is the physical aspects of a resource related to its historic character. Integrity is evaluated through seven aspects: location, design, setting, materials, workmanship, feeling, and association.

The CRHR includes properties that are listed or have been formally determined to be eligible for listing in the NRHP, State Historical Landmarks, and eligible Points of Historical Interest. Other resources require nomination for inclusion in the CRHR. These may include:

- resources contributing to the significance of a local historic district,
- individual historical resources,
- historical resources identified in historic resource surveys conducted in accordance with State Historic Preservation Office procedures,
- historic resources or districts designated under a local ordinance consistent with Commission procedures, and
- local landmarks or historic properties designated under local ordinance.

California Historical Building Code

The California State Historical Building Code (CHBC) (*California Code of Regulations*, Title 24, Part 8) is intended to save California's architectural heritage by recognizing the unique construction issues inherent in maintaining and adaptively reusing historic buildings. The CHBC's standards and regulations facilitate the rehabilitation or change of occupancy so as to preserve their original or restored elements and features; to encourage energy conservation and a cost-effective approach to preservation; and to provide for reasonable safety from fire, seismic forces, or other hazards for occupants and users of such buildings, structures, and properties and to provide reasonable availability and usability by the physically disabled. The 2019 triennial edition of the CHBC, effective January 1, 2020, is the currently adopted code. The City has adopted the CHBC by reference (Section 14.04.010 of the Pasadena Municipal Code [PMC]) and amended in Section 14.04.258 by adding the following: "4. The use of wood on the exterior side of exterior walls shall be prohibited in the Extreme, high and moderate fire hazard severity zones as identified by the Pasadena Fire Department".

California Health and Safety Code (Sections 7050.5, 7051, and 7054)

Sections 7050.5, 7051, and 7054 of the *California Health and Safety Code* collectively address the illegality of interference with human burial remains (except as allowed under applicable sections of the *California Public Resources Code* [PRC]). These sections also address the disposition of Native American burials in archaeological sites and protect such remains from disturbance, vandalism, or inadvertent destruction. Procedures to be implemented are established for (1) the discovery of Native American skeletal remains during construction of a project; (2) the treatment of the remains prior to, during, and after evaluation; and (3) reburial.

Section 7050.5 of the *California Health and Safety Code* specifically provides for the disposition of accidentally discovered human remains. Section 7050.5 states that if human remains are

found, no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined the appropriate treatment and disposition of the human remains.

California Public Resources Code (Section 5097.98)

Section 5097.98 of the PRC states that, if remains are determined by the Coroner to be of Native American origin, the Coroner must notify the NAHC within 24 hours. When the NAHC receives this notification from a County Coroner, it shall immediately notify those persons it believes to be most likely descended from the deceased Native American. The descendants may, with the permission of the owner of the land or his or her authorized representative, inspect the site of the remains and may recommend to the owner or the person responsible for the excavation work means for treatment or disposition, with appropriate dignity, of the human remains and any associated grave goods. The descendants shall complete their inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. This regulation also requires that, upon the discovery of Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred with the most likely descendants regarding their recommendations and all reasonable options regarding their preferences for treatment. This section of the PRC has been incorporated into Section 15064.5(e) of the State CEQA Guidelines.

City

Mills Act

The Mills Act (Sections 50280 et. seq. of the California Government Code) grants participating local agencies (cities and counties) the authority to contract with the owners of qualified historical properties, pursuant to the CHBC (discussed above), who actively participate in the rehabilitation, restoration, and/or maintenance their historic property while receiving property tax relief. While State law enacted the Mills Act, the program is administered by local governments, which establish their own criteria and determine how many contracts to allow in their jurisdiction.

The City of Pasadena adopted the “Historic Property Contract Program” to establish the procedures and guidelines to receive financial incentives for designating, rehabilitating, or protecting historic buildings.

City of Pasadena Historic Preservation Ordinance

The City of Pasadena has established an historic preservation program to promote “the identification, evaluation, rehabilitation, adaptive use, and restoration of historic structures.” The criteria for the designation of historic monuments, landmarks, historic signs, landmark trees, or landmark districts are applied “according to applicable National Register of Historic Places Bulletins for evaluating historic properties”. These criteria are excerpted, below, from Section 17.62.040 of the PMC.

Historic Monuments

A historic monument shall include all historic resources previously designated as historic treasures before adoption of [Zoning Code Chapter 17.62] in 2002, historic resources that are listed in the National Register at the State-wide or federal level of significance (including National Historic Landmarks) and any historic resource that is significant at a regional, State, or federal

level, and is an exemplary representation of a particular type of historic resource and meets one or more of the following criteria:

- a) It is associated with events that have made a significant contribution to the broad patterns of the history of the region, State, or nation.
- b) It is associated with the lives of persons who are significant in the history of the region, State, or nation.
- c) It is exceptional in the embodiment of the distinctive characteristics of a historic resource property type, period, architectural style, or method of construction, or that is an exceptional representation of the work of an architect, designer, engineer, or builder whose work is significant to the region, State, or nation, or that possesses high artistic values that are of regional, State-wide, or national significance.
- d) It has yielded, or may be likely to yield, information important in prehistory or history of the region, State, or nation.

A historic monument designation may include significant public or semi-public interior spaces and features.

Landmarks

A landmark shall include all properties previously designated a landmark before adoption of [Zoning code Chapter 17.62] in 2002 and any historic resource that is of a local level of significance and meets one or more of the criteria listed below.

A landmark may be the best representation in the City of a type of historic resource or it may be one of several historic resources in the City that have common architectural attributes that represent a particular type of historic resource. A landmark shall meet one or more of the following criteria:

- a) It is associated with events that have made a significant contribution to the broad patterns of the history of the City.
- b) It is associated with the lives of persons who are significant in the history of the City.
- c) It embodies the distinctive characteristics of a type, architectural style, period, or method of construction, or represents the work of an architect, designer, engineer, or builder whose work is of significance to the City or possesses artistic values of significance to the City.
- d) It has yielded, or may be likely to yield, information important locally in prehistory or history.

Historic Signs

A historic sign shall include all signs in the sign inventory as of the date of adoption of the Zoning Code and any sign subsequently designated historically significant by the Historic Preservation Commission that possesses high artistic values. A historic sign shall meet one or more of the following criteria:

- a) The sign is exemplary of technology, craftsmanship or design of the period when it was constructed, uses historic sign materials and means of illumination, and is not significantly altered from its historic period. Historic sign materials shall include metal or wood facings, or paint directly on the façade of a building. Historic means of illumination shall include incandescent light fixtures or neon tubing on the exterior of the sign. If the sign has been altered, it must be restorable to its historic function and appearance.

- b) The sign is integrated with the architecture of the building.
- c) A sign not meeting criteria a or b above may be considered for inclusion in the inventory if it demonstrates extraordinary aesthetic quality, creativity, or innovation.

All other regulations relating to signs shall comply with Chapter 17.48 (Signs).

Landmark Trees

A tree shall qualify to be of historic or cultural significance and of importance to the community if it meets any one of the following criteria:

1. It is one of the largest or oldest trees of the species located in the City;
2. It has historical significance due to an association with a historic event, person, site, street, or structure; or
3. It is a defining landmark or significant outstanding feature of a neighborhood.

Landmark Districts

A landmark district shall include all landmark districts previously designated before adoption of this Chapter and any grouping of contiguous properties that also meet the following criteria:

- a) Within its boundaries, a minimum of 60 percent of the properties qualify as contributing; and
- b) The grouping represents a significant and distinguishable entity of Citywide importance and one or more of a defined historic, cultural, development and/or architectural context(s) (e.g., 1991 Citywide historic context, as amended, historic context prepared in an intensive level survey or historic context prepared specifically for the nominated landmark district).

When considering applications to designate a landmark district, the Historic Preservation Commission shall use the National Register of Historic Places Bulletin #21: "Defining Boundaries for National Register Properties."

3.2.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse cultural and paleontological resources impact if it would:

- Threshold 3.2a:** Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5;
- Threshold 3.2b:** Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5;
- Threshold 3.2c:** Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

The Initial Study (provided in Appendix A-1) concluded the following threshold related to cultural resources was determined to result in less than significant impacts and was not carried forward into the Draft EIR for further analysis:

- Would the project result disturb any human remains, including those interred outside of formal cemeteries?

3.2.4 METHODOLOGY

An Historical Resource Assessment for the Project site was prepared by PaleoWest and dated January 14, 2022 (Appendix C-1). As discussed previously, Psomas conducted an archaeological records search on July 24, 2020 at the SCCIC at California State University, Fullerton; submitted a request to the NAHC for a Sacred Lands File search on July 10, 2020, the results were received on July 15, 2020 (Appendix C-2); submitted a request to the NHM for a paleontological resource record search on December 16, 2020, the results were received on December 25, 2020 (Appendix C-3); and initiated Native American consultation consistent with AB 52 on May 28, 2020. The records search results were reviewed by a Registered Professional Archaeologist and combined with the findings of the Historical Resource Assessment, considered in the analysis of potential impacts to historic, archaeological, and paleontological resources.

3.2.5 ENVIRONMENTAL IMPACTS

Threshold 3.2a: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Project

The buildings at 491, 495, 499, 503, and 541 South Arroyo Parkway were evaluated for historical significance by applying the criteria of the CRHR and the Local Register using data gathered during the pedestrian survey and information acquired through historical research. PaleoWest recommends that the buildings at 491, 495, 499, 503, and 541 South Arroyo Parkway are not eligible for inclusion in the CRHR or the Local Register. PaleoWest concurs with the previous recommendation that the buildings at 501 and 523 South Arroyo Parkway are eligible for the Local Register and observed no changes that would compromise that assessment. Further, PaleoWest recommends that the buildings at 501 and 523 South Arroyo Parkway are locally eligible for the CRHR under Criterion C. Therefore, both buildings at 501 South Arroyo Parkway and 523 South Arroyo Parkway are historical resources for the purposes of CEQA (PaleoWest 2022, Appendix C-1).

Collectively, the buildings located at 491, 495, 499, 501, 503, 523, and 541 South Arroyo Parkway (referred to herein as the South Arroyo Parkway Industrial District) were evaluated to determine if they represent a potential historic district due to the timing of their construction and original development of industrial uses along a railroad and near downtown Pasadena. PaleoWest's analysis of the South Arroyo Parkway Industrial District included determining if it is locally eligible for the CRHR under Criterion A and as a City Landmark District. The analysis found that the district does not retain sufficient integrity to convey its historical significance. The buildings have been modified over time to accommodate their current use as commercial buildings. These modifications have led to a loss of historic material and have fundamentally changed the use and design of the buildings. Buildings that were constructed during the period of significance of the potential district, have been substantially altered over time, fragmenting the association of the extant buildings with their interrelated historical use, and compromising the integrity of setting, feeling, and association. Therefore, the South Arroyo Parkway Industrial District is not a historical resource for the purposes of CEQA (PaleoWest 2022, Appendix C-1).

As determined in the Historic Resources Assessment, the Project site contains two historic resources: the buildings at 501 and 523 South Arroyo Parkway. Based on available plans, the Project would not involve the physical destruction of the buildings at 501 and 523 South Arroyo Parkway, nor would it result in any significant internal or external physical modifications that would compromise the historic integrity of the buildings. The Project would change the setting, but those changes would not physically alter the buildings and are not substantial enough to compromise the overall historic integrity or obstruct the view of the buildings from the public right-of-way. The surrounding area has been modified over time by new construction and modifications to existing buildings, including the construction of multi-story buildings, which has resulted in the disruption of the historical setting. Therefore, the Project would not result in a substantive adverse change to the historic integrity of the buildings at 501 and 523 South Arroyo Parkway.

While the current Project description would not result in a substantive adverse change to the historic integrity of the buildings at 501 and 523 South Arroyo Parkway, the potential for future internal and external modifications to them does exist in the form of tenant improvements. However, the City's existing design review process, established in Zoning Code Section 17.61.030, requires a finding of consistency with the SOI's Standards to approve any proposed exterior changes to historical buildings within the Central District. Therefore, mitigation measure (MM) CUL-1 requires that the Project Applicant engage with a licensed architect and/or engineer that meets the SOI's Professional Qualifications Standards to develop a series of protection interventions and protocols that would preserve the two historical resources on the Project site – 501 and 523 South Arroyo Parkway – during construction activities. These protocols shall take into consideration the protection of and security of both resources, particularly the preservation of the character-defining features through the installation of physical protective barriers around each resource and the creation of site protocols that will eliminate the potential for physical damage resulting from impacts associated with construction and transport of equipment.

The potential for vibration to cause damage to the buildings at 501 and 523 South Arroyo Parkway is addressed in Section 3.7, Noise, of this Draft EIR. The most damaging sources of vibrations include blasting and pile driving. The Project's construction would not include blasting or pile driving; therefore, vibrations from these particularly damaging activities would not impact the buildings at 501 and 523 South Arroyo Parkway. However, there is potential for some construction equipment that would be used on the site to cause cosmetic damage to these buildings because of vibration. Implementation of MM NOI-1, which outlines setbacks for operation of vibration-causing construction equipment, would reduce the potential for cosmetic damage to these two buildings to a less than significant level.

Implementation of MM CUL-1 would ensure that potential tenant improvements associated with this Project do not result in a significant impact on the identified historical buildings. The Project is not expected to cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5.

Project with Building A Residential/Commercial

The analysis of historical resources for the Project with Building A Residential/Commercial would be the same as that of the Project, as both buildings at 501 South Arroyo Parkway and 523 South Arroyo Parkway are planned to be preserved and integrated into the site development in the same way as the Project. Therefore, the Project with Building A Residential/Commercial would not involve the physical destruction of 501 South Arroyo Parkway and 523 South Arroyo Parkway, nor would it result any significant physical modifications that would comprise the historic integrity of the buildings. Through implementation of MM CUL-1, tenant improvements to 501 and 523 South Arroyo Parkway would result in less than significant impacts to a documented historical resource. As with the Project, the Project with Building A Residential/Commercial would not compromise the overall historic integrity of, nor obstruct the public view of, the historic buildings.

As discussed for the Project, the potential for vibration to cause damage to the buildings at 501 and 523 South Arroyo Parkway is addressed in Section 3.7, Noise, of this Draft EIR. Implementation of MM NOI-1, which outlines setbacks for operation of vibration-causing construction equipment, would reduce the potential for cosmetic damage to these two buildings to a less than significant level. Therefore, with implementation of MMs CUL-1 and NOI-1, the Project with Building A Residential/Commercial is not expected to cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5.

Threshold 3.2b: Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Project

There are no known archaeological resources within the Project site; additionally, no known archaeological resources are within ½-mile of the Project site (Appendix C-2). However, the Project site is located within a region of California that has evidence for human occupation dating back several thousand years as noted by the positive SLF results for sacred sites located near the Project site. Thus, archaeological resources have the potential to be present in native sediments beneath the Project site. Therefore, the potential to encounter previously unidentified archaeological resources is a potentially significant impact. This impact would be reduced to a less than significant level with implementation of MM CUL-2, which requires attendance by a qualified archaeologist at the pre-grade conference and identifies actions to take in the event that cultural resources (i.e., prehistoric sites, historic sites, and/or isolated artifacts) are discovered.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would have one less level of subterranean parking spanning both proposed buildings. However, the possibility of unknown, intact archaeological resources being present in native sediments beneath the Project site remains the same as the Project. Therefore, with implementation of MM CUL-2, there would be a less than significant impact related to encountering unknown archaeological resources.

Threshold 3.2c: Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Project

No unique geologic features are known to exist, and no fossils have been documented on the Project site. The City's General Plan EIR states that "Although Quaternary Old Alluvial Deposits [such as those beneath the site] in general have the potential to yield fossils, the paleontological sensitivity in these areas of the City is considered low due to its proximity to the mountains to the north. Since the older Quaternary alluvial sediments are close to the sediment source, the uppermost layers of these deposits are likely too coarse-grained to preserve fossils. However, abundant fossils occur in the Topanga Formation. The Topanga Formation is in the southwesternmost portions of the City and near the South Fair Oaks specific plan area. Grading and excavations deeper than six feet into the Topanga Formation have the potential to impact significant fossils" (Pasadena 2015). Accordingly, the City requires monitoring for projects that could excavate within the Topanga Formation; however, the Project would not involve excavation in the Topanga Formation. There would be less than significant impacts related to paleontological resources, and no mitigation is required.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would have one less level of subterranean parking spanning both proposed buildings. As discussed for the Project, the Project with Building A Residential/Commercial would not involve excavation in the Topanga Formation, which has potential to yield significant paleontological resources. There would be a less than significant impacts related to encountering unknown archaeological resources, and no mitigation is required.

3.2.6 CUMULATIVE IMPACTS**Project**

Although cultural resources are site-specific regarding any given resource (e.g., resources of important cultural value to Native Americans and the history of California), impacts may be considered cumulative simply because they relate to the loss of cultural resources in general over time throughout the region. Historic structures that may be altered or demolished in and near the City could affect the cultural significance of an individual site or the structure, as well as incrementally diminish the City's historical context. As noted above, the buildings at 501 and 523 South Arroyo Parkway are eligible for the Local Register and eligible for the CRHR under Criterion C; however, the Project is not expected to cause a substantial adverse change in the significance of either resource as defined in Section 15064.5 with implementation of MM CUL-1. Compliance with CEQA and the City's Historic Preservation Ordinance would prevent significant adverse impacts on historical resources in the City and avoid a cumulative contribution to the loss of historical resources during development throughout the City pursuant to the General Plan. Implementation of MM NOI-1, which outlines setbacks for operation of vibration-causing construction equipment, would reduce the potential for cosmetic damage to these two buildings to a less than significant level. Therefore, the Project would not result in a cumulatively considerable impact to historical resources.

Regarding archaeological resources, there are no known resources listed or determined eligible for listing on the Project site. Implementation of MM CUL-2, consistent with the City's General Plan, would reduce potential impacts to archaeological resources to a less than significant level. The City requires implementation of this mitigation where there is potential to encounter unknown cultural resources, as appropriate, thereby avoiding a cumulative contribution to the loss of archaeological resources during development throughout the City pursuant to the General Plan. The Project site is not located in the portions of the City considered to be paleontologically sensitive. Therefore, the Project would not result in a cumulatively considerable impact to archaeological and paleontological resources.

Project with Building A Residential/Commercial

The cumulative analysis of the Project with Building A Residential/Commercial would be the same as that of the Project. The Project with Building A Residential/Commercial is not expected to cause a substantial adverse change in the significance of either resource as defined in Section 15064.5 with implementation of MM CUL-1. Compliance with CEQA and the City's Historic Preservation Ordinance would prevent significant adverse impacts on historical resources in the City and avoid a cumulative contribution to the loss of historical resources during development throughout the City pursuant to the General Plan EIR. Implementation of MM NOI-1, which outlines setbacks for operation of vibration-causing construction equipment, would reduce the potential for cosmetic damage to the two buildings to a less than significant level. Therefore, the Project with Building A Residential/Commercial would not result in a cumulatively considerable impact to historical resources.

The more limited excavation associated with one less level of subterranean parking would not reduce the possibility of unknown, intact archaeological resources being present in native sediments beneath the site. The City requires implementation of this mitigation (herein MM CUL-2) where there is potential to encounter unknown cultural resources, as appropriate, thereby avoiding a cumulative contribution to the loss of archaeological resources during development throughout the City pursuant to the General Plan. The site is not located in the portions of the City considered to be paleontologically sensitive. Therefore, the Project with Building A Residential/Commercial would not result in a cumulatively considerable impact to archaeological and paleontological resources.

3.2.7 MITIGATION MEASURES

MM CUL-1 To the satisfaction of the City, the Project Applicant shall engage with a licensed architect and/or engineer that meets the Secretary of the Interior's Professional Qualifications Standards for historic architect to develop a series of protection interventions and protocols that will preserve the two historical resources on the Project site – 501 and 523 South Arroyo Parkway – during all construction activities in, on, and near these two buildings. These measures shall take into consideration the protection of and security of both resources, particularly the preservation of the character-defining features through the installation of physical protective barriers around each resource and the creation of site protocols that will eliminate the potential for physical damage resulting from impacts with construction and transport equipment.

To ensure the protection of these resources and their character-defining features, all protective barriers (which shall be installed prior to the initiation of any construction activity) and protocols shall be compliant with the *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* (Weeks and Grimmer 1995) (Standards) and be subject to review and approval by the City planning staff.

Site protocols for protecting the historical resources shall outline issues related to site access and navigation by contractors and construction personnel to reduce the potential for any inadvertent accidents between equipment and the two on-site historical resources. Additionally, a series of emergency measures shall be developed that outlined specific step-by-step processes in the event that an accident involves one of the historical resources. This will likely include the following:

- 1) Stop-work protocols after an accident involving a historical resource occurs,
- 2) Notification procedures and identification key contacts,
- 3) Identification of qualified historic preservation professionals to investigate the historical resources following the determination that the area is safe,
- 4) Thorough conditions assessment of the resource by the qualified consultant to ascertain the level and extent of the damage, and
- 5) Preparation of a historical resource treatment plan to stabilize the historical resource and address the damage, which will be submitted to City staff for review and approval prior to completing the work and resumption of construction activities.

Additionally, protocols shall include regular on-site monitoring during construction activities by historic preservation consultant, either a SOI Qualified historic architect or architectural historian. The historic preservation consultant shall document the existing conditions of each resource prior to the initiation of any construction activity and prior to installation of the protective barriers and implementation of the protection protocols. This documentation phase will include high resolution digital photographs of each facade, as well as details of character-defining features for each resource. During construction, the historic preservation consultant shall prepare field report memoranda to the City confirming that the Standards compliant protection barriers are installed in accordance with the Standards, and that agreed upon protocols are being followed throughout the course of the Project. These memoranda will be submitted to City staff for their records and review. A final report outlining the conditions of the historical resources prior, during, and following the Project's construction shall be issued to the City for approval following construction activities and prior to the issuance of a Certificate of Occupancy.

- MM CUL-2** If cultural resources are discovered during construction of land development projects in Pasadena that may be eligible for listing in the California Register for Historic Resources, all ground disturbing activities in the immediate vicinity of the find shall be halted until the find is evaluated by a Registered Professional Archaeologist. If testing determines that significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates as applicable, and other special studies; and provide a comprehensive final report including site record to the City and the South-Central Coastal Information Center at California State University Fullerton. No further grading shall occur in the area of the discovery until Planning Department approves the report.

3.2.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

The mitigation measures identified above would reduce potential impacts associated with historic and archaeological resources to a less than significant level. There would be less than significant impacts related to paleontological resources, and no mitigation is required. Therefore, no significant and unavoidable impacts relating to cultural resources have been identified.

3.2.9 SUMMARY OF ANALYSIS

Project

Based on the Historical Resource Assessment prepared for the Project site, the buildings at 501 and 523 South Arroyo Parkway are historical resources for the purposes of CEQA (PaleoWest 2022, Appendix C-1). While the Project's tenant improvements do not anticipate demolishing, moving, or making major alterations to these historic resources, these plans remain conceptual and have not yet been finalized. Therefore, there may be a potential for impact and MM CUL-1 would be required to ensure that any alterations to these two structures meet the SOI's Standards. The potential for vibration to cause damage to the buildings at 501 and 523 South Arroyo Parkway is addressed in Section 3.7, Noise, of this Draft EIR. Implementation of MM NOI-1, which outlines setbacks for operation of vibration-causing construction equipment, would reduce the potential for cosmetic damage to these two buildings to a less than significant level. With implementation of MMs CUL-1 and NOI-1, there would be a less than significant impact to historical resources.

There are no known archaeological or paleontological resources on the Project site. However, based on the results on the cultural resources records searches conducted for the Project site

and vicinity (Appendices C-2), unknown archaeological resources have potential to be present in native sediments beneath the Project site. Therefore, MM CUL-2, which is consistent with the City's General Plan EIR, would be required. With implementation of MM CUL-2, the Project would result in less than significant impacts related to archaeological resources. The Project site is not located in the portions of the City considered to be paleontologically sensitive. Therefore, there would be less than significant impacts related to paleontological resources, and no mitigation is required.

Project with Building A Residential/Commercial

The analysis of cultural resources for the Project with Building A Residential/Commercial would be the same as that of the Project regarding the documented historic resources (501 and 523 South Arroyo Parkway). The more limited excavation associated with one less level of subterranean parking would not reduce the possibility of unknown, intact archaeological resources being present in native sediments beneath the site. With implementation of MMs CUL-1, CUL-2, and NOI-1, the Project with Building A Residential/Commercial would result in less than significant impacts related to historic and archaeological resources. The site is not located in the portions of the City considered to be paleontologically sensitive. Therefore, there would be less than significant impacts related to paleontological resources, and no mitigation is required.

3.3 **ENERGY**

3.3.1 **EXISTING CONDITIONS**

The Project site consists of five parcels developed with a total of nine commercial buildings with seven businesses with an existing building area of 125,465 square feet (sf). These existing uses consume electricity as well as natural gas for space heating and cooking needs. Depending on when these buildings were built or renovated, they would have complied with the energy efficiency standards that were adopted at that time.

3.3.2 **RELEVANT PROGRAMS AND REGULATIONS**

Federal

The Office of Energy Efficiency and Renewable Energy's (EERE) mission is to accelerate the research, development, demonstration, and deployment of technologies and solutions to equitably transition America to net-zero greenhouse gas emissions economy-wide by no later than 2050, and ensure the clean energy economy benefits all Americans, creating good paying jobs for the American people—especially workers and communities impacted by the energy transition and those historically underserved by the energy system and overburdened by pollution (EERE 2021).

EERE's work will involves the four principles:

- Building the clean energy economy in a way that benefits all Americans. We must address environmental injustices that disproportionately affect communities of color, low-income communities, and indigenous communities.
- Fostering a diverse science, technology, engineering, and math (STEM) workforce. We need to increase awareness of clean energy job opportunities at minority-serving institutions and ensure that organizations receiving EERE funding are thinking through diversity and equity in their own work.
- Developing more robust workforce training opportunities to build a pipeline for permanent, good-paying jobs for the clean energy workforce.
- Working closely and learning from state and local governments.

State

Title 24 Energy Efficiency Standards

The Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24, Part 6 of the *California Code of Regulations* [CCR]) were established in 1978 in response to a legislative mandate to reduce California's energy consumption. The currently applicable standards are the 2019 Standards, effective January 1, 2020. The 2019 standards focus on four key areas: smart residential photovoltaic systems, updated thermal envelope standards (preventing heat transfer from the interior to exterior and vice versa), residential and nonresidential ventilation requirements, and nonresidential lighting requirements. The ventilation measures improve indoor air quality, protecting homeowners from air pollution originating from outdoor and indoor sources (California Energy Commission [CEC] 2021). The requirements of the energy efficiency standards result in the reduction of natural gas and electricity consumption. Both natural gas and electricity use produce GHG emissions. The goal of the standards is to reduce energy use in new homes by more than 50 percent. The 2019 standards require that there is sufficient on-site electricity generation to meet the annual electricity usage for low rise residential buildings. A 30 percent

reduction in energy uses is anticipated for nonresidential uses. The requirement for low-rise residential buildings to develop onsite electricity generation is consistent with the goal to develop renewable sources of energy.

The CEC adopted the 2008 changes to the Building Energy Efficiency Standards in order to (1) “Provide California with an adequate, reasonably-priced, and environmentally-sound supply of energy” and (2) “Respond to Assembly Bill 32, the Global Warming Solutions Act of 2006, which mandates that California must reduce its greenhouse gas emissions to 1990 levels by 2020”. Additionally, it has been California policy that all new residential buildings will be zero net energy (ZNE) by 2020 and new commercial buildings will be ZNE by 2030, as described in the 2008 California Public Utilities Commission (CPUC) long-term energy efficiency strategic plan. In 2013, the CEC, in coordination with the CPUC, commenced a process to update the Title 24 energy efficiency standards and, the 2016 Title 24 Energy Efficiency Standards establish building design and construction requirements that move closer to achieving California’s ZNE goals. The requirements of the energy efficiency standards result in the reduction of natural gas and electricity consumption. Both natural gas use and electricity generation result in GHG emissions.

California Green Building Standards Code

The 2019 California Green Building Standards Code (24 CCR, Part 11), also known as the CALGreen code, contains mandatory requirements and voluntary measures for new residential and nonresidential buildings (including buildings for retail, office, public schools and hospitals) throughout California). The development of the CALGreen Code is intended to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the following construction practices: (1) planning and design; (2) energy efficiency; (3) water efficiency and conservation; (4) material conservation and resource efficiency; and (5) environmental quality. In short, the code is established to reduce construction waste; make buildings more efficient in the use of materials and energy; and reduce environmental impact during and after construction.

Senate Bills 1078, 107, and SBX1-2 (Renewable Portfolio Standards)

Established in 2002 under SB 1078, accelerated in 2006 under SB 107, and again in 2011 under SBX1-2, California’s Renewable Portfolio Standard (RPS) requires retail sellers of electric services to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020. Initially, the RPS provisions applied to investor-owned utilities, community choice aggregators, and electric service providers. SBX1-2 added, for the first time, publicly owned utilities to the entities subject to RPS.

Senate Bill 100

On September 10, 2018, Governor Brown signed SB 100, the 100 Percent Clean Energy Act of 2018. SB 100 requires renewable energy and zero-carbon resources to supply 100 percent of electric retail sales to end-use customers and 100 percent of electricity procured to serve state agencies by December 31, 2045. This policy requires the transition to zero-carbon electric systems that do not cause contributions to increase of GHG emissions elsewhere in the western electricity grid (CEC 2021b). SB 100 also creates new standards for the RPS goals established by SB 350 in 2015. Specifically, the bill increases required energy from renewable sources for both investor-owned utilities and publicly owned utilities from 50 percent to 60 percent by 2030.

City Green Building Ordinance

The City green building ordinance is Municipal Code Sections 14.04.500 through 14.04-511 (as amended). The ordinance incorporates the 2019 CALGreen and 2019 Building and Energy

Efficiency Standards. Under the ordinance, nonresidential development that is over 25,000 square feet would be subject to the mandatory Tier 1 CALGreen standards, and nonresidential development over 50,000 square feet would be subject to the mandatory Tier 2 CALGreen standards (Section 14.04.504).

City of Pasadena Green City Action Plan

The City of Pasadena developed and adopted the Green City Action Plan on September 18, 2006 (Pasadena 2006). The plan, which contains various actions and goals applicable on a local level, was prepared to create a more sustainable City capable of meeting growing demand and reducing impacts to natural resources. There are seven focus areas within the plan: (1) Energy, (2) Waste Reduction, (3) Urban Design, (4) Urban Nature, (5) Transportation, (6) Environmental Health, and (7) Water. Each of these focus areas contains actions and goals.

A partial list of these actions and goals related to energy that are applicable to the Project and Project with Building A Residential/Commercial is shown below:

- **Action 2:** Reduce the city's peak electric load by 10 percent within seven years through energy efficiency, shifting the timing of energy demands and conservation measures.
- **Action 8:** Advance higher density, mixed use, walkable, bikeable, and disabled accessible neighborhoods which coordinate land use and transportation with open space systems for recreation and ecological restoration.
- **Action 13:** Expand affordable public transportation coverage to within ½ kilometer of all city residents in ten years.
- **Action 15:** Implement a policy to reduce the percentage of commute trips by single occupancy vehicles by 10 percent in seven years.

3.3.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse energy impact if it would:

Threshold 3.3a: Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; and/or

Threshold 3.3b: Conflict with or obstruct a State or local plan for renewable energy or energy efficiency.

3.3.4 METHODOLOGY

Energy consumption was calculated for the construction and operations phases of the Project and the Project with Building A Residential/Commercial. Fuel consumption from construction worker, vendor, and delivery/haul trucks as well as operations phase vehicle trips were calculated using the trip rates and distances provided in the CalEEMod construction output files, as provided in Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data, of this Draft EIR. Operations phase trip generation and trip lengths were provided within the City's traffic analysis, provided in Appendix G-1, Transportation Impact Analysis/CEQA Evaluation for Project, and Appendix G-2, Transportation Impact Analysis/CEQA Evaluation for Project with Building A Residential/Commercial. Total vehicle miles traveled (VMT) were then calculated for each type of construction and operations-related trips and divided by the corresponding miles per gallon factor using CARB's Emissions FACTor (EMFAC) 2017 model. EMFAC provides the total annual VMT

and fuel consumed for each vehicle type. Utility-related energy consumption was estimated and provided by the Applicant. The inputs and data for the modeling are provided in Appendix D, Energy Modeling Data.

3.3.5 ENVIRONMENTAL IMPACTS

Threshold 3.3a: Would the Project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Project

Construction

Construction of the Project would require the use of construction equipment for grading and building activities; all off-road construction equipment is assumed to use diesel fuel. Transportation energy use depends on the type and number of trips, VMT, fuel efficiency of vehicles, and travel mode. During construction, transportation energy would be used for the transport and use of construction equipment, from delivery vehicles and haul trucks, and from construction employee vehicles that would use gasoline and/or diesel fuel. The use of these energy resources fluctuates according to the phase of construction and would be temporary. Table 3.3-1, Construction-Related Energy Use for the Project, quantifies anticipated energy use during construction activities of the Project. The use of these energy resources fluctuates according to the phase of construction and would be temporary.

**TABLE 3.3-1
CONSTRUCTION-RELATED ENERGY USE FOR THE PROJECT**

Source	Gasoline Fuel (gallons)	Diesel Fuel (gallons)
Off-road Construction Equipment	59,671	71,430
Worker commute	57,735	274
Vendors	1,253	21
On-road haul	22	18,937
Total	118,682	90,662
Source: Energy data can be found in Appendix D, Energy Modeling Data.		

Construction energy use could be considered wasteful, inefficient, or unnecessary if construction equipment is not well-maintained such that its energy efficiency is substantially lower than newer equipment; if equipment idles even when not in use; if construction trips utilize longer routes than necessary; or if excess electricity and water¹ are used during construction activities. Pursuant to the Title 13, Section 2485 of *California Code of Regulations*, all diesel-fueled commercial motor vehicles must not idle for more than five consecutive minutes at any location. Mandatory compliance would reduce fuel use by construction vehicles. Fuel energy consumed during construction would also be temporary in nature, and there are no unusual Project characteristics that would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in other parts of the region or State. Short-term energy usage for construction of the Project would result in long-term energy savings from newly constructed buildings that are compliant with the current Title 24 CALGreen code. As such, energy use associated with construction of the Project would not result in significant impacts related to

¹ Indirect energy use for the extraction, treatment, and conveyance of water.

wasteful, inefficient, or unnecessary consumption of energy resources. There would be a less than significant impact, and no mitigation is required.

Operation

The Project would promote building energy efficiency through compliance with energy efficiency standards (Title 24 Energy Efficiency Standards and CALGreen). Development of the Project is required to comply with the latest building energy efficiency standards adopted by the State and the City at the time of Project implementation. Mobile source energy consumption is based on estimated Project-related trip generation forecast of 6,366 daily trips, as provided in the Project Transportation Impact Analysis – Outside of CEQA Analysis (Pasadena DOT 2021a) and the VMT assumptions for the Project's trips (Pasadena DOT 2020; Appendix G-1). The energy use for the Project also includes the anticipated electrical demand, natural gas demand, and mobile trips for the conversion of the two historic buildings to commercial uses, which are assumed to be restaurant for the purposes of this Draft EIR. The estimated energy consumption attributable to the Project as calculated by CalEEMod is shown in Table 3.3-2, Energy Use During Operation of the Project, below.

**TABLE 3.3-2
ENERGY USE DURING OPERATION OF THE PROJECT**

Land Use	Gasoline (gallons/yr)	Diesel (gallons/yr)	Natural Gas (kBTU/yr)	Electricity (kWh/yr)
Project Land Uses	211,629	4,226	5,543,466	5,678,570
kBTU: kilo-British thermal units; kWh: kilowatt hour; yr: year Source: Energy data can be found in Appendix D, Energy Modeling Data.				

Adherence to the 2019 Building Energy Efficiency Standards would result in a reduction of energy use as compared to previous energy standards (CEC 2021). The reduction in energy use intensity typically consisted of upgrades to higher efficiency equipment and improved building automation, lighting controls, and sequences of operations. The CEC states that the 2019 energy efficiency standards are projected to result in a 30 percent improvement in energy efficiency over the 2016 standards for nonresidential buildings. Therefore, the new buildings would be more energy efficient than existing buildings that are proposed to be demolished and buildings proximate to the Project site and would be among the most energy-efficient buildings in the City.

Transportation energy use would be associated with daily trips associated with the proposed project. The Project site is within both a High-Quality Transit Area (HQTa) and Transit Priority Area (TPA). HQTAs are areas within one-half mile of a fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes or less during peak commuting hours. TPAs are areas within one-half mile of a major transit stop that is existing or planned. Project employees, visitors and residents of the Project site would be able to use these energy-efficient mass transit options. In addition, consistent with Title 24 requirements, the Project would be required to develop electric vehicle charging infrastructure (6 percent of nonresidential parking spaces) as well as storage and parking for bicycles (5 percent of vehicle parking spaces). This would encourage and support the use of transportation that does not rely on gasoline and diesel fuels.

Because the Project would involve the most energy-efficient buildings required under the 2019 Title 24 Energy Efficiency Standards and would promote energy efficient transportation options by developing within a HQTa and TPA and promoting alternative-fueled vehicles, the Project

would not result in the inefficient, wasteful, or unnecessary consumption of energy. There would be a less than significant impact, no mitigation is required.

Project with Building A Residential/Commercial

Construction

The analysis of construction energy use and efficiency for the Project with Building A Residential/Commercial would be essentially the same as the Project. All construction assumptions for the Project with Building A Residential/Commercial would be consistent with the Project, except that grading for the subterranean garage and other areas for improvement would require 36,802 cy less soil export than the Project (for a total of 147,211 cy of soil export) and 2,685 less truckloads than the Project (for a total of 10,515 truckloads for export). Table 3.3-3, Construction-Related Energy Use for the Project with Building A Residential/Commercial, provides the anticipated energy use during construction activities.

**TABLE 3.3-3
CONSTRUCTION-RELATED ENERGY USE FOR THE PROJECT WITH
BUILDING A RESIDENTIAL/COMMERCIAL**

Source	Gasoline Fuel (gallons)	Diesel Fuel (gallons)
Off-road Construction Equipment	59,671	71,430
Worker commute	57,016	271
Vendors	1,253	21
On-road haul	17	14,969
Totals	117,958	86,691
Source: Energy data can be found in Appendix D, Energy Modeling Data.		

The Project with Building A Residential/Commercial is anticipated to result in slightly less energy demand during construction than the Project. As with the Project, fuel energy consumed during construction for the Project with Building A Residential/Commercial would also be temporary in nature, and there are no unusual Project characteristics that would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in other parts of the region or State. Short-term energy usage for construction of the Project with Building A Residential/Commercial would result in long-term energy savings from newly constructed buildings that are compliant with the current Title 24 California Building Code. As such, energy use associated with construction of the Project with Building A Residential/Commercial would not result in significant impacts related wasteful, inefficient, or unnecessary consumption of energy resources. There would be a less than significant impact, and no mitigation is required.

Operations

The Project with Building A Residential/Commercial would promote building energy efficiency through compliance with energy efficiency standards (Title 24 and CALGreen). The development of the Project with Building A Residential/Commercial is required to comply with the latest building energy efficiency standards adopted by the State and the City at the time of Project implementation. Mobile source energy demand is based on estimated Project with Building A Residential/Commercial-related trip generation forecast of 2,494 daily trips, as contained in the Transportation Impact Analysis – Outside of CEQA Analysis prepared for the Project with Building A Residential/Commercial (Pasadena DOT 2021b) and incorporates the vehicle VMT

assumptions for the Project with Building A Residential/Commercial's trips (Pasadena DOT 2021c). It should be noted that the energy use also includes the anticipated electrical demand, natural gas demand, and mobile trips for the conversion of the two historic buildings to commercial uses, as with the Project. The estimated energy consumption attributable to the Project with Building A Residential/Commercial as calculated by CalEEMod and provided by the Applicant is shown in Table 3.3-4, Energy Use During Operation of the Project with Building A Residential/Commercial, below.

**TABLE 3.3-4
ENERGY USE DURING OPERATION OF THE PROJECT WITH BUILDING
A RESIDENTIAL/COMMERCIAL**

Land Use	Gasoline (gallons/yr)	Diesel (gallons/yr)	Natural Gas (kBTU/yr)	Electricity (kWh/yr)
Project with Building A Residential/Commercial Land Uses	77,747	1,606	4,497,483	5,517,728
kBTU: kilo-British thermal units; kWh: kilowatt hour; yr: year				
Sources: Energy data can be found in Appendix D, Energy Modeling Data.				

The Project with Building A Residential/Commercial would also be required to adhere to the 2019 Building Energy Efficiency Standards which result in an improvement in energy efficiency. Therefore, the new buildings would be more energy efficient than existing proposed to be demolished as well as buildings proximate to the Project Site and would be among the most energy efficient buildings in the City.

The Project with Building A Residential/Commercial would also be located within both a HQT and TPA. Employees, visitors, and residents of the Project with Building A Residential/Commercial site would be able to use these energy efficient mass transit options. In addition, the Project would be required to develop electric vehicle charging infrastructure (6 percent of nonresidential parking spaces) as well as storage and parking for bicycles (5 percent of vehicle parking spaces). This would encourage and support the use of transportation that does not rely on gasoline and diesel fuels.

Because the Project with Building A Residential/Commercial would involve the most energy efficient buildings required under the 2019 Title 24 Energy Efficiency Standards and would promote energy efficient transportation options by developing within a HQT and TPA as well as promote alternative fueled vehicles, the Project would not result in the inefficient, wasteful, or unnecessary consumption of energy. There would be a less than significant impact, and no mitigation is required.

Threshold 3.3b: Would the Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

Project

As discussed above, strategies and measures have been implemented at the State level with the California's Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings and the CALGreen Code. The Project would be more energy-efficient than the existing buildings in the vicinity of the site, including the buildings to be demolished. The CALGreen Code requires the development of electric vehicle charging infrastructure to promote and support alternatively fueled vehicles and bicycling. The Project would also be consistent with the City's Green City Action Plan, by increasing energy efficiency for buildings, developing higher density, mixed-use, walkable, bikeable, and disabled-accessible neighborhoods which coordinate land use and

transportation. As such, the Project would not conflict with or obstruct the State or the City's goals for energy efficiency and energy efficiency. There would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

The analysis of conflict of the Project with Building A Residential/Commercial with plans for renewable energy and energy efficiency would be the same as that of the Project. The Project with Building A Residential/Commercial would result in a lower VMT than the Project; however, both scenarios would be consistent with applicable energy-related plans and regulations. The proposed buildings would be more energy-efficient than the existing buildings in the vicinity of the site and the buildings to be demolished on site. The Project with Building A Residential/Commercial would provide electric vehicle charging infrastructure and provide bicycle parking on-site for its residents, visitors, and employees. The Project with Building A Residential/Commercial would be consistent with the City's Green City Action Plan by increasing energy efficiency for buildings, developing higher density, mixed-use, walkable, bikeable, and disabled-accessible neighborhoods which coordinate land use and transportation. As such, the Project with Building A Residential/Commercial would not conflict with or obstruct the State or the City's goals for energy efficiency. There would be a less than significant impact, and no mitigation is required.

3.3.6 CUMULATIVE IMPACTS

Project

The geographic area for consideration of cumulative impacts is the City. Future development throughout the City would generate additional energy demand and construction and operational fuel energy demand. Future development projects in the City would also need to comply with all applicable local and State energy efficiency and renewable energy regulations. The electrification of the transportation sector is anticipated throughout California and would contribute to reduced fuel energy use related to future development throughout the City. Also, regional (i.e., Southern California Association of Governments) planning documents support a denser land use pattern with a focus on proximity to transit. Therefore, the Project would not result in a cumulatively considerable impact related to energy.

Project with Building A Residential/Commercial

The cumulative impact analysis of energy for the Project with Building A Residential/Commercial would be the same as the cumulative impact analysis for the Project.

3.3.7 MITIGATION MEASURES

No significant impacts related to energy would occur, and no mitigation measures are necessary.

3.3.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

The Project and Project with Building A Residential/Commercial would not result in significant energy related impacts.

3.3.9 SUMMARY OF ANALYSIS

Project

Construction and operation of the Project would not result in wasteful, inefficient, or unnecessary construction of energy resources, nor conflict with or obstruct the applicable State or local plans for renewable energy and energy efficiency. There would be a less than significant impacts, and no mitigation is required.

Project with Building A Residential/Commercial

The summary of findings for the Project with Building A Residential/Commercial would be comparable to the findings for the Project. This scenario would have slightly reduced excavation commensurate with one fewer subterranean level and reduced operational VMT. However, for all the same reasons as discussed for the Project, construction and operation of the Project with Building A Residential/Commercial would not result in wasteful, inefficient, or unnecessary construction of energy resources, nor conflict with or obstruct the applicable State or local plans for renewable energy and energy efficiency. There would be less than significant impacts, and no mitigation is required.

3.4 **GREENHOUSE GAS EMISSIONS**

3.4.1 **EXISTING CONDITIONS**

Global Climate Change and Greenhouse Gases

Climate change is a recorded change in the Earth's average weather measured by variables such as wind patterns, storms, precipitation, and temperature. Historical records show that global temperature changes have occurred naturally in the past, such as during previous ice ages. The year 2020 ranks as Earth's hottest year on record, tying 2016.¹ Overall, Earth's average temperature has risen more than two degrees Fahrenheit since the 1880s. Continuing the planet's long-term warming trend, the year's globally averaged temperature was 1.84 degrees Fahrenheit (1.02 degrees Celsius) warmer than the baseline 1951-1980 mean. The last seven years have been the warmest seven years on record, typifying the ongoing and dramatic warming trend (NASA 2021).

The global atmospheric concentration of carbon dioxide (CO₂), the most abundant greenhouse gas (GHG), has increased from a pre-industrial (roughly 1750) value of about 280 parts per million (ppm) to a seasonally-adjusted 413.73 ppm in July 2021. The National Oceanic and Atmospheric Administration (NOAA) Annual Greenhouse Gas Index (AGGI) in 2020 was 1.47, which means the warming influence of GHGs has increased 47 percent since 1990. It took about 240 years for the AGGI to go from zero to one, and 30 years to increase by another 47 percent (NOAA Earth System Research Laboratory [ESRL] 2021).

Greenhouse Gases

GHGs are global pollutants and are therefore unlike criteria air pollutants such as ozone (O₃), particulate matter (PM₁₀ and PM_{2.5}), and toxic air contaminants (TACs), which are pollutants of regional and local concern (see Section 3.1, Air Quality, of this Draft EIR). While pollutants with localized air quality effects have relatively short atmospheric lifetimes (generally on the order of a few days), GHGs have relatively long atmospheric lifetimes, ranging from one year to several thousand years. Long atmospheric lifetimes allow for GHGs to disperse around the globe. Therefore, GHG effects are global, as opposed to the local and/or regional air quality effects of criteria air pollutant and TAC emissions.

GHGs, as defined under California's Assembly Bill (AB) 32, include CO₂, methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆). GHGs vary widely in the power of their climatic effects; therefore, climate scientists have established a unit called global warming potential (GWP). The GWP of a gas is a measure of both potency and lifespan in the atmosphere as compared to CO₂. For example, as CH₄ and N₂O are approximately 25 and 298 times (respectively) more powerful than CO₂ in their ability to trap heat in the atmosphere, they have GWPs of 25 and 298, respectively (CO₂ has a GWP of 1). Carbon dioxide equivalent (CO₂e) is a quantity that enables all GHG emissions to be considered as a group despite their varying GWP. The GWP of each GHG is multiplied by the prevalence of that gas to produce CO₂e.

General Environmental Effects of Global Climate Change

Executive Order (EO) S-3-05 mandates the preparation of biennial science assessment reports on climate change impacts and adaptation options for California. EO S-13-08 directs the California Natural Resources Agency (CNRA) to develop a State Climate Adaptation Strategy and to provide

¹ A [separate, independent analysis](#) by the National Oceanic and Atmospheric Administration (NOAA) concluded that 2020 was the second-warmest year in their record, behind 2016.

State land use planning guidance related to sea level rise and other climate change impacts. Current reports resulting from these directed actions are the *Climate Action Team Report to the Governor and Legislature* and the *California Climate Adaptation Strategy* (CalEPA 2010; CNRA 2009a). These studies report that global warming in California is anticipated to impact resources including, but not limited to, those discussed below.

- **Public Health.** Many Californians currently experience the worst air quality in the nation, and climate change is expected to make matters worse. Higher temperatures would increase the frequency, duration, and intensity of conditions conducive to air pollution formation. If global background O₃ levels increase as predicted under some scenarios, it may become impossible to meet local air quality standards. Air quality could be further compromised by more frequent wildfires, which emit fine particulate matter that can travel long distances. Rising temperatures and more frequent heat waves would increase the risk of death from dehydration, heat stroke/exhaustion, heart attack, stroke, and respiratory distress. Climate change may also increase asthma rates and the spread of infectious diseases and their vectors, as well as challenge food and water supplies. Children, the elderly, people with chronic heart or lung disease, outdoor workers, people who exercise outdoors and the economically-disadvantaged would be particularly vulnerable to these changes. In addition, more frequent extreme weather events could also result in increased injuries and deaths from these phenomena.
- **Energy.** Increasing mean temperature and more frequent heat waves will drive up demand for cooling in summer; this new energy demand will only be partially offset by decreased demand for heating in winter. Hydropower, which currently provides 15 percent of in-state generation, would be threatened by declining snowpack, which serves as a natural reservoir for hydropower generation in the spring and summer. Winter storms, earlier snowmelt, and greater runoff may combine to cause flooding, which could, in turn, damage transmission lines and cause power outages.
- **Water Resources.** Rising temperatures, less precipitation, and more precipitation falling as rain instead of snow could severely diminish snowpack. Because the Sierra Nevada snowpack provides most of California's available water, this potential loss would increase the risk of summer water shortages and would hamper water distribution and hydropower generation. The diminished snowpack would also nearly eliminate all skiing and other snow-related recreation. Rising sea levels would push saltwater into California's estuaries, wetlands, and groundwater aquifers, threatening the water quality and reliability in the Sacramento/San Joaquin River Delta—a major California freshwater supply. Extreme precipitation and flooding could also damage water quality by creating sudden increases in runoff. Moreover, warming would increase evapotranspiration rates from plants, soil, and open water surfaces, which would result in greater demand for irrigation. Overall, climate change would reduce California's water supplies even as its growing population requires additional resources.
- **Sea Level and Flooding.** Sea level at California's coasts is expected to rise by 11 to 18 inches above 2000 levels by 2050 and by 23 to 55 inches by 2100. If realized, these increases would create more frequent and higher storm surges; would erode some coastal areas; and would increase pressure on existing levees. These increases would create a greater risk of flooding in previously untouched inland areas. Consequently, continued development in vulnerable coastal areas would put more people and infrastructure at risk.
- **Agriculture.** Although higher CO₂ levels can stimulate plant production and increase plant water-use efficiency, in the long-term, climate change would reduce the quantity and quality of agricultural products statewide. As temperatures rise, farmers will face greater water demand for crops and a less reliable water supply, as well as increased competition from urban water users. Sea level rise may cause saltwater intrusion in the Delta region,

making it difficult to raise certain crops. Rising temperatures will likely aggravate O₃ pollution, interfering with plant growth and making plants more susceptible to disease and pests. In addition, warming would reduce the number of colder hours needed for fruit and nut production; would shift pest and weed ranges; would alter crop-pollinator timing; and would increase the frequency of droughts, heat waves, and floods. Higher average temperatures would also increase mortality and decrease productivity in livestock.

- **Forestry.** California timber production has declined over the past few decades due, in part, to warming and increased wildfires. While further warming may increase production for some species in some locations, climate change is expected to reduce overall forest growth. Increasing average temperatures and drought frequency would result in more wildfires and greater burned areas, while less frequent and more intense rainfall would increase soil erosion and landslides. Higher temperatures and less water would force many tree species to shift their ranges; those that run out of livable habitat may die out. Pests, diseases, and invasive species may also colonize new areas, further challenging forest health and biodiversity.
- **Ecosystems.** Rising average temperatures would subject plants and animals to greater thermal stress, causing some species to adapt or shift their ranges, while others may face extinction. Invasive species may also shift their ranges, threatening native species. Changing temperatures would also alter the timing of plant flowering and insect emergence, damaging species' ability to reproduce. Changing precipitation patterns would impact aquatic and riparian ecosystems by reducing snowpack, stream flow, and groundwater, while increasing the frequency of droughts, floods, and wildfires. As sea levels rise, some coastal habitats may be permanently flooded or eroded, and saltwater intrusion into freshwater resources may threaten terrestrial species. Changes in ocean circulation and temperature, ocean acidification, and increased runoff and sedimentation would threaten pelagic species. In sum, continued global warming would alter natural ecosystems and threaten California's biological diversity.

Global, National, and State Contributions to Greenhouse Gas Emissions

Table 3.4-1, Comparison of Worldwide Greenhouse Gas Emissions, compares the magnitude of GHG emissions on the global, national and State scales. It shows the relative estimated quantities of GHG emissions from worldwide to California. CO₂e emissions are commonly expressed as metric tons of carbon dioxide equivalent (MTCO₂e). Larger quantities of emissions, such as on the State or world scale, are expressed in million MTCO₂e (MMTCO₂e). Metric tons may also be stated as "tonnes".

**TABLE 3.4-1
COMPARISON OF WORLDWIDE GHG EMISSIONS**

Area and Data Year	Annual GHG Emissions (MMTCO₂e)
World (2018)	47,552
United States (2018)	6,024
California (2018)	425
SCAG region (2020)	216
Pasadena (2009)	2.04
GHG: greenhouse gas; MMTCO ₂ e: million metric tons of carbon dioxide equivalent Source: Climate Watch 2021; CARB 2021a; SCAG 2020a; Pasadena 2018.	

As shown, the U.S. contributes approximately 12.7 percent of worldwide GHG emissions per year and California contributes approximately 0.9 percent. The SCAG region contributes approximately 51 percent of California's GHG emissions. Based on the data in Table 3.4-1, the City of Pasadena's GHG emissions are approximately 0.9 percent of the SCAG region's emissions; however, it is noted that there is an 11-year difference in the dates of the data.

The most common GHG is CO₂, which constitutes approximately 80 and 83 percent of all GHG emissions in the U.S. and California, respectively. The primary contributors to California GHG emissions are (1) transportation; (2) industrial uses; and (3) electric power production from both in-State and out-of-State sources. In the City's 2009 GHG emissions inventory, the transportation sector accounted for the largest portion of emissions, contributing approximately 52 percent of the community-wide total. Energy use was the second largest producer of emissions, contributing approximately 47 percent of the community-wide total (Pasadena 2018).

Project Site Emissions

GHGs are emitted from current operations at the Project site. Existing Project site GHG emissions were estimated using the California Emissions Estimator Model (CalEEMod) version 2020.4.0 computer program (CAPCOA 2021), as discussed further under Section 3.4.4, Methodology. Existing emissions were calculated for the four businesses that would be removed from the site (i.e., 491/495, 499/503, 541, and 577 South Arroyo Parkway) and replaced by new uses associated with the Project or Project with Building A Residential/Commercial. In other words, the existing emissions do not include emissions from the buildings to be retained with implementation of the Project (i.e., 465, 501, and 523 South Arroyo Parkway). Existing vehicle trip data, an estimated 2,454 daily trips, are derived from the Transportation Impact Analysis (TIA) – Outside of CEQA Analysis prepared for the Project (Pasadena DOT 2021a). The results of the analysis are shown in Table 3.4-2, Estimated Annual GHG Emissions for Uses to be Removed. As shown in this table, the majority of existing emissions are from vehicle trips (mobile source emissions), followed by energy emissions.

**TABLE 3.4-2
ESTIMATED ANNUAL GHG EMISSIONS FOR USES TO BE REMOVED**

Source	Emissions (MTCO₂e/yr)
Area	<1
Energy	629
Mobile	796
Waste	130
Water	61
Total Operational Emissions	1,616
MTCO ₂ e/yr: metric tons of carbon dioxide equivalent per year	
Notes:	
<ul style="list-style-type: none"> Totals may not add due to rounding variances. Detailed calculations in Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data. 	

3.4.2 RELEVANT PROGRAMS AND REGULATIONS

Federal

U.S. Environmental Protection Agency Findings

On December 7, 2009, the U.S. Environmental Protection Agency (USEPA) Administrator signed two distinct findings regarding GHGs under Section 202(a) of the Clean Air Act (CAA).

- **Endangerment Finding:** The Administrator finds that the current and projected concentrations of the six key well-mixed GHGs—carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆)—in the atmosphere threaten the public health and welfare of current and future generations.
- **Cause or Contribute Finding:** The Administrator finds that the combined emissions of these well-mixed GHGs from new motor vehicles and new motor vehicle engines contribute to the GHG pollution which threatens public health and welfare.

The findings do not themselves impose any requirements on industry or other entities. However, this action was a prerequisite implementing GHG emissions standards for vehicles (USEPA 2021a). A light-duty vehicle is defined any motor vehicle with a gross vehicle weight of 6,000 pounds or less (CARB 2021b).

Light-Duty Vehicle Greenhouse Gas Emissions Standards and Corporate Average Fuel Economy Standards

The USEPA and the Department of Transportation's National Highway Traffic Safety Administration (NHTSA) have been working together on developing a National Program of regulations to reduce GHG emissions and to improve the fuel economy of light-duty vehicles. On April 1, 2010, the USEPA and NHTSA announced a joint Final Rulemaking establishing standards for 2012 through 2016 model year vehicles. On October 15, 2012, the agencies issued a Final Rulemaking with standards for model years 2017 through 2025. The rules require these vehicles to meet an estimated combined average emissions level of 295 grams of CO₂ per mile by 2012, decreasing to 250 grams per mile by 2016, and finally to an average industry fleet-wide level of 163 grams per mile in model year 2025. The 2016 standard is equivalent to 35.5 miles per gallon (mpg) and the 2025 standard is equivalent to 54.5 mpg if the levels were achieved solely through improvements in fuel efficiency. The agencies expect, however, that a portion of these improvements will occur due to air conditioning technology improvements (i.e., they will leak less) and due to the use of alternative refrigerants, which would not contribute to fuel economy. These standards would cut GHG emissions by an estimated 2 billion metric tons and 4 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2017–2025). The combined USEPA GHG standards and NHTSA Corporate Average Fuel Economy (CAFE) standards resolve previously conflicting requirements under both federal programs and the standards of the State of California and other States that have adopted the California standards (USEPA and NHTSA 2012).

On September 19, 2019, NHTSA and the USEPA issued a final action entitled the "One National Program Rule" to enable the federal government to provide nationwide uniform fuel economy and GHG emission standards for automobile and light duty trucks. This action finalizes critical parts of the Safer, Affordable, Fuel-Efficient (SAFE) Vehicles Rule that was first proposed in August 2018. In this proposal, the agencies proposed new and amended GHG and Corporate Average Fuel Economy (CAFE) standards for model year 2021 to 2026 light duty vehicles (USEPA and NHTSA 2019).

In this action, USEPA withdrew the Clean Air Act waiver that had been granted to the State of California in January 2013 for the State's Advanced Clean Car program with respect to GHG and Zero Emission Vehicle (ZEV) elements. In November 2019, California, 21 other states, the District of Columbia, and four California cities filed a petition for EPA to reconsider SAFE-1. A petition for reconsideration was also filed by several environmental groups.

On April 28, 2021, USEPA published a Notice of Reconsideration: California State Motor Vehicle Pollution Control Standards; Advanced Clean Car Program; Reconsideration of a Previous Withdrawal of a Waiver of Preemption; Opportunity for Public Hearing and Public Comment. The public comment period closed on July 6, 2021 (USEPA 2021b).

State

Assembly Bill 1493 (Mobile Source Reductions)

Assembly Bill (AB) 1493, adopted September 2002, also known as Pavley I, requires the development and adoption of regulations to achieve the maximum feasible reduction of GHGs emitted by noncommercial passenger vehicles, light-duty trucks, and other vehicles used primarily for personal transportation in the State. The emission standards have become increasingly more stringent through the 2016 model year. California is also committed to further strengthening these standards beginning in 2017 to obtain a 45 percent GHG reduction from 2020 model year vehicles (CARB 2021c). Regulations to make California emissions standards for model year 2017 and beyond consistent with federal standards were adopted in 2012 and are discussed further below.

CARB's Advanced Clean Cars Program

In January 2012, CARB approved the Advanced Clean Cars Program, an emissions-control program for model year 2017 through 2025. The program combines the control of smog, soot and GHGs with requirements for greater numbers of zero-emission vehicles. By 2025, when the rules will be fully implemented, the new automobiles will emit 34 percent fewer global warming gases and 75 percent fewer smog-forming emissions. The program also requires car manufacturers to offer for sale an increasing number of zero-emission vehicles (ZEVs) each year, including battery electric, fuel cell, and plug-in hybrid electric vehicles. In March 2017, CARB adopted GHG standards for 2022 through 2025 model years and directed staff to begin rule development for 2026 and subsequent model years (CARB 2021d).

Executive Order S-3-05 (Statewide GHG Targets)

On June 1, 2005, Governor Arnold Schwarzenegger signed EO S-3-05, which proclaims that California is vulnerable to the impacts of climate change. It declares that increased temperatures could reduce snowpack in the Sierra Nevada Mountains; could further exacerbate California's air quality problems; and could potentially cause a rise in sea levels. In an effort to avoid or reduce the impacts of climate change, EO S-3-05 calls for a reduction in GHG emissions to the year 2000 level by 2010, to year 1990 levels by 2020, and to 80 percent below 1990 levels by 2050.

However, executive orders do not have the same status as a law, because in California's constitutional system, it is the Legislature, not the Governor, who is entrusted with the role of making statewide laws. The Legislature declined to include the EO's 2050 goal in AB 32 (discussed below), and again declined to use the EO's 2050 goal in adopting Senate Bill (SB) 375 (discussed below), nor has it incorporated it in any implementing legislation or applicable plans. Additionally, although CARB has the requisite authority to adopt whatever regulations are necessary beyond the AB 32 horizon year 2020 to meet the target set forth in S-3-05, the agency has not done so. Since the Legislature has never enacted EO S-3-05's 2050 target, and no expert agency has interpreted CEQA to require it, the 2050 target has only the force and effect of an

executive order issued by a former Governor. If the Legislature has delegated any of its authority to define CEQA's requirements, it delegated that authority to the Governor's Office of Planning and Research (OPR).

Senate Bill 97 and the State CEQA Guidelines

Pursuant to Senate Bill (SB 97), OPR developed and CNRA adopted proposed amendments to the State CEQA Guidelines (CEQA Amendments) for the feasible mitigation of GHG emissions and their effects. The CEQA Amendments became effective on March 18, 2010.

The CEQA Amendments for Greenhouse Gas Emissions state in Section 15064.4(a) that lead agencies should "make a good faith effort, to the extent possible on scientific and factual data, to describe, calculate or estimate" GHG emissions. The CEQA Amendments note that an agency may identify emissions by either selecting a "model or methodology" to quantify the emissions or by relying on "qualitative analysis or other performance based standards" (CNRA 2009b). Section 15064.4(b) of the State CEQA Guidelines provides that the lead agency should consider the following when assessing the significance of impacts from GHG emissions on the environment (CNRA 2009b):

- The extent a project may increase or reduce GHG emissions as compared to the environmental setting.
- Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
- The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.

All of these are considered in the impact analysis presented in this section. The revisions to Appendix G, Environmental Checklist Form, of the State CEQA Guidelines, which is often used as a basis for lead agencies' selection of significance thresholds, do not prescribe specific thresholds. Rather, Appendix G asks whether the project would conflict with a plan, policy or regulation adopted to reduce GHG emissions or would generate GHG emissions that would significantly affect the environment, indicating that the determination of what is a significant effect on the environment should be left to the lead agency. Accordingly, the CEQA Amendments do not prescribe specific methodologies for performing an assessment; they do not establish specific thresholds of significance; and they do not mandate specific mitigation measures. Rather, the CEQA Amendments emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA (CNRA 2009b).

The CEQA Amendments indicate that lead agencies should consider all feasible means, supported by substantial evidence and subject to monitoring and reporting, of mitigating the significant effects of GHG emissions. As pertinent to the Project, these potential mitigation measures, set forth in Section 15126.4(c) of the State CEQA Guidelines, may include (1) measures in an existing plan or mitigation program for the reduction of GHG emissions that are required as part of the lead agency's decision; (2) reductions in GHG emissions resulting from a project through implementation of project design features; (3) off-site measures, including offsets, to mitigate a project's emissions; and (4) carbon sequestration measures (CNRA 2009b).

Among other things, the CNRA noted in its Public Notice for these changes that impacts of GHG emissions should focus on the cumulative impact on climate change. The Public Notice states (CNRA 2009a):

While the Proposed Amendments do not foreclose the possibility that a single project may result in greenhouse gas emissions with a direct impact on the environment, the evidence before [CNRA] indicates that in most cases, the impact will be cumulative. Therefore, the Proposed Amendments emphasize that the analysis of greenhouse gas emissions should center on whether a project's incremental contribution of greenhouse gas emissions is cumulatively considerable.

Thus, the CEQA Amendments continue to make clear that the significance of GHG emissions is most appropriately considered on a cumulative level.

Assembly Bill 32 (Statewide GHG Reductions)

In furtherance of the goals established in EO S-3-05, the California Legislature adopted the public policy position that global warming is “a serious threat to the economic well-being, public health, natural resources, and the environment of California” (*California Health and Safety Code*, Section 38501). The public policy statements became law with the enactment of the California Global Warming Solutions Act of 2006 (AB 32) in September 2006, after considerable study and expert testimony before the Legislature. The law instructs CARB to develop and enforce regulations for the reporting and verifying of statewide GHG emissions. AB 32 directed CARB to set a GHG emission limit based on 1990 levels, to be achieved by 2020. The bill set a timeline for adopting a scoping plan for achieving GHG reductions in a technologically and economically feasible manner. The scoping plan is described further below.

Executive Order B-30-15 (Statewide Interim GHG Targets)

California EO B-30-15 (2015) set an “interim” statewide emission target to reduce GHG emissions to 40 percent below 1990 levels by 2030 and directed State agencies with jurisdiction over GHG emissions to implement measures pursuant to statutory authority to achieve this 2030 target and the 2050 target of 80 percent below 1990 levels. Specifically, the Executive Order directed CARB to update the Scoping Plan to express this 2030 target in metric tons.

Senate Bill 32/Assembly Bill 197

SB 32, signed September 8, 2016, implements a goal of EO B-30-15. Under SB 32, in “adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions,” CARB must ensure that statewide GHG emissions are reduced to 40 percent below the 1990 level by 2030. SB 32’s findings state that CARB will “achieve the state’s more stringent GHG emission reductions in a manner that benefits the state’s most disadvantaged communities and is transparent and accountable to the public and the Legislature.” AB 197, a companion to SB 32, adds two members to the CARB and requires measures to increase transparency about GHG emissions, climate policies, and GHG reduction actions.

California Air Resources Board Scoping Plan

On December 11, 2008, CARB adopted the Scoping Plan to achieve the goals of AB 32. The Scoping Plan establishes an overall framework for the measures that will be adopted to reduce California’s GHG emissions. CARB determined that achieving the 1990 emission level would require a reduction of GHG emissions of approximately 28.5 percent below what would otherwise occur in 2020 in the absence of new laws and regulations (referred to as “business as usual”). The Scoping Plan evaluates opportunities for sector-specific reductions; integrates all CARB and

Climate Action Team early actions and additional GHG reduction measures by both entities; identifies additional measures to be pursued as regulations; and outlines the role of a cap-and-trade program.

First Update to the Climate Change Scoping Plan

CARB approved the final “First Update to the Climate Change Scoping Plan” on May 22, 2014. The first update describes California’s progress towards AB 32 goals, stating that “California is on track to meet the near-term 2020 GHG limit and is well positioned to maintain and continue reductions beyond 2020 as required by AB 32”. Specifically, “if California realizes the expected benefits of existing policy goals (such as 12,000 megawatts [MW] of renewable distributed generation by 2020, net zero energy homes after 2020, existing building retrofits under AB 758, and others) it could reduce emissions by 2030 to levels squarely in line with those needed in the developed world and to stay on track to reduce emissions to 80 percent below 1990 levels by 2050” (CARB 2014). Reducing the “business as usual” or NAT condition of 509 MMTCO₂e to the 1990 emissions level of 431 MMTCO₂e will require a reduction of 78 MMTCO₂e, or approximately a 15.3 percent reduction (compared to a 28.5 percent reduction as set forth in the original Scoping Plan but not directly comparable because of the change in methodology).

Second Update to the Climate Change Scoping Plan

CARB prepared a second update to the Scoping Plan to reflect the 2030 target established in EO B-30-15 and in SB 32 (discussed above). The Final Proposed 2017 Scoping Plan was published in November 2017, and the third public Board Meeting for the Proposed Scoping Plan was held on December 14, 2017, where the Final Proposed 2017 Climate Change Scoping Plan (Second Update to the Climate Change Scoping Plan, or 2017 Scoping Plan Update) was adopted.

The 2017 Scoping Plan Update includes new statutory GHG reduction requirements that were not included in the current Scoping Plan, including SB 32 (discussed below) which sets a 40 percent GHG reduction target below 1990 GHG levels to be achieved by 2030, SB 350 (which sets a 50 percent reduction in GHG emissions from electricity generation and other energy uses in existing structures, and a 50 percent renewable energy portfolio requirement), and SB 650 (which establishes priority GHG reduction targets for designated types of GHGs such as methane). The key elements of the 2017 Scoping Plan Update proposal call for further GHG reductions from the refinery sector specifically, further reductions from other stationary sources through either a renewed and expanded cap and trade or carbon tax program, further reductions from other sectors such as transportation technologies and services, water and solid waste conservation and management, and land uses in both open space and urban areas (CARB 2017).

2022 Scoping Plan Update

The 2022 Scoping Plan Update will assess progress towards achieving the SB 32 2030 target and lay out a path to achieve carbon neutrality by mid-century. The first public workshops for the 2022 Scoping Plan Update were held in June 2021 (CARB 2021e).

Senate Bill 375 (Land Use Planning)

Signed September 30, 2008, SB 375 provides for a new planning process to coordinate land use planning and regional transportation plans (RTPs) and funding priorities in order to help California meet the GHG reduction goals established in AB 32. SB 375 requires Metropolitan Planning Organizations, including the Southern California Association of Governments (SCAG), to incorporate a Sustainable Communities Strategy (SCS) in their regional transportation plans that will achieve GHG emission reduction targets set by CARB. There are two mutually important facets to SB 375: reducing vehicle miles traveled (VMT) and encouraging more compact,

complete, and efficient communities for the future. SB 375 also includes provisions for exemptions from or streamlined CEQA review for projects classified as transit priority projects (SCAG 2016). See additional discussion of the SCAG plan under “Regional” regulations below.

Senate Bills 1078, 107, and SBX1-2 (Renewable Portfolio Standards)

Established in 2002 under SB 1078, accelerated in 2006 under SB 107, and again in 2011 under SBX1-2, California’s Renewable Portfolio Standard (RPS) requires retail sellers of electric services to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020. Initially, the RPS provisions applied to investor-owned utilities, community choice aggregators, and electric service providers. SBX1-2 added, for the first time, publicly owned utilities to the entities subject to RPS.

Senate Bill 350

SB 350, signed October 7, 2015, is the *Clean Energy and Pollution Reduction Act of 2015*. SB 350 is the implementation of some of the goals of EO B-30-15. The objectives of SB 350 are:

- (1) To increase from 33 percent to 50 percent, the procurement of our electricity from renewable sources.
- (2) To double the energy efficiency savings in electricity and natural gas final end uses of retail customers through energy efficiency and conservation (California Energy Commission [CEC] 2021a).

Senate Bill 100

On September 10, 2018, Governor Brown signed SB 100, the 100 Percent Clean Energy Act of 2018. SB 100 requires renewable energy and zero-carbon resources to supply 100 percent of electric retail sales to end-use customers and 100 percent of electricity procured to serve state agencies by December 31, 2045. This policy requires the transition to zero-carbon electric systems that do not cause contributions to increase of GHG emissions elsewhere in the western electricity grid (CEC 2021b). SB 100 also creates new standards for the RPS goals established by SB 350 in 2015. Specifically, the bill increases required energy from renewable sources for both investor-owned utilities and publicly owned utilities from 50 percent to 60 percent by 2030.

Executive Order B-55-18

On September 10, 2018, Governor Brown also signed California EO B-55-18, which sets a new statewide goal of carbon neutrality as soon as possible, and no later than 2045, and achieve net negative emissions thereafter. EO B-55-18 was added to the existing Statewide targets of reducing GHG emissions, including the targets previously established by Governor Brown of reducing emissions to 40 percent below 1990 levels by 2030 (EO B-30-15 and SB 32), and by Governor Schwarzenegger of reducing emissions to 80 percent below 1990 levels by 2040 (EO S-3-05).

Title 24 Energy Efficiency Standards

The Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24, Part 6 of the *California Code of Regulations* [CCR]) were established in 1978 in response to a legislative mandate to reduce California’s energy consumption. The currently applicable standards are the 2019 Standards, effective January 1, 2020. The 2019 standards focus on four key areas: smart residential photovoltaic systems, updated thermal envelope standards (preventing heat transfer from the interior to exterior and vice versa), residential and nonresidential ventilation

requirements, and nonresidential lighting requirements. The ventilation measures improve indoor air quality, protecting homeowners from air pollution originating from outdoor and indoor sources (CEC 2021c). The requirements of the energy efficiency standards result in the reduction of natural gas and electricity consumption. Both natural gas and electricity use produce GHG emissions. The goal of the standards is to reduce energy use in new homes by more than 50 percent. The 2019 standards require that there is sufficient on-site electricity generation to meet the annual electricity usage for low rise residential buildings. A 30 percent reduction in energy uses is anticipated for nonresidential uses. The requirement for low-rise residential buildings to develop onsite electricity generation is consistent with the goal to develop renewable sources of energy.

The CEC adopted the 2008 changes to the Building Energy Efficiency Standards in order to (1) “Provide California with an adequate, reasonably-priced, and environmentally-sound supply of energy” and (2) “Respond to Assembly Bill 32, the Global Warming Solutions Act of 2006, which mandates that California must reduce its GHG emissions to 1990 levels by 2020”. In 2013, the CEC, in coordination with the CPUC, commenced a process to update the Title 24 energy efficiency standards and, the 2016 Title 24 Energy Efficiency Standards establish building design and construction requirements that move closer to achieving California’s zero net energy (ZNE) goals. The requirements of the energy efficiency standards result in the reduction of natural gas and electricity consumption. Both natural gas use and electricity generation result in GHG emissions.

California Green Building Standards Code

The 2019 California Green Building Standards Code (24 CCR, Part 11), also known as the CALGreen code, contains mandatory requirements and voluntary measures for new residential and nonresidential buildings (including buildings for retail, office, public schools and hospitals) throughout California). The development of the CALGreen Code is intended to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the following construction practices: (1) planning and design; (2) energy efficiency; (3) water efficiency and conservation; (4) material conservation and resource efficiency; and (5) environmental quality. In short, the code is established to reduce construction waste; make buildings more efficient in the use of materials and energy; and reduce environmental impact during and after construction.

California Air Pollution Control Officers Association

The California Air Pollution Control Officers Association (CAPCOA) is the association of Air Pollution Control Officers representing all 35 local air quality agencies throughout California. CAPCOA is not a regulatory body but has been an active organization in providing guidance in addressing the CEQA significance of GHG emissions and climate change as well as other air quality issues. The August 2010 CAPCOA publication entitled *Quantifying Greenhouse Gas Mitigation Measures, A Resource for Local Government to Assess Emission Reductions from Greenhouse Gas Mitigation Measures* provides guidance on the quantification of project-level mitigation of GHGs associated with land use, transportation, energy use, and other related project areas. The guidance includes detailed procedures about the approaches to assessing and calculating the GHG emissions reductions associated with project design features and mitigation measures (CAPCOA 2010). This publication’s methods are used in the CalEEMod computer model that is used to calculate GHG emissions.

Regional

South Coast Air Quality Management District

The City lies within the boundaries of the South Coast Air Quality Management District (SCAQMD). SCAQMD is the regulatory agency responsible for improving air quality for large areas of Los Angeles, Orange County, Riverside and San Bernardino counties, including the Coachella Valley. The region is home to more than 17 million people—about half the population of the entire state of California. The mission of the SCAQMD is “To clean the air and protect the health of all residents in the South Coast Air District through practical and innovative strategies” (SCAQMD 2021).

Southern California Association of Governments

As previously discussed, SB 375 specifically required Metropolitan Planning Organizations (MPOs), including SCAG, to incorporate an SCS in their RTPs that will achieve GHG emission reduction targets set by CARB. SCAG’s current SCS is included in its 2020–2045 RTP/SCS *Connect SoCal* (SCAG 2020b).² The 2020–2045 RTP/SCS combines the need for mobility with a “sustainable future” through a reduction in the number of emissions produced from transportation sources. The document was adopted by SCAG on September 3, 2020. The 2020–2045 RTP/SCS is expected to reduce per capita transportation emissions by 19 percent by 2035 relative to 2005.

City

The City of Pasadena Climate Action Plan (CAP) was adopted on March 5, 2018 (Pasadena 2018). The CAP states, “Climate change presents Pasadena with both complex challenges and tremendous opportunities. The City of Pasadena is committed to creating a vision for a more sustainable community. By making choices to reduce its GHG emissions and preparing for the changes that are underway, Pasadena can reduce the risks from climate change.”

With respect to CEQA evaluation of new development projects, the CAP states,

The CAP establishes a framework for evaluating and mitigating GHG emissions by providing an emissions inventory, emissions reduction goals, and strategies for reducing emissions. Part of these emissions reductions will need to be achieved through better environmental and sustainable performance by new development projects.

To determine whether new development projects comply with the CAP, and to ensure that projects are contributing to GHG reductions, City staff will use the CAP Consistency Checklist (Checklist) for discretionary projects subject to CEQA.

New development projects that meet the requirements of the Checklist, including completion of one of the three options (Options A, B, or C) listed below, will be deemed to be consistent with the CAP and will be found to have a less than significant contribution to cumulative GHG emissions. Projects that do not meet the requirements in the Checklist will be deemed to be inconsistent with the CAP and must prepare a project specific analysis of GHG emissions (Pasadena 2018).

² The 2020-2045 RTP/SCS succeeds the 2016-2040 RTP/SCS.

The following Options are provided by the City for new development projects to establish consistency with the CAP, as included in Appendix D, Climate Action Plan Consistency Checklist, of the City's CAP (Pasadena 2017).

- Option A, Sustainable Development Actions, requires that the Project incorporate sustainable development actions, which would become conditions of the entitlement for approval of the project, intended to ensure that the project contributes its fair share to the City's cumulative GHG reduction goals.
- Option B, GHG Efficiency, requires that the Project demonstrate consistency with the applicable Pasadena's per service population GHG efficiency threshold.
- Option C, Net Zero GHG Emissions, requires that the Project achieve Net Zero GHG Emissions, which requires quantifying the project's GHG emission levels and demonstrate that the project would not result in a net increase in GHG emissions.

The Checklist and Option B are discussed further below, under Section 3.4.3, Thresholds of Significance, and in the impact findings, under Section 3.4.5, Environmental Impacts.

3.4.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse greenhouse gas emissions impact if it would:

- Threshold 3.4a:** Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; and/or
- Threshold 3.4b:** Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

The CAP Checklist, as described above, is a tool for new development projects to demonstrate consistency with the CAP, a qualified GHG reduction plan in accordance with CEQA Guidelines Section 15183.5. The City's CAP Option B GHG efficiency metric is used for this analysis. Per the City's CAP, this method recognizes that highly efficient projects (e.g., compact and mixed-use development) with relatively high mass emissions may nevertheless meet the local and State GHG reduction goals/targets. Using the demographic projections developed for the CAP, the City has developed service person efficiency thresholds for the years of 2020, 2025, 2030 and 2035 which are consistent with Pasadena's GHG emission goals included in the CAP and the State targets it is designed to achieve (AB 32, SB 32, and substantial progress towards EO S-3-05). Table 3.4-3, City of Pasadena Climate Action Plan Efficiency Thresholds, provides the thresholds for GHG efficiency for the first year that the Project would be in operation.

**TABLE 3.4-3
CITY OF PASADENA CLIMATE ACTION PLAN
EFFICIENCY THRESHOLDS**

Project's First Operational Year	Threshold
2017 – 2020	5.63 MTCO ₂ e/SP
2021 – 2025	4.56 MTCO ₂ e/SP
2026 – 2030	3.57 MTCO ₂ e/SP
2031 – 2035	2.73 MTCO ₂ e/SP
MTCO ₂ e: metric tons of carbon dioxide equivalent; SP: service person. Source: Pasadena 2018.	

Under Option B, based on the Project's and Project with Building A Residential/Commercial's first operational year of 2026, the City's GHG efficiency metric of 3.57 MTCO₂e per service person (MTCO₂e/SP) would be used as the GHG efficiency threshold. Per the CAP, with Option B, projects must be able to demonstrate a GHG efficiency which is less than or equal to the threshold listed below for the projects' first operational year to be considered consistent with the Pasadena CAP and State targets it is designed to achieve.

3.4.4 METHODOLOGY

In June 2021, the SCAQMD in conjunction with the CAPCOA and other California air districts, released the latest version of the California Emissions Estimator Model™ (CalEEMod™), version 2020.4.0 (CAPCOA 2021). The purpose of this model is to calculate construction-source and operational-source air pollutants, including GHG emissions, from direct and indirect sources; and quantify applicable GHG reductions achieved from mitigation measures. CalEEMod version 2020.4.0 was used to estimate the GHG emissions associated with the existing land uses to be removed and the proposed land uses for the Project and Project with Building A Residential/Commercial. The inputs and data for the modeling are described above for existing uses; below for proposed uses; and in Appendix B of this Draft EIR.

3.4.5 ENVIRONMENTAL IMPACTS

Threshold 3.4a: Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

As described above, under Section 3.4.3, Thresholds of Significance, Option B would be applied to this analysis to assess Project and Project with Building A Residential/Commercial consistency with the CAP to determine whether either project would generate GHG emissions that may have a significant impact on the environment.

Project

Construction of the Project would begin in 2023, occur over a period of approximately 34 months, and would be completed in a single phase. Construction emissions for the Project were calculated using CalEEMod 2020.4.0, as described above. Project construction is planned to occur from March 2023 to January 2026 with a six-day work week. The CalEEMod input for construction emissions was based on the Project's construction assumptions and default assumptions derived from CalEEMod. Demolition would include an estimated 45,912 square feet (sf) of buildings and the export of approximately 300 14-cubic yard (cy) truckloads of debris. Grading for the subterranean garage and other areas for improvement would require the export of an estimated 184,013 cy of soil, requiring approximately 13,200 truckloads for export. The principal source of construction-related GHG emissions would be from internal combustion engines of construction

equipment, on-road construction vehicles, and workers' commuting vehicles. The estimated construction GHG emissions for the proposed Project would be 3,691 MTCO₂e, as shown in Table 3.4-4, Estimated GHG Emissions from Construction of the Project.

**TABLE 3.4-4
ESTIMATED GHG EMISSIONS FROM
CONSTRUCTION OF THE PROJECT**

Year	Emissions (MTCO₂e)
2023	986
2024	1,429
2025	1,267
2026	9
Total	3,691
MTCO ₂ e: metric tons of carbon dioxide equivalent	
Notes:	
<ul style="list-style-type: none"> Totals may not add due to rounding variances. Detailed calculations in Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data. 	

Operational emissions are comprised of area, energy, mobile, stationary source, waste, and water emissions. Operational GHG emissions would come primarily from energy; other sources include mobile trips; water consumption; natural gas for space and water heating; and gasoline-powered landscaping and maintenance equipment. Area source emissions are based on CalEEMod assumptions for the specific land uses and size. Energy emissions are based on the Applicant's estimate of electrical and natural gas use and default CalEEMod values. Mobile source emissions are based on the estimated Project-related trip generation forecast of 6,366 daily trips, as contained in the Project TIA – Outside of CEQA Analysis (Pasadena DOT 2021a) and incorporate the vehicle miles traveled (VMT) assumptions for the Project's trips (Pasadena DOT 2020). The emissions analyses for the Project also includes the anticipated electrical demand, natural gas demand, and mobile trips for the conversion of the two historic buildings to commercial uses, which are assumed to be restaurant for the purposes of this Draft EIR. The Project's long-term gross and net operational emissions are summarized below in Table 3.4-5, Estimated Annual Net GHG Emissions from Operation of the Project. The net operational emissions account for the emissions from the land uses to be demolished and/or replaced with the proposed Project uses on the site plus the land uses to be retained. As shown in Table 3.4-5, the Project's estimated net operational emissions would be 3,257 MTCO₂e/yr.

Notes:	
<ul style="list-style-type: none"> Totals may not add due to rounding variances. Detailed calculations in Appendix B, Air Quality and Greenhouse Gas Emissions Modeling Data. 	

Table 3.4-6, GHG Efficiency Metric for the Project, shows the Project's GHG efficiency using Option B from the City's CAP. According to Section 2.0, Project Description, the Project would add 959 service persons to the Project site (222 residents and 737 full-time employees). Based on the service population of 959 SP for the Project, described above, the GHG efficiency metric would be 3.52 MTCO₂e/SP, which does not exceed the City's CAP GHG efficiency threshold of 3.57 MTCO₂e/SP for 2026. As such, the Project has demonstrated consistency with the City's CAP, and the Project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. There would be a less than significant impact, and no mitigation is required.

**TABLE 3.4-6

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial construction is also planned to occur from March 2023 to January 2026 with a six-day work week. All construction assumptions for the Project with Building A Residential/Commercial would be consistent with the Project, except that grading for the subterranean garage and other areas for improvement would require 36,802 cy less of soil export than the Project (for a total of 147,211 cy of soil export) and 2,685 less truckloads than the Project (for a total of 10,515 truckloads for export). The principal source of construction-related GHG emissions would be from internal combustion engines of construction equipment, on-road construction vehicles, and workers' commuting vehicles. The estimated construction GHG emissions for the Project with Building A Residential/Commercial would be 3,637 MTCO₂e, as shown in Table 3.4-7, Estimated GHG Emissions from Construction of the Project with Building A Residential/Commercial.

**TABLE 3.4-7

As discussed above, operational emissions are comprised of area, energy, mobile, stationary source, waste, and water emissions. Operational GHG emissions for the Project with Building A Residential/Commercial would come primarily from energy, like the Project. Other sources include mobile trips; water consumption; natural gas for space and water heating; and gasoline-powered landscaping and maintenance equipment. Energy emissions are based on the Applicant's estimate of electrical and natural gas use and default CalEEMod values. Mobile source emissions are based on estimated Project with Building A Residential/Commercial-related trip generation forecast of 2,494 daily trips, as contained in the TIA – Outside of CEQA Analysis prepared for the Project with Building A Residential/Commercial (Pasadena DOT 2021b) and incorporate the VMT assumptions for the Project with Building A Residential/Commercial's trips (Pasadena DOT 2021c). The emissions analyses also include the anticipated electrical demand, natural gas demand, and mobile trips for the conversion of the two historic buildings to commercial uses, which are assumed to be restaurant for the purposes of this Draft EIR. The Project with Building A Residential/Commercial's long-term gross and net operational emissions are summarized below in Table 3.4-8, Estimated Annual Net GHG Emissions from Operation of the Project with Building A Residential/Commercial. The net operational emissions account for the emissions from the land uses to be demolished and replaced with the proposed Project uses on the site. As shown in Table 3.4-8, the Project's estimated net operational emissions would be 1,618 MTCO₂e/yr.

Table 3.4-9, GHG Efficiency Metric for the Project with Building A Residential/Commercial, shows the Project with Building A Residential/Commercial's GHG efficiency using Option B from the City's CAP. According to Section 2.0, Project Description, the Project with Building A Residential/Commercial would add 810 service persons to the Project site (715 residents and 95 full-time employees). Based on the service population of 810 SP, the GHG efficiency metric would be 2.15 MTCO₂e/SP, which does not exceed the City's CAP GHG efficiency threshold of 3.57 MTCO₂e/SP for 2026. As such, the Project with Building A Residential/Commercial has demonstrated consistency with the City's CAP, and would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. There would be a less than significant impact, and no mitigation is required.

Threshold 3.4b: Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Project

A lead agency may assess the significance of GHG emissions by determining a project's consistency with a local GHG reduction plan or CAP that qualifies under Section 15183.5 of the State CEQA Guidelines. A CAP is designed to ensure that development within a jurisdiction occurs in a manner that supports the goals of AB 32. The City adopted its CAP on March 5, 2018. As described above, the CAP is a long-range planning document that guides the City towards long-term emissions reductions in accordance with State of California goals. The CAP analyzes emission sources within the City, forecasts future emissions, and establishes emission reduction targets. This CAP is the City's roadmap to achieving the City's 2030 target and State-mandated goal of 40 percent below 1990 levels by 2030, with the ultimate goal of achieving carbon neutrality by 2045. Thus, the CAP is consistent with State plans, policies, and regulations, AB 32, the AB 32 Scoping Plan and updates, EO B-30-15, SB 32, and EO B-55-18. However, to provide further substantiation that the Project would be consistent with State plans, policies, and regulations, Project consistency with the SCAG 2020–2045 RTP/SCS *Connect SoCal*, CARB's California's Climate Change Scoping Plan (Scoping Plan), and Statewide GHG reduction goals for 2030 or 2050 identified in EO S-3-05 and SB 32, is discussed below.

SCAG's *Connect SoCal* plan is centered on maintaining and better managing the transportation network for moving people and goods, while expanding mobility choices by locating housing, jobs, and transit closer together, and increasing investment in transit and complete streets. *Connect SoCal*'s "Core Vision" includes the following categories: Sustainable Development, System Preservation and Resilience, Demand and System Management, Transit Backbone, Complete Streets, and Goods Movement. The Core Visions detail strategies to implement the goals of *Connect SoCal*. These strategies include, but are not limited to, the following: focus growth near destinations and mobility options; promote diverse housing choices; leverage technology innovations; support implementation of sustainability policies; and promote a green region (SCAG

2020b). The Project would not conflict with these strategies, as it would provide employment opportunities and residential uses on-site and proximate to other related uses. Furthermore, as described in Section 2.0, Project Description, of this Draft EIR, the Project is an infill and mixed-use development project, and is within a Transit Priority Area (TPA) and High-Quality Transit Area HQTa, as defined by the SCAG. Therefore, the Project would provide access for visitors, employees, and residents at the Project site to utilize mass-transit options to travel to and from the site. The Project would promote diverse housing choices by providing assisted living and independent living units on-site, along with medical uses. This would reduce reliance on single-occupancy vehicles. The infill redevelopment component of the Project would accommodate new growth, which would increase connectivity in the existing City neighborhood, especially considering that the Project site is currently underutilized with surface parking and no housing onsite. Additionally, the Project would comply with all pertinent regulations to reduce GHG emissions, including Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings and the California Green Building Standards Code, which would involve the development of electric vehicle charging infrastructure and bicycle storage and parking. This would assist the City in the transition from fossil fuel-based transportation. Therefore, the Project would not conflict with the *Connect SoCal* plan.

The CARB adopted the Scoping Plan to implement AB 32. The Scoping Plan was adopted in 2008 and updated in 2014 and 2017 and provides a framework for actions to reduce the State's GHG emissions. Statewide plans and regulations, including, but not limited to, light duty vehicle GHG emissions standards, Advanced Clean Car standards, Low Carbon Fuel Standard, Renewable Portfolio Standards, Energy Efficiency Standards for Residential and Nonresidential Buildings, and California Green Building Standards, are being implemented. The Scoping Plan requires CARB and other State agencies to adopt regulations and other initiatives to reduce GHGs in the State. The Scoping Plan is not directly applicable to specific projects, nor is it intended to be used for project-level evaluations. The policies and regulations adopted for the purposes of supporting the Scoping Plan documents (i.e., AB 32, SB 32, EO S-3-05) specify reduction targets for the State. For example, EO S-3-05 establishes the following goals: GHG emissions should be reduced to 2000 levels by 2010, to 1990 levels by 2020, and to 80 percent below 1990 levels by 2050. The 2017 Scoping Plan focuses on GHG reduction targets for 2030, as specified in EO B-30-15 and now SB 32, and the path to meet 2050 GHG emissions goals. At the time of preparation of this EIR, no plans, policies, or regulations that are specific to SB 32 and applicable to the Project have been adopted. The Project would not conflict with the goals of the Scoping Plan and its updates, as the Project would be consistent with the City's CAP and would not exceed the City's CAP Option B GHG threshold of 3.57 MT CO_{2e} per service persons for the operational year of 2026. Additionally, per the reasons described above, including the Project's mixed-use nature within a TPA and HQTa, and because the Project would not exceed the threshold in the City's CAP, this analysis supports the conclusion that the Project would not impede the State's trajectory toward the previously described Statewide GHG reduction goals for 2030 or 2050.

Although VMT would be higher for the Project than existing conditions, as detailed further in Section 3.9, Transportation, of this Draft EIR, the Pasadena DOT determined that the Project would not exceed any of the CEQA transportation thresholds defined in the City's TIA guidelines. With implementation of the Project, there would be a higher efficiency of trips, as mixed uses would be located proximate to each other and public transit options. For example, the Los Angeles County Metropolitan Transportation Authority (Metro) Gold (L) Line runs adjacent to the western site boundary. The nearest light rail platforms are Del Mar Station and Fillmore Station, located approximately ¼-mile due north and due south, respectively. Additional public transit service present near the site includes the California Boulevard/Arroyo Parkway Metro bus stop located in the right-of-way (ROW) on the southern site boundary, and the Bellevue Drive/Arroyo Parkway Metro bus stop located in the ROW at the northeast corner of the site. Multimodal transportation

is encouraged with the availability of bicycle racks on Metro, Pasadena Transit, and City of Los Angeles Department of Transportation (LADOT) buses and at each Metro Gold (L) Line Station. In addition, bicycles are allowed onto Metro Gold (L) Line trains. Transit facilities provided by these agencies within ¼-mile of the Project site include the following: Pasadena Transit bus routes 20, 51, 52; Metro bus routes 177, 256, 501, 686, and 687; and Metro Gold (L) Line (light rail). Public transit availability would reduce vehicle trips and associated GHG emissions when compared with locations without similar transit attributes. Additionally, the Project would provide bicycle parking to encourage reduction of fossil-fueled vehicle use by employees and the associated GHG emissions, and it would provide new facilities for charging of electric vehicles, and parking for low-emission vehicles.

As discussed above under Threshold 3.4a, the Project's GHG efficiency metric would be below the City's CAP GHG efficiency threshold of 3.57 MTCO₂e/SP. The provision of infill development at a higher density than the existing land uses near high-quality transit service supports the goals and policies of the CAP, thereby supporting AB 32, the AB 32 scoping plan and updates, EO B-30-15, SB 32, and EO B-55-18. Therefore, the Project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. The impact would be less than significant, and no mitigation is required.

Project with Building A Residential/Commercial

Consistent with the Project, the Project with Building A Residential/Commercial's GHG efficiency metric would be below the City's CAP GHG efficiency threshold of 3.57 MTCO₂e/SP, per Option B. As such, the Project with Building A Residential/Commercial has also demonstrated consistency with an applicable plan, policy, or regulation adopted for the purposes of reducing GHG emissions. However, to provide further substantiation that the Project with Building A Residential/Commercial would be consistent with State plans, policies, and regulations, Project with Building A Residential/Commercial consistency with the SCAG 2020–2045 RTP/SCS *Connect SoCal*, CARB's California's Scoping Plan, and Statewide GHG reduction goals for 2030 or 2050 identified in EO S-3-05 and SB 32, is discussed below.

Consistent with the Project, the Project with Building A Residential/Commercial would not conflict with SCAG's *Connect SoCal* plan. The Project with Building A Residential/Commercial would provide employment opportunities and residential uses on-site and proximate to other related uses. Additionally, the Project with Building A Residential/Commercial is an infill and mixed-use development project and is within a TPA and HQT, and would therefore provide access for visitors, employees, and residents at the Project site to utilize mass-transit options to travel to and from the site. The infill redevelopment component of the Project with Building A Residential/Commercial would accommodate new growth, which would increase connectivity in the existing City neighborhood, especially considering that the Project site is currently underutilized with surface parking and no housing onsite. Additionally, the Project with Building A Residential/Commercial would comply with all pertinent regulations to reduce GHG emissions, including Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings and the California Green Building Standards Code. Therefore, the Project would not conflict with the *Connect SoCal* plan. Regarding consistency with the CARB Scoping Plan, the Project with Building A Residential/Commercial would also not conflict with the goals of the Scoping Plan and its updates, as the Project with Building A Residential/Commercial would be consistent with the City's CAP and would not exceed the City's CAP Option B GHG threshold of 3.57 MTCO₂e per service persons for the operational year of 2026. Because the Project with Building A Residential/Commercial would not exceed the threshold in the City's CAP, and all of the reasons stated above, this analysis supports the conclusion that the Project with Building A Residential/Commercial would not impede the State's trajectory toward the previously described Statewide GHG reduction goals for 2030 or 2050.

Although VMT would be higher for the Project with Building A Residential/Commercial than existing conditions, the Pasadena DOT determined that the Project with Building A Residential/Commercial would not exceed any of the CEQA transportation thresholds defined in the City's TIA guidelines. Compared to the Project, the Project with Building A Residential/Commercial would have substantively lower VMT per Capita and lower VT per Capita. With implementation of the Project with Building A Residential/Commercial, there would be a higher efficiency of trips, as mixed uses would be located proximate to each other and public transit options. Additionally, the Project with Building A Residential/Commercial would also provide bicycle parking to encourage reduction of fossil-fueled vehicle use by employees and the associated GHG emissions and would provide new facilities for charging of electric vehicles and parking for low-emission vehicles. Therefore, the Project with Building A Residential/Commercial would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. This is consistent with the findings for the Project. The impact would be less than significant, and no mitigation is required.

3.4.6 CUMULATIVE IMPACTS

Project

Because the magnitude of global GHG emissions is extremely large when compared with the emissions of typical development projects, it is accepted as very unlikely that any individual development project would have GHG emissions of a magnitude to directly impact global climate change. CAPCOA's *CEQA and Climate Change Report* states, "GHG impacts are exclusively cumulative impacts; there are no non-cumulative GHG emission impacts from a climate change perspective" (CAPCOA 2008). As noted by the CNRA, "Due to the global nature of GHG emissions and their potential effects, GHG emissions will typically be addressed in a cumulative impacts analysis" (CNRA 2009b). Therefore, the analysis presented above represents the cumulative impact analysis of GHG emissions for the Project. As discussed, the Project would be below the GHG efficiency threshold and result in measures that are consistent with goals of the CAP. As such, the Project would have a less than significant impact and no mitigation is required.

Project with Building A Residential/Commercial

As stated above, the analysis presented above represents the cumulative impact analysis for the Project with Building A Residential/Commercial related to GHG emissions, and therefore, the Project with Building A Residential/Commercial would have a less than significant impact and no mitigation is required.

3.4.7 MITIGATION MEASURES

No significant impacts related to GHG emissions would occur, and no mitigation is required.

3.4.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.4.9 SUMMARY OF ANALYSIS

Project

Option B of the CAP was utilized to establish consistency with the City's CAP for the Project. Based on the service population of 959 SP for the Project, the Project's GHG efficiency metric would be 3.52 MTCO₂e/SP, which does not exceed the City's CAP GHG efficiency threshold of 3.57 MTCO₂e/SP for 2026. As such, the Project has demonstrated consistency with the City's

CAP, and the Project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. There would be a less than significant impact. As the Project would be consistent with the CAP, it would not conflict with an applicable plan, policy, or regulation adopted for the purposes of reducing GHG emissions. There would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

Option B of the CAP was utilized to establish consistency with the City's CAP for the Project with Building A Residential/Commercial. Based on the service population of 810 SP for the Project with Building A Residential/Commercial, the GHG efficiency metric would be 2.15 MTCO₂e/SP, which does not exceed the City's CAP GHG efficiency threshold of 3.57 MTCO₂e/SP for 2026. As such, the Project with Building A Residential/Commercial has demonstrated consistency with the City's CAP, and would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. There would be a less than significant impact and no mitigation is required. As the Project with Building A Residential/Commercial would be consistent with the CAP, it would not conflict with an applicable plan, policy, or regulation adopted for the purposes of reducing GHG emissions. There would be a less than significant impact, and no mitigation is required.

3.5 HAZARDS AND HAZARDOUS MATERIALS

This section analyzes potential hazards from current and/or past uses on and near the Project site and use and transport of hazardous materials during construction and operation of the Project and Project with Building A Residential/Commercial. Information in this section is derived in part from the *Phase I Environmental Site Assessment; 465, 491, 503, 525 and 577 South Arroyo Parkway, Pasadena, California 91105* (Phase I ESA), prepared by EMG and dated April 2020 (EMG 2020). The Phase I ESA is provided in Appendix E of the Draft EIR.

3.5.1 EXISTING CONDITIONS

Historic and Current Uses of the Project Site

As discussed in Section 2.0, Environmental Setting and Project Description, the Project site consists of five parcels developed with a total of nine commercial buildings with seven businesses. Table 2-1 summarizes the existing on-site land uses.

**TABLE 3.5-1
SUMMARY OF EXISTING LAND USES**

Address	Existing Use	Building Size	Disposition
465 S. Arroyo Parkway	Whole Foods Grocery	73,671 sf	To Be Retained
491/495 S. Arroyo Parkway	K9 Loft	12,676 sf	To Be Demolished
499/503 S. Arroyo Parkway	Corporate Furniture Resource	21,437 sf	To Be Demolished
501 S. Arroyo Parkway	Gold Line Pilates	2,880 sf	Historic Resource; To Be Retained
523 S. Arroyo Parkway	Town & Country Event Rentals	3,002 sf	Historic Resource; To Be Retained
541 S. Arroyo Parkway	Little Lily's Kitchen	7,493 sf	To Be Demolished
577 S. Arroyo Parkway	Guisado's Restaurant	4,306 sf	To Be Demolished
S.: South; sf: square feet			

The Phase I ESA included a chronological history of the Project site uses. Based on review of historical documentation, on-site development was identified beginning in the 1890s (EMG 2020). Table 3.5-2 summarizes the land use history of the Project site roughly by decade. These land uses had a wide variety of tenants, which are listed in the Phase I ESA provided in Appendix E.

**TABLE 3.5-2
LAND USE HISTORY**

Years	Land Use(s)
1890s	Residences and vacant lots
1900s	A factory and vacant lots
1910s	Vacant building and vacant lots
1920 to Mid-1930s	Various commercial buildings (including current 485-497, 499/511 and 501 Arroyo Parkway buildings) and vacant lots
Late 1930s to 1940s	Various commercial buildings (including current 485-497, 499/511 and 501 Arroyo Parkway buildings) and a service station on the southeast portion of the site
1950s to Early 1960s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Arroyo Parkway buildings) and a service station on the southeast portion of the Project. Of note, a “gasol pump” was noted on the 1950 Sanborn map located on the southeast corner of the 499/511 Arroyo Parkway buildings building
Mid-1960s to Late 1960s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Arroyo Parkway buildings) and a service station on the southeast portion of the site
1970s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Arroyo Parkway buildings) and a service station on the southeast portion of the site. Of note, a “gasol” pump was noted on the southeast corner of the 499/511 Arroyo Parkway buildings in the 1970 Sanborn map.
1980s to Early 1990s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Arroyo Parkway buildings) and a service station on the southeast portion of the site
Mid-1990s to Late 1990s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Arroyo Parkway buildings)
Early 2000s to Mid-2000s	Various commercial buildings (including current 485-497, 499/511, 501, 523 and 541 Arroyo Parkway buildings) and a service station on the southeast portion of the site. Of note, the service station was demolished in approximately 2002 and replaced by the current 577 Arroyo Parkway building
2008 to Current	Various commercial buildings (including current 441-483, 485-497, 499/511, 501, 523, 541 and 577 Arroyo Parkway buildings)
EMG. 2020 (April 30). <i>Phase I Environmental Site Assessment</i> ; 465, 491, 503, 525 and 577 South Arroyo Parkway, Pasadena, California 91105. Owings Bills, MD: EMG. Appendix E.	

Phase I Environmental Site Assessment

The purpose of a Phase I ESA is to identify “recognized environmental conditions” or RECs, which are defined as “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property”. Therefore, a Phase I ESA addresses the potential for site contamination due to past or present land uses and the potential for future site contamination based on current conditions on and surrounding a site.

The Phase I ESA did not identify any current RECs that warranted further site investigation (e.g., soil and/or water testing) based on current or historic uses of the site. The Phase I ESA also reviewed off-site facilities that have suspected or documented environmental concerns or RECs that could negatively impact the Project site. It was determined that no off-site facilities have the potential to impact the Project site, and there are no applicable RECs (EMG 2020).

Historical Recognized Environmental Condition

The Phase I ESA concluded that there was one Historical REC. An Historical REC is defined under American Society for Testing and Materials (ASTM) E1527–13 as a past release of any

hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restriction, AULS, institutional controls, or engineering controls), at the time the Phase I ESA is conducted. Essentially, this means a property was, or would have been, categorized as an REC at some point in the past, but has been remediated (i.e., cleaned up) to a point that it is not considered an REC at the time the Phase I ESA is prepared (in this case 2020).

As part of the Phase I ESA, it was determined that a former ARCO station at 125 East California Boulevard was located on the Project site from approximately the 1930s to 2002 and utilized at least three underground storage tanks (USTs). This facility was on the southern portion of the site, the location of the current restaurant at 577 South Arroyo Parkway (EMG 2020).

An unauthorized gasoline release impacting groundwater was first reported in 1988 and soil vapor extraction operations were initiated. In 1998, three USTs were removed from the site and various soil and groundwater investigations were subsequently conducted. The station received a “no further action” letter from the Pasadena Fire Department (PFD) dated May 24, 2000. However, the former ARCO site also received an additional clarification letter regarding this “no further action” letter stating that while the site has complied with the regulatory requirements for the site investigation/remediation, contamination remained at the site below regulatory action levels. A Declaration of Environmental Restriction allowing access for remediation was recorded on August 21, 2002, that was to terminate 90 days after No Further Action was received. Quarterly monitoring was conducted, and 761 cubic yards of soil was removed. The Los Angeles Regional Water Quality Control Board (LARWQCB) granted case closure on December 3, 2004, with no property use restrictions, activity and use limitations, institutional controls, or engineering controls. The monitoring wells were abandoned in 2005. The Phase I ESA concluded that based on the “no further action” status, the historical use of the Project as a service station represents a Historical REC (EMG 2020). As noted above, there are no controls on this portion of the site related to this past gasoline release and remediation.

Other Notable Findings

The Phase I ESA also identified other findings related to current and past land uses that were determined to be “de minimis conditions” or otherwise did not rise to the level of an REC; these are described below.

Gasoline Pump

A “gasol” pump was identified in the southeastern corner of what was then 511 South Arroyo Parkway based on Sanborn maps dated 1950 and 1970. This is no longer a street address in use; this would be in the central portion of the Project site in the area now occupied by the structure at 501 South Arroyo Parkway. “Gasol” is an abbreviated term for gasoline, which is used on Sanborn maps during this time period. A “gasol” pump generally consists of a fuel dispenser and most commonly a mechanical pump and nozzle. Based on the lack of information related to the historical presence of a “gasol” pump on-site, Ramboll US Corporation (Ramboll) conducted a Phase II Environmental Site Assessment to evaluate the subsurface conditions in the vicinity of the pump. On February 13, 2018, Spectrum Geophysics of Chatsworth conducted a geophysical survey to mark subsurface utility lines, subsurface structures, and underground obstructions in the area of concern. During the geophysical survey, two approximately two-inch-diameter metal conduits were observed extending above ground surface in the general vicinity of the former “gasol” pump (EMG 2020).

One conduit was located within an elevated concrete pad, extended approximately three inches above the ground surface and was backfilled with concrete. The second conduit extended approximately two inches above the ground surface and was open to an approximate depth of five feet below ground surface (bgs). A petroleum-like odor was noted on the measuring tape used to measure the total depth of the open conduit. Finally, a subsurface metallic anomaly, suggestive of piping, was detected approximately one-half foot bgs and extended laterally between the two aforementioned conduits. Two soil borings were also advanced to 20 feet bgs in the vicinity of the former pump. Soil samples were collected from borings at approximate depths of 5, 10, 15, and 20 feet bgs and were field screened for organic vapors with a photoionization detector (EMG 2020).

The soil samples were also submitted to a laboratory for the analysis of volatile organic compounds (VOCs), oxygenates and methyl tert butyl ether (MTBE), total petroleum hydrocarbons (TPH)-gasoline range organics (GRO), TPH-diesel range organics (DRO), TPH-oil range organics (ORO), and lead. Groundwater samples were not collected due to the typical depth to groundwater in the area (more than 140 feet bgs). No VOC, MTBE or TPH were detected in soil samples. Lead was detected at concentrations ranging from 3.8 mg/kg to 10 mg/kg; however, all concentrations were below the U.S. Environmental Protection Agency (USEPA) regional screening levels for residential and commercial/industrial use, and within typical background levels for California. Based on this information, the Phase I ESA stated the former “gasol” pump represents a de minimis condition associated with the site and no further action or investigation is recommended (EMG 2020).

Bus Facility and Fueling Station

The review of the historical data available for the site identified that a bus facility (and later a distributing company, auto repair facility, tire center and auto detailing shop) with an associated fueling station was located on the northern portion of the site, in the area of the current Whole Foods store, from approximately the 1930s through 2007. Sanborn Maps from 1950 through 1970 depicted “gas and oil tanks” in the southern portion of the Whole Foods site. Furthermore, a UST was formerly associated with 455 South Arroyo Parkway, in the area of the current Whole Foods store. No details regarding the size or contents of the UST were provided. Additionally, Absolute Automotive at 451 South Arroyo Parkway was listed on the historical auto station database which may have also been associated with this address/business. No records regarding the installation or removal of USTs were found during this assessment (EMG 2020).

As a three-story underground parking garage was constructed at the Whole Foods building, the Phase I ESA stated that it appears likely that any onsite USTs or potentially contaminated soils associated with USTs would have been excavated and removed during the construction of the parking garage. Based on the excavation of onsite soils during the redevelopment in 2008 and anticipated depth to groundwater (approximately 150 feet bgs), the former bus fueling facility and historical USTs do not appear to represent a REC. The Phase I ESA concluded that no further action or investigation is recommended (EMG 2020).

Hazardous Building Materials

Based on the date of construction (1921, 1925, 1951, 2003 and 2008), there is a potential that asbestos containing materials (ACMs) exist at the Project. The suspect asbestos containing roofing materials, ceiling tile, wallboard/joint compound, vinyl floor tile, vinyl sheet flooring and various mastics were observed in generally good condition except for some limited areas of damage noted in the 499/511 Arroyo Parkway building and the 577 Arroyo Parkway building (EMG 2020).

Considering the dates of construction (1921, 1925, 1951, 2003 and 2008), there is a potential that there is lead-based paint existing at the site. The painted surfaces were observed to be in generally good condition, with no chipping, peeling, or cracking paint observed. All paint applied prior to 1978 is considered suspect (EMG 2020).

Waste Generation

One cooking grease bin and an in-ground grease trap, which were not currently in use, were identified at the vacant former Margarita Jones restaurant (541 South Arroyo Parkway) and an additional in-ground grease trap, which is not currently in use was identified at the 577 South Arroyo Parkway building located on the southwest portion of the site, which was vacant at the time the Phase I ESA was prepared and is now operating as Guisado's Restaurant. In addition, a 55-gallon drum was observed on the southwest portion of the site. According to labeling on the drum, the contents are "Non-hazardous" and consist of soil cuttings that were generated during the completion of a subsurface investigation at the Project in 2018. No evidence of releases from the grease bin, traps or drum, such as staining or dead vegetation, was observed. The cooking grease in the bin and any remaining cooking grease located in the grease traps, as well as the contents of the soil cutting drum, were recommended for disposal by a licensed contractor in accordance with applicable regulations in the Phase I ESA (EMG 2020). The Applicant reports the soil cuttings and cooking grease have been disposed of appropriately and restaurants now occupy the locations of the grease traps; these properties were unoccupied at the time of the Phase I ESA site reconnaissance.

3.5.2 RELEVANT PROGRAMS AND REGULATIONS

Federal

Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) was authorized by Congress on October 21, 1976, through the amendment of the Solid Waste Disposal Act. This law creates the framework for the proper management of hazardous and non-hazardous solid waste. The California Environmental Protection Agency (CalEPA) and the Department of Toxic Substances Control (DTSC) regulate the generation, transportation, treatment, storage, and disposal of hazardous waste under both the RCRA and the California Hazardous Waste Control Act, discussed further below. Both laws impose "cradle-to-grave" regulatory systems for handling hazardous waste in a manner that protects human health and the environment.

Emergency Planning & Community Right to Know Act

The Emergency Planning & Community Right to Know Act (EPCRA) was enacted by Congress as the national legislation on community safety. This law was designated to help local communities protect public health, safety, and the environment from chemical hazards. The primary purpose of EPCRA is to inform communities and citizens of chemical hazards in their areas by requiring businesses to report the locations and quantities of chemicals stored on-site to State and local agencies. These reports help communities prepare to respond to chemical spills and similar emergencies.

Section 3131 of EPCRA requires manufacturers to report releases to the environment (i.e., air, soil, and water) of more than 600 designated toxic chemicals; report off-site transfers of waste for treatment or disposal at separate facilities; pollution prevention measures and activities; and participate in chemical recycling. These annual reports are submitted to the USEPA and state agencies. The USEPA maintains and publishes a database that contains information on toxic chemical releases and other waste management activities by certain industry groups and federal

facilities. This online, publicly available, national digital database is called the Toxics Release Inventory and was expanded by the Pollution Prevention Act of 1990.

To implement EPCRA, Congress required each state to appoint a State Emergency Response Commission (SERC) to coordinate planning and implementation activities associated with hazardous materials. The SERCs were required to divide their states into Emergency Planning Districts and to name a Local Emergency Planning Committee (LEPC) for each district. The federal EPCRA program is implemented and administered in California by the California Emergency Management Agency (Cal EMA), a SERC, six LEPCs, and 83 Certified Unified Program Agencies (CUPAs). Cal EMA provides staff support to the SERC and the LEPCs. The Governor's Office of Emergency Services (OES) coordinates and provides staff support for the SERC and LEPCs. Broad representation by firefighters, health officials, government and media representatives, community groups, industrial facilities, and emergency managers ensures that all necessary elements of the planning process are represented.

Hazardous Materials Transportation Act

The Hazardous Materials Transportation Act, promulgated under Title 49 of the CFR and administered by the U.S. Department of Transportation (DOT), governs the handling and transport of hazardous materials, including medical waste. In 1999, the DOT defined regulated medical waste as a hazardous material under Class 6.2 of the DOT regulations, thereby subjecting it to the provisions of the Hazardous Materials Transportation Act. The California Department of Transportation (Caltrans) implements these federal regulations for hazardous materials transported within California.

State

Medical Waste Management Act

The Medical Waste Management Act (MWMA) (*California Health and Safety Code* Sections 117600-118360) governs the management of medical waste in California. The Medical Waste Management Program (MWMP), administered by the California Department of Public Health (DPH), Environmental Management Branch, regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the MWMA. The MWMA regulates the storage, disposal, and transport of medical waste through a registration and permit process, including requirements for an on-site medical waste management plan. The regulations require special containers for medical, biohazardous, and sharps wastes; storage of medical waste in the common storage facility; segregation of the biohazard and medical wastes from other hazardous wastes; medical waste transportation requirements; the use of steam sterilization, incineration, microwave, or other approved technology to treat medical waste on site; protective clothing for handlers; treatment and tracking records; and annual inspection and enforcement provisions.

California Occupational Safety and Health Administration

The Division of Occupational Safety and Health, better known as Cal/OSHA, protects and improves the health and safety of working men and women in California through setting and enforcing standards; providing outreach, education, and assistance; and issuing permits, licenses, certifications, registrations, and approvals. Employers are required to monitor worker exposure to listed hazardous substances and notify workers of exposure (8 *California Code of Regulations* [CCR] Sections 337-340). Cal/OSHA regulations specify employer requirements including employee training, provision of safety equipment, accident-prevention programs, and hazardous substance exposure warnings.

Asbestos Abatement

Asbestos is a known human carcinogen, and the USEPA and CalEPA have identified asbestos as a hazardous air pollutant pursuant to Section 12 of the Federal Clean Air Act. Further, the California Air Resources Board (CARB) has identified asbestos as a Toxic Air Contaminant (TAC), pursuant to the *California Health and Safety Code* (Section 39650 et. seq.). Asbestos is also regulated as a potential worker safety hazard under the authority of the CalOSHA, discussed above. These rules and regulations prohibit emissions of asbestos from asbestos-related demolition or construction activities; require medical examinations and monitoring of employees engaged in activities that could disturb asbestos; specify precautions and safe work practices that must be followed to minimize the potential for release of asbestos fibers; and require notice to federal and local government agencies prior to beginning renovation or demolition that could disturb asbestos.

In California, asbestos abatement must be performed and monitored by contractors with appropriate certifications from the California Department of Health Services (DHS). In addition, CalOSHA has regulations to protect worker safety during potential exposure to asbestos under Title 8 of the *California Code of Regulations* (Section 1529 Asbestos). All demolition that could result in the release of asbestos must be conducted according to CalOSHA standards. These standards were developed to protect the general population and construction workers from respiratory and other hazards associated with exposure to these materials.

The South Coast Air Quality Management District's (SCAQMD's) Rule 1403 provides guidelines for the proper removal and disposal of asbestos-containing materials. In accordance with Rule 1403, structures that may contain asbestos are required to be subject to an asbestos survey by a Certified Asbestos Consultant (certified by CalOSHA) to identify building materials that contain asbestos. Under this rule, removal of asbestos must include prior SCAQMD notification; compliance with removal procedures and time schedules; asbestos-handling and clean-up procedures; and storage, disposal, and landfilling requirements.

Lead Abatement

Because of its toxic properties, lead is regulated as a hazardous material. Inorganic lead is also regulated as a TAC. In California, lead abatement must be performed and monitored by contractors with appropriate certifications from the California DHS. In addition, CalOSHA has adopted regulations to protect worker safety during potential exposure to lead under Title 8 of the *California Code of Regulations* (Section 1532.1 Lead). All demolition that could result in the release of lead must be conducted according to these standards, which were developed to protect the general population and construction workers from respiratory and other hazards associated with lead exposure.

Business Plan Act

In recognition of the dangers associated with keeping hazardous substances, the state legislature has enacted several laws regulating the use and transport of identified hazardous materials. California's Hazardous Materials Release Response Plans and Inventory Law, sometimes called the "Business Plan Act," aims to minimize the potential for accidents involving hazardous materials and to facilitate an appropriate response to possible hazardous materials emergencies. The law requires businesses that use hazardous materials to provide inventories of those materials to designated emergency response agencies, to illustrate on a diagram where the materials are stored onsite, to prepare an emergency response plan, and to train employees to use the materials safely.

Chapter 6.95 of the California Health and Safety Code and Title 19 of the California Code of Regulations describe the requirements for chemical disclosure, business emergency plans, and community right-to-know programs. In particular, Chapter 6.95 requires all businesses using hazardous materials to inform local government agencies of the types and quantities of materials stored on site. This disclosure enables emergency response agencies to respond quickly and appropriately to accidents involving dangerous substances.

The State requires the owner or operator of any business that handles hazardous materials in quantities equal to or greater than 55 gallons, 500 pounds, or 200 cubic feet of gas at standard temperature and pressure, to develop and submit a business plan. The Governor's Office of Emergency Services (OES), acting pursuant to Section 25503.3 of the Health and Safety Code, has developed a single comprehensive hazardous materials inventory form for businesses to use to submit their individual hazardous materials inventories. This form contains all State and federally required inventory information and use of this form is mandatory.

California Hazardous Waste Control Act

The California Hazardous Waste Control Act (HWCA), as found in the *California Health and Safety Code* (see Division 20, Chapter 6.5, Article 2, Section 25100, et seq.) authorizes the DTSC and local CUPA to regulate facilities that generate or treat hazardous waste. The HWCA authorizes CUPAs to perform the following actions:

- Conduct inspections of any factory, plant, construction site, waste disposal site, transfer station, establishment, or any other place or environment where hazardous wastes are stored, handled, processed, disposed of, or being treated to recover resources
- Maintain records of compliance with the HWCA
- Require hazardous waste generators to pay inspection and administration fees to cover the costs of administering the provisions in the HWCA. Fees may include but shall not be limited to the costs of inspection, document development and processing, recordkeeping, enforcement activities, and informational materials development and distribution
- Issue authorization for on-site treatment of hazardous waste to persons eligible to operate pursuant to permit-by-rule, conditional authorization, or conditional exemption
- Enforce against violations of the HWCA

Local

Certified Unified Program Agency

Senate Bill (SB) 1082 (1993) established the Unified Hazardous Waste and Hazardous Materials Management Regulatory Program, which consolidates, coordinates, and makes consistent six different hazardous material/waste programs. A CUPA is an agency of a county or city that administers these State programs regulating hazardous materials and hazardous wastes. Currently, there are 83 CUPAs in California.

The Los Angeles County Fire Department (LACFD) is the CUPA for much of Los Angeles County. However, the Pasadena Fire Department (PFD) is designated as a participating agency and is authorized to implement one or more of the program elements within their jurisdiction. The LACFD and PFD administer the following programs:

- Hazardous Materials Release Response and Inventory Program;

- California Accidental Release Prevention Program (CalARP), a combination of federal and state programs for the prevention of accidental release of regulated toxic and flammable substances;
- Underground Storage Tanks (UST) Program;
- Aboveground Storage Tanks (AST) Program; and
- Hazardous Waste Generator Program.

Pasadena Municipal Code

Chapter 8.80, Handling and Disclosure of Hazardous Materials, of the Pasadena Municipal Code (PMC) is applicable to all businesses in the City that handle hazardous materials. It establishes uniform standards for disclosure, fees, and penalties associated with the proper handling of hazardous materials. The Pasadena fire chief is empowered to enforce compliance, and the PFD is authorized to clean up or abate the effects of any hazardous materials deposited on public or private property in the City.

3.5.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse hazards and hazardous materials impact if it would:

- Threshold 3.5a:** Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
- Threshold 3.5b:** Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school; and/or
- Threshold 3.5c:** Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment.

The Initial Study (provided in Appendix A-1) concluded the following thresholds related to hazards and hazardous materials were determined to result in no impacts or less than significant impacts and were not carried forward into the Draft EIR for further analysis:

- Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?
- Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?
- Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

3.5.4 METHODOLOGY

The contents of Phase I ESAs are defined by national record review requirements in accordance with both the ASTM E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and the USEPA Standards and Practices for All Appropriate Inquiries (40 *Code of Federal Regulations* [CFR] Part 312). The Phase I ESA for the proposed Project was conducted in accordance with these standards. The findings of the Phase I ESA would apply equally to the Project and Project with Building A Residential/Commercial.

3.5.5 ENVIRONMENTAL IMPACTS

Threshold 3.5a: Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Project

Hazardous materials are routinely used by businesses and private individuals. Common community businesses in urban areas that utilize hazardous materials include service stations, medical labs, dry cleaners, and photo-processing centers. In addition, commonly used household products such as paints, cleaners, oils, batteries, and pesticides contain hazardous materials. Accordingly, hazardous materials that may be commonly encountered in a typical urban environment generally include petroleum products (including oil and gasoline); automotive fluids (antifreeze, hydraulic fluid); paint; cleaners (dry cleaning solvents, cleaning fluids); and pesticides from current or historical agricultural uses (if in significant concentrations). Accidental spills or leaks, illegal dumping of hazardous waste, improper storage, or a transportation accident could release hazardous materials or wastes in the community and pose public health and safety risks.

Operation of medical and medical-related facilities, such as the medical offices in Building A and assisted living facilities in Building B, would involve the routine transport, use, and disposal of hazardous materials (e.g., pharmaceutical products, medical gases, radioisotopes and x-ray producing machines, cleaners, solvents, medical and biological wastes). This would include the use of hazardous materials for various medical procedures and facility maintenance and generation of biomedical waste. These types of materials are typical of any medical facility and would not be considered acutely or unusually hazardous. Also, each proposed building would have a 50-kilovolt standby emergency engine diesel generator.

Health care facilities in California are licensed, regulated, inspected, and/or certified by several public and private agencies at the State and federal levels. In particular, the DPH Licensing and Certification Program is responsible for ensuring health care facilities comply with State laws and regulations. All medical and medical-related uses proposed for the Project would obtain required licenses/permits for the operation of the facility, including those needed for the laboratories, radiologic equipment, medical devices, workplace safety, radioactive materials, and certified professionals. Health care professionals at both the medical offices in Building A and the assisted living facilities in Building B would also be licensed individuals, where necessary.

All hazardous materials and/or wastes associated with the Project, including those related to proposed commercial uses and the presence of diesel generators, would be transported only by a Licensed Hazardous Waste Hauler, who must meet all applicable State and federal requirements, including U.S. DOT regulations under 49 *Code of Federal Regulations* (Hazardous Materials Transportation Act) and Caltrans standards pursuant to the Hazardous Materials Transportation Act to be licensed. Additionally, the Project would be required to comply with all applicable permitting, reporting, and other requirements of the following CUPA programs,

administered by the PFD and/or LACFD: Hazardous Materials Release Response and Inventory Program; CalARP; AST Program; and Hazardous Waste Generator Program.

These regulations would require permits, disclosure and inventory, spill prevention and response plans, monitoring and inspections, spill reporting, emergency procedures, employee training, remedial actions, and other compliance measures to prevent the release of hazardous materials into the environment. Thus, no public health hazards associated with the day-to-day operations of the Project would be created at the site. With compliance with all applicable regulations, the Project would not result in a significant hazard to the public or the environment related to the routine transport, use, disposal, and storage of hazardous materials. The Project would result in less than significant impacts, and no mitigation is required.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would not generate as much biomedical waste (categorized as hazardous materials) as the Project, since only the assisted living building would generate such materials. This development scenario would instead generate a mix of non-hazardous municipal waste and biomedical waste. Like the Project, the buildings would each have a standby emergency generator. Therefore, the same regulations for health care facilities would remain applicable to Building B, and the same regulations for commercial uses and the presence of diesel generators would remain applicable. Even though this scenario would not result in generating as much biomedical waste as the Project, the risk to the public or the environment would not be appreciably reduced under this scenario because 1) health care facilities are strictly regulated in California, and 2) the types of medical facilities and related materials used in either the Project or this scenario are typical of medical facilities and not acutely or unusually hazardous. As with the Project, the Project with Building A Residential/Commercial would result in less than significant impacts, and no mitigation is required.

Threshold 3.5b: Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school?

Project

The Project site is within approximately one-quarter mile of the following three schools:

- Mayfield Junior School, 405 South Euclid Avenue;
- The Waverly School, 67 West Bellevue Drive; and
- Aria Montessori School, 693 South Euclid Avenue.

The emission or handling of hazardous materials or substances could pose hazards to nearby schools in the event of an accidental release or spill. As discussed under Thresholds 3.5(a) above and 3.5(c) below, construction and operation of the Project would involve the use of common hazardous substances, potential encounter of hazardous building materials (ACMs and LBP), and use of medical and medically related materials that can be categorized as hazardous.

As discussed below, compliance with SCAQMD Rule 1403 and the CalOSHA's Title 8 regulations on asbestos and lead abatement would be a condition of Project approval and would ensure that handling and disposal of these materials is conducted safely and accident conditions during demolition activities would not be reasonably foreseeable. Handling and use of common hazardous materials, such as fuel, oil, and solvents, during construction was addressed in the Initial Study.

As discussed above, there are several regulations pertaining to management of hazardous materials and wastes, including materials associated with health care facilities, that would apply to the operation of the Project. As noted, health care facilities are strictly regulated in California and the types of medical facilities and related materials used in the Project are typical of medical facilities and not acutely or unusually hazardous. All hazardous materials and/or wastes associated with the Project, including those related to proposed commercial uses and the presence of diesel generators, would be transported and handled in compliance with the Hazardous Materials Transportation Act and applicable CUPA programs. As such, an accidental release capable of affecting nearby schools is not reasonably foreseeable.

The Project would result in less than significant impacts related to emission of hazardous emissions or handling hazardous or acutely hazardous materials, substances, or waste within proximity to schools in the Project site vicinity, and no mitigation is required.

Project with Building A Residential/Commercial

As discussed above under Threshold 3.5(a), while the Project with Building A Residential/Commercial would generate relatively less biomedical waste than the Project, this development scenario would still generate biomedical waste. This is the only difference in construction or operation related to hazardous materials compared to the Project. Therefore, the same regulations for health care facilities would remain applicable to Building B, and the same regulations for commercial uses and the presence of diesel generators would remain applicable. As such, like the Project, the Project with Building A Residential/Commercial would result in less than significant impacts related to schools in the Project site vicinity, and no mitigation is required.

Threshold 3.5c: Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Project

Cortese List and Other Listed Sites

Based on review of the Cortese List data resources, the Project site is not located on the State of California Hazardous Waste and Substances Sites List of sites published by CalEPA and compiled pursuant to Section 65962.5 of the *California Government Code* (referred to as the Cortese List). There is one site on the Cortese List located in the City of Pasadena, which is the Jet Propulsion Laboratory (CalEPA 2020), located approximately 4.25 miles to the northwest.

As discussed above, a Phase I ESA was conducted and identified no RECs related to current or historic land uses on or surrounding the Project site. The Phase I ESA did identify one Historical REC on the southern portion of the Project site based on a former service station and associated gasoline release that was remediated. Based on the “no further action” regulatory status of this portion of the Project site, the Phase I ESA states no further action or investigation is recommended (EMG 2020; Appendix E). As noted above, there are no controls on this portion of the site related to this past gasoline release and remediation.

Furthermore, a Historical REC is not a REC, defined under ASTM E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. For a past release to be determined a Historical REC, the release or other event must have been previously cleaned up or meet current regulatory standards without clean up. As

such, there are no conditions present on the site such that excavation activities would be expected to encounter on-site contamination. Handling and transport of hazardous materials, that would represent a significant hazard to construction workers, the public, or the environment, is not anticipated.

Hazardous Building Materials

The likely presence of ACMs and LPB at the site, due to the age of the buildings, was disclosed in the Initial Study (see Appendix A of this Draft EIR). Compliance with SCAQMD Rule 1403 and the CalOSHA's Title 8 regulations on asbestos and lead abatement would be conditions for the Project approval and would ensure that handling and disposal of these materials is conducted safely, and accident conditions during demolition activities would not be reasonably foreseeable. As such, the transport, use, and disposal of hazardous materials required for construction and the presence of ACMs and LBP in buildings to be demolished would not present a significant hazard to the construction workers, the public, or the environment. The Project would result in less than significant impacts, and no mitigation is required.

Project with Building A Residential/Commercial

The analysis of potential hazards related to location on a site identified on the Cortese List, past or present land uses, and/or hazardous building materials would be the same for both the Project and the Project with Building A Residential/Commercial. The analysis is based entirely on the history and/or current land uses on the site and the planned demolition of buildings that likely contain ACMs and/or LBP, and planned land uses have no bearing on the conclusions. The Project with Building A Residential/Commercial would result in less than significant impacts, and no mitigation is required.

3.5.6 CUMULATIVE IMPACTS

Project

Existing developments in the City, including health care facilities, pose risks to public health and safety with respect to the use, storage, handling, generation, transport, and disposal of hazardous materials. Future developments throughout the City would increase these risks as more facilities or operations may utilize hazardous materials or may be located on the Cortese list or other hazardous materials databases.

Regulations for a variety of activities and uses to protect public health and safety exist at all levels of government. Compliance of individual projects, including the Project, with pertinent regulations would preserve public health and safety and would prevent hazards to existing and future developments. Thus, with compliance with regulations, future growth and development in the City is not expected to present significant risks to public health and safety. Also, future growth and development would be subject to review and approval by the PFD and LACFD (i.e., CUPA), as applicable to land uses that handle hazardous materials and/or generate hazardous waste. The Project's compliance with existing health and safety regulations as discussed in this section would prevent the creation of health risks and public safety hazards. Therefore, the Project's contribution to cumulative impacts would be less than significant, and no mitigation is required.

Project with Building A Residential/Commercial

The cumulative impact analysis of hazards and hazardous materials for the Project with Building A Residential/Commercial would be the same as that of the Project.

3.5.7 MITIGATION MEASURES

No significant impacts related to hazards and hazardous materials would occur, and no mitigation is required.

3.5.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.5.9 SUMMARY OF ANALYSIS

Project

Construction and operation of the Project would not result in a significant hazard to the public or the environment related to the routine transport, use, disposal, and storage of hazardous materials through compliance with all applicable regulations. There would be a less than significant impact, and no mitigation is required. Construction and operation of the Project would not result adversely affect schools in the vicinity through compliance with applicable regulations. There would be a less than significant impact, and no mitigation is required. There are no conditions present on the site due to current or historic land uses such that excavation activities would be expected to encounter on-site contamination. Handling and transport of hazardous materials, that would represent a significant hazard to construction workers, the public, or the environment, is not anticipated. There would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

The summary of findings for the Project with Building A Residential/Commercial would be comparable to the findings for the Project. The only difference is that this scenario would not generate as much biomedical waste (categorized as hazardous materials) as the Project. As with the Project, the Project with Building A Residential/Commercial would result in less than significant impacts related to hazards and hazardous materials, and no mitigation is required.

3.5.10 REFERENCES

EMG. 2020 (April 30). *Phase I Environmental Site Assessment; 465, 491, 503, 525 and 577 South Arroyo Parkway, Pasadena, California 91105*. Owings Mills, MD: EMG. Appendix E.

3.6 **LAND USE AND PLANNING**

This section discusses consistency of the proposed Project and Project with Building A Residential/Commercial with applicable City land use and planning documents and regulations as well as land use consistency. Information in this section is derived in part from *City of Pasadena General Plan* and its Environmental Impact Report (EIR) and the Central District Specific Plan (CDSP).

3.6.1 **EXISTING CONDITIONS**

On-Site and Surrounding Land Uses

The Project site consists of five parcels developed with a total of nine commercial buildings with seven businesses. All existing buildings on the site are one or two stories with heights ranging between 17 feet and 63 feet. All existing land uses have surface parking except for the Whole Foods Market, which has a 275-space subterranean parking structure for its sole use. Table 3.6-1 summarizes the existing on-site land uses; and Exhibit 2-2, Existing Project Site, in Section 2.0, Environmental Setting and Project Description, illustrates the addresses and locations of the nine existing buildings and other on-site land uses.

**TABLE 3.6-1
SUMMARY OF EXISTING LAND USES**

Address	Existing Use	Building Size	Disposition
465 S. Arroyo Parkway	Whole Foods Grocery	73,671 sf	To Be Retained
491/495 S. Arroyo Parkway	K9 Loft	12,676 sf	To Be Demolished
499/503 S. Arroyo Parkway	Corporate Furniture Resource	21,437 sf	To Be Demolished
501 S. Arroyo Parkway	Gold Line Pilates	2,880 sf	Historic Resource; To Be Retained
523 S. Arroyo Parkway	Town & Country Event Rentals	3,002 sf	Historic Resource; To Be Retained
541 S. Arroyo Parkway	Little Lily's Kitchen	7,493 sf	To Be Demolished
577 S. Arroyo Parkway	Guisado's Restaurant	4,306 sf	To Be Demolished
Total Existing Building Area		125,465 sf	
S.: South; sf: square feet			

The Project area is an urban environment, and the site and surrounding area are fully built out with a broad mix of land uses. These land uses also represent a variety of ages, architectural styles, heights, and conditions. Exhibit 2-3, Aerial Photograph, in Section 2.0 shows the site and existing land use types in the surrounding area.

Commercial land uses are primarily located to the north, including retail, services, and restaurants. Other land uses to the north include medical offices; Pasadena Humane Society, located approximately 0.1-mile to the northwest; Central Park, located approximately 0.2-mile northwest of the site; and single- and multi-family residential land uses located, at the nearest, approximately 0.2-mile to the north on Del Mar Boulevard and approximately 0.1-mile to the north-northeast on Bellevue Drive. Commercial land uses are located opposite the Project site on Arroyo Parkway. Single- and multi-family residential land uses are situated less than 0.1-mile to the east along Marengo Avenue and Arroyo Parkway. Land uses to the south include a mix of commercial, medical office, and single- and multi-family residential land uses; the latter is located along Marengo Avenue and California Boulevard to the southeast. To the west, there is a mix of commercial and non-profit (i.e., npr/KPCC and Union Station Homeless Services) uses. Further from the site, land uses include a mix of commercial, medical, light industrial, single- and multi-family residential, and public (e.g., schools, churches, parks).

3.6.2 RELEVANT PROGRAMS AND REGULATIONS

Regional

Southern California Association of Governments

The Southern California Association of Governments (SCAG) is the Metropolitan Planning Organization (MPO) for six counties: Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial Counties, an area that encompasses more than 38,000 square miles. As the designated MPO, the federal government mandates that SCAG research and draw up plans for transportation, growth management, hazardous waste management, and air quality. Among the many activities SCAG undertakes are the following:

- Maintaining a continuous, comprehensive, and coordinated planning process resulting in a Regional Transportation Plan (RTP) and a Federal Transportation Improvement Program (FTIP);
- Developing a Sustainable Communities Strategy (SCS) to reduce greenhouse gas emissions as required by applicable State law (SB 375) as an element of the RTP.

The RTP is a long-range transportation plan that is developed and updated by SCAG every four years to guide transportation investments throughout the region. The SCS is a required element of the RTP that integrates land use and transportation strategies to achieve California Air Resources Board emissions reduction targets pursuant to Senate Bill (SB) 375.

On September 3, 2020, the SCAG Regional Council adopted the 2020–2045 RTP/SCS (RTC/SCS; also referred to as Connect SoCal) and the addendum to the *Connect SoCal Program Environmental Impact Report*. The 2020–2045 RTP/SCS is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. It charts a path toward a more mobile, sustainable, and prosperous region by making connections between transportation networks, between planning strategies, and between the people whose collaboration can improve the quality of life for Southern Californians (SCAG 2020).

High-Quality Transit Areas and Transit Priority Areas

High-Quality Transit Areas (HQTAs) are areas within one-half mile of a fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes or less during peak commuting hours. Transit Priority Areas (TPAs) are areas within one-half mile of a major transit stop that is existing or planned. The Project site is within both a HQTA and TPA.

City

Pasadena General Plan

The City adopted the current *Pasadena General Plan* in August 2015. In accordance with State law, the General Plan provides the overall framework for translating broad community values and expectations into goals and policies for managing growth and enhancing the quality of life in the City. The Land Use Element of the General Plan includes a series of Guiding Principles, which cumulatively represent the City's vision for the future. Each of the Guiding Principles is addressed in the analysis below. In implementing the Guiding Principles, the Land Use Element establishes a framework for development that promotes higher density, mixed-use, urban environments oriented to transit and pedestrian activity within specific, high-quality areas of the City that reflect the historic scale and character of Pasadena. Targeted areas include distinctly urban locations,

such as the urban core, underutilized properties, transit-oriented development areas, mixed-use areas, and urban villages.

Central District Specific Plan

The Land Use Element of the City's General Plan establishes an overall pattern of development that directs growth "into specific areas in order to protect residential neighborhoods and create mixed-use urban environments." These areas are based on a concept of higher density, mixed-use environments that support transit- and pedestrian-oriented mobility strategies. The Central District is one of eight areas throughout the City requiring preparation of a specific plan to implement this goal.

The CDSP encompasses 960 acres corresponding to the area recognized by Pasadena residents as "downtown". The CDSP's vision statement is:

The Central District will function as the City of Pasadena's vibrant urban core, providing a diversity of economic, residential, and cultural opportunities. Downtown will be a place to work, shop, live, and play, with convenient access by foot, bicycle, and transit, as well as by car. Physical and economic growth will support this role and respect the numerous resources of historical and cultural significance that contribute to Downtown's unique identity (Pasadena 2004).

The CDSP's Policy Framework established planning objectives to support this vision and further defines the role of the Central District in the City. In addition, the CDSP has established specific development standards, codified in Chapter 17.30 of the Pasadena Municipal Code (PMC), for permitted land use types, maximum housing density, maximum floor area ratio (FAR), minimum and maximum building heights, required setbacks, open space, signage, and parking.

Within the CDSP, the site is identified as within the Arroyo Corridor Transition precinct within the Arroyo Corridor/Fair Oaks sub-district, which is an important gateway to downtown that also supports a broad, but rather undefined, mixture of uses at the periphery of the urban core. The objective of the Arroyo Corridor/Fair Oaks sub-district is to establish Arroyo Parkway as a visually appealing entrance corridor. Additionally, the intent of sub-district is to provide an attractive opportunity for employment-generating uses adaptable to changing economic conditions—such as arts, technology, and knowledge-based enterprise—within a revitalized low-scale, mixed-use setting at the periphery of Downtown Pasadena. The emphasis of the Arroyo Corridor Transition precinct is the transitional character of the area towards more pedestrian and transit-oriented development with a mix of land uses including residential, commercial, and employment (Pasadena 2004).

Pasadena Zoning Code

The City's zoning code (Title 17 of the PMC) implements the General Plan's Land Use Element. The intent of the zoning code is to protect public health, safety, and the general welfare of residents and visitors in the City. Together with the zoning map, the zoning code identifies the particular use permitted on each parcel in the City and sets forth regulations and standards for development to ensure that the policies, goals, and objectives of the General Plan are implemented.

In addition to land use regulations, the zoning code provides development standards. The standards regulate things such as height, setbacks, parking, lot coverage, and gross floor area of structures. It also regulates what uses are permitted in each of the City's zoning districts to ensure compatibility between land uses.

Zoning Code Variances

A zoning variance acts as a waiver to some aspect of the zoning law, but it cannot violate the expressed basis of the controlling code. Section 17.61.080 of the PMC, Variances, allows for variances from the development standards of this Zoning Code, variances for historic resources, and modifications for individuals with disabilities. The Project Applicant requests a variance for historic resources, which is addressed in Section 17.61.080(H) et. seq. of the PMC.

According to the PMC, a variance for historic resources is intended to accommodate historic resources that are undergoing development, change in use, or are being relocated. This unique type of variance is designed to provide relief from the strict compliance with the development standards of the zoning code that may impair the ability of a historic resource to be properly used or to be relocated onto a new site. The PMC states that this type of variance shall not allow a use of land or structure not otherwise allowed in the zoning district in which the subject property is located. It only applies if the property has a historic designation or is required, as a condition of approval of the variance, to submit an application for historic designation prior to completion of the proposed project or establishment of the proposed use.

The review authority may approve a variance for historic resources application, with or without conditions, only after first finding that:

- a) The variance for historic resource is necessary to facilitate the appropriate use of an existing historic structure;
- b) The variance for historic resource would not adversely impact property within the neighborhood or historic district; and
- c) Granting the variance for historic resource application would be in conformance with the goals, policies, and objectives of the General Plan and the purpose and intent of any applicable specific plan.

Because the Project would involve concurrent permit processing, rather than the variance as a standalone permit, the variance for historic resources would be considered as part of the Project's entitlements by the highest level review authority. In this case, it would be Planning Commission review followed by consideration by City Council.

Planned Development Zoning District

As discussed in Section 2.0, Environmental Setting and Project Description, implementation of the Project would require approval of a Planned Development (PD) zoning district for the site. According to the City of Pasadena zoning code, the specific purposes of the PD zoning district are to:

- Establish a procedure for the development of large parcels of land in order to reduce or eliminate the rigidity, delays, and inequities that otherwise would result from application of land use regulations and administrative procedures designed primarily for small parcels;
- Ensure orderly and thorough planning and review procedures that will result in quality urban design.
- Encourage variety and avoid monotony in large developments by allowing greater freedom in selecting the means to provide access, light, open space, and amenity;

- Allow certain types of development consistent with the general plan that can be acceptable at a specific location only under standards significantly more restrictive than those of a base district in which the use is permitted;
- Provide a mechanism whereby the city may authorize desirable developments in conformity with the general plan without inviting speculative rezoning applications that if granted, often could deprive subsequent owners of development opportunities that do not necessarily result in construction of the proposed facilities;
- Encourage allocation and improvement of common open space in residential areas, and provide for maintenance of the open space at the expense of those who will directly benefit from it;
- Encourage the preservation of serviceable existing structures of historic value or artistic merit by providing the opportunity to use them imaginatively for purposes other than that for which they were originally intended; and
- Encourage the assembly of properties that might otherwise be developed in unrelated increments to the detriment of surrounding neighborhoods.

Adoption of a PD zoning district would reclassify the Project site from CD-6 to PD-39, while simultaneously establishing applicable land use regulations and development standards that are specific to the newly established zoning district. The regulations and standards that dictate permitted and conditionally permitted land uses and development would be prescribed in the accompanying PD Plan. This ensures the Project or Project with Building A Residential/Commercial is developed as intended. PD Plans are developed in consideration of existing zoning requirements that are applicable to a project site while also providing flexibility in site usage and building design.

The City's process allows a property owner to initiate an amendment to reclassify a property two acres or larger to a PD zoning district. A proposed PD zoning district and the permitted or conditionally permitted land uses are required to be consistent with the City's General Plan. However, development cannot exceed maximums for floor area ratio or density on the Land Use Diagram (but only as high as a 3.0 FAR and 87 du/acre) unless approved by the City Council.

The review process of a new PD Application requires input from the City's Design Commission, Planning Commission, and City Council. The review process for a proposed Planned Development is outlined in Sections 17.26.020(C)(3)(d) (Commission and Council Action), 17.61.030(I)(5)(b) (Design Conditions), and 17.74 (Amendments) of the PMC. The role of the Design Commission is limited to recommendations to the Planning Commission and City Council on aesthetic and urban design issues related to architecture, landscaping, site plan, and related aesthetic issues, as well as historic preservation. Additionally, comments on the aesthetic/cultural resources of a draft environmental study are appropriate. Therefore, review and advisement by the Design Commission regarding the proposed PD zone and PD Plan would occur first at a public meeting.

A subsequent review of a proposed PD zone and PD Plan would occur at a public hearing by the Planning Commission. The Planning Commission's role is to make a written recommendation to the City Council to approve, approve with modifications, or deny the proposed reclassification and PD Plan. The City Council's role is to hold a public hearing to consider the recommendation of the Planning Commission and to hear evidence regarding the proposal. Upon receipt of the Planning Commission's recommendation, the City Council would move to approve, approve with modifications, or deny the proposed PD zoning district and PD Plan. Prior to any approval, the City Council is required to certify the Final EIR. Planned Developments and the accompanying

PD Plan are made a part of the Zoning Code when approved to ensure implementation occurs as approved.

The basic design of a project, including compatibility with surroundings, massing, proportion, siting, solid-to-void relationships, and compliance with applicable design guidelines is evaluated through the City's Design Review process and is a role for the City's Design Commission. This phase of review generally occurs after approval of the PD Application, if received. An approved PD zoning district and accompanying PD Plan cannot be later revised without requiring a formal application from the Applicant, noticed public hearings before the Planning Commission and City Council, and further appropriate environmental review pursuant to CEQA.

3.6.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse land use and planning impact if it would:

Threshold 3.6a: Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

The Initial Study (provided in Appendix A-1) concluded the following threshold related to land use and planning was determined to result in no impacts and was not carried forward into the Draft EIR for further analysis:

- Would the project physically divide an established community?

3.6.4 METHODOLOGY

The analysis of potential land use impacts considers the Project's consistency with applicable land use plans, policies, and regulations adopted for the purpose of reducing or avoiding an environmental impact. This analysis considers the land use development controls on the site and the compatibility of the proposed uses with surrounding land uses. A project is considered consistent with the provisions of the identified regional and local plans if it meets the general intent of the plans and would not preclude the attainment of the primary intent of the land use plan or policy. A given project need not be in perfect conformity with each and every policy nor does State law require precise conformity of a proposed project with every policy or land use designation for a site.

3.6.5 ENVIRONMENTAL IMPACTS

Threshold 3.6a: Would the Project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Project

The primary land use planning documents that govern the Project site are the City's General Plan, CDSP, and the City's zoning code. Additionally, the 2020–2045 RTP/SCS is prepared, in part, based on data from cities and counties related to their respective general plans, land uses, and expected demographic growth. While the Project is considered consistent with the General Plan, based on comments received during the scoping period for the Project, a consistency analysis is also provided herein for the Land Use Element's Guiding Principles, General Plan goals and policies that have the purpose of avoiding or mitigating an environmental effect, and applicable objectives of the CDSP.

The paragraphs below evaluate the Project's consistency with these documents.

Pasadena General Plan

The City's General Plan land use designation for the site is High Mixed-Use, which is intended to support multi-story mixed-use buildings with a variety of compatible commercial and residential uses. Development within this designation is characterized by shared open spaces, extensive landscaping, minimal building separations, and shared driveways with parking located underground or to the rear of the street. The High Mixed-Use General Plan land use category allows maximum densities of 3.0 floor area ratio (FAR) and 87 dwelling units per acre (du/acre). Based on the site area (144,853 sf), the site would allow up to 434,559 sf of floor area and up to 289 dwelling units. Development of the Project would result in a total of 417,929¹ sf of floor area (aboveground), which would include up to 95 senior housing units. The Project would not require a General Plan amendment. Also, as discussed in Section 2.14, Population and Housing, of the Initial Study (refer to Appendix A-1), there is adequate remaining development capacity in the Central District to accommodate the Project.

These Guiding Principles are:

- 1) *Growth will be targeted to serve community needs and enhance the quality of life. Higher density development will be directed away from residential neighborhoods and into the Central District, Transit Villages, and Neighborhood Villages. These areas will have a diverse housing stock, job opportunities, exciting districts with commercial and recreational uses, and transit opportunities. New development will build upon Pasadena's tradition of strong sense of place, great neighborhoods, gardens, plazas, parks, and trees.*

The Project would provide senior living facilities and several related amenities that are acutely needed in the City and wider region as the U.S. population is generally living longer and a greater proportion of the population is considered senior or elderly with the large "boomer" segment, in particular, reaching this threshold. The medical office building would be robustly employment-generating and be located near the abundant health care land uses on Fair Oaks Avenue, providing an efficient synergy. These uses would therefore serve community needs and enhance quality of life, not limited to seniors, for residents of Pasadena and beyond.

- 2) *Pasadena's historic resources will be preserved. Citywide, new development will be in harmony with and enhance Pasadena's unique character and sense of place. New construction that could affect the integrity of historic resources will be compatible with, and differentiated from, the existing resource.*

An historic resources variance is being sought by the Applicant to preserve and adaptively reuse two previously recorded historic structures on the site (501 and 523 South Arroyo Parkway). Specifically, the Applicant is requesting an increase in allowable building height to offset the reduction in developable area due to preserving the two historic structures. The City provides incentives to owners of historic properties, including several as part of the zoning code. The zoning code incentives are consistent with the General Plan, which directs the City to implement flexible zoning regulations to promote the preservation of historic properties. This variance is being considered consistent with the General Plan as well as the City's historic preservation program, which promotes the identification, evaluation, rehabilitation, adaptive use, and restoration of historic structures. Within the zoning code, a purpose of a planned development (PD) district is to "encourage the preservation of serviceable existing structures of historic value or artistic merit by providing the opportunity

¹ Of this, a total of 338,376 sf would be new development in Buildings A and B.

to use them imaginatively for purposes other than that for which they were originally intended.” This provision facilitates the adaptive re-use of historic resources and encourages their long-term preservation on large sites designated for new development, as is the case with the Project. Mitigation measure (MM) CUL-1 requires that the Project Applicant engage with a licensed architect and/or engineer that meets the SOI’s Professional Qualifications Standards to develop a series of protection interventions and protocols that would preserve the two historical resources on the Project site – 501 and 523 South Arroyo Parkway – during construction activities. These protocols shall take into consideration the protection of and security of both resources, particularly the preservation of the character-defining features through the installation of physical protective barriers around each resource and the creation of site protocols that will eliminate the potential for physical damage resulting from impacts associated with construction and transport of equipment. Additionally, implementation of MM NOI-1, which outlines setbacks, monitoring, and (if needed) restoration related to the potential for cosmetic damage to these two buildings because of operation of vibration-causing construction equipment would reduce impacts to a less than significant level. Therefore, the proposed variance for historic resources and related PD Plan is consistent with the City’s policies to preserve and protect historic resources.

- 3) *Pasadena will be an economically vital City by providing jobs, services, revenues, and opportunities. A diverse economic base with jobs for Pasadena residents will be fostered; existing businesses will be encouraged to stay or expand; affordable housing will be provided for the labor pool; the continued fiscal health of the city will be ensured.*

The proposed uses in both Buildings A and B would be employment- and revenue-generating. Additionally, the medical office and assisted living uses would provide services to the community. As such, the Project provides opportunities for both potential employees and existing and future residents of the City.

- 4) *Pasadena will be a socially, economically, and environmentally sustainable community. Safe, well designed, accessible and human-scale residential and commercial areas will be provided where people of all ages can live, work and play. These areas will include neighborhood parks, urban open spaces and the equitable distribution of public and private recreational facilities; new public spaces will be acquired. Human services will be coordinated and made accessible to those who need them.*

Providing adequate care and housing for the senior community is a critical component of being a socially sustainable community. The higher density of land uses on the Project site compared to the existing condition is both economically and environmentally sustainable, particularly due to the site’s proximity to bus and light rail transit facilities. The urban public spaces proposed as part of the Project invite gathering on the site in an aesthetically pleasing and safe environment whereas the existing site conditions are disjointed and do not provide open spaces for gathering not associated with a restaurant.

The proposed building facades incorporate numerous window openings to provide views and to avoid blank, massive-looking building faces. The facades would also be articulated with patios, window shades, and varying surface treatments to provide variation and break up the surface of the buildings. Portions of both proposed buildings would be set back from the widest part of the building envelope and some portions of the buildings would extend only to Level 4 and Level 6. Additionally, the ground floor would be slightly taller than the remaining levels, at 15 feet high. This would act to differentiate the ground floor and, combined with some unique architectural features for this level, create a human-scale and pedestrian-friendly environment.

Finally, Section 3.3, Energy, and Section 3.4, GHG Emissions, of this EIR provide analyses of energy use/efficiency and GHG emissions, respectively, with construction and operation of the Project. Section 3.3 concludes that construction and operation of the Project would not result in wasteful, inefficient, or unnecessary construction of energy resources, nor conflict with or obstruct the applicable State or local plans for renewable energy and energy efficiency. As discussed above, Section 3.4 of this EIR concludes that the Project would be consistent with State, regional, and City plans, policies, and regulations adopted for the purpose of reducing the emissions of GHGs. Refer to these sections of this EIR for the complete analysis of these topics.

- 5) *Pasadena will be a City where people can circulate without cars. Specific plans in targeted development areas will emphasize a mix of uses, pedestrian activity, and transit; public and private transit will be made more available; neighborhood villages and transit villages will reduce the need for auto use.*

While this has been sometimes interpreted to mean the City wants circulation with an absence of cars, what this realistically means is that the City can be navigated without cars if desired. This is in contrast to a car-first culture, where primacy of vehicular circulation is typical with alternative transportation modes being limited or inaccessible. Placing the proposed land uses and a higher density of land uses than existing on the site near transit, regardless of the amount of parking provided, supports this principle.

The Project would facilitate senior residents being able to shop for groceries and household items, attend some medical appointments, and dine at on-site buildings that would be accessible even to those with mobility aids. Additionally, there are abundant dining options and other retail/commercial facilities within walking distance of the Project site. Within walking distance, light rail/bus ride, or a short drive/rideshare, there are medical facilities, including Huntington Hospital and emergency rooms; additional restaurants, shopping, and services; and numerous cultural amenities, such as ArtCenter, Pasadena Playhouse, Pasadena Civic Center, museums, theater, and music venues. As such, implementation of the Project would enable the site to become an active part of the neighborhood fabric.

- 6) *Pasadena will be a cultural, scientific, corporate, entertainment, and educational center for the region. Long-term growth opportunities will be provided for existing institutions; a healthy economy will be fostered to attract new cultural, scientific, corporate, entertainment and educational institutions.*

The proposed uses in both Buildings A and B support the City being a corporate center. Medical office uses have the potential to also support scientific research, depending on the tenants that occupy the space. Adding medical office uses on the site also supports the growing medical office cluster immediately to the west in the nearby South Fair Oaks Specific Plan Area along Raymond Avenue and South Fair Oaks Avenue. As discussed above under principle 5, the Project site is within walking distance, light rail/bus ride, or a short drive/rideshare to extensive cultural and educational offerings within the City.

- 7) *Community participation will be a permanent part of achieving a greater City. Citizens will be provided with timely and understandable information on planning issues and projects; citizens will directly participate in shaping plans and policies for Pasadena's future.*

The City's environmental review process for the Project has met, and exceeded, the requirements in CEQA and the State CEQA Guidelines for scoping and noticing. The City held two scoping meetings, including one with Planning Commission. As per City

standards, the hearings for the Project will be public, where citizens may comment on the Project and make their views known further and above than what has already occurred.

- 8) *Pasadena is committed to public education and a diverse educational system responsive to the broad needs of the community.*

The Project would neither support nor conflict with this principle. No public or private educational facilities are included in the Project; however, no educational facilities are currently located on the site. It is noted that ArtCenter College of Design South Campus facilities are located within ½-mile of the Project site on Arroyo Parkway and Raymond Avenue to the south and southwest, respectively. ArtCenter Extension offers non-degree courses for adults, teens, and kids.

The City's General Plan also includes goals and policies that have the purpose of avoiding or mitigating an environmental effect; for the City of Pasadena, these are focused on historic resources, GHG emissions/sustainability, and trees/open space. The discussion below presents some applicable General Plan goals and policies followed by a discussion of how the Project relates to those goals and policies. As shown, the Project would not conflict with the General Plan with regard to goals and policies adopted to avoid or reduce an environmental effect.

Goal 8. Historic Preservation. Preservation and enhancement of Pasadena's cultural and historic buildings, landscapes, streets and districts as valued assets and important representations of its past and a source of community identity, and social, ecological, and economic vitality.

Policy 8.1 Identify and Protect Historic Resources. Identify and protect historic resources that represent significant examples of the City's history.

Policy 8.4 Adaptive Reuse. Encourage sensitive adaptive re-use including continuing the historic use of historic resources to achieve their preservation, sensitive rehabilitation, and continued economic and environmental value.

Policy 8.5 Scale and Character of New Construction in a Designated Landmark and Historic Districts. Promote an architecturally sensitive approach to new construction in Landmark and Historic districts. Demonstrate the proposed project's contextual relationship with land uses and patterns, spatial organization, visual relationships, cultural and historic values, and relationships in height, massing, modulation, and materials.

Section 3.2, Cultural and Paleontological Resources, of this EIR provides an analysis of impacts to historic resources. A Historical Resource Assessment (HRA) was prepared for the Project site (refer to Appendix C-1) that analyzed all existing buildings on the site over 45 years of age to determine whether or not they were eligible historic resources and, for those buildings determined to be historic (501 and 523 South Arroyo Parkway), analyzed whether implementation of the Project would result in a significant impact to those resources. As discussed in Section 3.2, while the Project's tenant improvements do not anticipate demolishing, moving, or making major alterations to these historic resources, these plans remain conceptual and have not yet been finalized. Therefore, there may be a potential for impact, and MM CUL-1 (described above) would be required. Additionally, the HRA assessed whether the Project's scale, massing, and design would result in an indirect impact to these historic resources. The HRA determined there would not be a significant impact related to development of the proposed Buildings A and B in proximity to the historic buildings on the site. Additionally, implementation of MM NOI-1, which outlines setbacks, monitoring, and (if needed) restoration related to the potential for cosmetic damage to these two buildings because of operation of vibration-causing construction equipment would reduce impacts to a less than significant level. With implementation of MM CUL-1 and MM NOI-

1, it was determined there would be a less than significant impact to historic resources. Based on this assessment, it can be concluded that the Project would not conflict with applicable goals and policies related to historic resources and their preservation.

Goal 10. City Sustained and Renewed. Development and infrastructure practices that sustain natural environmental resources for the use of future generations and, at the same time, contribute to the reduction of greenhouse gas emissions and impacts on climate change.

Policy 10.1 Environmental Quality and Conservation. Establish Pasadena as a leader on environmental stewardship efforts, including air quality protection, energy and water efficiency, renewable energy standards, natural resource conservation, and greenhouse gas emission standards in the areas of energy, water, air and land.

Policy 10.4 Sustainable Building Practices. Foster sustainable building practices and processes specified by the City's Green Building Code by incorporating energy and water savings, toxic and solid waste reduction strategies into the building of new structures and remodeling of existing structures.

Policy 10.6 Adaptive Reuse. Encourage adaptive reuse of structures, including non-historic structures, as a means of supporting environmental sustainability.

Section 3.4, GHG Emissions, provides an analysis of GHG emissions including the consistency of the Project with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs. As concluded in Section 3.4 of this EIR, the Project would be consistent with the City's Climate Action Plan (CAP), SCAG's 2020–2045 RTP/SCS *Connect SoCal*, the California Air Resources Board (CARB), California's Climate Change Scoping Plan (Scoping Plan), and Statewide GHG reduction goals for 2030 or 2050 identified in Executive Order (EO) S-3-05 and Senate Bill (SB) 32. Also, as discussed above, Section 3.3, Energy, of this EIR concludes that construction and operation of the Project would not result in wasteful, inefficient, or unnecessary construction of energy resources, nor conflict with or obstruct the applicable State or local plans for renewable energy and energy efficiency. Based on these analyses, it can be concluded that the Project would not conflict with applicable goals and policies related to GHG emissions and sustainability as it relates to energy efficiency.

Policy 10.13 Urban Forest. Maintain and plant additional trees along the City's sidewalks, civic places, parks, and in private developments to support the health and diversity of wildlife, sequester GHG emissions, and contribute to the reduction of the urban heat-island.

The analysis of the proposed tree removals pursuant to the City's "City Trees and Tree Protection Ordinance" (codified in Chapter 8.52 of the PMC) was included in Section 2.4, Biological Resources, of the Initial Study (refer to Appendix A-1) prepared for the Project. As discussed, the Urban Forestry section of the City's Public Works Department typically requires a fee, dependent on the size of the tree(s) being removed, to be remitted into the City's street tree fund. For the Project, a planned condition of approval calls for planting of one new street tree along both Arroyo Parkway and California Boulevard. The Project would also include a total of 25 trees in above-grade planters within the site. With compliance with the Project's conditions of approval, the Project would not conflict with the City's tree protection ordinance and there would be a less than significant impact. Project implementation would result in a net gain in the urban forest, with no loss of street trees and a greater amount of landscaping at ground level and on upper levels of Building B than in the existing condition. Based on this analysis, it can be concluded that the Project would not conflict with applicable goals and policies related to the urban forest.

Based on the Project's consistency with the land use designation for the site, furtherance of applicable Guiding Principles of the Land Use Element, and applicable General Plan policies that

focus on avoiding or reducing an environmental impact, the Project would be considered consistent with the General Plan.

CDSP and Zoning Code

The Project site is zoned CD-6 (Central District, Arroyo Corridor/Fair Oaks subdistrict). The City considers the Central District to be Pasadena's urban core, and the CDSP includes a "diverse mix of land uses designed to create the primary business, financial, retailing, and government center of the City" (Pasadena 2004). The CDSP includes both Public Realm and Private Realm Design Guidelines, which apply to all development in this district, including the Project. The CDSP also provides District-wide land use, mobility, and urban design concepts. The CDSP identifies sub-districts, and within the sub-districts, precincts that include more specific goals, policies, and standards targeted toward the vision for each neighborhood.

The site is in the Arroyo Corridor Transition precinct within the Arroyo Corridor/Fair Oaks sub-district, which is an important gateway to Downtown Pasadena that also supports a broad, but rather undefined, mixture of uses at the periphery of the urban core. The objective of the Arroyo Corridor/Fair Oaks sub-district is to establish Arroyo Parkway as a visually appealing entrance corridor, as well as to provide an attractive opportunity for employment-generating uses adaptable to changing economic conditions, such as arts, technology, and knowledge-based enterprise, within a revitalized low-scale, mixed-use setting at the periphery of Downtown Pasadena. The emphasis of the Arroyo Corridor Transition precinct is the transitional character of the area towards more pedestrian and transit-oriented development with a mix of land uses including residential, commercial, and employment (Pasadena 2004). The Project would include this mix of land uses—senior residents, commercial, and employment—in one location thereby supporting the transition from single-use parcels and disjointed, disparate land uses to a cohesive mix of uses that are near transit and support pedestrian accessibility within and through the site.

The Project would establish a PD zoning district (via a zone change from CD-6 to PD-39) for the site and requires adoption of a PD Plan. Adoption of a PD zoning district simultaneously establishes applicable land use regulations and development standards that are specific to the newly established zoning district. The regulations and standards that dictate allowed and conditionally allowed land uses and development would be prescribed in the accompanying PD Plan.

Within the Arroyo Corridor/Fair Oaks sub-district, building height is limited to 50 feet, or 65 feet using height averaging. As discussed previously, the Applicant is requesting a variance for historic resources (described above in Section 3.6.2) to increase the allowable building height to offset the reduction in developable area due to preserving the two historic structures. The maximum height of all proposed structures would be one of the land use regulations prescribed in the PD Plan prepared by the City.

The review process of a new PD Application requires input from the City's Design Commission, Planning Commission, and City Council. The City's PD process is detailed above in Section 3.6.2. As discussed, the PD Plan, implemented via the zone change, would define all aspects of Project design and cannot be deviated from with further discretionary action, and related environmental review. With approval of the PD application and PD Plan (including approval of the Affinity Project, zoning map amendment to rezone the property from CD-6 to PD-39, variance for historic resources for building height, and Design Review), the proposed Project would be compatible with the City's zoning designations and Zoning Code.

Section 3, Policy Framework of the CDSP includes planning objectives applicable to new development in the Specific Plan area. The CDSP has a total of 33 objectives associated with the 7 General Plan Guiding Principles. The CDSP objectives that correspond with each Guiding

Principles are summarized below, followed by discussion, with focus on the purpose of avoiding or mitigating an environmental effect, where relevant.

- 1) *Summary of CDSP Guiding Principle 1 and Associated Objectives: Promoting growth appropriately and enhancing the Downtown through the development of multi-story buildings with a variety of complementary commercial and/or residential uses in underutilized areas with higher development capacity.*

The Project would redevelop an underutilized site with transit and pedestrian accessibility multi-story buildings that provide complementary commercial, assisted living, and medical office uses. The Project integrates two existing historic structures with the ground floor layout designed to provide spacing and setbacks to blend the scales of the existing and proposed structures.

- 2) *Summary of Guiding Principle 2 and Associated CDSP Objectives: Preservation of the City's historic character and environment which would be accomplished through preservation and integration of Pasadena's historic resources as part of a complementary development that reduces the risk of resource demolition, deterioration by neglect, and/or impacts from natural circumstances.*

As discussed previously, an historic resources variance is being sought by the Applicant to preserve and adaptively reuse two previously recorded historic structures on the site (501 and 523 South Arroyo Parkway). Specifically, the Applicant is requesting an increase in allowable building height to offset the reduction in developable area due to preserving the two historic structures. This variance is being considered consistent with the General Plan as well as the City's historic preservation program, which promotes the identification, evaluation, rehabilitation, adaptive use, and restoration of historic structures. Within the zoning code, a purpose of a PD district is to "encourage the preservation of serviceable existing structures of historic value or artistic merit by providing the opportunity to use them imaginatively for purposes other than that for which they were originally intended." This provision facilitates the adaptive re-use of historic resources and encourages their long-term preservation on large sites designated for new development, as is the case with the Project.

An HRA was prepared for the Project site (refer to Appendix C-1) that analyzed whether implementation of the Project would result in a significant impact to historic resources. As discussed in Section 3.2 of this Draft EIR, while the Project's tenant improvements do not anticipate demolishing, moving, or making major alterations to these historic resources, these plans remain conceptual and have not yet been finalized. Therefore, there may be a potential for impact, and MM CUL-1 (described above) would be required. Additionally, the HRA assessed whether the Project's scale, massing, and design would result in an indirect impact to these historic resources. The HRA determined there would not be a significant impact related to development of the proposed Buildings A and B in proximity to the historic buildings on the site. Additionally, implementation of MM NOI-1, which outlines setbacks, monitoring, and (if needed) restoration related to the potential for cosmetic damage to these two buildings because of operation of vibration-causing construction equipment would reduce impacts to a less than significant level. With implementation of MM CUL-1 and MM NOI-1, it was determined there would be a less than significant impact to historic resources. Based on this assessment, it can be concluded that the Project would not conflict with applicable objectives related to historic resources and their preservation.

- 3) *Summary of CDSP Guiding Principle 3 and Associated Objectives: Supporting economic growth and sustainability by providing jobs, services, revenues, and opportunities for the City's economic vitality and fiscal health.*

As discussed previously, the proposed uses in both Buildings A and B would be employment- and revenue-generating. Additionally, the medical office and assisted living uses would provide services to the community. As such, the Project provides opportunities for both potential employees and existing and future residents of the City.

- 4) *Summary of CDSP Guiding Principle 4 and Associated Objectives: Creating a thriving community that meets basic needs and provides opportunities for wellness and quality of life through improving Pasadena's infrastructure and urban form through modernized buildings that are energy- and water-efficient, and the development of the area's urban forest.*

Providing adequate care and housing for the senior community is a critical component of a City that is meeting the basic needs for all segments of its population. The Project would facilitate senior residents being able to shop for groceries and household items, attend some medical appointments, and dine at on-site buildings that would be accessible even to those with mobility aids. There are abundant dining options and other retail/commercial facilities within walking distance of the Project site. Within walking distance, light rail/bus ride, or a short drive/rideshare, there are medical facilities, including Huntington Hospital and emergency rooms; additional restaurants, shopping, and services; and numerous cultural amenities, such as ArtCenter, Pasadena Playhouse, Pasadena Civic Center, museums, theater, and music venues. As such, implementation of the Project would enable the site to become an active part of the neighborhood fabric.

As discussed, for the Project, a planned condition of approval calls for planting of one new street tree along both Arroyo Parkway and California Boulevard. The Project would also include 25 trees in above-grade planters within the site. With compliance with the conditions of approval, the Project would not conflict with the City's tree protection ordinance and there would be a less than significant impact. Implementation of the Project would result in a net gain in the urban forest, with no loss of street trees and a greater amount of landscaping at ground level and on upper levels of Building B than in the existing condition. Based on this analysis, it can be concluded that the Project would not conflict with applicable objectives related to the urban forest.

- 5) *Summary of CDSP Guiding Principle 5 and Associated Objectives: Providing a community that supports efficient transportation and multi-modal options through development of land uses that are pedestrian friendly and transit-accessible*

As discussed previously, the higher density of land uses on the Project site compared to the existing condition is both economically and environmentally sustainable, particularly due to the site's proximity to bus and light rail transit facilities.

- 6) *Summary of CDSP Guiding Principle 6 and Associated Objectives: Supporting institutional growth through development of commercial uses and quality medical and assisted living uses.*

The Project would support institutional growth by providing high-quality redevelopment of the site with complementary commercial, assisted living, and medical office uses. Adding medical office uses on the site also supports the growing medical office cluster immediately to the west in the nearby South Fair Oaks Specific Plan Area along Raymond Avenue and South Fair Oaks Avenue.

- 7) *Summary of CDSP Guiding Principle 7 and Associated Objectives: Enhancing a local community identity through supporting the continued modernization and development of the Arroyo Parkway as a major commercial corridor.*

As discussed previously, the higher density of land uses on the Project site compared to the existing condition is both economically and environmentally sustainable, particularly due to the site's proximity to bus and light rail transit facilities and underutilized condition. The urban public spaces proposed as part of the Project invite gathering on the site in an aesthetically pleasing and safe environment whereas the existing site conditions are disjointed and do not provide open spaces for gathering not associated with a restaurant.

The proposed building facades incorporate numerous window openings to provide views and to avoid blank, massive-looking building faces. The facades would also be articulated with patios, window shades, and varying surface treatments to provide variation and break up the surface of the buildings. Portions of both proposed buildings would be set back from the widest part of the building envelope and some portions of the buildings would extend only to Level 4 and Level 6. Additionally, the ground floor would be slightly taller than the remaining levels, at 15 feet high. This would act to differentiate the ground floor and, combined with some unique architectural features for this level, create a human-scale and pedestrian-friendly environment. Therefore, the Project would support Arroyo Parkway continuing to modernize and be a major commercial corridor in the City.

SCAG 2020–2045 RTP/SCS

As discussed above, the Project would not require a General Plan amendment and would be consistent with the Land Use Element's Guiding Principles and applicable goals and policies that pertain to environmental effects. Additionally, as the Project is an urban infill development located within both a High-Quality Transit Area (HQTA) and a Transit Priority Area (TPA), the proposed land uses would be consistent with the applicable goals of the 2020–2045 RTP/SCS. The Project would increase density, including senior housing, in an area within ½-mile of two light rail stations (Fillmore and Del Mar). As discussed above, the Project would enable senior residents to shop for groceries and household items, attend some medical appointments, and dine at on-site buildings that would be accessible even to those with mobility aids. Additionally, there are abundant dining options and other retail/commercial facilities within walking distance of the Project site. With a light rail and or short drive/rideshare, abundant dining, entertainment, and services in the City are accessible from the site. The Project would also provide bicycle parking and bicycle serving amenities, and electric car charging would be provided in the subterranean parking garage. Furthermore, the Project would include this mix of land uses—senior residents, commercial, and employment—in one location thereby supporting the transition from single-use parcels and disjointed, disparate land uses to a cohesive mix of uses that are near transit and support pedestrian accessibility within and through the site. As such, the Project would promote and maximize regional mobility, livability, prosperity, and sustainability compared to the existing uses on the site and contribute to a healthier community and region as a whole.

As discussed in Section 3.2, Air Quality, the Project would not result in a conflict with or obstruct implementation of the applicable air quality plan—South Coast Air Quality Management District's (SCAQMD) 2016 Air Quality Management Plan (AQMP)—nor result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or State ambient air quality standards (AAQS). Accordingly, the Project is consistent with SCAG's 2020–2045 RTP/SCS as it regards land use and transportation patterns that, in turn, help CARB achieve its air quality attainment goals as defined in the applicable State Implementation Plan (SIPs). As discussed above, Section 3.4, GHG Emissions, determined the Project would be consistent with the City's CAP, SCAG's 2020–2045 RTP/SCS, CARB, California's Scoping Plan, and Statewide GHG reduction goals for 2030 or 2050. As discussed in Section 3.9, Transportation, using the City's Transportation Demand Model, the Pasadena Department of Transportation (DOT) determined that the Project would not exceed any of the California Environmental Quality Act (CEQA) transportation thresholds defined in the City's

Transportation Impact Analysis Guidelines (TIA Guidelines), including vehicle trips (VT) per capita and vehicle miles traveled (VMT) per capita. SCAG's 2020–2045 RTP/SCS has a focus on transit-oriented development as a means to reduce VMT to improve air quality, reduce GHG emissions, and improve mobility.

The Project would result in a less than significant impact on any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and no mitigation is required.

Project with Building A Residential/Commercial

The analysis of consistency with land use plans, policies, or regulations adopted to avoid or mitigate an environmental impact for the Project with Building A Residential/Commercial would be essentially the same as that of the Project, with some differences focused on the provision of multi-family housing instead of medical office space. The scale, massing, and site layout for the Project with Building A Residential/Commercial would be the same as the Project.

Pasadena General Plan

As discussed for the Project, the High Mixed-Use General Plan land use category allows maximum densities of 3.0 FAR and 87 du/acre and the site would allow up to 434,559 sf of floor area and up to 289 dwelling units. Development of the Project with Building A Residential/Commercial would also result in a total of 417,929 sf of floor area (aboveground) but would include 289 dwelling units balanced between market rate apartments/condominiums in Building A and independent senior living units in Building B. The Project with Building A Residential/Commercial would not require a General Plan amendment.

As included above for the Project, a consistency analysis of the Project with Building A Residential/Commercial with the Land Use Element's Guiding Principles is also provided herein:

These Guiding Principles are:

- 1) *Growth will be targeted to serve community needs and enhance the quality of life. Higher density development will be directed away from residential neighborhoods and into the Central District, Transit Villages, and Neighborhood Villages. These areas will have a diverse housing stock, job opportunities, exciting districts with commercial and recreational uses, and transit opportunities. New development will build upon Pasadena's tradition of strong sense of place, great neighborhoods, gardens, plazas, parks, and trees.*

The Project with Building A Residential/Commercial would provide senior living facilities and several related amenities that are acutely needed in the City and wider region as the U.S. population is generally living longer and a greater proportion of the population is considered senior or elderly with the large "boomer" segment, in particular, reaching this threshold. The ground floor commercial uses in Building A would also be employment-generating, and the housing provided under this scenario is also acutely needed in the region. These uses would therefore serve community needs and enhance quality of life, not limited to seniors, for residents of Pasadena and beyond.

- 2) *Pasadena's historic resources will be preserved. Citywide, new development will be in harmony with and enhance Pasadena's unique character and sense of place. New construction that could affect the integrity of historic resources will be compatible with, and differentiated from, the existing resource.*

An historic resources variance is being sought by the Applicant to preserve and adaptively reuse two previously recorded historic structures on the site (501 and 523 South Arroyo Parkway). Specifically, the Applicant is requesting an increase in allowable building height to offset the reduction in developable area due to preserving the two historic structures. The City provides incentives to owners of historic properties, including several as part of the zoning code consistent with the General Plan, which directs the City to implement flexible zoning regulations to promote the preservation of historic properties. This variance is being considered consistent with the General Plan as well as the City's historic preservation program, which promotes the identification, evaluation, rehabilitation, adaptive use, and restoration of historic structures. Within the zoning code, a purpose of a PD district is to "encourage the preservation of serviceable existing structures of historic value or artistic merit by providing the opportunity to use them imaginatively for purposes other than that for which they were originally intended." This provision facilitates the adaptive re-use of historic resources and encourages their long-term preservation on large sites designated for new development, as is the case with the Project. Additionally, MM CUL-1 requires that the Project Applicant engage with a licensed architect and/or engineer that meets the SOI's Professional Qualifications Standards to develop a series of protection interventions and protocols that would preserve the two historical resources on the Project site – 501 and 523 South Arroyo Parkway – during construction activities. These protocols shall take into consideration the protection of and security of both resources, particularly the preservation of the character-defining features through the installation of physical protective barriers around each resource and the creation of site protocols that will eliminate the potential for physical damage resulting from impacts associated with construction and transport of equipment. Additionally, implementation of MM NOI-1, which outlines setbacks, monitoring, and (if needed) restoration related to the potential for cosmetic damage to these two buildings because of operation of vibration-causing construction equipment would reduce impacts to a less than significant level. Therefore, with implementation of required mitigation, the proposed variance for historic resources and related PD Plan is consistent with the City's policies to preserve and protect historic resources.

- 3) *Pasadena will be an economically vital City by providing jobs, services, revenues, and opportunities. A diverse economic base with jobs for Pasadena residents will be fostered; existing businesses will be encouraged to stay or expand; affordable housing will be provided for the labor pool; the continued fiscal health of the city will be ensured.*

The proposed ground floor commercial uses in Building A and all uses in Building B would be employment- and revenue-generating. Also, the assisted living uses in Building B would provide services to the community. Additionally, the market-rate housing proposed in Building A in this scenario would contribute to the local economic base as their patronage may encourage existing businesses to stay and/or expand. As such, the Project with Building A Residential/Commercial provides opportunities for both potential employees and existing and future residents of the City.

- 4) *Pasadena will be a socially, economically, and environmentally sustainable community. Safe, well designed, accessible and human-scale residential and commercial areas will be provided where people of all ages can live, work and play. These areas will include neighborhood parks, urban open spaces and the equitable distribution of public and private recreational facilities; new public spaces will be acquired. Human services will be coordinated and made accessible to those who need them.*

Providing adequate care and housing for the senior community as well as market-rate housing is a critical component of being a socially sustainable community. The higher density of land uses on the Project site is both economically and environmentally

sustainable, particularly due to the site's proximity to bus and light rail transit facilities. The urban public spaces proposed as part of the Project with Building A Residential/Commercial invite gathering on the site in an aesthetically pleasing and safe environment whereas the existing site conditions are disjointed and do not provide open spaces for gathering not associated with a restaurant.

The proposed building facades incorporate numerous window openings to provide views and to avoid blank, massive-looking building faces. The facades would also be articulated with patios, window shades, and varying surface treatments to provide variation and break up the surface of the buildings. Portions of both proposed buildings would be set back from the widest part of the building envelope and some portions of the buildings would extend only to Level 4 and Level 6. Additionally, the ground floor would be slightly taller than the remaining levels, at 15 feet high. This would act to differentiate the ground floor and, combined with some unique architectural features for this level, create a human-scale and pedestrian-friendly environment.

- 5) *Pasadena will be a City where people can circulate without cars. Specific plans in targeted development areas will emphasize a mix of uses, pedestrian activity, and transit; public and private transit will be made more available; neighborhood villages and transit villages will reduce the need for auto use.*

While this has been sometimes interpreted to mean the City wants circulation with an absence of cars, what this realistically means is that the City can be navigated without cars if desired. This is in contrast to a car-first culture, where primacy of vehicular circulation is typical with alternative transportation modes being limited or inaccessible. Placing the proposed land uses and a higher density of land uses than existing on the site near transit, regardless of the amount of parking provided, supports this principle.

The Project with Building A Residential/Commercial would facilitate residents being able to shop for groceries and household items and dine at on-site buildings that would be accessible even to those with mobility aids. There are abundant dining options and other retail/commercial facilities within walking distance of the Project site. Within walking distance, a light rail/bus ride, or a short drive/rideshare, there are medical facilities, including Huntington Hospital and emergency room; additional restaurants, shopping, and services; and numerous cultural amenities, such as ArtCenter, Pasadena Playhouse, Pasadena Civic Center, museums, theater, and music venues. As such, implementation of the Project with Building A Residential/Commercial would enable the site to become an active part of the neighborhood fabric.

- 6) *Pasadena will be a cultural, scientific, corporate, entertainment, and educational center for the region. Long-term growth opportunities will be provided for existing institutions; a healthy economy will be fostered to attract new cultural, scientific, corporate, entertainment and educational institutions.*

All proposed uses in Building A and assisted living uses, and related amenities in Building B support the City being a corporate center. As discussed above under principle 5, the Project site is within walking distance, a light rail/bus ride, or a short drive/rideshare to extensive cultural and educational offerings within the City.

- 7) *Community participation will be a permanent part of achieving a greater City. Citizens will be provided with timely and understandable information on planning issues and projects; citizens will directly participate in shaping plans and policies for Pasadena's future.*

The City's environmental review process for the Project with Building A Residential/Commercial has met, and exceeded, the requirements in CEQA and the State CEQA Guidelines for scoping and noticing. The City held two scoping meetings, including one with Planning Commission. As per City standards, the hearings for the Project with Building A Residential/Commercial will be public, where citizens may comment on the project and make their views known further and above than what has already occurred.

- 8) *Pasadena is committed to public education and a diverse educational system responsive to the broad needs of the community.*

The Project with Building A Residential/Commercial would neither support nor conflict with this principle. No public or private educational facilities are included in the Project with Building A Residential/Commercial; however, no educational facilities are currently located on the site. As noted above, the ArtCenter College of Design South Campus facilities are located within ½-mile of the Project site on Arroyo Parkway and Raymond Avenue to the south and southwest, respectively. ArtCenter Extension (ACX) offers non-degree courses for adults, teens, and kids.

As discussed above, the City's General Plan also includes goals and policies that have the purpose of avoiding or mitigating an environmental effect; for the City of Pasadena, these are focused on historic resources, GHG emissions/sustainability, and trees/open space. The discussion below presents some applicable General Plan goals and policies followed by a discussion of how the Project with Building A Residential/Commercial relates to those goals and policies. As shown, the Project with Building A Residential/Commercial would not conflict with the General Plan with regard to goals and policies adopted to avoid or reduce an environmental effect.

Goal 8. Historic Preservation. Preservation and enhancement of Pasadena's cultural and historic buildings, landscapes, streets and districts as valued assets and important representations of its past and a source of community identity, and social, ecological, and economic vitality.

Policy 8.1 Identify and Protect Historic Resources. Identify and protect historic resources that represent significant examples of the City's history.

Policy 8.4 Adaptive Reuse. Encourage sensitive adaptive re-use including continuing the historic use of historic resources to achieve their preservation, sensitive rehabilitation, and continued economic and environmental value.

Policy 8.5 Scale and Character of New Construction in a Designated Landmark and Historic Districts. Promote an architecturally sensitive approach to new construction in Landmark and Historic districts. Demonstrate the proposed project's contextual relationship with land uses and patterns, spatial organization, visual relationships, cultural and historic values, and relationships in height, massing, modulation, and materials.

Section 3.2, Cultural and Paleontological Resources, of this EIR provides an analysis of impacts to historic resources, including an HRA (refer to Appendix C-1) that analyzed whether implementation of the Project with Building A Residential/Commercial would result in a significant impact to those resources. As discussed in Section 3.2, while the tenant improvements do not anticipate demolishing, moving, or making major alterations to these historic resources, these plans remain conceptual and have not yet been finalized. Therefore, there may be a potential for impact, and MM CUL-1 (described above) would be required. Additionally, the HRA assessed whether the scale, massing, and design of the Project with Building A Residential/Commercial would result in an indirect impact to these historic resources. The HRA determined there would not be a significant impact related to development of the proposed Buildings A and B in proximity

to the historic buildings on the site. Additionally, implementation of MM NOI-1, which outlines setbacks, monitoring, and (if needed) restoration related to the potential for cosmetic damage to these two buildings because of operation of vibration-causing construction equipment to a less than significant level. With implementation of MM CUL-1 and MM NOI-1, it was determined there would be a less than significant impact to historic resources. Based on this assessment, it can be concluded that the Project with Building A Residential/Commercial would not conflict with applicable goals and policies related to historic resources and their preservation.

GOAL 10. City Sustained and Renewed. Development and infrastructure practices that sustain natural environmental resources for the use of future generations and, at the same time, contribute to the reduction of greenhouse gas emissions and impacts on climate change.

Policy 10.1 Environmental Quality and Conservation. Establish Pasadena as a leader on environmental stewardship efforts, including air quality protection, energy and water efficiency, renewable energy standards, natural resource conservation, and greenhouse gas emission standards in the areas of energy, water, air and land.

Policy 10.4 Sustainable Building Practices. Foster sustainable building practices and processes specified by the City's Green Building Code by incorporating energy and water savings, toxic and solid waste reduction strategies into the building of new structures and remodeling of existing structures.

Policy 10.6 Adaptive Reuse. Encourage adaptive reuse of structures, including non-historic structures, as a means of supporting environmental sustainability.

Section 3.4, GHG Emissions, provides an analysis of GHG emissions including the consistency of the Project with Building A Residential/Commercial with applicable plans, policies, or regulations adopted for the purpose of reducing the emissions of GHGs. As concluded in Section 3.4 of this EIR, the Project would be consistent with the City's Climate Action Plan (CAP), SCAG's 2020–2045 RTP/SCS *Connect SoCal*, the California Air Resources Board (CARB), California's Climate Change Scoping Plan (Scoping Plan), and Statewide GHG reduction goals for 2030 or 2050 identified in Executive Order (EO) S-3-05 and Senate Bill (SB) 32. Also, as discussed above, Section 3.3, Energy, of this EIR concludes that construction and operation of the Project with Building A Residential/Commercial would not result in wasteful, inefficient, or unnecessary construction of energy resources, nor conflict with or obstruct the applicable State or local plans for renewable energy and energy efficiency. Based on these analyses, it can be concluded that the Project with Building A Residential/Commercial would not conflict with applicable goals and policies related to GHG emissions and sustainability as it relates to energy efficiency.

Policy 10.13 Urban Forest. Maintain and plant additional trees along the City's sidewalks, civic places, parks, and in private developments to support the health and diversity of wildlife, sequester GHG emissions, and contribute to the reduction of the urban heat-island.

The analysis of the proposed tree removals pursuant to the City's "City Trees and Tree Protection Ordinance" (codified in Chapter 8.52 of the PMC) was included in Section 2.4, Biological Resources, of the Initial Study (refer to Appendix A-1) prepared for the Project with Building A Residential/Commercial. As discussed, the Urban Forestry section of the City's Public Works Department typically requires a fee, dependent on the size of the tree(s) being removed, to be remitted into the City's street tree fund. For the Project with Building A Residential/Commercial, a planned condition of approval calls for planting of one new street tree along both Arroyo Parkway and California Boulevard. The Project with Building A Residential/Commercial would also include a total of 25 trees in above-grade planters within the site. With compliance with the conditions of approval, the Project with Building A Residential/Commercial would not conflict with the City's tree protection ordinance and there would be a less than significant impact. Implementation of the

Project with Building A Residential/Commercial would result in a net gain in the urban forest, with no loss of street trees and a greater amount of landscaping at ground level and on upper levels of Building B than in the existing condition. Based on this analysis, it can be concluded that the Project with Building A Residential/Commercial would not conflict with applicable goals and policies related to the urban forest.

Based on the Project with Building A Residential/Commercial's consistency with the land use designation for the site, furtherance of applicable Guiding Principles of the Land Use Element, and applicable General Plan policies that focus on avoiding or reducing an environmental impact, the Project with Building A Residential/Commercial would be considered consistent with the General Plan.

CDSP and Zoning Code

As with the Project, the Project with Building A Residential/Commercial would establish a PD zoning district (via a Zone Change from CD-6 to PD-39) for the site and requires adoption of a PD Plan. The regulations and standards that dictate allowed and conditionally allowed land uses and development would be prescribed in the accompanying PD Plan. As discussed previously, the Applicant is requesting a variance for historic resources (described above in Section 3.6.2) to increase the allowable building height to offset the reduction in developable area due to preserving the two historic structures. The maximum height of all proposed structures would be one of the land use regulations prescribed in the PD Plan prepared by the City. With approval of the zone change from CD-6 to PD-39 and approval of the Project with Building A Residential/Commercial, including Design review, the proposed Project with Building A Residential/Commercial would be compatible with the City's zoning designations.

The City considers the Central District to be Pasadena's urban core, and the CDSP includes a "diverse mix of land uses designed to create the primary business, financial, retailing, and government center of the City" (Pasadena 2004). The CDSP includes both Public Realm and Private Realm Design Guidelines, which apply to all development in this district, including the Project with Building A Residential/Commercial. The CDSP also provides District-wide land use, mobility, and urban design concepts. The CDSP identifies sub-districts, and within the sub-districts, precincts that include more specific goals, policies, and standards targeted toward the vision for each neighborhood.

As discussed previously, the site is in the Arroyo Corridor Transition precinct within the Arroyo Corridor/Fair Oaks sub-district, which is an important gateway to Downtown Pasadena that also supports a broad, but rather undefined, mixture of uses at the periphery of the urban core. The objective of the Arroyo Corridor/Fair Oaks sub-district is to establish Arroyo Parkway as a visually appealing entrance corridor, as well as to provide an attractive opportunity for employment-generating uses adaptable to changing economic conditions, such as arts, technology, and knowledge-based enterprise, within a revitalized low-scale, mixed-use setting at the periphery of Downtown Pasadena. The emphasis of the Arroyo Corridor Transition precinct is the transitional character of the area towards more pedestrian and transit-oriented development with a mix of land uses including residential, commercial, and employment (Pasadena 2004). The Project with Building A Residential/Commercial would include this mix of land uses—senior residents, residents, commercial, and employment—in one location thereby supporting the transition from single-use parcels and disjointed, disparate land uses to a cohesive mix of uses that are near transit and support pedestrian accessibility within and through the site.

Section 3, Policy Framework of the CDSP includes planning objectives applicable to new development in the Specific Plan area. The CDSP has a total of 33 objectives associated with the 7 General Plan Guiding Principles. The CDSP objectives that correspond with each Guiding

Principles are summarized below, followed by discussion, with focus on the purpose of avoiding or mitigating an environmental effect, where relevant.

- 1) *Summary of CDSP Guiding Principle 1 and Associated Objectives: Promoting growth appropriately and enhancing the Downtown through the development of multi-story buildings with a variety of complementary commercial and/or residential uses in underutilized areas with higher development capacity.*

The Project with Building A Residential/Commercial would redevelop an underutilized and deteriorating site with transit and pedestrian accessibility multi-story buildings that provide complementary commercial, assisted living, and residential uses. The Project with Building A Residential/Commercial integrates two existing historic structures with the ground floor layout designed to provide spacing and setbacks to blend the scales of the existing and proposed structures.

- 2) *Summary of Guiding Principle 2 and Associated CDSP Objectives: Preservation of the City's historic character and environment which would be accomplished through preservation and integration of Pasadena's historic resources as part of a complementary development that reduces the risk of resource demolition, deterioration by neglect, and/or impacts from natural circumstances.*

As discussed previously, an historic resources variance is being sought by the Applicant to preserve and adaptively reuse two previously recorded historic structures on the site (501 and 523 South Arroyo Parkway). This provision facilitates the adaptive re-use of historic resources and encourages their long-term preservation on large sites designated for new development, as is the case with the Project with Building A Residential/Commercial. An HRA was prepared for the site (refer to Appendix C-1) that analyzed whether implementation of the Project with Building A Residential/Commercial would result in a significant impact to historic resources. As discussed in Section 3.2 of this Draft EIR, while the tenant improvements do not anticipate demolishing, moving, or making major alterations to these historic resources, these plans remain conceptual and have not yet been finalized. Therefore, there may be a potential for impact, and MM CUL-1 (described above) would be required. Additionally, the HRA assessed whether the Project with Building A Residential/Commercial's scale, massing, and design would result in an indirect impact to these historic resources. The HRA determined there would not be a significant impact related to development of the proposed Buildings A and B in proximity to the historic buildings on the site. Additionally, implementation of MM NOI-1, which outlines setbacks, monitoring, and (if needed) restoration related to the potential for cosmetic damage to these two buildings because of operation of vibration-causing construction equipment would reduce impacts to a less than significant level. With implementation of MM CUL-1 and MM NOI-1, it was determined there would be a less than significant impact to historic resources. Based on this assessment, it can be concluded that the Project with Building A Residential/Commercial would not conflict with applicable goals and policies related to historic resources and their preservation.

- 3) *Summary of CDSP Guiding Principle 3 and Associated Objectives: Supporting economic growth and sustainability by providing jobs, services, revenues, and opportunities for the City's economic vitality and fiscal health.*

The proposed uses in Building B the ground-floor commercial in Building A would be employment- and revenue-generating under this scenario. Additionally, the assisted living uses would provide services to the community. As such, the Project with Building A Residential/Commercial provides opportunities for both potential employees and existing and future residents of the City.

- 4) *Summary of CDSP Guiding Principle 4 and Associated Objectives: Creating a thriving community that meets basic needs and provides opportunities for wellness and quality of life through improving Pasadena's infrastructure and urban form through modernized buildings that are energy- and water-efficient, and the development of the area's urban forest.*

Providing adequate care and housing for the senior community is a critical component of a City that is meeting the basic needs for all segments of its population. The Project with Building A Residential/Commercial would facilitate residents, including senior residents, being able to shop for groceries and household items, and dine at on-site buildings that would be accessible even to those with mobility aids. There are abundant dining options and other retail/commercial facilities within walking distance of the site. Within walking distance, light rail/bus ride, or a short drive/rideshare, there are medical facilities, including Huntington Hospital and emergency rooms; additional restaurants, shopping, and services; and numerous cultural amenities, such as ArtCenter, Pasadena Playhouse, Pasadena Civic Center, museums, theater, and music venues. As such, implementation of the Project with Building A Residential/Commercial would enable the site to become an active part of the neighborhood fabric.

- 5) *Summary of CDSP Guiding Principle 5 and Associated Objectives: Providing a community that supports efficient transportation and multi-modal options through development of land uses that are pedestrian friendly and transit-accessible.*

As discussed previously, the higher density of land uses proposed on the site compared to the existing condition is both economically and environmentally sustainable, particularly due to the site's proximity to bus and light rail transit facilities.

- 6) *Summary of CDSP Guiding Principle 6 and Associated Objectives: Supporting institutional growth through development of commercial uses and quality medical and assisted living uses.*

The Project with Building A Residential/Commercial would support institutional growth by providing high-quality redevelopment of the site with complementary commercial, assisted living, and residential uses.

- 7) *Summary of CDSP Guiding Principle 7 and Associated Objectives: Enhancing a local community identity through supporting the continued modernization and development of the Arroyo Parkway as a major commercial corridor.*

As discussed previously, the higher density of land uses proposed on the site compared to the existing condition is both economically and environmentally sustainable, particularly due to the site's proximity to bus and light rail transit facilities and underutilized condition. The urban public spaces proposed as part of the Project with Building A Residential/Commercial invite gathering on the site in an aesthetically pleasing and safe environment whereas the existing site conditions are disjointed and do not provide open spaces for gathering not associated with a restaurant.

The proposed building facades incorporate numerous window openings to provide views and to avoid blank, massive-looking building faces. The facades would also be articulated with patios, window shades, and varying surface treatments to provide variation and break up the surface of the buildings. Portions of both proposed buildings would be set back from the widest part of the building envelope and some portions of the buildings would extend only to Level 4 and Level 6. Additionally, the ground floor would be slightly taller than the remaining levels, at 15 feet high. This would act to differentiate the ground floor

and, combined with some unique architectural features for this level, create a human-scale and pedestrian-friendly environment. Therefore, the Project with Building A Residential/Commercial would support Arroyo Parkway continuing to modernize and be a major commercial corridor in the City.

SCAG 2020–2045 RTP/SCS

As discussed above, the Project with Building A Residential/Commercial would not require a General Plan amendment and would be consistent with the Land Use Element's Guiding Principles and applicable goals and policies that pertain to environmental effects. Additionally, as the Project with Building A Residential/Commercial is an urban infill development located within both a High-Quality Transit Area (HQTa) and a Transit Priority Area (TPA), the proposed land uses would be consistent with the applicable goals of the 2020–2045 RTP/SCS. The Project with Building A Residential/Commercial would increase density, including senior and market-rate housing, in an area within ½-mile of two light rail stations (Fillmore and Del Mar). As discussed above, the Project would enable residents to shop for groceries and household items and dine at on-site buildings that would be accessible even to those with mobility aids. Additionally, there are abundant dining options and other retail/commercial facilities within walking distance of the site. With a light rail and or short drive/rideshare, abundant dining, entertainment, and services in the City are accessible from the site. The Project with Building A Residential/Commercial would also provide bicycle parking and bicycle serving amenities, and electric car charging would be provided in the subterranean parking garage. Furthermore, the Project with Building A Residential/Commercial would include this mix of land uses—residential, commercial, and employment—in one location thereby supporting the transition from single-use parcels and disjointed, disparate land uses to a cohesive mix of uses that are near transit and support pedestrian accessibility within and through the site. As such, the Project with Building A Residential/Commercial would promote and maximize regional mobility, livability, prosperity, and sustainability compared to the existing uses on the site and contribute to a healthier community and region as a whole.

As discussed in Section 3.2, Air Quality, the Project with Building A Residential/Commercial would not result in a conflict with or obstruct implementation of the applicable air quality plan—SCAQMD's 2016 AQMP—nor result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or State AAQS. Accordingly, the Project with Building A Residential/Commercial is consistent with SCAG's 2020–2045 RTP/SCS as it regards land use and transportation patterns that, in turn, help CARB achieve its air quality attainment goals as defined in the applicable SIPs. As discussed above, Section 3.4, GHG Emissions, determined the Project with Building A Residential/Commercial would be consistent with the City's CAP, SCAG's 2020–2045 RTP/SCS, CARB, California's Scoping Plan, and Statewide GHG reduction goals for 2030 or 2050. As discussed in Section 3.9, Transportation, using the City's Transportation Demand Model, the Pasadena DOT determined that the Project with Building A Residential/Commercial would not exceed any of the CEQA transportation thresholds defined in the City's TIA Guidelines, including VT per capita and VMT per capita. SCAG's 2020–2045 RTP/SCS has a focus on transit-oriented development as a means to reduce VMT to improve air quality, reduce GHG emissions, and improve mobility.

The Project with Building A Residential/Commercial would result in a less than significant impact on any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, and no mitigation is required.

3.6.6 CUMULATIVE IMPACTS

Project

The cumulative impacts related to demographic growth are analyzed for the City of Pasadena. Growth and development in the City would be accompanied by potential changes in existing land uses. New development on vacant areas and underutilized lots are anticipated to be developed in accordance with the General Plan, Housing Element, and zoning code in effect at the time of each project's application. This includes consideration of variances and vehicles such as PD zoning districts, where allowable. If discretionary actions are needed, individual projects would be subject to evaluation for potential environmental impacts as required by CEQA. This review process would address potential land use and planning policy conflicts.

Projects requiring General Plan amendments or zone changes/variances would need to show consistency with the applicable goals, policies, and/or actions in the General Plan and/or Zoning Code, respectively, and thus are not expected to lead to land use incompatibilities or conflicts. Planned or required infrastructure and public facilities associated with individual projects would provide the necessary facilities and services to existing and future developments. Thus, these projects would complement the private development projects planned in the City. Therefore, the Project would not result in a cumulatively considerable impact, and no mitigation is required.

Project with Building A Residential/Commercial

The cumulative analysis of the Project with Building A Residential/Commercial would be the same as that of the Project. The change in proposed use from medical to residential in Building A does not adversely affect the consistency with the City's General Plan and zoning code. As such, the Project with Building A Residential/Commercial would also not result in a cumulatively considerable impact, and no mitigation is required.

3.6.7 MITIGATION MEASURES

No significant impacts related to land use and planning would occur, and no mitigation is required.

3.6.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.6.9 SUMMARY OF ANALYSIS

Project

The Project would not require a General Plan amendment and would be consistent with the Guiding Principles of the City's General Plan Land Use Element and numerous goals and policies related to avoiding or reducing environmental impacts. The Project would establish a PD zoning district (via a Zone Change from CD-6 to PD-39) for the site and requires adoption of a PD Plan. The regulations and standards that dictate allowed and conditionally allowed land uses and development would be prescribed in the accompanying PD Plan. The basic design of a project, including compatibility with surroundings, massing, proportion, siting, solid-to-void relationships, and compliance with applicable design guidelines is evaluated through the City's Design Review process and is a role for the City's Design Commission. A subsequent review of a proposed PD zone and PD Plan would occur at a public hearing by the Planning Commission. Therefore, with adherence to the PD Plan processes, including consideration of a variance for historic resources to increase the height of the proposed buildings, the Project would be considered consistent with the zoning code. The Project would not conflict with any land use plan, policy, or regulation

adopted for the purpose of avoiding or mitigating an environmental effect; therefore, there would be less than significant impacts.

Project with Building A Residential/Commercial

The analysis of consistency with land use plans, policies, or regulations adopted to avoid or mitigate an environmental impact for the Project with Building A Residential/Commercial would be essentially the same as that of the Project. The Project with Building A Residential/Commercial would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect; therefore, there would be less than significant impacts.

3.7 NOISE

This section analyzes potential noise and vibration impacts associated with the implementation of the proposed Project and Project with Building A Residential/Commercial. Information in this section is derived from the noise analysis conducted by Psomas and summarized here and the *City of Pasadena General Plan* and its Environmental Impact Report (EIR). The noise modeling data is provided in Appendix F.

3.7.1 EXISTING CONDITIONS

The existing noise environment in the Project area is primarily influenced by traffic noise on nearby roads and, to a lesser extent, the Metro's Gold (L) Line, which runs adjacent to the western boundary of the Project Site. The roadways contributing the most noise to the Project site are South Arroyo Parkway and East California Boulevard.

Noise Background

Noise has been simply defined as "unwanted sound." Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, when it has adverse effects on health, or, as stated in the Pasadena Municipal Code (PMC), is unnecessary, excessive, or annoying. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear.

Range of Noise

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at 3 feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA at approximately 100 feet, which can cause serious discomfort. Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

Noise Descriptors

Environmental noise descriptors are generally based on averages, rather than instantaneous noise levels. The most commonly used figure is the equivalent level (L_{eq}). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period and is commonly used to describe the "average" noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA L_{eq} sound levels in the evening from 7:00 PM to 10:00 PM, and the addition of 10 decibels to dBA L_{eq} sound levels at night between 10:00 PM and 7:00 AM. These additions are made to

account for the noise-sensitive time periods during the evening and night hours when sound appears louder. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure. The City of Pasadena relies on the 24-hour CNEL level to assess land use compatibility with noise sources.

Sound Propagation

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

Geometric Spreading

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source.

Ground Absorption

The propagation path of noise from a highway to a receptor is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually sufficiently accurate for distances of less than 200 feet. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receptor, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receptor such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source.

Atmospheric Effects

Receptors located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects.

Shielding

A large object or barrier in the path between a noise source and a receptor can substantially attenuate noise levels at the receptor. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an “out of sight, out of mind” effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby resident. However, for vegetation to provide a substantial or even noticeable noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction.

Community Response to Noise

Community responses to noise may range from registering a complaint by telephone or letter, to initiating court action, depending upon everyone's susceptibility to noise and personal attitudes about noise. Approximately ten percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints will occur. Another 25 percent of the population will not complain even in very severe noise environments. Thus, a variety of reactions can be expected from people exposed to any given noise environment. Surveys have shown that about ten percent of the people exposed to traffic noise of 60 dBA will report being highly annoyed with the noise, and each increase of one dBA is associated with approximately two percent more people being highly annoyed. When traffic noise exceeds 60 dBA or aircraft noise exceeds 55 dBA, people may begin to complain. Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels. An increase or decrease of 1 dBA cannot be perceived except in carefully controlled laboratory experiments, a change of 3 dBA is considered barely perceptible, and changes of 5 dBA are considered readily perceptible.

Land Use Compatibility with Noise

Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop, and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The Federal Highway Administration (FHWA) encourages State and local governments to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that any noise impacts are minimized.

Vibration

Per the Federal Transit Administration (FTA), vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. VdB serves to reduce the range of numbers used to describe human response to vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receivers for vibration include structures (especially older masonry structures), people (especially residents, the elderly, and sick), and vibration-sensitive equipment.

The background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings.

Noise Level Measurements

To determine the baseline noise level environment and to assess potential noise impacts, four short-term (20 minutes) and two long-term (24 hours) noise level measurements during typical weekday conditions were collected on September 9 and 10, 2021.

The long-term measurements were collected along the eastern Project site boundary on South Arroyo Parkway and southern site boundary along East California Boulevard where existing noise levels are highest. The average noise levels along South Arroyo Parkway adjacent to the site range from 57 to 70 dBA L_{eq} and the 24-hour weighted noise level at this location is 72 dBA CNEL. The average noise levels along East California Boulevard range from 54 to 74 dBA L_{eq} and the 24-hour weighted noise level at this location is 73 dBA CNEL. The long-term noise measurements indicate that noise levels, generated primarily by traffic, along these two roadways are very similar.

The short-term measurements were collected along the western Project site boundary adjacent to the Metro Gold (L) Line and in the parking lot in front of K9 Loft at 491 South Arroyo Parkway (south side of the Whole Foods Market building) where noise levels are less substantial than along South Arroyo Parkway and East California Boulevard. Table 3.7-1, Short-Term Ambient Noise Measurements, presents the average (L_{eq}), maximum (L_{max}), and minimum noise level (L_{min}) values that were collected at these two locations. The complete noise monitoring results are included in Appendix F.

**TABLE 3.7-1
SHORT-TERM AMBIENT NOISE MEASUREMENTS**

Location	Time	Noise Levels (dBA)			Primary Noise Source(s)
		L_{eq}	L_{max}	L_{min}	
Western Project site boundary (adjacent to Metro L Line)	12:09 PM–12:30 PM	63.8	87.4	48.7	Metro Gold (L) Line and background traffic
491 South Arroyo Parkway (adjacent to south side of Whole Foods Market)	12:32 PM–12:52 PM	61.7	76.1	48.9	Background traffic

dBA: A-weighted decibels; L_{eq} : equivalent noise level; L_{max} : maximum noise level; L_{min} : minimum noise level

As shown in Table 3.7-1, the average daytime noise levels near the site range from 62 to 64 dBA L_{eq} . These noise levels are considered typical for the site due to substantial levels of background traffic on two adjacent roadways.

Sensitive Receptors

California's General Plan Guidelines (OPR 2017) defines noise-sensitive receptors as those land uses that require serenity or are otherwise adversely affected by noise events or conditions. Furthermore, the City of Pasadena attempts to minimize exposure to excessive noise levels to residents, workers, and visitors of Pasadena by adopting the noise-related California General

Plan Guidelines. The land use categories requiring the lowest noise thresholds are schools, libraries, churches, hospitals, and residences. Schools, libraries, churches, hospitals, and residences proximate to the Project site are referred to as the Project's "noise sensitive receptors" due to sensitivity of these uses to noise exposure. Although each land use category has a different measure of acceptable noise exposure, most of the categories listed must remain under 60-70 dBA per State and City guidelines.

The buildings and structures that surround the Project site are mostly commercial properties, including medical office buildings at 55 East California Boulevard and 333 South Arroyo Parkway, a self-storage facility at 411 South Arroyo Parkway, and a Public Radio facility at 474 South Raymond Avenue. The closest noise-sensitive receptors to the Project site include a mix-use residential complex located immediately east of the Project site at 482 South Arroyo Parkway and a hotel located at 400 South Arroyo Parkway. The closest hospital is located two blocks west of the Project site at 625 Fair Avenue Oaks (Huntington Hospital), the closest school is located 0.2-mile to the east at 405 South Euclid Avenue (Mayfield Junior School), the closest church is located 0.3-mile to the west at 500 South Pasadena Avenue (Pasadena Community Christian Fellowship), and the closest park is located 0.2 mile to the north-northwest at 275 South Raymond Avenue (Central Park).

3.7.2 RELEVANT PROGRAMS AND REGULATIONS

Public agencies have established noise guidelines and standards to protect citizens from potential hearing damage and various other adverse physiological and social effects associated with noise.

Noise Standards

California Noise Insulation Standards

Title 24 of the *California Code of Regulations*, also known as the California Building Standards Code or, more commonly, as the California Building Code (CBC), codifies the State's noise insulation standards applicable to all occupancies throughout the State. Section 1206.4, Allowable Interior Noise Levels, of the CBC states "Interior noise levels attributable to exterior sources shall not exceed 45 dB in any habitable room. The noise metric shall be either the day-night average sound level (L_{dn}) or the community noise equivalent level (CNEL), consistent with the noise element of the local general plan."

The 2019 California's Green Building Standards Code, also known as CALGreen, contains mandatory measures for non-residential building construction in Section 5.507 on Environmental Comfort. These noise standards are applied to new construction in California for controlling interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when non-residential structures are developed in areas where the exterior noise levels exceed 65 dBA CNEL, such as within a noise contour of an airport, freeway, railroad, and other areas where noise contours are not readily available. If the development falls within an airport or freeway 65 dBA CNEL noise contour, the combined sound transmission class (STC) rating of the wall and roof-ceiling assemblies must be at least 50. For those developments in areas where noise contours are not readily available and the noise level exceeds 65 dBA L_{eq} for any hour of operation, a wall and roof-ceiling combined STC rating of 45 and exterior windows with a minimum STC rating of 40 are required (Section 5.507.4.1). Alternatively, if the interior noise levels of non-residential buildings satisfy the performance criteria of 50 dBA L_{eq} (1 hour), then the performance method to meet CALGreen standards defined in Section 5.507.4.2 has been met.

City of Pasadena General Plan Noise Element

The City of Pasadena is affected by several different sources of noise, including automobile traffic, Rose Bowl events, commercial activity, and periodic nuisances such as construction, loud parties, and other events. The Noise Element of the City's General Plan is intended to identify these sources and provide objectives and policies that ensure that noise from these sources does not create an unacceptable noise environment (Pasadena 2015). The Noise Element contains the City's guidelines for noise compatible land uses, which are presented as Table 3.7-2, City of Pasadena Guidelines for Noise Compatible Land Use.

The City's Noise Element acknowledges that noise from major roadways may affect sensitive receptors. The following policy and implementation measures are applicable to the Project and Project with Building A Residential/Commercial:

- Policy 2a** The City will encourage noise-compatible land uses along major roadways.
- Measure 1** The City will consult the guidelines for noise compatible land use shown on Table 3 of this Noise Report to guide the appropriateness of land uses relative to roadway noise.
- Measure 2** An acoustical study showing the ability to meet state noise insulation standards may be required for any development proposed in an area where the noise level exceeds the "clearly acceptable level" as determined by the City and shown on Table 3.

The Noise Element recognizes that noise generated by commercial operations, maintenance, truck deliveries, and traffic can affect adjacent residential areas and other sensitive land uses. The following objective and implementation measure are applicable to the Project and Project with Building A Residential/Commercial:

- Objective 6** The City will minimize noise spillovers from commercial and industrial operations into adjacent residential neighborhoods and other sensitive uses, while maximizing the Land Use Element's objectives to encourage mixed-use development in the Central District and other Specific Plan areas as well as to promote economic vitality.
- Measure 26** The City will warn new residents and other sensitive noise receptors about the potential for noise in the Central District and other mixed-use areas.

Source: Pasadena 2002.							

The Noise Element recognizes that construction activity is also a source of occasional temporary nuisance noise throughout the City; that these and other such nuisance noises are common to cities; and, because of their unpredictable nature, that these activities must be addressed on a case-by-case basis. The following policies are applicable to the Project and Project with Building A Residential/Commercial:

- Policy 7b** The City will encourage limitations on construction activities adjacent to sensitive noise receptors as defined in Table 3 of this Noise Report.
- Policy 7c** The City will encourage construction and landscaping activities that employ techniques to minimize noise.

City of Pasadena Municipal Code

Chapter 9.36, Noise Restrictions, of the PMC is the City's Noise Ordinance. It is the City's policy "to prohibit unnecessary, excessive and annoying noises from all sources. Noise at certain levels is detrimental to the health and welfare of the general public". The following sections of the Noise Ordinance are applicable to the Project and Project with Building A Residential/Commercial:

9.36.040 - Ambient noise level.

- A. When "ambient noise level" is referred to in this chapter, it means the actual measured ambient noise level.
- B. Any sound level measurement made pursuant to the provisions of this chapter shall be measured with a sound level meter using the A weighting.
 - 1. Where the sound alleged to be offending is of a type or character set forth below, the following values shall be added to the sound level measurement of the offending noise:
 - a. Except for noise emanating from any electrical transformer or gas metering and pressure control equipment existing and installed prior to the effective date of the ordinance codified herein, any steady audible tone: + 5;
 - b. Repeated impulsive noise: + 5;
 - c. Noise occurring more than 5 but less than 15 minutes per hour: - 5;
 - d. Noise occurring more than 1 but less than 5 minutes per hour: - 10;
 - e. Noise occurring less than 1 minute per hour: -20.
 - 2. Values of subsections (B)(1)(c), (B)(1)(d) and (B)(1)(e) of this section shall be added to the sound level measurements during daytime (6 a.m. to 11 p.m.) periods only.

9.36.050 – General noise sources.

- A. It is unlawful for any person to create, cause, make or continue to make or permit to be made or continued any noise or sound which exceeds the ambient noise level at the property line of any property by more than 5 decibels.

9.36.070 – Construction projects.

- A. No person shall operate any pile driver, power shovel, pneumatic hammer, derrick power hoist, forklift, cement mixer or any other similar construction equipment within a residential district or within a radius of 500 feet therefrom at any time other than as listed below:
 - 1. From 7:00 AM to 7:00 PM Monday through Friday;
 - 2. From 8:00 AM to 5:00 PM on Saturday; and
 - 3. Operation of any of the listed construction equipment is prohibited on Sundays and holidays.
- B. No person shall perform any construction or repair work on buildings, structures or projects within a residential district or within a radius of 500 feet therefrom in such a manner that a reasonable person of normal sensitiveness residing in the area is caused discomfort or annoyance at any time other than as listed below:
 - 1. From 7:00 AM to 7:00 PM Monday through Friday;
 - 2. From 8:00 AM to 5:00 PM on Saturday; and
 - 3. Performance of construction or repair work is prohibited on Sundays and holidays.
- C. For purposes of this section, holidays are New Year's Day, Martin Luther King Jr. Day, Lincoln's Birthday, Washington's Birthday, Memorial Day, Independence Day, Labor Day, Veterans Day, Thanksgiving Day, Day after Thanksgiving, and Christmas.

9.36.080 – Construction equipment.

It is unlawful for any person to operate any powered construction equipment if the operation of such equipment emits noise at a level in excess of 85 dBA when measured within a radius of 100 feet from such equipment.

9.36.110 – Radio, television sets and similar devices.

- A. Use Restricted. It is unlawful for any person within any residential zone of the city to use or operate any radio receiving set, musical instrument, phonograph, television set or other machine or device for the producing or reproducing of sound (between the hours of 10 PM of one day and 7 AM of the following day) in such a manner as to disturb the peace, quiet and comfort of neighboring residents or any reasonable person of normal sensitiveness residing in the area.
- B. Prima Facie Violation. Any noise level exceeding the ambient base level at the property line of any property by more than 5 decibels is deemed to be prima facie evidence of a violation of the provisions of this section.

Vibration Standards

The following vibration standards are used in this analysis to assess the construction vibration levels generated by the proposed land uses and their effects at adjacent, existing land uses to be retained on the Project site. The City's General Plan and the PMC do not identify vibration level standards.

The Federal Transit Administration provides quantitative vibration damage and vibration annoyance criteria, which have been applied in this analysis. Table 3.7-3, Construction Vibration Damage Criteria present these thresholds.

**TABLE 3.7-3
CONSTRUCTION VIBRATION DAMAGE CRITERIA**

Building Class	PPV, (in/sec)	Approximate L_v*
I. Reinforced-concrete, steel or timber (no plaster)	0.5	102
II. Engineered concrete and masonry (no plaster)	0.3	98
III. Non-engineered timber and masonry buildings	0.2	94
IV. Buildings extremely susceptible to vibration damage	0.12	90
RMS velocity in decibels, VdB re 1 micro-in/ sec Source: FTA 2018.		

The building damage threshold for Class II Buildings is selected for surrounding non-historic retail buildings; the threshold for Class III buildings is selected for surrounding residential buildings; and the threshold for Class IV buildings is selected for the on-site historic structures. These thresholds represent the vibration limits for damage to buildings from continuous sources of vibration during construction activities on the Project site.

3.7.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse noise impact if it would:

Threshold 3.2a: Result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan, local noise ordinance, or applicable standards of other agencies.

Threshold 3.2b: Result in generation of excessive ground-borne vibration or ground-borne noise levels.

The Initial Study (provided in Appendix A-1) concluded the following thresholds related to noise were determined to result in no impacts or less than significant impacts and were not carried forward into the Draft EIR for further analysis:

- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

3.7.4 METHODOLOGY

Point Source Noise

The distance from the noise source to a receptor is a primary consideration in determining the actual noise level experienced at the receptor. Construction equipment can be considered to operate in two modes: stationary and mobile. Noise impacts from stationary construction equipment are assessed from the center of the equipment, while noise impacts for mobile

construction equipment are assessed as emanating from the center of the equipment activity or construction site.

Traffic Noise

The noise levels for roadways in the Project traffic study area were estimated using the Federal Highway Administration's (FHWA's) Highway Traffic Noise Prediction Model (RD-77-108). The FHWA model determines a predicted noise level through a series of adjustments to a reference sound level. These adjustments account for traffic flows, speed, truck mix, varying distances from the roadway, length of exposed roadway, and noise shielding. The calculations do not consider the effect of any noise barriers or topography that may affect ambient noise levels. The net trip generation for the Project and Project with Building A Residential/Commercial was used to estimate off-site traffic noise generation.

Groundborne Vibration

In contrast to airborne noise, groundborne vibration is not a common environmental problem. Some common sources of groundborne vibration are construction activities such as blasting, pile driving, and operating heavy earth-moving equipment. Trains and similar rail vehicles can also produce vibration. It is unusual for vibration from sources such as buses and trucks to be perceptible. In quantifying vibration, the PPV is most frequently used to describe vibration impacts and is typically measured in inches per second (in/sec). Vibration levels that may cause annoyance to humans are described using the vibration decibel (VdB). Typically, groundborne vibration generated by man-made activities attenuates rapidly with distance from the source.

3.7.5 ENVIRONMENTAL IMPACTS

Threshold 3.2a **Would the Project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

Project

Construction Noise

Construction of the Project would include noise generated from demolition, site preparation, grading/excavation, building construction and architectural coating activities. Construction activities are carried out in discrete steps, each of which has its own mix of equipment and, consequently, its own noise characteristics. These various sequential phases would change the character of the noise levels surrounding the construction site as work progresses. Construction noise levels reported in the U.S. Environmental Protection Agency's (USEPA's) *Noise from Construction Equipment and Operations, Building Equipment, and Home Appliances* were used to estimate future construction noise levels for the Project (USEPA 1971). Typically, the estimated construction noise levels are governed primarily by equipment that produces the highest noise levels. Construction noise levels for each generalized construction phase (ground-clearing/demolition, excavation/grading, foundation construction, building construction and site cleanup) are based on a typical construction equipment mix for a mixed-use project and do not include use of atypical, very loud, and vibration-intensive equipment (e.g., pile drivers). The degree to which noise-sensitive receptors are affected by construction activities depends heavily on their proximity.

Table 3.7-4, Construction Noise Levels at Surrounding Receptors, summarizes the estimated maximum and average construction noise levels at several receptors (both sensitive and non-

sensitive) for each construction phase as well at the noise level at a distance of 100 feet; which is the City's construction noise threshold (Section 9.36.080 of the PMC). Maximum noise levels represent the noise levels from construction equipment occurring nearest to the noise sensitive use/receptor. Average noise levels represent the noise exposure to sensitive uses based on the distance to the center of the Project site. Noise levels from general Project-related construction activities were evaluated based on the City's noise limit of 85 dBA at 100 feet. As shown in Table 3.7-4, Construction Noise Levels at Surrounding Receptors, construction noise levels at 100 feet from the construction area would range from 72 to 83 dBA L_{eq} . As shown, noise generation for all construction phases would be less than the 85 dBA noise limit as measured at 100 feet; and would be lower than 85 dBA for almost all receptors and/or all construction phases. Noise level reductions from intervening structures and from existing masonry walls on-site and equipment being below grade were not considered in the noise modeling. As such, actual average and maximum construction noise levels would be lower than shown in Table 3.7-4.

**TABLE 3.7-4
CONSTRUCTION NOISE LEVELS AT SURROUNDING RECEPTORS**

Truck trips would be needed for delivery of construction equipment and materials as well as the export of the excavated soils. Noise generated from truck trips would add to the ambient noise level generated by vehicle traffic. In general, a doubling of traffic is necessary to increase noise levels by 3 dBA. For the Project, it is anticipated that development site would result in an average of approximately 110 truck trips per day during the demolition phase and 250 truck trips per day during the grading/excavation phase.¹ These truck trips would travel along local truck routes near the Project site. The City of Pasadena's Truck Route Map (DOT 2016) designates Del Mar Boulevard, Arroyo Parkway and Fair Oaks Avenue as truck routes. The addition of an average of 250 truck trips per day to roadway volumes of approximately 18,000 daily trips along Arroyo Parkway north of California Boulevard or 21,000 daily trips along California Boulevard west of Arroyo Parkway would increase roadway volumes by approximately 1 to 2 percent. A doubling of traffic volumes is required to increase traffic noise levels by 3 dBA. 3 dBA is also the lowest change in noise levels that is considered to be perceptible in outdoor environments. As such, the small increase in traffic volumes related to construction activities proximate to the Project site would not result in a perceptible increase in noise levels. Noise from truck trips associated with development of the site would cease when construction of the Project is complete.

In summary, noise from construction activities on site would be clearly audible above the existing ambient noise environment. However, construction would occur during the least noise-sensitive portions of the day, consistent with Section 9.36.070 of the PMC, nor would it exceed the City's construction noise limit of 85 dBA at 100 feet. Additionally, off-site noise from the addition of construction-related truck trips would not be discernable. There would be less than significant construction noise impacts, and no mitigation is required.

Operation

Off-Site Traffic Noise Generation

Operation of the Project would increase traffic compared to the existing uses on the site, which has the potential to increase noise levels on local roadways proximate to the site. Table 3.7-5, Net Trip Generation for the Project, summarizes the daily total trip generation and the AM and PM peak hour trip generation for the existing land uses (not including Whole Foods Market as this is not changing), the Project land uses, and the net difference.

**TABLE 3.7-5
NET TRIP GENERATION FOR THE PROJECT**

	Daily	AM Peak Hour	PM Peak Hour
Existing Uses	2,454	189	237
Proposed Uses	6,366	515	618
Net Change	3,913	326	381
Source: Pasadena 2021a.			

¹ Based on an estimated excavated export volume of 184,013 cubic yards transported by 14 cubic yard trucks which results in 13,144 truckloads. Assuming that there are two truck trips per load, there would be 26,288 one-way truck trips. These truck trips would be distributed over a grading period of 4-months with 104 workdays per month. The 253 average truck trips per day was obtained by dividing 26,288 truck trips by 104 grading days.

As shown in Table 3.7-5, the existing uses on the site generate 2,454 vehicle trips per day with 189 AM and 237 PM peak-hour trips. The Project is estimated to generate a total of 6,366 vehicle trips per day, with 515 AM and 618 PM peak hour trips. The net change in trips, when considering the traffic generated by existing land uses, is an additional 3,913 trips per day with 326 AM peak hour trips and 381 PM peak hour trips.

Table 3.7-6, Net Street segment volumes with the Project (Year 2026), on the following page summarizes the average daily trips (ADT) for several street segments on the Project site vicinity, the additional ADT attributable to the Project, and the net different as a percentage.

**TABLE 3.7-6
NET STREET SEGMENT VOLUMES WITH THE PROJECT (YEAR 2026)**

Street Segment	Existing ADT	Additional ADT	Net Change
Bellevue Dr. b/t Arroyo Prkwy. and Marengo Ave.	850	160	19%
Bellevue Dr. west of Arroyo Prkwy.	4,690	0	0%
Arroyo Prkwy. b/t Bellevue Dr. and Del Mar Blvd.	17,040	490	3%
Arroyo Prkwy. b/t Bellevue Dr. and California Blvd.	16,200	650	4%
California Blvd. b/t Raymond Ave. and Arroyo Prkwy.	17,060	900	5%
California Blvd. b/t Raymond Ave. and Fair Oaks Ave.	14,640	300	2%
Raymond Ave. b/t California Blvd. and Bellevue Dr.	9,780	600	6%
Raymond Dr. b/t California Blvd. and Pico Street	9,140	0	0%
California Blvd. b/t Arroyo Prkwy. and Marengo Ave.	24,750	1,280	5%
California Blvd. b/t Arroyo Prkwy. and Raymond Ave.	21,020	540	3%
Arroyo Prkwy. b/t California Blvd. and Bellevue Dr.	17,990	2,480	14%
Arroyo Prkwy. b/t California Blvd. Pico Street	26,540	980	4%
Arroyo Prkwy. b/t Del Mar Blvd. and Bellevue Dr.	16,220	480	3%
Arroyo Prkwy. b/t Glenarm Street and Fillmore Street	24,000	980	4%
ADT: average daily trips; b/t: between; Dr.: Drive; Prkwy.: Parkway; Ave.: Avenue; Blvd.: Boulevard			
Source: Pasadena 2021a			

As shown in Table 3.7-6, implementation of the Project would result between 0 percent and 19 percent increase in ADT. It is noted that the percent change in trips is 6 percent or below on all street segments except on (1) Arroyo Parkway between California Boulevard and (2) Bellevue Drive and on Bellevue Drive between Arroyo Parkway and Marengo Avenue. A three-decibel increase occurs when traffic volumes double or a project increases the percentage of noisy trucks on roadways. With a maximum increase of 19 percent, the increase in off-site traffic-related noise would be less than 1 decibel. This increment is not discernable to human hearing even under laboratory conditions. As such, the Project would not result in a substantial permanent change in noise levels related to off-site traffic. There would be a less than significant impact related to traffic noise, and no mitigation is required.

On-Site Stationary Noise Generation

Operational noise sources associated with the Project would include, but not be limited to, mechanical equipment (e.g., HVAC units) and landscape maintenance equipment. The City's Noise Ordinance is designed to control unnecessary, excessive, and annoying sounds from sources on private property by specifying noise levels that cannot be exceeded.

PMC Section 9.36.090, Machinery, Equipment, Fans and Air Conditioning, defines the noise level exposure limits at properties affected by specific noise sources. HVAC units and other stationary

equipment would be selected and installed to comply with the City of Pasadena's Noise Ordinance. The noise threshold for HVAC equipment is that the noise shall not exceed 5 dBA above ambient conditions at the property lines. HVAC units would be located on top of seven to eight story buildings; therefore, noise generation from the HVAC equipment would be substantially attenuated by the distance between the top of the building to the nearest receptors beyond the property lines. Additionally, the HVAC units would be situated behind parapets, which would reduce noise transmission to lower elevation receptors.

Noise from landscape maintenance would be similar to noise currently occurring at the Project site. Noise from leaf blowers is specifically addressed under Section 9.37, Leaf-Blowing Machines, of the PMC. The City limits the use of leaf-blowing machines to the least noise sensitive portions of the day, limits the use to 30 minutes per day, and sets a noise level limit of 65 dBA as measured at 50 feet. Compliance with the City's requirements would result in noise levels that are acceptable pursuant to the PMC.

The Project would also have outdoor uses such open spaces and dining. Noise generated by these uses typically include people talking and, possibly, use of amplified music. Any noise generated within the open spaces would be substantially attenuated by the proposed structures, the elevation above the street, and the distance between the outdoor activities and the nearest property line. Also, all outdoor uses would be subject to the 5 dB noise limit established in Section 9.36.050 of the PMC.

In summary, through compliance with the City's Noise Ordinance, there would be less than significant impacts related to on-site stationary noise sources, and no mitigation is required.

Project with Building A Residential/Commercial

Construction Noise

Construction of the Project with Building A Residential/Commercial would result in the same construction noise generation as the Project. The only difference in construction scenario is that subterranean parking is reduced to four levels (instead of five). However, this would not affect the noise generation from the excavation activities themselves because there would be the same daily construction activities.

As discussed for the Project, at a distance of 100 feet from the Project's construction area, construction activities for the Project with Building A Residential/Commercial would generate noise levels ranging from 72 to 83 dBA L_{eq} . As shown in Table 3.7-4 above, noise generation for all construction phases would be less than the City's 85 dBA noise limit as measured at 100 feet.

As discussed for the Project, truck trips are needed for delivery of construction equipment and materials as well as the export of the excavated soils. For the Project with Building A Residential/Commercial, based on data provided by the Project Applicant, it is anticipated that grading and excavation of the site would result in a maximum of 10,515 truckloads of soil during the grading/excavation phase of four months. Assuming that each truckload has two trips, there would be an average of approximately 200 truck trips per day (reduced from an estimated 250 trips for the Project). The addition of 200 truck trips per day to roadway volumes of approximately 18,000 daily trips along Arroyo Parkway north of California Boulevard or 21,000 daily trips along California Boulevard west of Arroyo Parkway would increase roadway volumes by approximately 1-2 percent. A doubling of traffic volumes is required to increase traffic noise levels by 3 dBA. 3 dBA is also the lowest change in noise levels that is considered perceptible to human hearing in outdoor environments. As such, the small increase in traffic volumes related to construction activities proximate to the Project site would not result in a perceptible increase in noise levels.

After completion of Project related construction activities, noise from truck trips associated with development of the site would cease.

Therefore, as with the Project, construction of the Project with Building A Residential/Commercial would be clearly audible above the existing ambient noise environment. However, construction would occur during the least noise-sensitive portions of the day, consistent with Section 9.36.070 of the PMC, nor would it exceed the City's construction noise limit of 85 dBA at 100 feet. Additionally, off-site noise from the addition of construction-related truck trips would not be discernable. There would be less than significant construction noise impacts, and no mitigation is required.

Operation

Off-Site Traffic Noise

Operation of the proposed Project with Building A Residential/Commercial would increase traffic as compared to existing uses on the site, which has the potential to increase noise levels on local roadways proximate to the site. Table 3.7-7, Net Trip Generation for the Project with Building A Residential/Commercial, summarizes the daily total trip generation and the AM and PM peak hour trip generation for the existing land uses (not including Whole Foods Market as this is not changing), the Project land uses, and the net difference.

**TABLE 3.7-7
NET TRIP GENERATION FOR THE PROJECT WITH BUILDING A
RESIDENTIAL/COMMERCIAL**

	Daily	AM Peak Hour	PM Peak Hour
Existing Uses	2,454	189	237
Project Uses	2,494	194	217
Net Change	41	5	(20)
Source: Pasadena 2021b.			

As shown in Table 3.7-7, the Project with Building A Residential/Commercial is estimated to generate a total of 2,494 vehicle trips per day, with 194 AM and 217 PM peak hour trips. The net change in trips, when considering the traffic generated by existing land uses, is 41 additional trips per day with an increase of 5 AM peak hour trips and a reduction of 20 PM peak hour trips.

Because the Project with Building A Residential/Commercial would generate fewer daily trips than the Project, it can be concluded that this scenario would not result in a substantial permanent change in noise levels related to off-site traffic. There would be a less than significant impact related to traffic noise, and no mitigation is required.

On-Site Stationary Noise Generation

Operational noise sources associated with the Project with Building A Residential/Commercial would be essentially the same as the Project. As with the Project, through compliance with the City's Noise Ordinance, there would be less than significant impacts related to on-site stationary noise sources, and no mitigation is required.

Threshold 3.2b Would the Project result in generation of excessive ground-borne vibration or ground-borne noise levels?

Project

Construction

As discussed previously, there are no applicable City standards for vibration-induced building damage and/or annoyance and applicable FTA criteria have been applied in this analysis.

Pile driving and blasting are generally the sources of the most severe vibration during construction. Neither pile driving nor blasting would be used during Project construction. Conventional construction equipment would be used for demolition and grading activities. Table 3.7-8, Vibration Levels for Construction Equipment, summarizes typical vibration levels measured at 25 feet during construction activities for various vibration-inducing pieces of equipment.

**TABLE 3.7-8
VIBRATION LEVELS FOR CONSTRUCTION EQUIPMENT**

Equipment		PPV at 25 ft (in/sec)
Pile driver (impact)	upper range	1.518
	typical	0.644
Pile driver (sonic)	upper range	0.734
	typical	0.170
Vibratory roller		0.210
Large bulldozer		0.089
Caisson drilling		0.089
Loaded trucks		0.076
Jackhammer		0.035
Small bulldozer		0.003
ppv: peak particle velocity; ft: feet; in/sec: inch(es) per second. Source: FTA 2018.		

Demolition, grading and excavation, and building construction would occur up to the property lines for much of the Project site. These construction activities would generate vibration. However, construction related vibration would not be expected to interfere with the operation of land uses proximate to the construction area. Land uses nearby (about 50 feet) include restaurants, moving and storage facilities, a supermarket, and other non-vibration sensitive uses. Construction generated vibration from the Project would not interfere with their operation. However, heavy construction vehicles and activities may have the potential for cosmetic building damage.

Table 3.7-9, Vibration Levels and Building Damage at Surrounding Uses, summarizes the expected vibration level at several receptors – both on-site and off-site – for the primary vibration-generating construction equipment compared to the applicable vibration building damage threshold.

**TABLE 3.7-9
VIBRATION LEVELS AND BUILDING DAMAGE AT SURROUNDING USES**

Equipment	Vibration Levels (PPV)				
	Whole Foods Market located within the Project Site ¹	Commercial Historic Uses within the Project Site ²	Commercial Use to the West of the Project Site ³	Medical Use to the Southwest of the Project Site ⁴	Residential Use to the East of the Project Site ⁵
	(PPV at 10 ft)	(PPV at 10 ft)	(PPV at 30 ft)	(PPV at 100 ft)	(PPV at 105 ft)
Large bulldozer	0.35	0.35	0.07	0.01	0.01
Small bulldozer	0.01	0.01	0.00	0.00	0.00
Jackhammer	0.14	0.14	0.03	0.00	0.00
Loaded trucks	0.30	0.30	0.06	0.01	0.01
Threshold	0.3	0.12	0.3	0.3	0.3
Exceeds Threshold?	Yes	Yes	No	No	No
PPV: peak particle velocity; ft: feet ¹ Facility located at 465 South Arroyo Parkway ² Commercial property located at 501 & 523 South Arroyo Parkway ³ Commercial use located at 474 South Raymond Avenue ⁴ Medical use located at 100 East California Boulevard ⁵ Residential use located at 482 South Arroyo Parkway Source: FTA 2018; see Appendix F, Noise Modeling Data, for modeling assumptions and outputs.					

As shown in Table 3.7-9, the estimated vibration levels would not exceed the building damage threshold at adjacent off-site structures. However, during construction activity in close proximity (around 30 feet or less), buildings located within the Project site (i.e., Whole Foods Market and 501 and 523 South Arroyo Parkway) may be exposed vibration levels that could result in cosmetic building damage. As discussed in Section 2.0, Environmental Setting and Project Description, 501 and 523 South Arroyo Parkway are considered historic resources and are represented in Table 3.7-9 in the second column of estimated vibration levels (Commercial Historic Uses within the Project Site). Because of the age of these two structures, they are considered more susceptible to vibration-related damage than newer construction, such as Whole Foods Market, located at 465 South Arroyo Parkway. As shown, a lower threshold (0.12 compared to 0.30) is applied to these structures for consideration of vibration-inducing building damage.

As shown in Table 3.7-9, both the Whole Food Market building and the structures at 501 and 523 South Arroyo Parkway may experience vibration levels during operation of certain equipment that could cause cosmetic damage. Therefore, MM NOI-1 requires that certain construction activities/equipment are set back from these buildings, that vibration monitoring is implemented, and, if cosmetic damage does occur despite setbacks and monitoring, the Project Applicant shall be responsible for restoring the damage. With implementation of MM NOI-1, there would be less than significant impacts related to vibration causing damage to the three on-site buildings being retained.

Project with Building A Residential/Commercial

Construction of the Project with Building A Residential/Commercial would result in the same construction related vibration generation as the Project. The only difference in the construction scenario is that subterranean parking is reduced to four levels (instead of five). However, this would not affect the vibration generation from the excavation activities themselves because there would be the same daily construction activities. As with the Project, with implementation of MM NOI-1, there would be less than significant impacts for the Project with Building A

Residential/Commercial related to vibration causing damage to the three on-site buildings being retained.

3.7.6 CUMULATIVE IMPACTS

Project

Cumulative Construction Noise and Vibration

Noise and vibration generated during construction of the proposed Project would be localized and would occur intermittently for varying periods of time throughout the construction period. Short-term cumulative impacts related to ambient noise and vibration levels could occur if construction associated with the proposed Project as well as surrounding current and future development were to occur simultaneously. Noise or vibration generated by construction of the Project in combination with another project with major construction activity within approximately 1,000 feet of the site could adversely impact sensitive receptors in the vicinity of the site with a cumulative noise level greater than the noise generated solely at the Project site.

At this time there are no projects within 1,000 feet that are anticipated to be constructed concurrently with the Project that have the potential to generate cumulatively considerable noise or vibration levels. The City also limits noise from construction equipment to 85 dBA at 100 feet. Because construction noise would be substantially attenuated prior to reaching land uses proximate to the Project site and imposes a noise limit on construction equipment, cumulative noise from both construction projects would not be substantially different than that generated by the Project. As such, the Project would not result in a cumulatively considerable construction noise and vibration impact.

Cumulative Operational Noise

Cumulative traffic noise was evaluated by the City's General Plan EIR (Pasadena 2015), in which traffic noise levels were assessed for year 2015 and the buildout year of 2035 along Arroyo Parkway north of California Boulevard. Cumulative traffic noise levels were found to increase by 0.5 dBA. As discussed previously, the Project would increase traffic volumes by a maximum of 19 percent over existing conditions. This increase in traffic volumes would result in noise level increases of 1 dBA CNEL, which would not result in increases in cumulative traffic noise above the 5 dBA CNEL significance threshold used in the General Plan EIR.

Individual stationary sources of noise are regulated by the City's Municipal Code for both the Project and the Project with Building A Residential/Commercial. The stringent noise limitations established for each of these noise sources, the infrequency of occurrence, and the separation distance for these noise sources would limit cumulative noise exposure near the Project site to a less than significant level. As such, the Project would not result in a cumulatively considerable stationary noise source impact.

Project with Building A Residential/Commercial

The cumulative analysis for the Project with Building A Residential/Commercial is essentially the same as the Project. For construction noise and vibration, the only difference in the construction scenario is that subterranean parking is reduced to four levels (instead of five). However, this would not affect the construction noise and vibration generation from the excavation activities themselves because there would be the same daily construction activities. For operation, the only difference is the provision of residential instead of medical office land uses. This results in fewer daily vehicle trips. However, this would not affect the stationary source noise generation nor change the traffic noise generation to a degree that would be audible to human hearing. As such,

the Project with Building A Residential/Commercial would not result in a cumulatively considerable construction noise and vibration impact or operational noise impact.

3.7.7 MITIGATION MEASURES

MM NOI-1 The potential for vibration-induced cosmetic (i.e., not structural) damage to the structures at 465, 501, and 523 South Arroyo Parkway shall be reduced by implementing the following three steps: (1) setbacks, (2) monitoring, and (3) restoration (if applicable).

- (1) The Project Applicant shall be responsible for ensuring the construction specifications include the following language: "Construction equipment shall observe setback distances of 30 feet from any of the three on-site buildings being retained (Whole Foods Market and 501 and 523 South Arroyo Parkway) for equipment equivalent to a large bulldozer (29,000 pounds or more) and 20 feet for jackhammers and loaded trucks. Small dozers and other equipment with vehicle weights of less (29,000 pounds) are not anticipated to result in substantial levels of vibration that could cause building damage".
- (2) The Project Applicant shall be responsible for placing a vibration monitor in each of the three on-site buildings to remain on the site. The contractor would need to have vibration measurements taken on the site when heavy equipment or vibration intensive activities occurs near (i.e., less than 30 feet horizontal distance) to these three buildings. Vibration measurements will be recorded and compared to the vibration thresholds appropriate for the building that may be impacted. Vibration records shall be submitted to the City once a week. The appropriate vibration thresholds are as follows: 0.12 peak particle velocity (PPV) for 501 and 523 South Arroyo Parkway and 0.30 PPV for Whole Foods Market. The Applicant shall be responsible for preparing a Monitoring Plan, describing the proposed location of vibration monitors, the timing of monitoring, collecting vibration records (including date, time, activity that precipitated the monitoring, and who recorded the vibration level), to whom and when the monitoring records will be submitted, and any remedial actions needed because of vibration readings. The Monitoring Plan is subject to review and approval by City staff and will be submitted prior to initiation of any construction activity on the site.

If vibration levels are below these thresholds, it is permissible to have construction activity with large (over 29,000 pounds) equipment, jackhammers, and/or loaded trucks within the setback distances included in item 1 above. Additionally, vibration monitoring shall guide construction activity near the perimeter of these buildings during subterranean excavation and construction activity. If vibration levels are found to exceed the applicable threshold, then the associated construction activity shall immediately halt, and alternative methods for achieving the construction activity shall be determined and employed to reduce the construction-generated vibration exposure to the building(s) to less than the thresholds. While the specific alternative methods to be employed cannot be foreseen, as it would be depending on situation-specific factors, the performance objective of maintaining activity that results in vibration below the applicable thresholds shall guide all decisions.

- (3) If cosmetic damage does occur to one or more of these three buildings because of vibration from Project-related construction activities despite setbacks and monitoring, the Project Applicant shall be responsible for

restoring the damage. Cosmetic damage includes things like, for example, cracks in paint/plaster, fallen plaster/stucco from a facade, and cracked glass. Specifically, any restorations to Whole Foods Market shall be implemented to return the damaged area to the same condition (e.g., materials, colors, style) as present at the start of construction. Any restorations to the buildings at 501 and 523 South Arroyo Parkway shall conform to the Secretary of the Interior's Standards for the Rehabilitation and Guidelines for Rehabilitating Historic Buildings (Weeks and Grimmer 1995) (Standards), and the determination of whether the planned restorations is consistent with the Standards shall be made by a qualified historic preservation professional meeting the Secretary of the Interior's Professional Qualifications Standards for architectural history or historic architecture (Professional) and to the satisfaction of the City. The restorations to the historic buildings, if necessary, may be either to the conditions present before construction was initiated or, if the planned updates to these buildings are underway may be conducted to meet proposal conditions.

The City of Pasadena Planning & Community Development Department shall be responsible for ensuring these requirements are included in the construction specifications prior to any demolition activity on the site. The Project Applicant and the City's inspector assigned to the Project shall also be responsible for ensuring these measures are consistently implemented throughout the construction period.

3.7.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.7.9 SUMMARY OF ANALYSIS

Project

Construction of the Project would result in less than significant construction noise generation (see Table 3.7-4). Off-site noise from the addition of construction-related truck trips would not be audible. Estimated vibration levels when construction activities occur under the closest distance to each receptor would not exceed the vibration annoyance criteria (see Table 3.7-9) but may exceed the building damage threshold at remaining on-site structures within the Project site (i.e., Whole Foods Market and 501 and 523 South Arroyo Parkway) during construction activity in close proximity. Therefore, MM NOI-1 requires the construction specifications to include the following: "Construction equipment shall observe setback distances of 30 feet for equipment equivalent to a large bulldozer (29,000 pounds or more) and 20 feet for jackhammers and loaded trucks. Small dozers and other equipment with vehicle weights of less (29,000 pounds) are not anticipated to result in substantial levels of vibration that could cause building damage". Operation of the Project would result in less than significant operational noise, both from on-site stationary noise sources and off-site traffic noise. With implementation of MM NOI-1, there would be less than significant noise and vibration impacts related to construction and operation of the Project.

Project with Building A Residential/Commercial

The analysis of construction noise and vibration and operational noise for the Project with Building A Residential/Commercial would be essentially the same as the analysis of the Project. As discussed above, the differences in construction scenario and land uses between the two scenarios do not materially affect the results of the analysis. As with the Project, approval MM NOI-1 requires the construction specifications for the Project with Building A Residential/Commercial would be required to include the following: "Construction equipment shall

observe setback distances of 30 feet for equipment equivalent to a large bulldozer (29,000 pounds or more) and 20 feet for jackhammers and loaded trucks. Small dozers and other equipment with vehicle weights of less (29,000 pounds) are not anticipated to result in substantial levels of vibration that could cause building damage". With implementation of MM NOI-1, there would be less than significant noise and vibration impacts related to construction and operation of the Project with Building A Residential/Commercial.

3.8 PUBLIC SERVICES AND RECREATION

This section discusses the existing public services in the City of Pasadena and addresses potential impacts associated with the proposed Project and Project with Building A Residential/Commercial to the following services:

- Fire protection and emergency medical services (Pasadena Fire Department);
- Police protection services (Pasadena Police Department);
- School services (Pasadena Unified School District);
- Library services (Pasadena Public Library); and
- Parks and recreation services (City of Pasadena Parks, Recreation, and Community Services Department).

Information in this section is derived from the above-referenced public service providers, their websites, and the *City of Pasadena General Plan* and its Environmental Impact Report (EIR).

3.8.1 EXISTING CONDITIONS

Fire Protection

Fire protection and emergency medical services in the City are provided by the Pasadena Fire Department (PFD). The PFD is an “all-risk” fire department providing the community it protects with services that include fire suppression, emergency medical services (EMS), technical rescue (Urban Search and Rescue), and first-responder hazardous materials response. The PFD provides fire protection services with the capability of mitigating fire incidents within structures, vehicles, vegetation and the wildland-urban interface zone.

Depending on the risk, type, and location of the incident, resources can be dispatched from among the PFD’s eight advanced life support (ALS) engine companies (minimum one paramedic), five rescue ambulances staffed with two advanced life support firefighter paramedics, two trucks, and Battalion Chief. The PFD provides EMS to meet the standards set forth by the Los Angeles County Department of Health Services, Emergency Medical Services Agency, and provide 24-hour emergency response, treatment, transport of the ill and injured in the community. A 911 call for medical assistance receives a paramedic ambulance and an engine or truck, providing a minimum of two paramedic and four firefighter emergency medical technicians (EMTs), for exceptional patient care. Cross staffing provides a Type 1 Heavy Urban Search and Rescue, water tender, brush patrol, strike team command vehicle, and jumper support vehicle. The PFD has five reserve engines, two reserve trucks, fire reserve rescue ambulances, and a reserve command vehicle.

The PFD has California Governor’s Office of Emergency Services (Cal-OES) Type I Heavy Urban Search and Rescue that is available for response to incidents involving swift water rescue, structural collapse, trench rescue, confined space rescue, technical rope rescue, mountain rescue, and mass transit accident stabilization/rescue. All PFD personnel are trained at the Type-3 Light Operational Level per Cal-OES allowing for immediate action on technical rescue incidents involving low angle rope rescue and collapse or failure of light frame construction with the necessary equipment located on all frontline engines and trucks.

There are eight PFD stations in the City, and three of the eight stations serve the Project site and surrounding area, as summarized in Table 3.8-1 on the following page.

**TABLE 3.8-1
PASADENA FIRE DEPARTMENT FACILITIES SERVING THE PROJECT SITE**

Station No. and Address	Equipment and Personnel	Distance and Direction from Site
Fire Station 31 135 South Fair Oaks Avenue	1 Fire Engine (4 personnel) 1 Ladder Truck (4 personnel) 1 Advanced Life Support Rescue Ambulance (2 personnel) 10 Personnel Assigned Total	Approximately 0.4 mile to the northwest
Fire Station 34 1360 East Del Mar Avenue	1 Fire Engine (4 personnel) 1 Advanced Life Support Rescue Ambulance (2 personnel) 1 Battalion Chief (1 personnel) 7 Personnel Assigned Total	Approximately 1.5 miles to the east-northeast
Fire Station 39 50 Avenue 64	1 Fire Engine (4 personnel) 4 Personnel Assigned Total	Approximately 1.8 miles to the west-northwest

Additionally, the PFD through the Area C Unified Response Agreement and various mutual aid and automatic aid agreements has access to the following specialty units:

- Aircraft Rescue & Firefighting Apparatus
- Air/Light Utility
- Hazmat (Type 1 from Burbank and Glendale)
- Heavy Rescue (LAFD/LA County Fire)
- Regional Task Force (RTF-4 USAR Specialty Units)
- Type III Brush Engine, Water Tenders, Patrols

The PFD also joined with the Burbank Fire Department and Glendale Fire Department to create the Verdugo Fire Communications Center (VFCC) in 1979. The communications center now dispatches for a total of 13 agencies. There are automatic and mutual aid agreements in place so that the closest unit is dispatched to a given call, regardless of department. The PFD has various automatic aid agreements with each of the cities within the VFCC agencies and the Hollywood Burbank Airport for fire protection. The PFD maintains a Memorandum of Understanding for Exchange of EMS and Rescue Services through Automatic Aid/Initial Action and EMS Training Procedures between the cities of Pasadena, South Pasadena, San Marino, and San Gabriel. Additional emergency medical services response is provided via the closest unit model achieved through the agreements of the 13 agencies making up the VFCC. Additionally, the PFD has various automatic and/or mutual aid agreements with the U.S. Forest Service, City of Los Angeles Fire Department, and Los Angeles County Fire Department for fire protection needs. The PFD relies on the California Fire Service and Rescue Emergency Mutual Aid Plan for major disasters beyond local control (i.e., major emergencies, natural disasters, sabotage, civil disturbance, political violence and terrorism, attack).

There are no federal or state regulations directing the level of service response times and outcomes, but the National Fire Protection Association (NFPA) Fire Code is a nationally recognized standard. NFPA 1710 states that a unit (i.e., engine company or ladder truck company) should arrive at the scene of a critical emergency in 8 minutes from time of call receipt in fire dispatch and remaining first alarm units (effective response force) in 12 minutes, 90 percent of the time, where the benchmark travel time is 4 minutes for the first unit on scene and 8 minutes for the effective fire force. PFD's response time standard for emergency calls is that a fire engine arrives at the scene of an emergency within 5 minutes of dispatch 90 percent of the time. In the 2019 fiscal year, the response time for fire calls averaged 8 minutes 57 seconds and for medical calls averaged 6 minutes 29 seconds (PFD 2020).

Police Protection

The Pasadena Police Department (PPD) is a full-service law enforcement agency with the capability of responding to and fully investigating any type of call for service or crime incident that occurs within the City limits. The PPD is well equipped with sufficient vehicles, resources, and facilities (including a Type I jail) to accomplish any essential law enforcement task or mission. The PPD has several specialized assignments that allow it to address community concerns and critical incidents that occur within the City. Examples of these assignments include Special Weapons and Tactics (SWAT), Traffic Section, Neighborhood Services Section, Criminal Investigations Unit, and Air Operations Section.

There are frequent calls to the police department from businesses in the Project area related to the unhoused loitering in the area and transients causing disturbances with both the businesses and patrons. The objective is to find permanent housing for the unhoused and services for the transients through outreach, partnering with non-profits, other City entities, and the Los Angeles County Mental Health Department.

The PPD has mutual aid agreements with other police agencies that immediately surround the City. The PPD is the lead agency in mutual aid area "C" and has ready access to additional police resources, when and if needed. Additionally, the PPD has a mutual aid agreement with the Los Angeles County Sheriff's Department (LACSD) for general law enforcement services, if needed. The LACSD provides law enforcement service to the Metro "L" Line (formerly known as the Gold Line) adjacent to the Project site via a memorandum of understanding.

PPD classifies priority calls for police services into three categories:

- Priority 1: High priority classification, in progress crime with immediate threat to human life. PPD's response time standard for Priority 1 calls is 6 minutes or less.
- Priority 2: In progress crime with threat to property and suspect on scene.
- Priority 3: Priority call due to classification but no suspect on scene.

Schools

The Pasadena Unified School District (PUSD) provides public Transitional Kindergarten–12th grade education to more than 15,350 students in a 76-square mile area that includes the City of Pasadena, City of Sierra Madre, and unincorporated areas of Los Angeles County including Altadena. PUSD has a total of 23 schools, including 13 elementary schools (grades K-5), 1 K-8 school, 3 middle schools (grades 6-8), 2 high schools (grades 9-12), 1 continuation high school, and 1 alternative education program. In addition to these schools, PUSD also operates Focus Point Academy, an Adult Living Skills Center, four Early Childhood Education Centers, Transitional Kindergarten programs, and Twilight Adult Education. The administrative offices for Options For Youth Public Charter Schools is located in Pasadena at 320 North Halstead

Street, Suite 280. Opportunities for Learning Public Charter Schools operates one charter school in the City through the Duarte Unified School District for grades 7-12 at 2029 Lincoln Avenue.

Table 3.8-2 summarizes the PUSD schools that would serve school-age children generated by land uses on the Project site.

Parks and Recreational Facilities

City of Pasadena

Although the City is generally built out, it features an extensive system of parkland that includes City parks, trails systems, and larger open space corridors that traverse large swathes of the City. Pasadena's location at the southern edge of the San Gabriel Mountains provides residents with numerous hiking, biking, and equestrian opportunities. The City provides approximately 391 acres of parks and 502 acres of open space areas (Pasadena 2015).

The Green Space, Parks and Recreation Element of the City's General Plan states that an acceptable walking distance to a park is considered a 0.5-mile radius from a site. The City of Pasadena Parks, Recreation, and Community Services Department has identified the three community parks within a 0.5- to 0.7-mile radius of the Project site, summarized in Table 3.8-3 below, as the primary facilities serving the Project site.

**TABLE 3.8-3
CITY OF PASADENA PARKS AND RECREATION FACILITIES SERVING THE
PROJECT SITE**

Facility Name, Address, and Distance from Site	Amenities	Size (Acres)
Central Park 275 South Raymond Avenue 0.2-mile to the northwest	<ul style="list-style-type: none"> • Picnic tables, rose garden, children's playground, and lawn bowling greens with a club house operated by the Pasadena Lawn Bowling and Croquet Club. • 3-4 full time staff for park maintenance • Central Park Center is located at the south end of Central Park. The center provides after school care and youth camp administrative offices for the Park, Recreation, and Community Services Department. • 4 full time staff 	9.2
Memorial Park 85 East Holly Street 0.7 mile to the north	<ul style="list-style-type: none"> • Picnic tables, children's playground, exercise equipment and a band shell with seating. • 3-4 full time staff for park maintenance • The Pasadena Senior Center is located on the south end of the park which is independently operated by a non-profit to provide social services, programs and activities for seniors age 50 and older. 	5.3
Singer Park Southwest corner of California Boulevard and St. John Avenue 0.4 mile to the west	<ul style="list-style-type: none"> • Children's playground, covered seating areas, picnic tables, and passive recreation opportunities • 2-3 full time staff for park maintenance 	2.9

For maintenance purposes, the three parks mentioned are serviced by full time staff to ensure that the quality of the physical space and any structures within the park boundaries are maintained, and inquiries from the public are addressed within 48 hours.

The City of Pasadena does not have a minimum standard of parkland per capita. Rather, policy GSRP 6.3 of the Green Space, Recreation, and Parks Element of the City's General Plan identifies the City's parkland policy as: "Adequate Developed Parkland. Acquire or otherwise make available local parkland and open spaces in sufficient quantity to meet the community demand for facilities and programs identified in the Master Plan" (Pasadena 2015).

Other Parks and Open Space Facilities

The City of Pasadena and the Pasadena Unified School District (PUSD) maintain joint-use agreements permitting public use of the following PUSD facilities:

- Madison School/Park, 515 Ashtabula Street,
- Linda Vista Park, 1200 block of Linda Vista Avenue (former elementary school),
- McKinley School Park, 325 South Oak Knoll Avenue,
- John Muir High School Tennis Courts, 1905 North Lincoln Avenue, and
- Pasadena High School Tennis Courts, 2925 East Sierra Madre Boulevard (Pasadena 2015).

The Angeles National Forest (ANF), which spans about 700,000 acres, mostly in the San Gabriel Mountains, borders part of the north City boundary. The ANF offers 557 miles of hiking and equestrian trails, including 73 miles of National Recreation Trails and 176 miles of the Pacific Crest Trail (PCT); and 58 campgrounds (Pasadena 2015).

Other Public Facilities

For purposes of this Draft EIR, other public facilities refer to library services. The Pasadena Public Library (PPL) provides library services to City residents. PPL has a central library location (Central Library) and nine branch libraries, which are located so that all residents are within a mile from a library or within walking distance. PPL provides a variety of services and programs to meet each community's information needs. Programs are geared toward adults and children, service to the homebound, preschool story hours, and the Summer Reading Program.

The Project site falls between the Central Library and Allendale Branch Library service areas. Central Library is located approximately 0.8 mile to the north-northeast, and Allendale Branch Library is located approximately 0.7 mile to the south-southeast. It is noted that Central Library is currently closed for a seismic retrofit but will reopen. Also, many library resources are available 24 hours 7 days a week (24/7) virtually, including e-books, audiobooks, magazines and comics, and streaming music and video.

The Central Library is the main facility in the City and is over 100,000 square feet (sf) and houses over 300,000 collections. Central Library has provided a wide variety of programs and services for almost 100 years. Annually, 30,000-40,000 community members attend story times, author visits, cultural events, Art Night, recitals, plays, and many other programs. Central Library has also served as the hub of Pasadena's local history archives, providing valuable historical documents, newspaper, photos, and research. This facility also serves as a destination for those who need computer and/or WiFi access, providing highspeed internet access, computers, and a variety of productivity software for job searching, research, or personal use. For the last two years, Central Library has housed the iLab—an innovative space that provides the community with access to maker equipment like 3-D printers, Carvey machines, sewing machines, and more. In addition, Central Library is the home of the Office of the Young Child—a City wide systems-change initiative to bring all resources and activities for zero- to five-years-old children and their families together.

The Allendale Branch Library, located at 1130 South Marengo Avenue, is 3,172 sf with a 23,500-item collection and 4.8 full-time equivalent (FTE) staff. Allendale Branch is significantly smaller than Central Library but provides access to an extensive materials collection and programming that support the needs of neighboring high school students.

The PPL does not have one systemwide standard for square footage of library space per person; library space needs are determined individually for the service area of each branch. According to PPL, the total library facility square footage and collections are adequate to serve Pasadena's existing population and sufficient to support a population of up to a least 175,000 (as of 2013). Additionally, PPL adds approximately 60,000 items per year to its collection, which is expected to increase as titles continue to move toward electronic format. PPL's total collection exceeds national per capita standards at the time the General Plan Environmental Impact Report (EIR) was prepared (Pasadena 2015).

3.8.2 RELEVANT PROGRAMS AND REGULATIONS

State

California Disaster and Civil Defense Master Mutual Aid Agreement

The California Disaster and Civil Defense Master Mutual Aid Agreement is an agreement between the State of California, its various departments and agencies, and the various political subdivisions, municipal corporations, and other public agencies of the State of California. The agreement allows for the use of all the resources and facilities of the participating agencies in

preventing and combating the effect of disasters, such as flood, fire, earthquake, pestilence, war, sabotage, and riot. It commits the participating agencies to voluntarily aid and assist each other in the event of a disaster, through the interchange of services and facilities, including fire, police, medical and health, communication, and transportation services and facilities, as necessary to provide rescue, relief, evacuation, rehabilitation, and reconstruction.

Assembly Bill 2926

The State has traditionally been responsible for funding local public schools. To assist in providing facilities to serve students generated by new development projects, the State passed Assembly Bill (AB) 2926 in 1986. This bill allows school districts to collect impact fees from developers of new residential and commercial/industrial building space to fund school construction and reconstruction. AB 2926 also established maximum fees (adjusted for inflation) which can be collected under this and any other school fee authorization.

Senate Bill 50

Senate Bill (SB) 50 (or “Leroy Greene School Facilities Act”) and Proposition 1A (both of which passed in 1998) provide a comprehensive school facility financing and reform program by, among other methods, authorizing both a \$9.2 billion school facilities bond issue and school construction cost containment provisions. Specifically, the bond funds are to provide for new construction and for reconstruction/modernization needs. The provisions of SB 50 (1) prohibit local agencies from denying either legislative or adjudicative land use approvals on the basis that school facilities are inadequate and (2) reinstate the school facility fee cap for legislative actions (e.g., general plan amendments, specific plan adoption, zoning plan amendments). According to Section 65996 of the *California Government Code*, the development fees authorized by SB 50 are deemed to be “full and complete school facilities mitigation”.

SB 50 establishes three levels of developer fees that may be imposed upon new development by a school district’s governing board. Beginning in 2000, the maximum allowable amount of Level 1 developer fees is adjusted every two years based on the change in the statewide cost index for class B construction per Section 65995(b)(3) of the Government Code (OPSC 2021). These fee levels depend upon certain conditions within a district. For year 2020, these three levels currently include the following:

- Level 1:** Level 1 fees are the base statutory fees. Level 1 fees are \$4.08 per square foot (sf) for new residential development and \$0.66 per sf of chargeable, covered, and enclosed floor space for new commercial/industrial development. These amounts represent the maximum that can currently be legally imposed upon new development projects by a school district unless the district qualifies for a higher level of funding. Payment of this fee is deemed to constitute full, complete, and adequate mitigation of a project’s impacts on school facilities.
- Level 2:** Level 2 fees allow a school district to impose developer fees above the statutory levels up to 50 percent of school construction costs under designated circumstances. The State provides grant amounts for new school construction if funds are available.
- Level 3:** Level 3 fees apply if the State runs out of bond funds, allowing a school district to impose 100 percent of the cost of the school facility or mitigation on the developer minus any local dedicated school monies. However, Senate Bill 1016 (Chapter 38, Statutes of 2012) suspended the ability of school districts to levy Level III fees.

To accommodate students from new development projects, school districts may alternatively finance new schools through special school construction funding resolutions and/or agreements

between developers, the affected school districts and, occasionally, other local governmental agencies. These special resolutions and agreements often allow school districts to realize school mitigation funds in excess of the developer fees allowed under SB 50.

Measure TT Master Plan

In 2008, voters in the PUSD service area approved Measure TT, authorizing PUSD to sell up to \$350 million in bonds to be repaid through a property tax increase. Types of improvements to schools financed by Measure TT bonds include new, modernized, and reconfigured school buildings; upgrades to lighting, heating, ventilation, air conditioning, and electrical systems; seismic upgrades; new parking lots; and Americans with Disabilities Act access improvements.

Quimby Act

California allows a City or County to pass an ordinance that requires, as a condition of approval of a subdivision, either the dedication of land, the payment of a fee in lieu of dedication, or a combination of both for park and recreational purposes (Section 66477 of the *California Government Code*). This legislation, commonly called the “Quimby Act,” establishes a standard of 3 acres of parkland per 1,000 residents for new subdivision development unless the municipality has already established a higher rate, unless the amount of existing neighborhood and community park area exceeds that limit, in which case the city may adopt a higher standard not to exceed 5 acres per 1,000 residents. The Quimby Act also specifies acceptable uses and expenditures of such funds.

California Public Park Preservation Act

The primary instrument for protecting and preserving parkland is California’s Public Park Preservation Act of 1971. Under the Public Resources Code, cities and counties may not acquire any real property that is in use as a public park for any nonpark use unless compensation, land, or both are provided to replace the parkland acquired. This provides no net loss of parkland and facilities.

City

Pasadena Municipal Code

Chapter 4.17 et. seq. of the Pasadena Municipal Code (PMC) establishes the City’s park acquisition fund and requires that moneys received from the sale of dedicated parkland be deposited in the fund for park acquisition and development. The City collects park impact fees for new residential development to offset the increased demand for parks and impact on existing parks. The fees are used to fund parkland acquisition and capital improvements while interest from the fees can be used to pay for maintenance. The ordinance requires that any person developing new housing units pay an impact fee, which is included as a condition of approval when subdividing a parcel or as a prerequisite for obtaining a building permit. Impact fees are paid into a special fund maintained by the City Director of Finance and disbursed to pay for park or recreational facility improvements, as outlined in the PMC. Impact fees are valued based on the number of bedrooms in each new residential unit.

In 2000, the Pasadena City Council established three park impact districts: West, Central, and East. Marengo Avenue and Allen Avenue from the northern to the southern City limits serve as the dividing lines for the districts. A total of 90 percent of the residential impact fee collected in a park impact district must be spent on neighborhood and community parks in that district. The remaining 10 percent of the funds are distributed to the citywide parks, which include

Hahamongna, Central Arroyo, and Lower Arroyo. Interest earned on the funds collected may be used to maintain any park or any capital improvement located in any park.

Green Space, Recreation and Parks Master Plan

Pasadena's Green Space, Recreation and Parks Master Plan (GSRPMP) was approved and adopted in November 2007. The plan was developed in tandem with the City's previous General Plan Green Space Element and was the result of a three-year effort to determine the community's goals and objectives for natural open space, parks, recreational facilities, and recreational programs. The vision statement for the plan is: "To create, maintain, protect, and restore an interrelated system of parks, trails, and natural open spaces. To provide recreational opportunities which sustain a vibrant and healthy community with an emphasis on ecologically sensitive public enjoyment and education" (Pasadena 2015).

In addition to this vision statement, the GSRPMP identifies nine core principles, and all nine principles are meant to respond to challenges faced by the City related to the provision of recreational facilities and programs, which include high population densities and a "built out" community. The GSRPMP includes an extensive inventory of existing parks, open space areas, and recreational programs in the City. It also summarizes the public outreach process and feedback. Lastly, it provides a detailed community needs assessment. The community's needs are compared against the City's inventory of existing facilities and programs to establish gaps, deficiencies, priorities, and recommendations for recreation, parks, and open space. Recommendations outline sources of funding for the provision of parks and services in Pasadena. The GSRPMP is designed to be consistent with existing long-range plans for specific open space areas in the City.

3.8.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse public services and recreation impact if it would:

- Threshold 3.8a:** Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:
- i) Fire protection;
 - ii) Police protection;
 - iii) Schools;
 - iv) Parks; and/or
 - v) Other public facilities.
- Threshold 3.8b:** Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.
- Threshold 3.8c:** Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

3.8.4 METHODOLOGY

The public service providers were consulted for information regarding current services and to determine if the proposed Project or Project with Building A Residential/Commercial would significantly impact the respective providers' abilities to provide services such that new or physically altered facilities would be required, whose construction could result in an environmental impact. Other information presented in this section was derived from the City's website and the adopted General Plan and related EIR.

3.8.5 ENVIRONMENTAL IMPACTS

Threshold 3.8a: Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

- i) Fire protection;
- ii) Police protection;
- iii) Schools; and/or
- v) Other public facilities.¹

Fire Protection and Emergency Medical Services

Project

The PFD reports that the Project site is: (1) in an area serviced by a sufficient hydrant system as needed to achieve necessary fire flows, (2) the main thoroughfares running north-south and east-west, provide adequate access for PFD vehicles, and (3) fire and emergency medical response to the area are within desired response times.

The PFD anticipates that the Project would result in an increased call for fire protection and emergency medical services because there would be larger development on the site than the existing conditions; however, the increase would not result in the need to construct new or expanded facilities whose construction may cause an environmental impact. The Project would be required to comply with regulations related to fire protection and be subject to the City's routine construction permitting process. This includes a review by PFD for compliance with building and site design standards related to fire life safety and coordination with Pasadena Water and Power (PWP) to ensure that local fire flow infrastructure meets current code standards for the type and intensity of land uses involved. PFD did note that the addition of one rescue ambulance may be required due to the expected increase in medical-related calls. The new land uses would contribute to the City's general fund through payment of taxes; the general fund is the primary source of PFD's annual budget and would address the need for additional equipment. The potential need for additional equipment does not represent an environmental impact. There would be less than significant impacts related to the need for new or expanded PFD facilities, and no mitigation is required.

¹ Parks is addressed further below

Project with Building A Residential/Commercial

The PFD indicates that analysis of the Project with Building A Residential/Commercial would be essentially the same as that of the Project. The only difference is that this scenario would result in a relatively greater increase in fire and emergency medical services because there would be a larger development on the site than the existing conditions. Like the Project, the Project with Building A Residential/Commercial would not result in the need to construct new or expanded PFD facilities whose construction may cause an environmental impact. The Project with Building A Residential/Commercial would be required to comply with regulations related to fire protection and be subject to the City's routine construction permitting process. This includes a review by PFD for compliance with building and site design standards related to fire life safety and coordination with PWP to ensure that local fire flow infrastructure meets current code standards for the type and intensity of land uses involved. PFD did note that the addition of one rescue ambulance may also be required for this scenario due to the expected increase in medical-related calls. The new land uses would contribute to the City's general fund through payment of taxes; the general fund is the primary source of PFD's annual budget and would address the need for additional equipment. The potential need for additional equipment does not represent an environmental impact. There would be less than significant impacts related to the need for new or expanded PFD facilities, and no mitigation is required.

Police Protection***Project***

The PPD anticipates that the Project would result in an increase in calls for service in and around the site, primarily due to traffic (i.e., traffic stops, accidents), potential theft on the premises and in vehicles, and disturbances related to unhoused individuals. PPD states that whenever additional businesses and/or residents move into an area, there is a presumption that calls for service increase. To minimize the increase to the extent possible, PPD suggests consulting with their personnel specially trained in Crime Is Prevented through Environmental Design (CPTED) as part of Project design. However, the PPD does not indicate the Project would result in the need to construct new or expanded facilities to provide adequate police protection services. Generally, an increase in calls does not cause a need for new or expanded physical facilities because police called to a scene are typically out on the street and not at a police station and are on rotating shifts. This is consistent with the conclusion of the General Plan EIR, which states that although new officers (45) and new employees (20) would be required with buildout of the General Plan, "Given this level of staff increase, the field-nature of certain officers, the rotating daily shifts of police personnel, and the Department's [PPD's] existing facilities, no new or expanded police stations or other physical facilities are expected to be necessary" (Pasadena 2015). As such, implementation of the Project would not result in the construction of new or expanded police facilities that may cause an environmental impact. There would be less than significant impacts related to the need for new or expanded PPD facilities, and no mitigation is required.

Project with Building A Residential/Commercial

According to PPD, the analysis of the Project with Building A Residential/Commercial would not be different than the Project. Like the Project, the Project with Building A Residential/Commercial would not result in the need to construct new or expanded PPD facilities, the construction of which may cause an environmental impact. There would be less than significant impacts related to the need for new or expanded PPD facilities, and no mitigation is required.

Schools

Project

The Project would not generate school-age children that would utilize PUSD schools or programs, as the only dwelling units proposed are for senior-age persons. Also, as allowed under the SB 50, school districts serving the City can assess school impact fees based on the floor area of new dwelling units and non-residential developments. These fees, to be remitted prior to issuance of building permits, are used to fund school services and facilities needed to provide the necessary school services. There would be no impact, and no mitigation is required.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would result in a maximum of 197 residential units that could generate school-age children. As allowed under the SB 50, school districts serving the City can assess school impact fees based on the floor area of new dwelling units and non-residential developments. These fees are used to fund school services and facilities needed to provide the necessary school services. These fees would be remitted prior to issuance of building permits. In addition to SB 50 fees, State and local bond measures have been passed, and may be passed in the future, to fund additional school facilities. As discussed above, the payment of statutory school fees is “full and complete mitigation of the impacts”. The *California Education Code* and *California Government Code* do not require the dedication of land or payment of fees in excess of statutorily established school fees. Thus, impacts on school services from future residential development under the Project with Building A Residential/Commercial would be less than significant with payment of required SB 50 fees, and no mitigation is required.

Other Public Facilities

Project

While the Project would result in an increase in the population being served by the PPL, as noted above, the PPL’s total collection exceeds national per capita standards at the time the General Plan EIR was prepared (Pasadena 2015). As such, the PPL concluded that the Project’s population would be adequately served by the existing facilities and related collections. The PPL indicates that implementation of the Project would not result in the need to construct new or expanded PPL facilities, the construction of which may cause an environmental impact. There would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

When compared to the Project, this scenario would result in a greater increase of the on-site resident population and, therefore, likely a greater use of library services. However, the PPL indicates that implementation of the Project with Building A Residential/Commercial also would not result in the need to construct new or expanded PPL facilities, the construction of which may cause an environmental impact. There would be a less than significant impact, and no mitigation is required.

Threshold 3.8a: Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable

service ratios, response times, or other performance objectives for any of the public services:

iv) Parks;

Threshold 3.8c: Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

Project

The City's Parks, Recreation, and Community Services Department does not have a minimum service ratio for parks. As discussed above, there are three community parks within a 0.5- to 0.7-mile radius of the Project site. It is noted that the furthest community park, Memorial Park, is situated adjacent to Memorial Station on the Gold (L) Line. Also, approximately 31,605 sf of open space, including public and private (solely for resident and staff use), would be provided across the site as part of the Project. The City's Parks, Recreation, and Community Services Department concluded that the small increase in population associated with the Project would not result in the need for new or expanded off-site park facilities. Therefore, there would be less than significant impacts related to the need for new or expanded parks facilities, and no mitigation is required.

Project with Building A Residential/Commercial

As discussed, there are three community parks within a 0.7-mile radius of the site, with the furthest park being adjacent to the Memorial Gold (L) Line station. Also, approximately 31,605 sf of open space, including public and private (solely for resident and staff use), would be provided across the site as part of the Project with Building A Residential/Commercial. Although the resident population of the Project with Building A Residential/Commercial is higher than for the Project, the City's Parks, Recreation, and Community Services Department also concluded that the increase in population associated with the Project with Building A Residential/Commercial would not result in the need for new or expanded parks facilities. Therefore, there would be less than significant impacts related to the need for new or expanded off-site parks facilities, and no mitigation is required.

Threshold 3.8b: Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

Project

The residents generated by up to 95 independent living senior units would likely use both existing and future parks and recreational facilities in the City, as well as facilities in the surrounding area. These include County parks and recreational facilities, private recreational facilities, and recreational areas at the Angeles National Forest.

As discussed above, the City's Pasadena Parks, Recreation, and Community Services Department concluded that the increase in population associated with the Project would not drive the need for new or expanded park facilities. Also, as discussed previously, pursuant to Chapter 4.17 et. seq. of the PMC the City collects park impact fees for new residential developments to offset the increased demand for parks and impact on existing parks. The fees are used to fund parkland acquisition and capital improvements while interest from the fees can be used to pay for maintenance. The ordinance requires that any person developing new housing units pay an impact fee, which is included as a condition of approval when subdividing a parcel or as a prerequisite for obtaining a building permit. Therefore, the additional residents associated

with the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated. There would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

The residents generated by up to 197 units in Building A and up to 95 independent living senior units in Building B would likely use both existing and future parks and recreational facilities in the City, as well as facilities in the surrounding area. As discussed for the Project, the City's Parks, Recreation, and Community Services Department concluded that the contribution of residential growth from the Project with Building A Residential/Commercial is considered small with regard to direct need for City parks. Also, as discussed for the Project, the Project with Building A Residential/Commercial would be required to pay a park impact fee whose purpose is to offset increased demand for parks and impact on existing parks. Therefore, the additional residents associated with the Project with Building A Residential/Commercial would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated. There would be a less than significant impact, and no mitigation is required.

3.8.6 CUMULATIVE IMPACTS

Fire Protection and Emergency Medical Services

For fire protection and emergency medical services, the service area for consideration of cumulative impacts is the City, which is the PFD service area. For fire protection services, the PFD provides automatic aid as part of the VFCC. The PFD also participates in the State of California Master Mutual Aid program, which is used when all available local resources have been depleted or committed to an incident, allowing the State to coordinate resources available from neighboring counties, as necessary. Thus, future development with buildout of the City of Pasadena General Plan, and the VFCC participating agencies (for which PFD provides mutual aid), would increase the population and introduce structures that would create a demand for fire protection and emergency medical services. This cumulative demand for fire protection and emergency medical services would require additional personnel and resources at individual agencies to provide the same level of service and maintain existing response times. Conversely, the purpose of the VFCC is to provide a localized dispatch center with a borderless system among the participating agencies whereby the nearest available responder to the event, regardless of jurisdictional boundary, would provide the needed fire or emergency services. Essentially, each participating agency has the resources of all other participating agencies available for emergency response.

Individual developments in the City would be required to comply with pertinent provisions of the California Fire Code to prevent the creation of fire hazards, to promote fire safety, and to facilitate emergency response. Each project pursuant to General Plan buildout would be required to comply with regulations related to fire protection and be subject to the City's routine construction permitting process. This includes a review by PFD for compliance with building and site design standards related to fire life safety and coordinating with PWP to ensure that local fire flow infrastructure meets current code standards for the type and intensity of land uses involved. Future development in the City would generate revenues towards the City's general fund (e.g., property taxes, sales tax, business tax) that could potentially be applied toward the funding of PFD fire protection and emergency services. These revenues would help offset the increased demand for PFD services with buildout of the General Plan. Construction and operation of new or expanded facilities, if necessary, as an allowed land use were evaluated throughout the General Plan EIR (Pasadena 2015).

As discussed in the Initial Study, the development of the Project or the Project with Building A Residential/Commercial would be within the remaining development capacity of the General Plan for the Central District Specific Plan. Therefore, the Project or Project with Building A Residential/Commercial would not result in a cumulatively considerable impact to fire protection and emergency medical services, and no mitigation is required.

Police Protection Services

For police protection services, the geographic area for consideration of cumulative impacts is the City, which is the PPD service area. As discussed, the PPD has mutual aid agreements with other police agencies that immediately surround the City and the LACSD is the lead agency in mutual aid area "C".

Individual developments in the City would be reviewed by the PPD and required to comply with any requirements in effect when the review is conducted. Future development in the City would generate revenues towards the City's general fund (e.g., property taxes, sales tax, business tax) that could potentially be applied toward the funding of PPD fire protection and emergency services. These revenues would help offset the increased demand for PPD services with buildout of the General Plan. Construction and operation of new or expanded facilities, if necessary, as an allowed land use were evaluated throughout the General Plan EIR.

As discussed in the Initial Study, the development of the Project or Project with Building A Residential/Commercial would be within the remaining development capacity of the General Plan for the Central District Specific Plan. Therefore, the Project or Project with Building A Residential/Commercial would not result in a cumulatively considerable impact to police protection services, and no mitigation is required.

School Services

For school services, the geographic area for consideration of cumulative impacts is the PUSD service area, which includes the City and some adjacent areas. The General Plan EIR states that PUSD has capacity to accommodate the student population estimated for the City at General Plan buildout, with excess classroom capacity for all grade levels.

Individual developments in the City would be required to pay SB 50 fees as appropriate at the time that project is implemented. Additionally, PUSD can utilize Measure TT funds. As discussed in the Initial Study, the development of the Project or Project with Building A Residential/Commercial would be within the remaining development capacity of the General Plan for the Central District Specific Plan. Therefore, the Project or Project with Building A Residential/Commercial would not result in a cumulatively considerable impact to school services, and no mitigation is required.

Library Services

For library services, the geographic area for consideration of cumulative impacts is the City, as this is the PPL service area. The General Plan EIR states that the existing library system (in 2015) has adequate resources to serve the anticipated population increase with General Plan buildout.

As discussed in the Initial Study, the development of the Project or Project with Building A Residential/Commercial would be within the remaining development capacity of the General Plan for the Central District Specific Plan. Therefore, the Project or Project with Building A Residential/Commercial would not result in a cumulatively considerable impact to library services, and no mitigation is required.

Parks and Recreation Services

For park services, the geographic area for consideration of cumulative impacts is the City, as this is the City's Pasadena Parks, Recreation, and Community Services Department service area. For regional recreational facilities, such as the Angeles National Forest, the geographic area for consideration of cumulative impacts is primarily the San Gabriel Valley, although some users come from further distances to visit the forest.

Individual developments in the City would be required to pay the residential impact fee consistent with the park impact fee nexus study prepared in 2013 and updated every five years. Compliance with the residential impact fee program ensures that there is adequate parkland based on General Plan standards, and that there would not be substantial deterioration of existing facilities (Pasadena 2015).

In addition to City of Pasadena, the surrounding cities, County of Los Angeles, and National Forest Service have policies and programs to maintain and/or develop regional recreation facilities to meet increased demand. It is not expected that there would be regional growth, without some parallel growth of recreation facilities, such that the existing facilities would experience substantial physical deterioration.

As discussed in the Initial Study, the development of the Project or Project with Building A Residential/Commercial would be within the remaining development capacity of the General Plan for the Central District Specific Plan. Therefore, the Project or Project with Building A Residential/Commercial would not result in a cumulatively considerable impact to parks and recreational facilities, and no mitigation is required.

3.8.7 MITIGATION MEASURES

No significant impacts related to public services and recreation would occur, and no mitigation is required.

3.8.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.8.9 SUMMARY OF ANALYSIS

Project

Through consultation with PFD, PPD, PPL, and City's Parks, Recreation, and Community Services Department, it was determined that implementation of the Project would not result in the need for new or expanded fire protection, police protection, library service, or parks and recreation facilities, the construction of which could cause significant environmental impacts to maintain acceptable performance objectives. The City's Parks, Recreation, and Community Services Department also concluded that implementation of the Project would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. The new land uses would contribute, through payment of taxes, to the City's general fund that can be applied toward the funding of PFD and PPD; and would be required to remit the residential park impact fee to be applied towards City parks and recreation facilities. There would be less than significant impacts related to fire protection and emergency medical services, police protection services, library services, and parks and recreation, and no mitigation is required.

The Project would not generate school-age children that would utilize PUSD schools or programs, as the only dwelling units proposed are for senior-age persons. There would be no impact to PUSD services, and no mitigation is required.

Project with Building A Residential/Commercial

The analysis of the need for new or expanded fire protection services, police protection services, library services, and parks and recreation for the Project with Building A Residential/Commercial would be essentially the same as that of the Project. However, the Project with Building A Residential/Commercial would result in a higher resident population generation. Notwithstanding, the PFD, PPD, PPL, and City Parks, Recreation, and Community Services Department concluded that, as with the Project, there would also be less than significant impacts from this scenario and no mitigation is required.

The Project with Building A Residential/Commercial would generate school-age children and would be required to remit SB 50 fees. Thus, impacts on school services from future residential development under the Project with Building A Residential/Commercial would be less than significant with payment of required SB 50 fees, and no mitigation is required.

3.9 **TRANSPORTATION**

This section evaluates the impacts of the Project and Project with Building A Residential/Commercial with respect to all transportation modes, including vehicular, transit, bicycle, and pedestrian, and the effects related to freeway on- and off-ramps in the site vicinity. Information in this section is derived primarily from the *Transportation Impact Analysis, CEQA Evaluation, Category 2* (Project TIA), dated November 30, 2020; and the *Transportation Impact Analysis, CEQA Evaluation* (Project with Building A Residential/Commercial TIA), dated June 17, 2021, prepared by the Pasadena Department of Transportation (Pasadena DOT) and included as Appendices G-1 and G-2, respectively, to this Draft EIR.

3.9.1 **EXISTING CONDITIONS**

Street System

The existing street system in the study area consists of freeways, primary, and secondary arterials, and collector and local streets that provide regional, sub-regional, and local access within the Project area. The classifications of the street system in both TIAs are provided below:

- **Raymond Avenue** is a north/south Neighborhood Connector between Corson Street to Del Mar Boulevard, and a City Connector between Del Mar Boulevard to Glenarm Street. Raymond Avenue does not have bike lanes south of Maple Street. It has a speed limit of 35 miles per hour (mph) between California Boulevard and Glenarm Street, and 30 mph between California Boulevard and Green Street.
- **Arroyo Parkway** is a north/south Access Road between Holly Street to Colorado Boulevard, and a City Connector between Colorado Boulevard to the State Route (SR) 110 freeway. In the vicinity of the Project, Arroyo Parkway is a four-lane divided roadway with time limited parking on both sides of the roadway. It has a 35 mph speed limit in the project vicinity. Arroyo Parkway is not designated as a bike lane or route.
- **Marengo Avenue** is a north/south City Connector between Orange Grove Boulevard and Del Mar Boulevard, and a Neighborhood Connector north of Orange Grove Boulevard to the northern City limits and south of Del Mar Boulevard to the southern City limits. Bike lanes are present south of Cordova Street to Glenarm Street.
- **Cordova Street** is a four-lane, east/west Neighborhood Connector with two lanes in each direction. The posted speed limit on Cordova Street is 35 mph. A future road diet is proposed along a section of this roadway, which will include bike lanes.
- **Del Mar Boulevard** is an east/west City Connector that generally offers two lanes in each direction. The speed limit is 35 mph. Del Mar Boulevard is designated as a Class III Bike Route between Saint John Avenue and Wilson Avenue, and a Class III Enhanced Bike Route east of Wilson Avenue.
- **Bellevue Drive** is an east/west Access Road between Arroyo Parkway and Marengo Avenue with parking on both sides of the street. The Arroyo Parkway at Bellevue Drive intersection is a signalized offset intersection.
- **California Boulevard** is an east/west City Connector posted with a 30 mph speed limit. California Boulevard is designated as a Class III Bike Route between Marengo Avenue and Lake Avenue, and a Class III Enhanced Bike Route between Lake Avenue and Allen Avenue.

- **Glenarm Street** is an east/west oriented roadway that is classified as an Access Road between Pasadena Avenue to Fair Oaks Avenue, a City Connector between Fair Oaks Avenue to Arroyo Parkway, and a Neighborhood Connector between Arroyo Parkway to El Molino Avenue. Glenarm Street is designated as a Class III Bike Route between Pasadena Avenue and Marengo Avenue, and a Class II Bike Lane east of Marengo Avenue.

Alternative Transportation Facilities

Transit

The Project area is currently served by the Los Angeles County Metropolitan Transportation Authority (Metro) and Pasadena Area Rapid Transit System (Pasadena Transit). As shown in Table 3.9-1 below, the City identifies three hierarchical levels for transit facilities. Table 3.9-2 on the following page outlines the public transit service within the area.

**TABLE 3.9-1
TRANSIT FACILITIES HIERARCHY**

Level	Facilities Included
1	Includes all Gold (L) Line stops as well as corridors with transit service, whether it be a single route or multiple routes combined, with headways of five minutes or less during the peak periods.
2	Includes corridors with transit headways of between six and 15 minutes in peak periods.
3	Includes corridors with transit headways of 16 minutes or more at peak periods.
Source: Pasadena DOT 2021.	

Transit facilities provided by these agencies within ¼-mile of the Project site include the following:

- Pasadena Transit bus routes 20, 51, 52;
- Metro bus routes 177, 256, 501, 686, and 687; and
- Metro Gold (L) Line (light rail).

**TABLE 3.9-2
EXISTING TRANSIT SERVICE IN THE PROJECT AREA**

Location	Route
Raymond Ave at Del Mar Blvd – East Side	Pasadena Transit bus routes 20, 51, 52 Metro bus routes 177, 256, 501, 686, 687 Metro Gold (L) Line (light rail)
Raymond Ave at California Blvd – Northeast Corner	Pasadena Transit bus routes 51, 52 Metro bus routes 686, 687
Raymond Ave at Fillmore St – East Side	Metro Gold (L) Line
Raymond Ave at Fillmore St – Northeast Corner	Pasadena Transit bus routes 51, 52 Metro bus routes 686, 687
Raymond Ave at Glenarm St – Northeast Corner	Pasadena Transit bus routes 51, 52 Metro bus routes 686, 687
Arroyo Parkway at Del Mar Blvd – West Side	Metro Gold (L) Line
Arroyo Parkway at Del Mar Blvd – Southwest corner	Metro bus route 256
Arroyo Parkway at Bellevue Dr – Southwest corner	Metro bus route 256
Arroyo Parkway at California Blvd – Northside on California Blvd	Metro bus route 256
Arroyo Parkway at California Blvd – Southwest corner – Southeast corner	Pasadena Transit bus route 20
Arroyo Parkway at Fillmore St – Northeast corner – Southwest corner	Pasadena Transit bus route 20
Arroyo Parkway at Fillmore St – West side at cul-de-sac	Metro Gold (L) Line
Arroyo Parkway at Glenarm St – East side – Northwest side	Pasadena Transit bus route 20
Marengo Ave at California Blvd – Southeast corner	Pasadena Transit bus route 20
Source: Pasadena DOT 2021	

Bikeways

Multimodal transportation is encouraged with the availability of bicycle racks on Metro, Pasadena Transit, and City of Los Angeles Department of Transportation (LADOT) buses and at each Metro Gold (L) Line Station. In addition, bicycles are allowed onto Metro Gold (L) Line trains. Currently, 31.7 percent of the Citywide service population (i.e., population + jobs) is located within ¼-mile of Level 1 and 2 bicycle facilities. As shown in Table 3.9-3 below, the City's *Draft Bicycle Transportation Plan* (Bicycle Plan) identified three hierarchical levels for bicycle facilities.

**TABLE 3.9-3
BICYCLE FACILITIES HIERARCHY**

Level	Description	Facilities Included
1	Advanced Facilities	Bike Paths Multipurpose Paths Cycle Tracks/Protected Bike Lanes
2	Dedicated Facilities	Buffered Bike Lanes Bike Lanes Bike Boulevards
3	Basic Facilities	Bike Routes Enhanced Bike Routes Emphasized Bikeways
Source: Pasadena DOT 2021.		

Bikeway facilities within ¼-mile of the Project site include the following:

- Del Mar Boulevard is designated as a Class III Bike Route between Saint John Avenue and Wilson Avenue, and a Class III Enhanced Bike Route east of Wilson Avenue;
- California Boulevard is designated as a Class III Bike Route between Marengo Avenue and Lake Avenue, and a Class III Enhanced Bike Route between Lake Avenue and Allen Avenue;
- Glenarm Street is designated as a Class III Bike Route between Pasadena Avenue and Marengo Avenue, and a Class II Bike Lane east of Marengo Avenue; and
- Bike lanes are present south of Cordova Street to Glenarm Street.

Pedestrian

The pedestrian circulation system in the City is comprised of sidewalks, crosswalks, intersection and mid-block traffic controls, and signal technology. The City determines pedestrian accessibility based on a Pedestrian Accessibility metric, which is discussed further below in Section 3.9.4. The current Pedestrian Accessibility score is 3.88.

Vehicle Miles Traveled and Vehicle Trips

The City of Pasadena *Transportation Impact Analysis Current Practice and Guidelines* (TIA Guidelines) address two vehicular performance metrics: Vehicle Miles Traveled (VMT) per Capita and Vehicle Trips (VT) per Capita, as discussed further below in Section 3.9.4. The existing Citywide VMT per Capita is 22.6, and the existing Citywide VT per Capita is 2.8.

3.9.2 RELEVANT PROGRAMS AND REGULATIONS

State

Senate Bill 743

With its passage in 2013, Senate Bill (SB) 743 reformed the analysis and evaluation of traffic impacts under CEQA. SB 743 requires the Governor's Office of Planning and Research (OPR) to amend the CEQA Guidelines and replace the Level of Service (LOS) metric (i.e., auto delay, congestion) with alternative criteria that encourage reductions in greenhouse gas emissions,

multimodal transportation network-related development, and increased diversity of land uses (OPR 2021). In 2014, the OPR responded by publishing preliminary updates and identifying alternative criteria. The primary metric was identified as vehicle miles travelled (VMT). In 2016, the OPR published a revised proposal that adhered to VMT in evaluating transportation impacts.¹

City

General Plan Mobility Element

The City's General Plan Mobility Element was adopted in 2015 as an update to the 2004 Mobility Element. Based on the City's Guiding Principle related to mobility, Pasadena envisions itself in the future as "a city where people can circulate without cars" (Pasadena DOT 2015). It is noted that this goal is not intended to mean a city where there is an absence of cars, but rather where one could navigate the City without a car if desired.

In addition, the Mobility Element addresses state regulations that have been designed to evaluate transportation needs within the context of the community and regional, and also presents a comprehensive plan to meet such needs. The Mobility Element addresses strategies to promote non-auto travel, public transit services, parking approaches, bicycle facilities, car-sharing programs, and pedestrian components that are coordinated and connected with a regional transportation system.

Pasadena Transportation Impact Analysis Guidelines

The City developed and adopted its *Transportation Impact Analysis Current Practice and Guidelines* to ensure that transportation system improvements necessary to support new development while maintaining the quality of life within the community are identified prior to project approval and funded prior to construction (Pasadena DOT 2015). In supporting the City's vision, the TIA guidelines promote an integrated and multimodal transportation system that provides choices and accessibility for everyone living in and working in the City (Pasadena DOT 2015). For all proposed projects not categorically exempt, transportation impact analyses are an integral part of the environmental review process under CEQA. The City has adopted a set of performance measures and CEQA thresholds that are closely aligned with the Mobility Element objectives and policies. The mobility performance measures assess the quality of walking, biking, transit, and vehicular travel in the City. A combination of vehicular and multimodal performance measures are employed to evaluate system performance in reviewing new development projects. Such measures include VMT per Capita, VT per Capita, Proximity and Quality of the Bicycle and Transit Network, and Pedestrian Accessibility. These performance measures align with the sustainable goals of the General Plan by evaluating the efficiency of project by analyzing the per capita length and number of trips associated with changes in land use. With the expanded emphasis on sustainability and a continued focus on livability, the performance measures inform decisions related to the balance of travel modes and provide further understanding on the community's mobility needs.

The TIA Guidelines apply to all projects that require environmental review in accordance with CEQA and the City's established Environmental Policy Guidelines, significance thresholds, and transportation review guidelines. The TIA Guidelines differentiate between projects that are exempt, within CEQA thresholds, and analyses to be evaluated outside of the CEQA process. As further discussed below, the City's CEQA transportation thresholds determine a project's expected level of impact on the transportation system and identify appropriate types of mitigation.

¹ Governor's Office of Planning and Research, Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA, January 20, 2016.

Pasadena Municipal Code

Congestion Management Program

Chapter 10.64 of the Pasadena Municipal Code (PMC) implements the requirements of Metro's Congestion Management Program, in accordance with California Government Code Sections 65089 and 65089.3 and provisions of Metro's model trip-reduction ordinance.

Section 10.64.020 of the PMC requires that certain development project incorporate a Transportation Demand Management (TDM) program plan pursuant to Section 10.64.020 of the PMC. Such projects include mixed-use developments with 50 or more residential units or 50,000 sf or more on non-residential development, or non-residential projects that exceed 75,000 sf. TDM plans must be reviewed and approved by the Director of Pasadena DOT prior to the issuance of a building permit. Thereafter, updates on the implementation of the transportation plan are to be submitted for review and approval annually. TDM plans are required to include project description; site conditions that affect commute travel; and duties, responsibilities, and qualifications of a certified Employee Transportation Coordinator.

The demand for vehicle commute trips must be reduced by ensuring that the design of major residential and non-residential development projects will accommodate facilities for alternative modes of transportation. The TDM plan may include, but is not limited to, the strategies, such as promotional rideshare events, pay parking for employees, guaranteed ride home, private vanpool operations, bikeway linkages to established routes, transit pass and vanpool fare subsidies, reduced-parking fees for non-solo drivers, provision of a certified Employee Transportation Coordinator, and commuter matching service for all employees on an annual basis and new employees upon hiring.

Pedestrian Master Plan

The City's *Pedestrian Master Plan* (Pedestrian Plan) was adopted in 2006. The plan is intended to increase livability and walkability in Pasadena. Among other goals, the plan provides guidance for improved connectivity between the green spaces. The plan seeks to develop pedestrian-friendly projects, better integrate pedestrian improvements into street maintenance and traffic management programs and implement public education and enforcement programs that improve pedestrian safety and increase levels of walking.

Bicycle Transportation Plan

The City's *Bicycle Transportation Plan* (2000 Bicycle Plan) was adopted in 2000 and includes provisions that aim to increase overall recreation opportunities in Pasadena, particularly those related to bicycle lanes, trails, and bicycle infrastructure. An update to the Bicycle Plan is currently being developed by the City.

3.9.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse transportation impact if it would:

- Threshold 3.9a:** Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities;
- Threshold 3.9b:** Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)(1); and/or

Threshold 3.9c: Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Threshold 3.9d: Result in inadequate emergency access.

The City of Pasadena has adopted transportation performance measures and thresholds of significance to determine transportation and traffic impacts under CEQA. The City's transportation thresholds of significance applicable to the Project and Project with Building A Residential/Commercial are presented in Table 3.9-4, City of Pasadena CEQA Transportation Thresholds. The City's transportation analysis methodology is discussed further below.

**TABLE 3.9-4
CITY OF PASADENA CEQA TRANSPORTATION THRESHOLDS**

Metric	Description	CEQA Impact Threshold
1. VMT Per Capita	VMT in the City of Pasadena per service population (population + jobs)	An <u>increase</u> over existing Citywide VMT per Capita of 22.6
2. VT Per Capita	VT in the City of Pasadena per service population (population + jobs)	An <u>increase</u> over existing Citywide VT per Capita of 2.8
3. Proximity and Quality of Bicycle Network	Percent of service population (population + jobs) within a ¼-mile of bicycle facility types	Any <u>decrease</u> in existing citywide 31.7% of service population (population + jobs) within a ¼-mile of Level 1 & 2 bike facilities
4. Proximity and Quality of Transit Network	Percent of service population (population + jobs) within a ¼-mile of transit facility types	Any <u>decrease</u> in existing citywide 66.6% of service population (population + jobs) within a ¼-mile of Level 1 & 2 transit facilities
5. Pedestrian Accessibility	The Pedestrian Accessibility Score uses the mix of destinations, and a network-based walk shed to evaluate walkability	Any <u>decrease</u> in the Citywide Pedestrian Accessibility Score
VMT: vehicle miles traveled; VT: vehicle trips Source: Pasadena DOT 2021		

3.9.4 METHODOLOGY

City of Pasadena Transportation Impact Analysis

Pursuant to the TIA Guidelines, the Project was evaluated using the City's transportation performance measures. Proposed projects are analyzed using the City's calibrated travel demand forecasting (TDF) model built on SCAG's regional model. The City's TDF model uses TransCAD software to simulate traffic levels and travel patterns for the City of Pasadena. The TransCAD program consists of input files that summarize the City's land uses, street network, travel characteristics, and other key factors. Using this data, the model performs a series of calculations to determine the number of trips generated, the beginning and ending location of each trip, and the route taken by the trip. To be deemed accurate for project transportation impact on the transportation system, a model must be calibrated to a year in which actual land use data and traffic volumes are available and well documented. The Pasadena TDF has been calibrated to 2013 base year conditions using actual traffic counts, Census data, and land use data compiled by City staff with land uses' associated population and job increase estimates. The methodology of the specific performance assessment is provided below.

Vehicle Miles Traveled Per Capita

The VMT per Capita measure sums the miles traveled for trips within the City of Pasadena Transportation Demand Model (that is based on the SCAG regional model). The VMT total considers 100 percent of the mileage of trips that begin and end inside Pasadena and 50 percent of the distance travelled for trips with one end outside of Pasadena. The City's VMT is then divided by the City's total service population, defined as the population plus the number of jobs.

Although VMT itself will likely increase with the addition of new residents, the City can reduce VMT on a per-capita basis with land use policies that help Pasadena residents meet their daily needs within a short distance of home, reducing trip lengths, and by encouraging development in areas with access to various modes of transportation other than auto.

Vehicle Trips Per Capita

The VT per Capita is a measure of motor vehicle trips associated with the City. The measure sums the trips with origins and destination within the City of Pasadena, as generated by the 2013 Trip-Based Citywide Travel Demand Model. The regional VT is calculated by adding the VT associated with trips generated and attracted within City boundaries, and 50 percent of the VT associated with trips that either begin or end in the City but have one trip end outside of the City. The City's VT is then divided by the City's total service population, defined as the population plus the number of jobs. As with VMT, VT itself will likely increase with the addition of new residents, but the City can reduce VT on a per-capita basis with land use policies that help Pasadena residents meet their daily needs within a short distance of home, reducing trip lengths, and by encouraging development in areas with access to various modes of transportation other than auto.

Proximity and Quality of Transit Network

The Proximity and Quality of Transit Network provides a measure of the percent of the City's service population (population + jobs) within a ¼-mile of each of each of three transit facility types, as defined in Table 3.9-1. For each facility level, a ¼-mile network distance buffer is calculated and the total service population (population + jobs) within the buffer is identified. The City can improve the measures of Transit Proximity and Quality by reducing headways on existing transit routes, by expanding transit routes to cover new areas, and by encouraging residential and commercial development to occur in areas with an already high-quality transit service.

Proximity and Quality of Bicycle Network

The Proximity and Quality of Bicycle Network provides a measure of the percent of the City's service population (population + jobs) within a ¼-mile of bicycle facility types. The facility types are aggregated into three hierarchy levels, obtained from the City's Bicycle Plan categories as shown in Table 3.9-3. For each bike facility level, a ¼-mile network distance buffer is calculated and the total service population (population + jobs) within the buffer is identified. The City can improve measures of Bike Facility Access by improving and expanding existing bike facilities and by encouraging residential and commercial development in areas with high-quality bike facilities.

Pedestrian Accessibility

The Pedestrian Accessibility score provides a measure of the average walkability in the Traffic Analysis Zones (TAZs) surrounding Pasadena residents, based on a Pedestrian Accessibility metric. The Pedestrian Accessibility metric is a simple count of the number of land use types accessible to a Pasadena resident or employee in a given TAZ within a five-minute walk. The ten land use types considered are:

- 1) Retail,
- 2) Personal Services,
- 3) Restaurant,
- 4) Entertainment,
- 5) Office (including private sector and government offices),
- 6) Medical (including medical office and hospital uses),
- 7) Culture (including churches, religious and other cultural uses),
- 8) Park and Open Space,
- 9) School (including elementary and high schools), and
- 10) College.

3.9.5 ENVIRONMENTAL IMPACTS

Threshold 3.9a: Would the Project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Threshold 3.9b: Would the Project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)(1)?

The City's TIA methodology assesses both the vehicular and non-vehicular (i.e., transit, bicycle, pedestrian) transportation facilities together. Therefore, for clarity of the analysis, these two thresholds are analyzed together, consistent with the TIA Guidelines.

Project

Those projects with proposed land uses that are consistent with the General Plan and complementary to their surrounding land uses are expected to reduce the trip length associated with adjacent land uses; and/or increase the service population access to pedestrian, bike, and transit facilities if the project is within ¼-mile of those facilities.

Table 3.9-5, Transportation Impact Analysis Summary for the Project, summarizes the analyses of the Project's potential impacts on the City's transportation system using the calibrated TDF model. The results are based on the Project's vehicular and non-vehicular trip making characteristics, trip length, and its interaction with other surrounding/citywide land uses, and the City's transportation network. The Project TIA is provided in its entirety in Appendix G-1 to this Draft EIR.

**TABLE 3.9-5
TRANSPORTATION IMPACT ANALYSIS SUMMARY
FOR THE PROJECT**

Transportation Performance Metrics	Significant Impact Cap (Existing)	Incremental Change (Existing + Project)	Significant Impact?
VMT Per Capita	>22.6	19.5	No
VT Per Capita	>2.8	2.0	No
Proximity and Quality of Bicycle Network	<31.7%	32.0	No
Proximity and Quality of Transit Network	<66.6%	66.8	No
Pedestrian Accessibility	<3.9	3.9	No
VMT: vehicle miles traveled; VT: vehicle trips Source: Pasadena DOT 2020.			

As shown in Table 3.9-5, using the City's Transportation Demand Model, the Pasadena DOT determined that the Project would not exceed any of the CEQA transportation thresholds defined in the City's TIA Guidelines (Pasadena DOT 2020). As such, the Project would not conflict with the City's plan addressing the circulation system under CEQA (i.e., TIA Guidelines), which includes transit, roadway, bicycle and pedestrian facilities; or conflict or be inconsistent with Section 15064.3(b)(1) of the State CEQA Guidelines. There would be less than significant impacts, and no mitigation is required.

Project with Building A Residential/Commercial

The Pasadena DOT prepared a TIA for the Project with Building A Residential/Commercial using the same methodology as applied for the Project. Table 3.9-6, Transportation Impact Analysis Summary for the Project with Building A Residential/Commercial, summarizes the analyses of the Project with Building A Residential/Commercial's potential impacts on the City's transportation system using the calibrated TDF model. The Project with Building A Residential/Commercial TIA is provided in its entirety in Appendix G-2 to this Draft EIR.

**TABLE 3.9-6
TRANSPORTATION IMPACT ANALYSIS SUMMARY FOR THE PROJECT WITH
BUILDING A RESIDENTIAL/COMMERCIAL**

Transportation Performance Metrics	Significant Impact Cap (Existing)	Incremental Change (Existing + Project)	Significant Impact?
VMT Per Capita	>22.6	8.2	No
VT Per Capita	>2.8	1.4	No
Proximity and Quality of Bicycle Network	<31.7%	32.0	No
Proximity and Quality of Transit Network	<66.6%	66.8	No
Pedestrian Accessibility	<3.9	3.9	No
VMT: vehicle miles traveled; VT: vehicle trips Source: Pasadena DOT 2021.			

As shown in Table 3.9-6, using the City's TDM, the Pasadena DOT determined that the Project with Building A Residential/Commercial would not exceed any of the CEQA transportation thresholds defined in the City's TIA Guidelines (Pasadena DOT 2021). Compared to the Project, the Project with Building A Residential/Commercial would have substantively lower VMT per Capita and somewhat lower VT per Capita. As such, the Project with Building A

Residential/Commercial would not conflict with the City's plan addressing the circulation system under CEQA (i.e., TIA Guidelines), which includes transit, roadway, bicycle and pedestrian facilities; or conflict or be inconsistent with Section 15064.3(b)(1) of the State CEQA Guidelines. There would be less than significant impacts, and no mitigation is required.

Threshold 3.9c: Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Project

Based on comments related to traffic safety in response to the Notice of Preparation of the EIR, the above threshold has been included in the Draft EIR analysis after having been scoped out as part of Initial Study preparation.

The Pasadena DOT was consulted regarding the collision history for the South Arroyo Parkway and California Boulevard intersection. Pasadena DOT tracks the City's intersection collision history, which is inclusive of all transportation modes. For the five-year period from January 1, 2016, through December 31, 2020, there were a total of 20 collisions at this intersection, broken down by year as follows: 3 in 2016, 7 in 2017, 6 in 2018, 3 in 2019, and 1 in 2020. Of the 20 collisions, 9 resulted in injuries and 0 resulted in fatalities. All but 2 incidents involved another motor vehicle; of these, 1 incident involved a fixed object and 1 incident involved a pedestrian. Pasadena DOT generally considers the "top 10" intersections as typically having 8 or more collisions per year, and intersections that average 6 or more collisions per year could be considered high. The Arroyo Parkway and California Boulevard intersection averaged 4 collisions per year. In addition, the Pasadena DOT notes that when comparing the collision rate of this intersection with the Statewide average for signalized intersections controlled by traffic signals in an urban area, the crash rate for this intersection falls slightly below the Statewide average (Siques 2021a; Russo 2021).

The Pasadena DOT reports that they have worked closely with Metro in recent years to reduce delay at the intersection caused by the Metro L (Gold) Line operation and implemented an adaptive traffic control system to better manage operations along this corridor. There have been substantial changes to the signal operations at this intersection in the past approximately five years, and the changes have likely contributed to a reduction in collisions during this period. This intersection is not considered a high collision location, and Pasadena DOT continues to monitor operations at this intersection and along the corridor to address traffic signal operations and reduce the potential for collisions (Siques 2021a).

The Pasadena DOT concluded that the additional trips generated by the Project, on its own, are not expected to generate a safety concern at this intersection, especially with the traffic signal phasing/operations being proactively managed and the presence of raised median islands already provided at Arroyo Parkway and California Boulevard that restrict turn movements into and out of the proposed driveways. Additionally, the number of driveways at the site would be reduced from four to two on Arroyo Parkway and from two to one on California Boulevard, which helps reduce non-vehicular conflicts (Siques 2021b).

Based on the intersection's collision history, Pasadena DOT's continuing proactive management of this intersection, and the less than significant transportation impact pursuant to Thresholds 3.9(a) and (b), it is concluded that implementation of the Project would not result in a traffic safety hazard at the South Arroyo Parkway and California Boulevard intersection. Moreover, the Project would not increase hazards due to a geometric design feature or incompatible use. No sharp curves or dangerous intersections are proposed, and the proposed uses are consistent and

compatible with the existing uses onsite and in the vicinity. Therefore, there would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

As discussed above, the Pasadena DOT was consulted regarding the accident history for the South Arroyo Parkway and California Boulevard intersection and the potential for the addition of trips from the Project with Building A Residential/Commercial to affect the safety of this intersection. As discussed above, based on the intersection's collision history, Pasadena DOT's continuing proactive management of this intersection, and the less than significant transportation impact, it is concluded that implementation of the Project would not result in a traffic safety hazard at the South Arroyo Parkway and California Boulevard intersection. Moreover, the Project with Building A Residential/Commercial would not increase hazards due to a geometric design feature or incompatible use. There would be a less than significant impact, and no mitigation is required. This conclusion would be the same for the Project with Building A Residential/Commercial as this scenario would generate fewer daily trips than the Project.

Threshold 3.9d: Would the Project result in inadequate emergency access?

Project

As stated in Section 2.0, Project Description, of this Draft EIR, the site currently has seven points of access, including two on California Boulevard, one on Bellevue Drive, and four on Arroyo Parkway. All these access points except one are driveways leading to surface parking; the access point on Bellevue Drive leads into the subterranean parking structure serving Whole Foods Market. The ingress/egress on East Bellevue Drive to the 275-space Whole Foods Market parking structure would remain in place to continue serving the grocery store and would be entirely separated from the proposed parking structure. Additionally, there is a truck exit (only) from Whole Foods Market on Arroyo Parkway at the southern end of this structure.

As shown on Exhibit 2-5, First (Ground) Level Plan, in Section 2.0, Environmental Setting and Project Description, of this Draft EIR, the Project uses south of Whole Foods Market proposes three ingress/egress points: one on California Boulevard and two on South Arroyo Parkway. A circular drop-off area would be situated on the north side of each of the proposed buildings. The Project would not involve any alterations to existing public or private roadways and would not result in the elimination of a through-route or the narrowing of any roadways outside the boundaries of the site. All proposed ingress/ingress points and drive lanes on the site would be subject to Pasadena Fire Department and Pasadena DOT review and approval to ensure adequate access is available both for emergency vehicles, which are regularly expected with operation of Building B, and routine circulation. As such, implementation of the proposed Project would not create new obstructions to emergency access in the Project area. There would be a less than significant impact, and no mitigation is required.

Project with Building A Residential/Commercial

The analysis of emergency access for the Project with Building A Residential/Commercial would be the same as that of the Project. Although there would be 200 fewer parking spaces and a substantively lower VMT per Capita compared to the Project, the proposed circulation on the ground level for both development scenarios would be the same. There would be a less than significant impact, and no mitigation is required.

3.9.6 CUMULATIVE IMPACTS

Project

Cumulative transportation impacts within the City were recently evaluated in the Pasadena General Plan Draft EIR, which evaluated transportation impacts within the City associated with buildout of the General Plan in 2035 (City of Pasadena 2015). The General Plan EIR analysis considered impacts associated with the five transportation performance measures identified in the TIA Guidelines, namely VMT per Capita, VT per Capita, proximity and quality of the bicycle network, proximity and quality of the transit network, and pedestrian accessibility. The analysis found that transportation impacts associated with all five performance measures would be less than significant.

As the Project is consistent with the land use designation associated with the site that was evaluated in the General Plan EIR, the analysis of transportation impacts in the General Plan Draft EIR is representative of cumulative impacts associated with the Project. Also, as discussed above, the Project would result in less than significant impacts for all five transportation performance measures. Therefore, Project-related cumulative impacts were considered in the cumulative analysis conducted for the Pasadena General Plan Draft EIR. The Project would not result in a cumulatively considerable impact related to transportation, and no mitigation is required.

Project with Building A Residential/Commercial

As with the Project, cumulative impacts for the Project with Building A Residential/Commercial were considered in the cumulative analysis conducted for the Pasadena General Plan Draft EIR as the Project with Building A Residential/Commercial is consistent with the site's land use designation. The Project with Building A Residential/Commercial would not result in a cumulatively considerable impact related to transportation, and no mitigation is required.

3.9.7 MITIGATION MEASURES

No mitigation measures are required.

3.9.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.9.9 SUMMARY OF ANALYSIS

Project

The Pasadena DOT determined that the Project would not exceed any of the five CEQA transportation thresholds defined in the City's TIA Guidelines (Pasadena DOT 2020). As such, the Project would not conflict with the City's plan addressing the circulation system under CEQA (i.e., TIA Guidelines), which includes transit, roadway, bicycle and pedestrian facilities; or conflict or be inconsistent with Section 15064.3(b)(1) of the State CEQA Guidelines. Implementation of the Project would not create new obstructions to emergency access in the Project area. The Project would not result in a traffic safety hazard at the South Arroyo Parkway and California Boulevard intersection and would not increase hazards due to a geometric design feature or incompatible use. There would be less than significant impacts, and no mitigation is required.

Project with Building A Residential/Commercial

The analysis of transportation for the Project with Building A Residential/Commercial would be essentially the same as the Project. Compared to the Project, the Project with Building A Residential/Commercial would have substantively lower VMT per Capita and somewhat lower VT per Capita. The Pasadena DOT determined that the Project with Building A Residential/Commercial would not exceed any of the CEQA transportation thresholds defined in the City's TIA Guidelines (Pasadena DOT 2021). As such, the Project would not conflict with the City's plan addressing the circulation system under CEQA (i.e., TIA Guidelines), which includes transit, roadway, bicycle and pedestrian facilities; or conflict or be inconsistent with Section 15064.3(b)(1) of the State CEQA Guidelines. Implementation of the Project with Building A Residential/Commercial would not create new obstructions to emergency access in the Project area. The Project with Building A Residential/Commercial would not result in a traffic safety hazard at the South Arroyo Parkway and California Boulevard intersection and would not increase hazards due to a geometric design feature or incompatible use. There would be less than significant impacts, and no mitigation is required.

3.10 TRIBAL CULTURAL RESOURCES

This section addresses potential impacts to tribal cultural resources that could result from implementation of the Project or Project with Building A Residential/Commercial. Information in this section is derived from consultation between the City and local tribal representatives consistent with Assembly Bill (AB) 52 (Appendix H); an archaeological records search conducted by the South Central Coastal Information Center (SCCIC) on July 24, 2020; the Sacred Lands File search conducted by the Native American Heritage Commission (NAHC) received on July 15, 2020; and the Native American consultation conducted by the City (Appendix C-2).

3.10.1 EXISTING CONDITIONS

Section 3.2 of this Draft EIR provides an evaluation of cultural resources. As noted in that section, a cultural resource record search and literature review was conducted at the California Historical Resources Information System (CHRIS), which maintains records and literature regarding cultural resources within California. The CHRIS office for Los Angeles County is located at the SCCIC. No prehistoric archaeological sites or tribal cultural resources have been documented within the Project site or the ½-mile search radius. Nevertheless, the results from the NAHC Sacred Lands Files confirmed the presence of a sacred site (tribal cultural resource) important to the local Gabrielino/Tongva community. The resource is located nearby, but not within the Project site. The locations and other details of sacred sites are kept confidential in order to protect the sites.

3.10.2 RELEVANT PROGRAMS AND REGULATIONS

State

Assembly Bill 52

In September 2014, Governor Brown signed AB 52 (Chapter 532, Statutes of 2014), which creates a new category of environmental resources that must be considered under CEQA: “tribal cultural resources.” The legislation imposes new requirements for offering to consult with California Native American tribes regarding projects that may affect a tribal cultural resource, emphasizes a broad definition of what may be considered to be a tribal cultural resource, and includes a list of recommended mitigation measures.

Recognizing that tribes may have expertise regarding their tribal history and practices, AB 52 requires lead agencies to provide notice to tribes that are traditionally and culturally affiliated with the geographic area of a proposed project if they have requested notice of projects proposed within that area. MMs agreed upon during consultation must be recommended for inclusion in the environmental document.

AB 52 became effective on July 1, 2015 and requires that the lead agency provide project notifications to California Native American tribes on the NAHC Tribal Consultation list that request notification in writing prior to a lead agency’s release of a NOP for an EIR, a Mitigated Negative Declaration (MND), or Negative Declaration (ND). Once Native American tribes receive a project notification, they have 30 days to respond as to whether they wish to initiate consultation regarding the project and specifically consultation regarding mitigation for any potential project impacts.

Native American Historic Resource Protection Act

Established in 2002, the Native American Historic Resource Protection Act, establishes a misdemeanor for unlawfully and maliciously excavating upon, removing, destroying, injuring, or defacing a Native American historic, cultural, or sacred site that is listed or may be eligible for listing in the California Register of Historical Resources (CRHR). The focus of this legislation was to provide additional legal protection for Native American historical and cultural sites, art, and other cultural artifacts found at those sites. The Act also encourages collaborative relationships for the protection of Native American cultural resources between Native Americans and landowners. Funding and other state assistance should be encouraged for support of voluntary agreements to conserve, maintain, and provide physical access for Native Americans to these cultural resources.

California Health and Safety Code (Sections 7050.5, 7051, and 7054)

Sections 7050.5, 7051, and 7054 of the *California Health and Safety Code* collectively address the illegality of interference with human burial remains (except as allowed under applicable sections of the [*California Public Resources Code* (PRC)]). These sections also address the disposition of Native American burials in archaeological sites and protect such remains from disturbance, vandalism, or inadvertent destruction. Procedures to be implemented are established for (1) the discovery of Native American skeletal remains during construction of a project; (2) the treatment of the remains prior to, during, and after evaluation; and (3) reburial.

Section 7050.5 of the *California Health and Safety Code* specifically provides for the disposition of accidentally discovered human remains. Section 7050.5 states that if human remains are found, no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined the appropriate treatment and disposition of the human remains.

California Public Resources Code (Section 5097.98)

Section 5097.98 of the PRC states that, if remains are determined by the Coroner to be of Native American origin, the Coroner must notify the NAHC within 24 hours. When the NAHC receives this notification from a County Coroner, it shall immediately notify those persons it believes to be most likely descended from the deceased Native American. The descendants may, with the permission of the owner of the land or his or her authorized representative, inspect the site of the remains and may recommend to the owner or the person responsible for the excavation work means for treatment or disposition, with appropriate dignity, of the human remains and any associated grave goods. The descendants shall complete their inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. This regulation also requires that, upon the discovery of Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred with the most likely descendants regarding their recommendations and all reasonable options regarding their preferences for treatment. This section of the PRC has been incorporated into Section 15064.5(e) of the State CEQA Guidelines.

3.10.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse tribal cultural resources impact if it would:

- Threshold 3.10:** Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
- a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k); and/or
 - b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

3.10.4 METHODOLOGY

Consistent with requirements of AB 52, on May 28, 2020, the City of Pasadena initiated government-to-government consultation with those tribes that have provided written requests to be notified of projects in the City to identify, protect, and/or mitigate potential impacts to cultural places/resources. Both tribes (Gabrieliño/Tongva Tribe and Gabrieliño Band of Mission Indians – Kizh Nation) accepted the request for consultation and completed the AB 52 process for the Project with the City.

3.10.5 ENVIRONMENTAL IMPACTS

- Threshold 3.10:** **Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:**
- a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k); and/or**

Project

In response to Threshold 3.10a, for the purposes of impact analysis, a tribal cultural resource is considered a site, feature, place, cultural landscape, sacred place, or object which is of cultural value to a California Native American Tribe and is either eligible for the CRHR or a local register.

Psomas submitted a request to the SCCIC on July 24, 2020. As discussed above and in Section 3.2, Cultural Resources, of this Draft EIR, based on the record searches and consultation with Native American tribes culturally affiliated with the area (see analysis under Threshold 3.10b below), there are no tribal cultural resources listed on the CRHR or a local register within the

Project site. There would be no impact related to documented tribal cultural resources, and no mitigation is required.

Project with Building A Residential/Commercial

The analysis of potential impacts to documented tribal cultural resources for the Project with Building A Residential/Commercial would be essentially the same as that of the Project, as the records search and Native American consultation are based on the site location and history. This is the same for both scenarios. As with the Project, there would be no impact related to documented tribal cultural resources, and no mitigation is required.

Threshold 3.10: **Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:**

- b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?**

Project

As noted above, on May 28, 2020, the City initiated government-to-government consultation with those tribes that have provided written requests to be notified of projects in the City. Letters requested consultation pursuant to AB 52 were sent to the following tribal organizations:

- Gabrieliño Tongva Tribe; and
- Gabrieliño Band of Mission Indians – Kizh Nation.

Both tribes accepted the request for consultation and completed the AB 52 process for the Project with the City. The results of these consultations are summarized below.

Gabrieliño Tongva Tribe

The City consulted with tribal representatives from both the Gabrieliño Tongva Tribe and the Gabrieliño Band of Mission Indians – Kizh Nation.

Consultation between the Gabrieliño Tongva Tribe, represented by Mr. Sam Dunlap, and the City occurred on November 30, 2020. Mr. Dunlap indicated the Project site lies within an area where ancestral territories of Gabrieliño Tongva Tribe villages adjoined and overlapped, at least during the Late Prehistoric Period (i.e., before European contact) and the Protohistoric Periods (i.e., post European contact). Mr. Dunlap also mentioned several Native American burials and village sites are documented in Pasadena and nearby South Pasadena. However, Mr. Dunlap was unaware of these types of resources being present within the Project site.

On January 12, 2021, as requested by the City, Psomas had a follow-up conference call with Mr. Dunlap to revisit the Project and discuss the results of the SCCIC record search results for

the Project. After review of the record search results, Mr. Dunlap, speaking on behalf of the Gabrieliño Tongva Tribe did not see any reason to change his earlier position on whether documented tribal cultural resources exist on the Project site.

In summary, through consultation between Gabrieliño Tongva Tribe and the City, it was concluded that this area of Los Angeles County was inhabited by Native Americans, but existing site records do not indicate archaeological resources significant to Native Americans on the Project site. However, there is always the possibility that undiscovered intact cultural resources, including tribal cultural resources, may be present below the surface in native sediments. Therefore, Mr. Dunlap indicated the tribe would appreciate the opportunity for the Gabrieliño Tongva and Gabrieliño representatives from other tribal councils that are recognized by the NAHC to be allowed the opportunity to bid on Native American monitoring if the City approves such as measure for the Project.

Gabrieliño Band of Mission Indians – Kizh Nation

Consultation between the Gabrieliño Band of Mission Indians – Kizh Nation (Kizh Nation) and the City occurred on October 15, 2020. The Kizh Nation followed up with submittal of an e-mail on November 4, 2020, summarizing the consultation, providing tribal archive information, and providing requested mitigation. The Kizh Nation provided documents and information regarding the potential sensitivity of cultural resources related to the Kizh Nation and asked that the documents and information be kept confidential. The follow up e-mail requested that the City provide written notification stating whether and to what extent the proposed mitigation would be included for the Project so that the parties may conclude consultation, or if the requested mitigation is not agreeable so that the consultation may continue. The City reviewed and considered the information provided and mitigation required by the Kizh Nation. On December 2, 2021—consistent with the request of the Kizh Nation to be notified regarding whether and to what extent the proposed mitigation would be required for the Project—the City e-mailed the Kizh Nation and provided a recommended mitigation measure, based on the measure provided by Kizh Nation, for review and concurrence. The City stated that it considered consultation complete and would assume concurrence with the measure, and associated conditions of approval based on the mitigation measure, unless a response was received by December 9, 2021. No response was received from the Kizh Nation by or subsequent to December 9, 2021.

Project with Building A Residential/Commercial

The analysis of potential impacts to tribal cultural resources based on AB 52 consultation for the Project with Building A Residential/Commercial would be essentially the same as that of the Project. Although this scenario would have slightly less excavation due to inclusion of one fewer subterranean parking level and therefore somewhat less likelihood of encountering an unknown tribal cultural resource, the resulting potential impact and associated mitigation agreed upon with the Gabrieliño Band of Mission Indians – Kizh Nation would apply. With implementation of MM TCR-1, there would be a less than significant impact.

3.10.6 CUMULATIVE IMPACTS

Project

The cumulative impacts related to demographic growth are analyzed for the City of Pasadena. Direct impacts to cultural resources are generally site specific. However, development throughout the City, could potentially result in the disturbance of prehistoric archaeological resource sites (including tribal cultural resources/Native American remains). The City participates in Native American consultation consistent with AB 52 and SB 18 (when applicable). This process, in combination with site-specific archaeological studies, and any resulting site-specific mitigation

measures (typically monitoring and processes to manage any unanticipated resources), would contribute to the reduction of potential tribal cultural resource impacts to the maximum extent feasible. Because there are no documented tribal cultural resources on the Project site and MM TCR-1 would be implemented, the Project would not result in a cumulatively considerable impact to tribal cultural resources.

Project with Building A Residential/Commercial

The cumulative impact analysis of tribal cultural resources for the Project with Building A Residential/Commercial would be essentially the same as that of the Project, as the records search and Native American consultation are based on the site location and history. This is the same for both scenarios. As with the Project, because there are no documented tribal cultural resources on the Project site and MM TCR-1 would be implemented, the Project with Building A Residential/Commercial would not result in a cumulatively considerable impact to tribal cultural resources.

3.10.7 MITIGATION MEASURES

MM TCR-1 Prior to the commencement of any ground disturbing activity at the Project site, the Project Applicant shall accommodate a Native American Monitor (Monitor) culturally affiliated with the site as recognized by the Native American Heritage Commission (NAHC). The Monitor contracted and retained shall be at the expense of the tribe(s) that consulted on this Project. The Tribal Monitor will only be present on-site during the construction phases that involve ground-disturbing activities. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to pavement removal, potholing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching within the Project area. The Tribal Monitor will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified.

The on-site monitoring shall end when all ground-disturbing activities on the Project site are completed, or when the Tribal Representatives and Tribal Monitor have indicated that all upcoming ground-disturbing activities at the Project Site have little to no potential for impacting Tribal Cultural Resources.

Upon discovery of any Tribal Cultural Resources, construction activities shall cease in the immediate vicinity of the find (not less than the surrounding 50 feet) until the find can be assessed. All Tribal Cultural Resources unearthed by Project construction activities shall be evaluated by the Tribal Monitor approved by the Consulting Tribe and a qualified Archaeologist (if one is present).

If the resources are Native American in origin, the Consulting Tribe will retain it/them in the form and/or manner the Tribe deems appropriate, for educational, cultural and/or historic purposes. If human remains and/or grave goods are discovered or recognized at the Project Site, all ground disturbance in the immediate vicinity of the find shall be halted, and the County Coroner shall be notified per Section 5097.98 of the Public Resources Code and Section 7050.5 of the Health & Safety Code. Human remains and grave/burial goods shall be treated alike per Section 5097.98(d)(1) and (2) of the Public Resources Code. Work may continue in other parts of the Project site while evaluation and, if necessary, mitigation takes place (Section 15064.5[f] of the State CEQA Guidelines). Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of

archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. Any historic archaeological material that is not Native American in origin (non-Tribal Cultural Resource) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be donated to a local school or historical society in the area for educational purposes.

3.10.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.10.9 SUMMARY OF ANALYSIS

Project

Based on consultation with the Gabrieliño Tongva Tribe and Gabrieliño Band of Mission Indians – Kizh Nation pursuant with AB 52 (Appendix H) and the results on an archaeological records search conducted by the SCCIC on July 24, 2020; and NAHC Sacred Lands File search received on July 15, 2020 (Appendix C-2), there are no tribal cultural resources listed on the CRHR or a local register within the Project site or otherwise known to the culturally affiliated Native American tribes. However, there is always the possibility that undiscovered intact cultural resources, including tribal cultural resources, may be present below the surface in native sediments. Therefore, MM TCR-1 requires the Project Applicant to accommodate a Native American Monitor culturally affiliated with the site as recognized by the NAHC prior to the commencement of any ground-disturbing activity on the site. MM TCR-1 also defines the role of the Tribal Monitor, if such an individual elects to be present during construction of the Project, and the steps required if a potential tribal cultural resource is encountered during ground-disturbing activities. With implementation of MM TCR-1, there would be a less than significant impact.

Project with Building A Residential/Commercial

The analysis of potential impacts to tribal cultural resources for the Project with Building A Residential/Commercial would be essentially the same as that of the Project. Although this scenario would have slightly less excavation and therefore somewhat less likelihood of encountering an unknown tribal cultural resource, there is always the possibility that undiscovered intact cultural resources, including tribal cultural resources, may be present below the surface in native sediments. As such, the associated mitigation agreed upon with the Gabrieliño Band of Mission Indians – Kizh Nation would apply. With implementation of MM TCR-1, there would be a less than significant impact.

This page intentionally left blank

3.11 UTILITIES AND SERVICE SYSTEMS

This section addresses utilities and service systems that would be used with implementation of the Project or Project with Building A Residential/Commercial and analyzes potential impacts on the availability and capacity of the local providers for the following utilities and service systems (the service provider is noted parenthetically):

- Water facilities (Pasadena Water and Power);
- Wastewater facilities (Los Angeles County Sanitation Districts and City of Pasadena Department of Public Works);
- Dry utilities (Southern California Edison [electric], Southern California Gas Company [natural gas], and various telecommunications companies); and
- Solid waste disposal (Los Angeles County Sanitation Districts and Los Angeles County Public Works).

Information in this section is derived from the *Affinity Project Water Supply Assessment* (WSA), prepared for the Project by ESA and dated January 2022 (ESA 2022, Appendix I); the City of Pasadena's and the utilities' websites; the *City of Pasadena General Plan* and its Environmental Impact Report (EIR), and the Central District Specific Plan; the Notice of Preparation comment letter from the County Sanitation Districts of Los Angeles County regarding wastewater and provided in Appendix A-2; and other sources as cited herein. It is noted that the Project and Project with Building A Residential/Commercial do not qualify as a "project" under Senate Bill (SB) 610, which requires preparation of a WSA (Section 10912[a] of the Water Code). Nonetheless, based on comments received on the Notice of Preparation of this Draft EIR and given that all of California's 58 counties are under a drought emergency proclamation as of the preparation of this EIR (California 2021), a WSA was prepared for the Project and Project with Building A Residential/Commercial to inform the environmental analysis.

The Initial Study (provided in Appendix A-1) concluded that all thresholds related to hydrology and water quality, including storm drainage capacity, would result in no impacts or less than significant impacts and were not carried forward into the Draft EIR for further analysis.

3.11.1 EXISTING CONDITIONS

Existing utility infrastructure is located on site and in the surrounding roadways. Exhibits 2-17a and 2-17b, Conceptual Utility Plans, in Section 2.0, Environmental Setting and Project Description, of this EIR, show the locations of existing wet and dry utilities and the locations of proposed connections to utilities.

Water Supply

Infrastructure

Pasadena Water and Power (PWP) provides potable water to City residents and businesses. There are 2, existing, PWP 8-inch diameter domestic water lines in Arroyo Parkway, a 6-inch diameter domestic water line in Bellevue Drive, and a 12-inch diameter domestic water line in California Boulevard.

Water Supply Sources

The City's water supply is provided primarily through two sources: local groundwater from the Raymond Basin (RB) and imported water purchased from the Metropolitan Water District of

Southern California (MWD), which is a regional wholesaler in Southern California. MWD provides the City with water imported from the Colorado River Aqueduct (CRA) and the State Water Project (SWP). Table 3.11-1, Pasadena Water Supply Sources and Quantities (AFY), summarizes water supply sources and estimated volumes available now and over the next approximately 25 years (ESA 2022).

**TABLE 3.11-1
PASADENA WATER SUPPLY SOURCES AND QUANTITIES (AFY)**

Water Supply Source	2025	2030	2035	2040	2045 ^a
Imported Water	19,248	19,362	19,454	19,527	19,579
Groundwater	11,830	11,830	11,830	11,830	11,830
Totals	31,078	31,192	31,284	31,357	31,409
^a The 2045 imported water is projected based on a second order polynomial extrapolation (e.g., curve of best fit) from year 2025, 2030, 2035, and 2040 data in the PWP <i>Final 2020 Urban Water Management Plan</i> . The anticipated 2045 imported water projected in this table may differ from PWP's official projection in future updates to its 2020 UWMP. afy = acre-feet per year Source: ESA 2022 (via <i>Pasadena Water and Power Final 2020 Urban Water Management Plan</i>).					

Imported Water

The water supply for the City is imported from outside the region through the City's membership in MWD, which delivers both treated and untreated water to Southern California via two sources (i.e., SWP and CRA). Water from Northern California is imported by way of the SWP, and water from the Colorado River reaches the region through the CRA. MWD has five treatment plants, which supply most of Southern California with treated water through their regional distribution system. PWP receives treated water via five turnouts from MWD's Upper Feeder. Water served to PWP is treated at MWD's Weymouth Water Treatment Plant (WTP). During outages at the Weymouth WTP, PWP can receive treated water from MWD's Jensen WTP. Sufficient turnout capacity exists to meet existing and projected PWP demands. According to PWP's *2020 Urban Water Management Plan* (2020 UWMP), while connection capacity is sufficient, reliability of this supply is insufficient. As such, PWP would be unable to meet local demand solely from imported water supplies in the event of a service disruption from MWD. As shown in Table 3.11-2, PWP Imported Water Supplies (AFY), the City consistently obtains approximately 62 percent of its treated potable water from MWD (ESA 2022).

**TABLE 3.11-2
PWP IMPORTED WATER SUPPLIES (AFY)**

Water Supply Source	2025	2030	2035	2040	2045 ^a
Potable Water Imported from MWD	19,248	19,362	19,454	19,527	19,579
Total PWP Water Supplies	31,078	31,192	31,284	31,357	31,409
Percent of Total PWP Water Supplies	62%	62%	62%	62%	62%
^a The 2045 imported water is projected based on a second order polynomial extrapolation (e.g., curve of best fit) from year 2025, 2030, 2035, and 2040 data in the PWP <i>Final 2020 Urban Water Management Plan</i> . The anticipated 2045 imported water projected in this table may differ from PWP's official projection in future updates to its 2020 UWMP. afy = acre-feet per year Source: ESA 2022 (via <i>Pasadena Water and Power Final 2020 Urban Water Management Plan</i>).					

Local Groundwater

Groundwater production is obtained from the RB, which is an adjudicated basin. While PWP has groundwater pumping rights to extract groundwater based on the adjudication and decree, it is also credited with additional pumping rights for infiltrating surface water. PWP can use the RB for long-term supply storage as an emergency supply. PWP manages its pumping rights, spreading credits, and long-term storage in the RB to maintain a reliable source (ESA 2022).

Raymond Basin

Pasadena overlies the RB, which is an alluvial valley approximately 40 square miles in area underlain by deposits of gravel, sand, silt, and clay. The RB is in the northwest portion of the San Gabriel Valley and is bound by the San Gabriel Mountains to the north, the San Rafael Hills to the west, and the Raymond Fault to the south/southeast. RB is divided into three subareas: the Monk Hill subarea in the northwest, the Pasadena subarea in the central portion of the basin, and the Santa Anita subarea in the east. PWP has water rights in the Monk Hill and Pasadena subareas of the RB.

The base of the water-bearing strata of the RB is defined by bedrock material that is not considered to yield significant quantities of water. Overlying the bedrock are more than 1,200 feet of unconsolidated alluvial materials consisting of boulders, gravel, sand, silt, and clay. This alluvium is the principal water-bearing unit in the RB. Well yields in the alluvium range from a few hundred to several thousand gallons per minute (gpm). The alluvial aquifer system in the RB consists of many individual interconnected water-bearing zones.

Specific yield values in the RB are typical of alluvial sediments and range from approximately 5 percent to 18 percent. Groundwater generally flows southerly from areas of recharge at the base of the San Gabriel Mountains to areas of discharge along Raymond Fault at hydraulic gradients ranging from approximately 0.040 feet to 0.090 feet. The Raymond Fault acts as a leaky hydrologic barrier and defines the boundary between the RB and the main San Gabriel Valley Groundwater Basin to the south. Currently, RB groundwater levels are relatively higher in the northern half of the basin and lower in the southern half of the basin compared with historical trends. Current sources of groundwater recharge to the RB include:

- Natural infiltration and percolation of rainfall and surface water;
- Percolation of applied water from irrigation and other return flows;
- Subsurface inflow from adjacent groundwater basins, bedrock areas, and the San Gabriel Mountains;
- Artificial recharge through surface water infiltration; and
- Percolation of water from septic tanks (ESA 2022).

Raymond Basin Judgement

In December 1944, the RB was the first groundwater basin adjudicated in California. The adjudication known as the Raymond Basin Judgement (RB Judgement) was needed to resolve conflicts between the groundwater pumping entities. Under the adjudication, it was determined that 16 parties had the right to extract water. The court allocated groundwater pumping rights to each party, and this decision is based on RB Judgement of “safe yield”. The safe yield was originally determined to be 21,900 acre-feet per year (afy) but was modified in 1955 to 30,662 afy. These decreed rights were set in 1955 for recent wet weather conditions but were not reevaluated from time to time as then suggested. The authority to administer the RB Judgement, resolve future

disputes, and make binding judgments is vested in the RB Watermaster. The Watermaster is the Raymond Basin Management Board, which is the representatives of the parties (pumping entities) of the RB Judgement.

PWP's decreed groundwater pumping right was set at 12,807 afy; this is divided between the two underlying subareas: Monk Hill (4,464 afy) and Pasadena (8,343 afy). As suggested in the decree to reevaluate the RB groundwater conditions, the Raymond Basin Management Board implemented a resolution on July 1, 2009, that voluntarily reduced pumping from the Pasadena subarea to address declining water levels. As a result, PWP's water pumping from the RB was decreased by 2,503 afy, or from 12,807 afy to 10,304 afy (ESA 2022).

Surface Runoff Spreading Credits

PWP has pre-1914 rights to divert up to 25 cubic feet per second (cfs) of surface water from the Arroyo Seco and Millard Canyon streams and up to 8.9 cfs from the Eaton Wash. This surface water is currently used to recharge the RB. The RB Judgment allows each pumper to take the surface water directly to meet demand or use surface water to recharge the RB and then pump out a portion of the recharged volume in addition to their decreed groundwater pumping rights. PWP receives a pumping credit of 60 to 80 percent of the surface water recharged at the Arroyo Seco Spreading Grounds, and a credit of 80 percent of the surface water recharged at the Eaton Wash Spreading Grounds. From 2001 to 2020, groundwater pumping credits from the infiltration of surface water provided PWP an average of 1,675 afy. In dry years this was as low as 300 acre-feet (af) and in wet years up to 5,115 af (ESA 2022).

Groundwater Production

For the past five years (2015–2020), PWP's annual groundwater production has averaged approximately 11,000 afy, which includes decreed rights (10,304 afy) and annual surface water spreading credits. Currently PWP has 12 active wells and 6 wells are inactive due to contamination and other factors. Most of the operational wells are approaching 100 years, which reduces their capacity or reliability. Because of contamination issues, groundwater requires treatment or a sequence of blending with imported water to dilute contamination levels low enough to comply with State and federal drinking water requirements. Table 3.11-3, Groundwater Volume Pumped (AFY), provides the pumping history for all PWP wells that produced groundwater between 2016 and 2020 (i.e., the five years prior to the publication of PWP's 2020 UWMP) (ESA 2022).

**TABLE 3.11-3
GROUNDWATER VOLUME PUMPED (AFY)**

Groundwater	Location or Basin Name	2016	2017	2018	2019	2020
Alluvial Basin	Raymond Basin (Monk Hill and Pasadena subareas)	10,650	11,150	10,690	7,481	11,230
Totals		10,650	11,150	10,690	7,481	11,230
afy = acre-feet per year

Historic Water Demands for Existing Land Uses

Historically, the Project site has been used for commercial uses. Table 3.11-4, Historic Project Site Water Demand, presents the estimated historic water demand for the existing on-site land uses.

**TABLE 3.11-4
HISTORIC PROJECT SITE WATER DEMAND**

Land Use Category	Square Feet	Generation Unit	GPD	GPY	AFY
Existing Land Uses to Remain					
Whole Foods Grocery	73,671	150 gpd/1,000 sf	11,051	4,033,487	12.38
Existing Land Uses to be Removed					
Fitness ^a (501 S. Arroyo Pkwy)	2,880	300 gpd/1,000 sf	864	315,360	0.97
Event Rentals ^a (523 S. Arroyo Pkwy)	3,002	100 gpd/1,000 sf	300	109,573	0.34
Animal Hospital (491/495 S. Arroyo Pkwy)	12,676	100 gpd/1,000 sf	1,268	462,674	1.42
Event Rentals (523 S. Arroyo Pkwy)	21,437	100 gpd/1,000 sf	2,144	782,452	2.40
Restaurant (Fast Casual) (541 S. Arroyo Pkwy)	7,493	1,000 gpd/1,000 sf	7,493	2,734,945	8.39
Restaurant (Fast Casual) (577 S. Arroyo Pkwy)	4,306	1,000 gpd/1,000 sf	4,306	1,571,690	4.82
Subtotals	45,912	N/A	16,375	5,976,693	18.34
Totals			27,426	10,010,180	30.72
^a The businesses at 501 and 523 South Arroyo Parkway would change from retail to fast-casual restaurant with Project implementation. These two existing uses are included as land uses to be removed to capture the increased water demand of restaurants compared to retail. gpd: gallons per day; gpy: gallons per year; afy: acre-feet per year; N/A: not applicable Source: ESA 2022.					

Based on conservative water resources planning estimates for these existing uses, existing water demand at the Project site is estimated at 30.72 afy. Whole Foods would remain on the Project site and continue to generate water demands throughout construction and operation of the Project. Two existing buildings totaling approximately 5,882 square feet (sf) would also remain on the Project site; fast-casual restaurant uses are proposed to replace the existing retail uses and analyzed in these two buildings as part of the Project water demand analysis (ESA 2022).

Wastewater

Infrastructure

The City of Pasadena sewer system contains about 350 miles of pipelines. About 94 percent of these sewers are City-owned and 3 percent are owned by the Los Angeles County Sanitation Districts' (LACSD), 2 percent by the Los Angeles County Public Works (LACPW), and 1 percent are privately owned. Sewers range from 6-inch- to 42-inch-diameter pipes for LACSD trunk sewers; however, the majority are eight-inch-diameter pipes (Pasadena 2015).

As indicated above, the City operates and maintains most of the local sanitary sewer collection system. The City's sanitary collection system consists of approximately 328 miles of gravity pipelines, serving most parcels within the City limits and conveys an annual average flow of approximately 14 million gallons per day (mgd). The City's wastewater collection system conveys untreated wastewater to Los Angeles County Sanitation District's (LACSD) trunk sewer system

via 92 separate connections. The City's sewer system operates under Los Angeles Regional Water Quality Control Board (LARWQCB) Order 2006-003-DWQ and Order 2013-0058-EXEC. These LARWQCB orders require the City to take a proactive approach to ensure a Citywide operation, maintenance, and management plan is in place to reduce the number and frequency of Sanitary Sewer Overflows (SSO) within the City and related monitoring and reporting requirements (Pasadena 2019).

Within the area of the Project, there are two existing City of Pasadena 8-inch diameter sewer lines in Arroyo Parkway and one 8-inch diameter sewer line in California Boulevard a 6-inch diameter domestic water line in Bellevue Drive, and a 12-inch diameter domestic water line in California Boulevard. The northern sewer line in Arroyo Parkway turns west at and connects to the line in California Boulevard; the southern line turns east. Wastewater flow in the local sewer lines serving the site discharge to either or both the LACSD's Arroyo Seco Section 4 Trunk Sewer, located in the northern terminus of Garfield Avenue at Hardison Place, or Arroyo Seco Section 5 Trunk Sewer, also located in the northern terminus of Garfield Avenue at Hardison Place (LACSD 2021a; Appendix A-2).

Treatment

The Project site is within LACSD's District 16 and wastewater from the site is treated either at the Whittier Narrows Water Reclamation Plant (WRP) located near the City of South El Monte or at the Los Coyotes WRP located in the City of Cerritos. The Whittier Narrows WRP has a capacity of 15.0 mgd and currently processes an average flow of 9.9 mgd, and the Los Coyotes WRP has a capacity of 37.5 mgd and currently processes an average flow of 21.3 mgd (LACSD 2021a). As shown in Table 3.11-5, Existing Wastewater Generation, based on the LACSD's applicable wastewater generation rates, the existing uses on the Project site generate approximately 26,849 gpd of wastewater. Without including Whole Foods Market, the existing uses on the site generate approximately 15,798 gpd of wastewater.

**TABLE 3.11-5
EXISTING WASTEWATER GENERATION**

Existing Use	Building Size	Wastewater Generation Rate	Estimated Wastewater Generation (gpd)
Whole Foods Grocery	73,671 sf	150 gpd / 1,000 sf	11,051
K9 Loft	12,676 sf	100 gpd / 1,000 sf	1,268
Corporate Furniture Resource	21,437 sf	100 gpd / 1,000 sf	2,144
Gold Line Pilates	2,880 sf	100 gpd / 1,000 sf	288
Town & Country Event Rentals	3,002 sf	100 gpd / 1,000 sf	300
Little Lily's Kitchen	7,493 sf	1,000 gpd / 1,000 sf	7,493
Guisado's Restaurant	4,306 sf	1,000 gpd / 1,000 sf	4,306
Total Wastewater Generation with Whole Foods Market			26,849
Total Wastewater Generation without Whole Foods Market			15,798
sf: square feet; gpd: gallons per day			
Source of generation rates: LACSD 2021b.			

Dry Utilities

PWP provides electrical services and Southern California Gas (The Gas Company) provides natural gas services in the City of Pasadena. Telecommunications (i.e., telephone, television, and/or internet) services are provided by several companies, including, but not limited to,

Spectrum, AT&T, and EarthLink. There is a backbone of dry utility infrastructure throughout the City, including adjacent to the Project site.

Solid Waste

Landfills Serving the City

According to California Department of Resources Recycling and Recovery (CalRecycle) records, in 2019 (the most recent year data is available) the City of Pasadena disposed of approximately 291,584 tons of waste as follows: approximately 247,032 tons at in-State landfills, 10,043 tons was transformed to energy, and 34,509 tons was alternative daily cover (CalRecycle 2021a). While the City's post-diversion municipal waste was disposed at a total of 16 in-State landfills (in 2019), approximately 74 percent of the waste stream was disposed at Scholl Canyon Landfill in Glendale. The City's per resident disposal rate target is 10.9 pounds per day (PPD) and the per employee disposal rate target is 15.3 PPD; in 2019, the City achieved disposal rates of 9.2 PPD per capita and 13.4 PPD per employee (CalRecycle 2021b).

Based on a solid waste generation rate for retail land uses of 0.006 pounds per day per sf, published in the City's General Plan EIR and derived from CalRecycle, the 125,465 sf of existing uses on the Project site generate approximately 753 pounds (0.37 tons) of solid waste per day.

3.11.2 RELEVANT PROGRAMS AND REGULATIONS

Federal

Safe Drinking Water Act

The Safe Drinking Water Act (SDWA), *Health and Safety Code*, Sections 116350–116405) was passed in 1974 and is intended to protect public health by regulating the nation's public drinking water supply. The Federal SDWA authorizes the U.S. Environmental Protection Agency (USEPA) to set national standards for drinking water to protect against contaminants. Amendments in 1996 expanded the focus of the SDWA from primarily water treatment to enhanced source water protection, operator training, funding for water system improvements, and public information as important components of protecting drinking water supplies. The SDWA applies to every public water system in the United States and sets the enforceable maximum contaminant levels (MCLs) for drinking water supplies.

State

Safe Drinking Water Act

California enacted its own Safe Drinking Water Act, with the California Department of Health Services (DHS) granted primary enforcement responsibility. Title 22 of the *California Code of Regulations* (CCR) (Division 4, Chapter 15, "Domestic Water Quality and Monitoring Regulations") established DHS authority and provides drinking water quality and monitoring requirements, which are equal to or more stringent than federal standards.

Senate Bill 610

Senate Bill (SB) 610 amended State law¹ to improve the link between information on water supply availability and certain land use decisions made by cities and counties. Specifically, it requires land use planning entities (in this case, the City of Pasadena), when evaluating certain large development projects, to request a water supply availability assessment from the water supply entity that would provide water to the project. A water supply assessment (WSA) must be prepared in conjunction with the land use approval process associated with a project, and it must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project in question) over a 20-year horizon that includes normal, single-dry, and multiple dry-years. An SB 610 WSA is required for any “project” that is subject to CEQA and that proposes, among other things, residential development of more than 500 dwelling units.

Urban Water Management Planning Act

The Urban Water Management Planning Act (UWMP Act) (*California Water Code*, Division 6, Part 2.6, Section 10610 et seq.) was enacted in 1983. The UWMP Act applies to municipal water suppliers that serve more than 3,000 customers or provide more than 3,000 afy of water. The UWMP Act requires these suppliers to update their Urban Water Management Plan every five years to demonstrate an appropriate level of reliability in supplying anticipated short-term and long-term water demands during normal, dry, and multiple dry years.

Water Conservation in Landscaping Act

The Water Conservation in Landscaping Act of 2006 (Assembly Bill 1881) requires cities and counties, including charter cities and charter counties, to adopt landscape water conservation ordinances by January 1, 2010. The Department of Water Resources (DWR) prepared an updated Model Water Efficient Landscape Ordinance (MWELO), as contained in *California Code of Regulations* Title 23, Division 2, Chapter 2.7. Cities and counties have the option to adopt DWR’s ordinance or to develop their own. DWR’s ordinance identifies the landscape documentation that needs to be submitted to the local agency, including a completed Water Efficient Landscape Worksheet that estimates total water use and compares it to the Maximum Applied Water Allowance (MAWA) based on the annual reference evapotranspiration value for the project area. The MAWA is considered the water budget and should not be exceeded by the estimated water use. Standards for soil management, landscape design, irrigation design and efficiency, grading design, irrigation scheduling, maintenance, audit and survey of water use, recycled water, storm water management, public education, and wastewater prevention are provided to reduce irrigation water demand. The City of Pasadena has incorporated DWR’s MWELO into its Municipal Code (Section 17.44.050).

Senate Bill 7

Senate Bill 7 (SBX7-7) was approved in November 2009 and requires urban water retail suppliers in California, which includes the City of Pasadena, to reduce per capita water use by at least 10 percent on or before December 31, 2015 and achieve a 20 percent reduction by December 31, 2020. An urban retail water supplier must have included in its urban water management plan for the 2010 update, the baseline daily per capita water use, urban water use target, interim urban water use target, and compliance daily per capita water use, along with the bases for determining those estimates, including references to supporting data. Urban wholesale water suppliers shall

¹ SB 610 amended section 21151.9 of the *California Public Resources Code*, and amended sections 10631, 10656, 10910, 10911, 10912, and 10915 of, repealed section 10913 of, and added and amended section 10657 of, the *California Water Code*.

include an assessment of their present and proposed future measures, programs, and policies to help achieve the water use reductions required by this bill.

Urban retail water suppliers and agricultural water suppliers would not be eligible for State water grants or loans for surface water or groundwater storage, recycling, desalination, water conservation, water supply reliability, and water supply augmentation unless they comply with the water conservation requirements established by this bill.

Title 24 Green Building Standards

The 2019 California Green Building Standards Code (24 CCR, Part 11), also known as the CALGreen code, contains mandatory requirements for new residential and nonresidential buildings (including buildings for retail, office, public schools and hospitals) throughout California. The development of the CALGreen Code is intended to (1) cause a reduction in greenhouse gas (GHG) emissions from buildings; (2) promote environmentally responsible, cost effective, healthier places to live and work; (3) reduce energy and water consumption; and (4) respond to the directives by the Governor. The CALGreen Code contains requirements for construction site selection, storm water control during construction, construction waste reduction, indoor water use reduction, material selection, natural resource conservation, site irrigation conservation, and more. The code provides for design options allowing the designer to determine how best to achieve compliance for a given site or building condition. The code also requires building commissioning, which is a process for the verification that all building systems, such as heating and cooling equipment and lighting systems, are functioning at their maximum efficiency.

Section 5.408 of the current CALGreen code requires that at least 65 percent of the nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse.

California Plumbing Code

Part 5 of the California Building Code (Title 24 of the Code of Regulations) is the California Plumbing Code, which provides standards for the design and construction of water and sewer systems, storm drains, and recycled water systems in buildings. It prohibits connection to a septic tank in areas served by a public sewer system and requires the proper abandonment of septic tanks, cesspools, and seepage pits.

AB 939 and California Solid Waste Reuse and Recycling Access Act of 1989

In 1989, the California legislature passed a bill (Assembly Bill [AB] 939), which requires jurisdictions to reduce the amount of solid waste disposed of in landfills by 50 percent by the year 2000 and thereafter. The purpose of AB 939 is to “reduce, recycle, and reuse solid wastes generated in the State to the maximum extent feasible”. AB 939 also requires California counties to show 15 years of disposal capacity for all jurisdictions in the county or show a plan to transform or divert its waste.

Subsequent to AB 939, additional legislation was passed to assist local jurisdictions in accomplishing the required waste reduction goals. The California Solid Waste Reuse and Recycling Access Act of 1991 directs CalRecycle to draft a “model ordinance” relating to adequate areas for collecting and loading recyclable materials in development projects.

Solid Waste Disposal Measurement Act of 2008 (Senate Bill 1016)

The purpose of the Solid Waste Disposal Measurement Act of 2008 (SB 1016) is to make the process of goal measurement (as established by AB 939) simpler, timelier, and more accurate.

SB 1016 builds on AB 939 compliance requirements by implementing a simplified measure of jurisdictions' performance. SB 1016 accomplishes this by changing to a disposal-based indicator—the per capita disposal rate—which uses only two factors: (1) a jurisdiction's population (or in some cases employment) and (2) its disposal as reported by disposal facilities.

Each year CalRecycle will calculate each jurisdiction's per capita (per resident or per employee) disposal rates; the per capita disposal rate will be used for most jurisdictions. Each year's disposal rate will be compared that jurisdiction's 50 percent per capita disposal target. As such, jurisdictions will not be compared to other jurisdictions or the statewide average, but they will only be compared to their own 50 percent per capita disposal target. Among other benefits, per capita disposal is an indicator that allows for jurisdiction growth because as residents or employees increase, report-year disposal tons can increase and still be consistent with the 50 percent per capita disposal target. A comparison of the reported annual per capita disposal rate to the 50 percent per capita disposal target will be useful for indicating progress, or other changes, over time.

75 Percent Initiative

In 2011, Governor Brown signed AB 341, which sets a goal of 75 percent recycling, composting, or source reduction of solid wastes by 2020. It also mandated commercial recycling by 2012. The 75 percent goal will shift the focus from local diversion to a Statewide approach that would decrease reliance on landfills. CalRecycle has been holding workshops with stakeholders since May 2012 to identify existing programs and new ways to reduce the waste streams. A number of programs will be implemented under this initiative, including continued local jurisdiction diversion; commercial recycling; mattress recovery; greenhouse gas reduction grant and loan program; commercial organics recycling; potential packaging reduction activities; and other new programs that are under development.

Mandatory Commercial Organics Recycling Bill (AB 1826)

In 2014, Governor Brown signed AB 1826, requiring businesses to recycle their organic waste on and after April 1, 2016, depending on the amount of waste they generate per week. This law also requires that on and after January 1, 2016, local jurisdictions across the State implement an organic waste recycling program to divert organic waste generated by businesses, including multi-family residential dwellings that consist of five or more units. Organic waste means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste. The minimum threshold of organic waste generation by businesses decreases over time, which means an increasingly greater proportion of the commercial sector will be required to comply.

Short-Lived Climate Pollutant Reduction Strategy (AB 1383)

In September 2016, Governor Brown signed AB 1383, which set methane emissions reduction targets for California in a Statewide effort to reduce emissions of short-lived climate pollutants. The AB 1383 targets are to:

- Reduce organic waste disposal 50 percent by 2020 and 75 percent by 2025.
- Rescue for people to eat at least 20 percent of currently disposed surplus food by 2025.

While the ultimate goal of this bill is to reduce greenhouse gas emissions, it also serves to help reduce landfill disposal of a segment of municipal waste.

Regional

Sanitation Districts of Los Angeles County Wastewater Ordinance

In 1972, the LACSD adopted a Wastewater Ordinance, which was most recently amended in 1998, for the operation and financing of the LACSD's wastewater conveyance, treatment, and disposal facilities. The Wastewater Ordinance applies to all direct and indirect discharges of wastewater to any part of the sewerage system and regulates industrial wastewater discharges to protect the public sewerage system. The LACSD also charges Connection Fees and Surcharges. The Surcharge program requires all industrial companies discharging to the LACSD's sewerage system to pay their fair share of the wastewater treatment and disposal costs. The Connection Fee program requires all new users of the LACSD's sewerage system, as well as existing users that significantly increase the quantity or strength of their wastewater discharge, to pay their fair share of the costs for providing additional conveyance, treatment, and disposal facilities. The LACSD uses the fees for the expansion and improvement of their facilities, as needed, to serve existing and anticipated developments.

City

Urban Water Management Plan

The 2020 Urban Water Management Plan (UWMP) for the City of Pasadena was prepared to meet the mandates of the California Urban Water Management Planning Act. The 2020 UWMP identifies historic and projected water supplies available to the City of Pasadena; existing and projected water demand; available water rights; and programs to meet demand during an average year, single-dry year, and a five consecutive year drought. The UWMP is the foundational document for compliance with both the *California Water Code* and SB 610 and SB 221 documentation for applicable development projects in the City (PWP 2021a).

Water System and Resources Plan

The Water System and Resources Plan (WSRP) for the City of Pasadena, adopted by the City Council on October 4, 2021, is a 25-year strategy that integrates investments for sustainable water resources with the infrastructure necessary to ensure high quality water service continues to be provided now and in the future. This is the first time that PWP has combined a long-term resource plan and an infrastructure master plan, as these were previously two separate documents. The comprehensive WSRP document provides the programmatic view of the entire water operations from the source to the customers' tap. The WSRP is proposed to be revisited every five years with an internal review every two to three years. This type of periodic review is intended to ensure that the WSRP addresses evolving issues and local, regional, State or federal considerations.

The WSRP evaluates the current and projected needs of the customers for potable and non-potable water that provides risk-based screening of alternatives to meet future demands with necessary infrastructure within the reasonable operational and financial constraints. Major considerations include water quality, greater dependency on local water, groundwater basin stability, reliability of the distribution system, affordability, climate change uncertainties, and legislative and regulatory requirements (PWP 2021b).

Municipal Code

Chapter 13.10, Water Waste Prohibitions and Water Supply Shortage Plans, of the Pasadena Municipal Code (PMC) establishes 13 permanent water conservation requirements. Section 17.44.050 et. seq. of the PMC establishes the City's Model Water Efficient Landscape Ordinance (MWELo), consistent with State requirements.

Chapter 13.24 of the PMC includes sewer construction and maintenance standards and requirements. Chapter 4.52 of the PMC establishes sewer use rates; and Chapter 4.53 of the PMC ensures that new development pays its estimated cost for any capacity upgrades to the City sewer system through the payment of the sewer facility charge.

Chapters 8.60 of the PMC discusses City collection services, collection frequency and time, service fees, waste reduction, waste container, and bulky item pick up. Chapter 8.61 of the PMC addresses collecting, transporting, disposing, and/or recycling of solid waste to maintain the health, safety, public welfare, and quality of life in the City. It also addresses the franchisee recycling diversion rates for solid waste, and construction and demolition debris. Chapter 8.62 of the PMC requires all covered projects to divert a minimum of 75 percent of construction and demolition debris pursuant to State and local statutory goals and policies. Additionally, specific waste management plans and final compliance reports are also required. The Project and Project with Building A Residential/Commercial would be a covered project.

3.11.3 THRESHOLDS OF SIGNIFICANCE

The following significance criteria are derived from Appendix G of the State CEQA Guidelines. A project would result in a significant adverse impact related to utilities and service systems if it would:

- Threshold 3.11a:** Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities the construction or relocation of which could cause significant environmental effects;²
- Threshold 3.11b:** [Not] have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years;
- Threshold 3.11c:** Result in a determination by the wastewater treatment provider which serves or may serve the Project that it does not have adequate capacity to serve the project's projected demand in addition to the provider's existing commitments;
- Threshold 3.11d:** Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; and/or
- Threshold 3.11e:** [Not] comply with federal, State, and local management and reduction statutes and regulations related to solid waste.

² The Initial Study (provided in Appendix A-1) concluded that all thresholds related to hydrology and water quality, including storm drainage capacity, would result in no impacts or less than significant impacts and were not carried forward into the Draft EIR.

3.11.4 METHODOLOGY

The wet and dry utility service providers were consulted for information regarding current infrastructure and/or capacity and to determine if the proposed Project or Project with Building A Residential/Commercial would significantly impact the respective providers' capacity such that relocation or construction of new or expanded wet or dry utilities would be required, whose construction could result in an environmental impact. Other information presented in this section was derived from CalRecycle's website, City's website, the adopted General Plan and related EIR, the NOP comment letter from the LACSD, and LACPW's *Countywide Integrated Waste Management Plan 2019 Annual Report*.

3.11.5 ENVIRONMENTAL IMPACTS

Threshold 3.11a: Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities the construction or relocation of which could cause significant environmental effects?

Threshold 3.11c: Would the Project result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Project

As shown on Exhibit 2-17a and 2-17b, Conceptual Utility Plans, in Section 2.0, Environmental Setting and Project Description, all connections to water and wastewater utilities and all dry utilities would occur on the east side of the proposed buildings, either within the adjacent sidewalk or in South Arroyo Parkway.

Water Infrastructure

As discussed above, PWP provides potable water to City residents and businesses. The Project would include installation of new potable and fire water connections to the existing PWP water lines. As discussed in Section 2.0, Environmental Setting and Project Description, all connections to wet and dry utilities would occur to the east on South Arroyo Parkway. Refer to Exhibits 2-17a and 2-17b, Conceptual Utility Plans, in Section 2.0 to see the locations of existing wet and dry utilities and the locations of proposed connections to utilities. There would be a less than significant impact related to the need for new, expanded, or relocated water infrastructure, and no mitigation is required.

The proposed water infrastructure would be constructed within the Project site as defined in Section 2.0 and the potential for construction-related impacts are analyzed throughout this Draft EIR, including short-term air quality (Section 3.1) and noise (Section 3.7).

Wastewater Conveyance and Treatment

As shown on Exhibit 2-17a and 2-17b, Conceptual Utility Plans, the Project would tie into the existing 8-inch diameter City of Pasadena sewer line within the eastern portion of Arroyo Parkway and would flow east at the connection with the 8-inch-diameter line in California Boulevard. Sewer line capacity is part of the City's standard plan check/project approval process. No relocation or construction of new or expanded City-owned sewer lines has been determined necessary with Project implementation.

Wastewater flow in the City's local sewer lines serving the site discharge to either or both the LACSD's Arroyo Seco Section 4 Trunk Sewer or Arroyo Seco Section 5 Trunk Sewer. The LACSD's 21-inch-diameter Arroyo Seco Section 4 Trunk Sewer has a capacity of 69.0 mgd and conveyed a peak flow of 2.1 mgd when last measured in 2015. The 16-inch-diameter Arroyo Seco Section 5 Trunk Sewer has a capacity of 4.3 mgd and conveyed a peak flow of 0.4 mgd when last measured in 2015. As discussed above, LACSD indicates that wastewater from the Project would be conveyed and treated at either the Whittier Narrows WRP, which has a remaining capacity of 5.1 mgd, or the Los Coyotes WRP, which has a remaining capacity of 16.2 mgd (LACSD 2021a).

The LACSD estimates a total of 92,642 gpd of wastewater generation from both the Project and Project with Building A Residential/Commercial (LACSD 2021a). The LACSD estimate does not include Whole Foods Market. As shown in Table 3.11-5 above, based on the LACSD's applicable wastewater generation rates, all existing uses on the Project site (including those to be retained and those to be replaced but not including Whole Foods Market) generate approximately 15,798 gpd of wastewater. Therefore, the Project would result in a net wastewater generation of approximately 76,844 gpd (0.076 mgd) from all uses on the site except Whole Foods Market. Wastewater flows of approximately 0.076 mgd represent 0.1 percent of the Arroyo Seco Section 4 Trunk Sewer, 1.8 percent of the Arroyo Seco Section 5 Trunk Sewer, 1.5 percent of the Whittier Narrows WRP, and 0.5 percent of the Los Coyotes WRP remaining capacity. Therefore, there would be no relocation or construction of new or expanded LACSD-owned sewer lines or wastewater treatment facilities with Project implementation. There would be a less than significant impact, and no mitigation is required.

Dry Utilities (Electrical, Natural Gas, and Telecommunications)

As shown on Exhibits 2-17a and 2-17b, in Section 2.0 of this EIR, the Project would tie into existing underground electric and telecommunications lines located in the sidewalk on the west side of Arroyo Parkway (adjacent to the site) and the existing natural gas line located along the east side of Arroyo Parkway. There are four existing natural gas meters within the eastern portion of the site; the Project proposes to tie in and reuse these gas meters and associated laterals crossing under Arroyo Parkway.

Electric and natural gas services are regulated by the California Public Utilities Commission (CPUC), which requires that these utilities provide services as required by the public. Telecommunications services are provided on demand in a free market system. The need for new, expanded, and/or relocated dry utilities would be determined as part of future individual projects and dependent on the conditions at each project site. There would be less than significant impacts related to the relocation or construction of dry utility infrastructure to serve the Project, and no mitigation is required.

Project with Building A Residential/Commercial

Water Infrastructure

The analysis of wet and dry utilities service for the Project with Building A Residential/Commercial would be the essentially the same as the Project. As with the Project, all connections to water and wastewater utilities and all dry utilities would occur on the east side of the proposed buildings, either within the adjacent sidewalk or in South Arroyo Parkway. The proposed water infrastructure would be constructed within the Project site as defined in Section 2.0, and the potential for construction-related impacts are analyzed throughout this Draft EIR, including short-term air quality (Section 3.1) and noise (Section 3.7). There would be a less than significant impact related to the need for new, expanded, or relocated water infrastructure, and no mitigation is required.

Wastewater Conveyance and Treatment

There would be similar wastewater generation for the Project with Building A Residential/Commercial. Therefore, as discussed for the Project, no relocation or construction of new or expanded City-owned sewer lines has been determined necessary.

As discussed above, the LACSD estimated the same wastewater generation for the Project and Project with Building A Residential/Commercial (LACSD 2021a). With consideration of the estimated wastewater generation from the existing land uses, there would be a net wastewater generation of approximately 76,844 gpd (0.076 mgd) from all uses on the site except Whole Foods Market. This represents a nominal percentage of the LACSD's trunk sewer or WRP's that serve the site. Therefore, there would be no relocation or construction of new or expanded LACSD-owned sewer lines or wastewater treatment facilities with implementation of the Project with Building A Residential/Commercial. There would be a less than significant impact, and no mitigation is required.

Dry Utilities (Electrical, Natural Gas, and Telecommunications)

As with the Project, the Project with Building A Residential/Commercial would tie into existing electric infrastructure bordering the site. As such, there would be less than significant impacts related to the relocation or construction of dry utility infrastructure, and no mitigation would be required.

Threshold 3.11b: Would the Project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Project

2020 Water Demand

PWP provides potable and non-potable water for a mix of urban uses that includes residential, commercial, and governmental uses. There are no agricultural water services in the PWP's service area; however, a portion of water delivered is provided exclusively for landscape irrigation purposes. The gross water use entering PWP's distribution system is the total volume of water produced by PWP from local groundwater, plus the water imported from MWD, plus the groundwater purchased from local water agencies, minus the water delivered to other suppliers.

The total PWP water demands are based on water use sectors by starting with 2020 records of water sales by customer class, then using projected growth numbers for housing units and employment. The water demands incorporate passive conservation (code-based and price-effect savings) and active conservation (for installed active devices through 2020). Losses are assumed to be equal to the five-year average of losses from 2015 to 2019, which is approximately 6 percent to 9 percent of potable direct use demand. It is assumed that existing codes and ordinances related to water conservation would remain in place. Table 3.11-6, PWP's 2020 Water Demands, on the following page summarizes the calendar year 2020 water deliveries (ESA 2022).

**TABLE 3.11-6
PWP'S 2020 WATER DEMANDS**

Water Use Category	Total Volume (af)
Single-family residential	13,593
Multi-family residential	5,190
Commercial	6,530
Institutional/Governmental	1,311
Other Potable	80
Losses	2,586
Total Direct Use Demand	29,290
af: acre-feet Source: ESA 2022 (via <i>Pasadena Water and Power Final 2020 Urban Water Management Plan</i>).	

Historic Water Demands for Existing Land Uses

As shown in Table 3.11-4 above, existing water demand for all uses at the Project site is estimated at 30.72 afy. Whole Foods Market, which has an estimated annual water demand of 12.38 afy, would remain on the Project site and continue to generate water demands throughout construction and operation of the Project. Two existing buildings totaling approximately 5,882 square feet (sf) would also remain on the Project site; fast-casual restaurant uses are proposed to replace the existing retail uses and are analyzed in these two buildings as part of the Project water demand analysis (ESA 2022). The estimated water demand for all land uses to be removed or replaced (i.e., retail businesses at 501 and 523 South Arroyo Parkway) is 18.34 afy. As a conservative assumption, landscape water is not included in the historical water demands, which results in a slight overestimation of the Project's net increase in water demand relative to existing conditions (ESA 2022).

Projected Water Demand

Projected water use can be determined by examining past and current water use trends, along with consideration of land use planning data, climate change, and other factors relevant to sector-specific water use.

The City consists of a mix of land uses, including residential, commercial, industrial, institutional, and open space, with residential and commercial being the dominating uses. The City is largely built-out, and there are few vacant sites available for new developments. As such, growth is expected to be due primarily to increases in housing density and land use intensity.

Past water use, as it relates to PWP's service area, is detailed in its 2020 UWMP. MWD as the regional wholesale water supplier, prepares water resources reports, studies, and plans necessary to manage its regional water supplies based on current and future supply and demand scenarios. As part of its 2020 UWMP, MWD provided PWP and other member agencies with population and supply and demand calculations. Potable water demand for 2025, 2030, 2035, and 2040 are estimated by using the total retail demand projections provided by MWD as part of the regional planning process. Potable water demand for 2045 is sourced from the WSRP (Pasadena 2021b). Table 3.11-7, PWP Projected Water Demand (AF), presents the projected demand by water use classes. As shown, total demand is generally expected to increase, primarily due to the expected increase in housing units (ESA 2022).

**TABLE 3.11-7
PWP PROJECTED WATER DEMAND (AF)**

Water Use Category	2025	2030	2035	2040	2045

Project Water Demand

Construction

Project construction activities are anticipated to commence in 2023 and be completed in 2026. Over this period, water would be used for dust control purposes during demolition, excavation, grading activities, equipment cleaning, vehicle wash downs, washout basins, and re-compaction of backfill materials, concrete pouring, and other construction-related uses. Based on construction projects of similar size and duration, a conservative estimate of construction water use is up to 50 gallons per day per 1,000 square feet (50 gpd/1,000 sf). Construction activities for the Project would occur on a site area of approximately 90,400 sf. Based on water use of 50 gpd/1000 sf of construction activities at the Project site, water use during construction is assumed to be 4,520 gpd. Water use during the 34-month (approximately 1,020 days) construction period would be up to approximately 4.61 million gallons (MG) or 14.1 af. Calculated annually, this would be approximately 1.63 MG/year or 4.99 afy for approximately 3 years of construction (ESA 2022).

Operation

Once fully operational, the expected water use of the Project is determined by analyzing demand based on planned uses. To determine the water demand factors of the Project, water use demand factors were formulated based on data from PWP's 2020 UWMP as well as current and historical uses at similar facilities and information from similar mixed-use projects. The Project water demand includes all indoor uses and landscape irrigation in all water year types. Table 3.11-8, Project Water Demand, presents the estimated annual water demand for the Project. The calculated demand of 93.91 afy (approximately 94 afy) represents the worst-case scenario (conservative estimate) of the potential demand for the Project. When considering the existing land uses on the site that generate an annual water demand of 30.72 afy, the net water demand for the Project would be 75.57 afy (approximately 76 afy) (ESA 2022).

In all water year types, including single-dry and multiple-dry years, it is anticipated that the worst case (conservative estimate) Project demand of approximately 76 afy would remain unchanged, unless consumers within the City's service area are specifically asked to reduce water use through active conservation measures described in PWP's 2020 UWMP (ESA 2022).

Water Supply Sufficiency

MWD's Water Supply Sufficiency

MWD strives for a “diverse water portfolio” that allows it to meet demand even in years when its primary supplies would be inadequate. In fact, MWD has developed a water supply portfolio capable of meeting all demands in any given year. As documented in its 2020 UWMP, MWD plans for drought conditions and potential water shortages, and therefore has taken measures to have water in storage within its existing water supply systems and facilities to use during years when SWP and CRA supplies are curtailed. Using surplus water from normal and wet years, MWD's large storage portfolio contains both dry-year storage and emergency storage that can be used to meet demand in case of shortages.

As documented in its 2020 Integrated Resource Plan (IRP), scenario planning components are being used to predict a broader range of possible water supply and demand future scenarios. MWD's UWMP, its Water Shortage Contingency Planning (WSCP) and Drought Risk Assessments (DRA) use a similar approach to assess reliability of water supplies and sufficiency to meet demand. Operational studies used in the WSA demonstrate that MWD has sufficient water supply to meet the anticipated future demand for every hydrologic year on record. Therefore, MWD does not anticipate any reductions in water supply availability, even if SWP and/or CRA supplies are curtailed due to drought and/or water quality concerns over the study period. In years of above-average rainfall, MWD can store more water throughout its storage system, effectively building up more supplies for single-dry or multiple-dry years (ESA 2022).

MWD's and PWP's UWMPs address climate change and its impact on supplies as required by DWR in their UWMP Guidelines. More recent actions, such as DWR's initial SWP allocation of 0 percent for 2022 in December 2021 with planned reassessment in early 2022 (DWR 2021a), while not specifically mentioned in MWD's UWMP, should not be a cause for alarm as their single dry year projections for supply addressed near zero supply and there is adequate supply in storage to cover the small difference. Additionally, the DWR's initial SWP allocation is typically set low (conservative) and the Spring allocation is typically adjusted upwards, based on rainfall and snowpack figures. While the heavy December rainfall and the December 30, 2021, Sierra snowpack value of 202 percent of average for this time of year (DWR 2021b) do not guarantee an end to the current drought, it is positive news and could enable DWR to increase the SWP allocation in April.

CRA supplies are in the news recently and will be declining to all western states based on low reservoir levels on that system due to drought conditions. However, these reductions were also included in MWD's scenario planning in their IRP, UWMP, WSCP, and DRA. Additionally, starting with 2022, DWR now requires each agency that prepares an UWMP (including MWD and PWP) to prepare an Annual Water Shortage Assessment to address current water supply and demand conditions and file a report with DWR beginning July 1, 2022, and by July 1st of each successive year. If a supply shortage is predicted, the agency is required to show what demand reduction measures will be undertaken to eliminate any shortfall as required by Section 10632.1 of the Water Code. This annual assessment and associated reporting are to be conducted based on the supplier's procedures detailed in their WSCP. PWP will coordinate with their regional suppliers, MWD and the Watermaster to prepare this annual assessment.

PWP's Water Supply Sufficiency

Table 3.11-9, PWP Normal-Year Potable Water Supply and Demand Comparison (AFY), summarizes the City's projected supply and demand over an approximate 25-year planning horizon out to 2045 under normal water year conditions. As shown in Table 3.11-9, PWP can satisfy all customer demands.

**TABLE 3.11-9
PWP NORMAL-YEAR POTABLE WATER SUPPLY AND DEMAND
COMPARISON (AFY)**

Water Supply Source	2025	2030	2035	2040	2045
Supply Totals	31,087	31,192	31,284	31,537	31,409 ^a
Demand Totals	26,750	25,000	25,320	25,630	25,950 ^b
Difference	4,328	6,192	5,964	5,907	5,459
^a The 2045 supply total is projected based on a second order polynomial extrapolation (e.g., curve of best fit) from year 2025, 2030, 2035, and 2040 data in the PWP Final 2020 Urban Water Management Plan. The anticipated 2045 imported water projected in this table may differ from PWP's official projection in future updates to its 2020 UWMP. ^b PWP 2020 Water System and Resource Plan (Appendix A, p. A-6) afy: acre-feet per year Source: ESA 2022 (via Pasadena Water and Power Final 2020 Urban Water Management Plan and Water System and Resources Plan).					

The future water demand for the City and the entire region has been estimated by MWD using its new Econometric Demand Model, which uses forecast data from SCAG for variables including population, housing units, and employment. Although the City is using lower demand projections, which consider the reductions to meet 20x2020 targets, these MWD projections provide the basis for dry-year reliability planning.

PWP's 2020 UWMP projects that neither PWP nor its customers would experience supply deficits in normal or non-drought years through the year 2040. As a result, PWP does not expect critical shortages during the 20-year planning period. When taking dry and multiple dry years into account, PWP's water supply and demand forecasting model projected that beginning in 2020 and extending to 2040, PWP can meet its service area water demand approximately 91 percent of the time without implementing conservation measures. While in the remaining 9 percent of this period, the projected water supply shortage could range from approximately 1,000 to 1,500 afy. Additionally, based on extrapolated data from PWP's 2020 UWMP, critical shortages would not be expected through 2045. Chapter 8, Water Shortage Contingency Plan, of the PWP 2020 UWMP, explains how PWP intends to act in the case of an actual water shortage condition. The WSCP anticipates a water supply shortage and provides pre-planned guidance for managing and mitigating a shortage. Prior to invoking the WSCP, PWP can implement voluntary or mandatory demand management measures (DMMs), as described in detail in Chapter 9 of its 2020 UWMP. Through planned implementation of DMMs, PWP forecasts that no critical shortages will take place during the 20-year planning period. PWP has continuously implemented a water conservation program since 1991. Voluntary and mandatory DMMs can reduce demand by 10 percent up to as much as 25 percent in some years.

PWP may also implement water conservation measures pursuant to Chapter 13.10 of the PMC when the City Council determines, in its sole discretion, that due to drought or other water supply conditions a water supply shortage or threatened shortage exists and demand reduction is necessary to make more efficient use of water and appropriately respond to existing water conditions. On August 16, 2021, the Pasadena City Council unanimously approved a proposal to implement the Level 2 Water Supply Shortage Plan and to establish a voluntary water reduction target of 15 percent, which aligns with the state's reduction goal. Per Section 13.10.045 of the PMC, during a declared Level 2 water supply shortage, the following water conservation requirements apply:

1. Limits on Watering Days: Watering or irrigating of lawn, landscape or other vegetated area with water is limited to 2 days per week from April 1 through October 31, and no more than 1 day per week from November 1 through March 31, on a schedule established and posted by the department. This subsection does not apply to categories of use determined to be exempt under Section 13.10.037 of this chapter.
2. Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks or other malfunctions in the water user's plumbing or distribution system shall be repaired within 48 hours of notification by the department unless other arrangements are made with the department.
3. Limits on Filling Ornamental Lakes or Ponds: Filling or re-filling ornamental lakes or ponds is prohibited, except to the extent needed to sustain aquatic life, or for lakes and ponds that may be used for wildfire suppression.

The water conservation target and Level 2 Water Shortage Plan became effective immediately upon approval by the City Council and is in effect until such time as the City Council determines that a water supply shortage no longer exists or that another water supply shortage plan is necessary. The PMC also establishes water conservation measures for Level 3 and 4 water supply shortages where determined to exist by the City Council.

Table 3.11-10, PWP Single-Dry-Year Potable Water Supply and Demand Comparison (AFY), on the following page, and Table 3.11-11, PWP Multiple-Dry-Year Potable Water Supply and Demand Comparison (AFY), on page 3-22 provide a comparison of supply to demand during single-dry- and multiple-dry-year periods, respectively. As shown in these tables, water demand in the City would increase over the 25-year planning period. Water supplies provided by MWD

and supplemented by groundwater supplies are sufficient to meet demand. PWP can meet existing demand, in addition to new demand created by the Project, and no shortfall would occur (ESA 2022).

Multiple-Dry Years

As shown in Table 3.11-11, the City's water supply during a dry period could exceed the supplies used during a normal year given the ability to purchase additional imported supplies from its wholesaler, MWD. Furthermore, MWD projects sufficient supplies and storage to meet demands in future single- and multiple-dry-year scenarios. MWD's contingency plan for responding to water shortages is the Water Supply Allocation Plan (WSAP). The WSAP is based on a guiding principle for allocating shortages across MWD's service area. The WSAP formula uses different adjustments and credits to balance impacts of water shortage at the retail level, where local supplies can vary dramatically, and provide equity on the wholesale level among member agencies. It also considers the following: growth in demand, local investments, change in local supply conditions, the reduction in potable water demand from recycled water, and the implementation of water conservation programs.

As shown in Table 3.11-12, Five-Year Drought Risk Assessment, on page 3-11-22, PWP has chosen to use the same dry-year hydrologic scenarios as MWD. This allows PWP to use information about imported water supply reliability derived from modeling completed through the 2015 IRP Update process. Due to MWD's investments in continued reliability and sustainability programs that consider climate change issues, the projections shown in Table 3.11-12 do not vary. Therefore, the City's supply is determined to be reliable in normal-, single-dry-, and multiple-dry-year scenarios, with additional supplies purchased from MWD to meet demands in dry years as needed (ESA 2022).

Even though Tables 3.11-10 and 3.11-11 show available MWD supply is sufficient to meet PWP's demands, based on MWD's IRP model simulations for the future under different hydrology conditions, it is possible that some extreme dry years could result in MWD shortage allocations. MWD's model does show some potential years in which shortage allocations would be applied, reducing supply to PWP. For the years in which MWD supply could be reduced, the WSCP is in place. Table 3.11-12 provides the data for a five-year drought risk assessment both with and without the WSCP in place.

The WSA concludes that the City has sufficient water supplies under all hydrologic conditions, through agreements with and provided by MWD and use of its existing groundwater pumping rights from the RB. Because of MWD's long-term success of delivery of water to all customers and commitment to continue to serve treated water to all retailers, when SWP and CRA curtailments occur, MWD has supply flexibility through its vast network of water supply facilities and long-term water management programs to continue to meet all demands. In addition, PWP could pump additional local groundwater during drought, emergency, or other surface supply reductions to meet demands in the future. Furthermore, consumers and retailers could effectively reduce demands by 10 or 25 percent to relieve demand pressure on local and regional supplies. It is reasonable to assume, based on the consumer demand reductions that PWP customers would continue to curb per-capita use and when necessary, based on water supply allocations, customers could reduce per capita demands by up to 25 percent (ESA 2022).

Project Water Supply Sufficiency

As discussed above, in normal years the Project would conservatively generate an estimated 76 afy of new water demand, or about 0.24 percent of the City's anticipated total system supply of 31,078 afy in 2025, 0.24 percent of the supply of 31,537 afy in 2040, and 0.24 percent of the supply of 31,409 afy in 2045 (ESA 2022).

As stated previously, the 2020 UWMP aligns with Pasadena's population and land use and is consistent with SCAG population and employment projections; and thereby includes potential water demands that would be generated by land use changes and new commercial and residential developments like the Project. Additionally, PWP staff reviewed the WSA for the Project and concluded that the WSA meets the requirements of SB 610 and SB 221 and concurs that PWP would have sufficient water supplies to meet existing demands combined with the Project's estimated demands of 76 afy and cumulative demands anticipated in the 2020 UWMP (PWP 2022). Therefore, there would be sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. There would be a less than significant impact related to water supplies, and no mitigation is required.

Project with Building A Residential/Commercial

Table 3.11-13, Project with Building A Residential/Commercial Water Demand, on the following page presents the estimated annual water demand for the Project with Building A Residential/Commercial. The Project with Building A Residential/Commercial water demand includes all indoor uses and landscape irrigation in all water year types. The calculated demand of 86.20 (approximately 86 afy) represents the worst-case scenario (conservative estimate) of the potential demand for the Project with Building A Residential/Commercial. When considering the existing land uses on the site and which generate an annual water demand of 30.72 afy, the net water demand for the Project with Building A Residential/Commercial would be 67.86 afy (approximately 68 afy) (ESA 2022).

**TABLE 3.11-13
PROJECT WITH BUILDING A WITH RESIDENTIAL/COMMERCIAL
WATER DEMAND**

Proposed Land Use	Amount	Units	Generation Rate	GPD	AFY
Project with Building A Residential/Commercial Land Uses

Totals				88,009	98.58
Net Water Demand (Less 30.72 AFY for Existing Uses)					67.86
^a For conservative water resources planning purposes residential living units were assumed to be 2 bedroom units with associated water demand of 195 gpd/du. ^b Landscaping water demand is based on estimated annual average daily water demand. ^c Existing structure and land use to be retained and continue operation in the existing condition du: dwelling units; sf: square feet; gpd: gallons per day; gpy: gallons per year; afy: acre-feet per year; N/A: not applicable Source: ESA 2022.					

An annual water demand of 68 afy represents 0.22 percent of the City's anticipated total system supply of 31,078 afy in 2025, 0.22 percent of the supply of 31,537 afy in 2040, and 0.22 percent of the supply of 31,409 afy in 2045. The water demand for this scenario is approximately 8 afy lower than for the Project. Additionally, PWP staff reviewed the WSA for the Project and concluded that the WSA meets the requirements of SB 610 and SB 221 and concurs that PWP would have sufficient water supplies to meet existing demands combined with the Project with Building A Residential/Commercial's estimated demands of 68 afy and cumulative demands anticipated in the 2020 UWMP (PWP 2022). Therefore, as with the Project, there would be sufficient water supplies available to serve the Project with Building A Residential/Commercial and reasonably foreseeable future development during normal, dry, and multiple dry years. There would be a less than significant impact related to water supplies, and no mitigation is required.

Threshold 3.11d: Would the Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Project

Demolition required to construct the Project is estimated to generate approximate 4,200 cy of debris. In addition, there would be a limited volume of general construction debris during subsequent construction phases, such as packaging, excess construction materials, and food

wrappers. For purposes of this analysis, a conservative estimate of 4,500 cy of construction waste is anticipated. As discussed above, the City's C&D ordinance requires diversion of at least 75 percent of the construction waste stream from landfill disposal. Therefore, an estimated 1,125 cy of waste would be disposed in a landfill. For purposes of this analysis, it is assumed that all construction-phase waste would be disposed at Scholl Canyon Landfill, as it received the majority of the City's total waste stream in 2019 (the most recent publicly available data) and is the closest facility that accepts City waste. As of the end of 2019, the Scholl Canyon Landfill has a maximum daily capacity of 3,400 tons and a remaining permitted capacity of approximately 6.5 million cubic yards (3.8 million tons) (LACPW 2020). The one-time disposal of approximately 1,125 cy would represent approximately 0.07 percent of Scholl Canyon Landfill's remaining permitted capacity.

With implementation of the Project, based on the 2019 disposal rate of 9.2 PPD per capita (CalRecycle 2021b), up to 109 residents in the independent living units and up to 113 persons cared for in the assisted living facilities³ would generate approximately 2,042 PPD of solid waste, or approximately 373 tons per year.⁴ Based on the 2019 disposal rate of 13.4 PPD per employee, the estimated 737 employees would generate approximately 9,876 PPD of solid waste, or approximately 1,802 tons per year.⁵ As such, the Project would generate a total of approximately 2,175 tons per year (approximately 5.96 tons per day) of solid waste requiring disposal after diversion.

Solid waste would be collected by a private hauler and may be transported to any landfill in the State with capacity that can accept the municipal waste. The primary location that accepts City waste is Scholl Canyon Landfill, with approximately 74 percent of all waste generated after diversion going to this facility. Based on Scholl Canyon Landfill's remaining permitted capacity of approximately 6.5 million cubic yards (3.8 million tons) (LACPW 2020), the Project's annual solid waste disposal of 2,175 tons would represent approximately 0.06 percent of Scholl Canyon Landfill's remaining permitted capacity. However, as in the existing conditions, waste from the City of Pasadena may be disposed of after diversion at any facility that accepts waste from the City, both within and outside the County of Los Angeles as well as out of State. For instance, in 2019, City-generated waste was disposed at a total of 16 different facilities (CalRecycle 2021a).

Because there is adequate remaining capacity to accommodate the estimated construction and annual operational solid waste to be generated by the Project, there would be a less than significant impact related to landfill capacity. Further, the Project is in a developed urban area and within the City's existing refuse collection area. As such, the Project would not result in the need for new or substantially altered systems of solid waste collection and disposal. There would be a less than significant, and no mitigation is required. Attainment of solid waste reduction goals is addressed in Threshold 3.11e below.

Project with Building A Residential/Commercial

As discussed for the Project, demolition and construction of the Project with Building A Residential/Commercial is estimated to generate approximate 4,500 cy of debris. After diversion of at least 75 percent of the construction waste stream consistent with the City's C&D ordinance, an estimated 1,125 cy of waste would be disposed in a landfill. As discussed for the Project, this waste is assumed to be disposed in Scholl Canyon Landfill and this finite amount of waste would represent approximately 0.07 percent of Scholl Canyon Landfill's remaining permitted capacity (LACPW 2020).

³ The per capita resident generation rate is applied to these persons as a conservative analysis

⁴ $(2,042 \text{ PPD} \times 365 \text{ days}) / 2,000 \text{ pounds per ton} = 373 \text{ tons per year}$

⁵ $(9,876 \text{ PPD} \times 365 \text{ days}) / 2,000 \text{ pounds per ton} = 1,802 \text{ tons per year}$

With implementation of the Project with Building A Residential/Commercial, based on the 2019 disposal rate of 9.2 PPD per capita (CalRecycle 2021b), up to 493 residents in Building A, up to 109 residents in the independent living units, and 113 persons cared for in the assisted living facilities in Building B would generate approximately 6,578 PPD of solid waste, or approximately 1,201 tons per year.⁶ Based on the 2019 disposal rate of 13.4 PPD per employee, the estimated 95 employees would generate approximately 1,273 PPD of solid waste; or approximately 232 tons per year.⁷ As such, the Project with Building A Residential/Commercial would generate a total of approximately 1,433 tons per year (approximately 3.9 tons per day) of solid waste requiring disposal after diversion. This is slightly less daily solid waste generation than the Project and would represent approximately 0.04 percent of Scholl Canyon Landfill's remaining permitted capacity (LACPW 2020). Therefore, as with the Project, because waste from the City of Pasadena may be disposed of after diversion at any facility that accepts waste from the City and there is adequate remaining capacity to accommodate the estimated solid waste to be generated by the Project with Building A Residential Commercial, there would be a less than significant impact related to landfill capacity. Attainment of solid waste reduction goals is addressed in Threshold 3.11e below.

Threshold 3.11e: Would the Project comply with federal, State, and local management and reduction statutes and regulations related to solid waste?

Project

In 1992, the City adopted the "Source Reduction and Recycling Element" to comply with the California Integrated Waste Management Act. This act requires that jurisdictions maintain a 50 percent or better diversion rate for solid waste. The City implements this requirement through Section 8.61 of the PMC, which establishes the City's "Solid Waste Collection Franchise System". As described in Section 8.61.175, each franchisee is responsible for meeting the minimum recycling diversion rate of 75 percent for construction and demolition debris and 60 percent for other solid waste on a monthly and annual basis. The Project would be required to comply with the applicable solid waste franchise's recycling system and would therefore meet local and State solid waste diversion regulations. In addition, the Project would be required to comply with the City's Construction and Demolition Ordinance (Section 8.62 of the PMC), which includes preparation of a Construction Waste Management Plan for new structures over 1,000 sf. As such, the Project would comply with federal, State, and local regulations related to solid waste. There would be a less than significant impact, and no mitigation would be required.

Project with Building A Residential/Commercial

As discussed for the Project, the Project with Building A Residential/Commercial would be required to comply with the applicable solid waste franchise's recycling system and would therefore meet local and State solid waste diversion regulations. In addition, the Project would be required to comply with the City's Construction and Demolition Ordinance (Section 8.62 of the PMC), which includes preparation of a Construction Waste Management Plan for new structures over 1,000 sf. As such, the Project with Building A Residential/Commercial would comply with federal, State, and local regulations related to solid waste. There would be a less than significant impact, and no mitigation would be required.

⁶ (6,578 PPD * 365 days)/2,000 pounds per ton = 1,201 tons per year

⁷ (1,273 PPD * 365 days)/2,000 pounds per ton = 232 tons per year

3.11.6 CUMULATIVE IMPACTS

Project

Water

According to the requirements of Section 10910(c)(3) of the Water Code:

“The water supply assessment for the project shall include a discussion with regard to whether the public water system's total projected water supplies available during normal, single-dry, and multiple-dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses.”

As previously discussed, the Project would conservatively demand about 0.24 percent of the City's anticipated total system supply of 31,078 afy in 2025, 0.24 percent of the supply of 31,537 afy in 2040, and 0.24 percent of the supply of 31,409 afy in 2045 (ESA 2022). As the Project is consistent with the Project's land use designation in the General Plan as part of planned growth within the City's Central District, potential demand for the Project was considered as part of the PWP 2020 UWMP. Therefore, the WSA finds that MWD, as the wholesale potable water supplier has sufficient water supplies available to serve its member agencies, including PWP, now and over a 20-year planning horizon. In addition, PWP's groundwater, including its annual groundwater credits stored in the RB, are reliable in all water year types. With that understanding, the WSA concludes that PWP has sufficient water supplies in all water year types provided through MWD and supplemented with local groundwater to meet existing demands combined with the Project demands and cumulative demands through the 20-year planning horizon of the PWP 2020 UWMP. Therefore, the Project would not result in a cumulatively considerable impact related to water supplies, and no mitigation is required.

Wastewater

For wastewater conveyance and treatment services, the geographic area for consideration of cumulative impacts is the City of Pasadena (for locally owned sewer lines) and the LACSD service area (for regional facilities). The City manages its wastewater infrastructure through the Sewer Master Plan, prepared by the City's Department of Public Works and based on forecasts of wastewater flows with buildout of the General Plan. Individual development projects in the City would be required to remit the appropriate sewer facility charge consistent with Chapter 4.53 of the PMC, which ensures that new development pays its estimated cost for any capacity upgrades to the City sewer system.

Regarding LACSD facilities, as discussed above, the Project would represent a nominal incremental contribution to regional wastewater flows requiring conveyance to and treatment at the LACSD's WRPs. All future development projects in the LACSD's service area would be subject to the LACSD's Wastewater Ordinance, which includes the Connection Fee program. The Connection Fee program requires all new users of the LACSD's sewerage system, as well as existing users that significantly increase the quantity or strength of their wastewater discharge, to pay their fair share of the costs for providing additional conveyance, treatment, and disposal facilities. The LACSD uses the fees for the expansion and improvement of their facilities, as needed, to serve existing and anticipated developments. Also, as discussed in the Initial Study, the Project would be within the remaining development capacity of the General Plan for the Central District Specific Plan. Therefore, the Project would not result in a cumulatively considerable impact to wastewater conveyance or treatment facilities, and no mitigation is required.

Dry Utilities

Electricity and natural gas are provided on demand from CPUC-regulated utilities (i.e., PWP and The Gas Company) and telecommunications are provided from free-market providers (e.g., AT&T and Spectrum). The respective service areas for these utility providers, except for PWP, are large and all cover at least substantial portions of California. Because these utilities are provided on demand, including CPUC-regulated utilities, the expansion of services based on regional growth is part of each providers business strategy. Therefore, growth and development in the City is not expected to result in adverse impacts on dry utilities. The Project would not contribute to a cumulatively considerable impact related to the need for new or expanded dry utilities.

Solid Waste

Solid waste collection services are provided on demand by private haulers, and cumulative impacts on their services from future development in the City are not expected to result in adverse impacts on solid waste collection services. Available landfill capacity is expected to decrease over time with future growth and development in the City. Waste reduction and recycling programs and regulations are expected to reduce this demand and extend the life of existing landfills. Also, CalRecycle is responsible for administering and monitoring State solid waste reduction initiatives, and individual jurisdiction's ability to meet these requirements. It is assumed that CalRecycle's role would continue in the future. Based on the available capacity of landfills in the region and the Project's nominal contribution of additional solid waste requiring disposal—approximately 0.06 percent of Scholl Canyon Landfill's remaining daily permitted capacity, as a conservative analysis—the Project would not contribute to a cumulatively considerable impact to landfill capacity or solid waste regulations.

Project with Building A Residential**Water**

The cumulative impact analysis of water supply for the Project with Building A Residential/Commercial would be the same as that provided for the Project. If the Project with Building A Residential/Commercial is pursued, this development scenario would conservatively demand about 0.22 percent of the City's anticipated total system supply of 31,078 afy in 2025, 0.22 percent of the supply of 31,537 afy in 2040, and 0.22 percent of the supply of 31,409 afy in 2045 (ESA 2022). While the Project with Building A Residential/Commercial would result in slightly less water demand, this would not result in a difference in the cumulative impact finding for this scenario. Therefore, the Project with Building A Residential/Commercial would not result in a cumulatively considerable impact related to water supplies, and no mitigation is required.

Wastewater

The cumulative impact analysis of wastewater conveyance and treatment for the Project with Building A Residential/Commercial would be the same that provided for the Project.

Dry Utilities

The cumulative impact analysis of dry utilities for the Project with Building A Residential/Commercial would be the same as that provided for the Project.

Solid Waste

The cumulative impact analysis of dry utilities for the Project with Building A Residential/Commercial would be the same as that provided for the Project. While the Project

with Building A Residential/Commercial would result in slightly less solid waste generation, this would not result in a difference in the cumulative impact finding for this scenario.

3.11.7 MITIGATION MEASURES

No significant impacts related to utilities and service systems would occur, and no mitigation is required.

3.11.8 LEVEL OF SIGNIFICANCE AFTER MITIGATION

Less than significant.

3.11.9 SUMMARY OF ANALYSIS

Project

The Project would result in less than significant impacts related to the relocation or construction of new or expanded water, wastewater conveyance and treatment, electric power, natural gas, or telecommunications facilities that could cause significant environmental effects, and no mitigation would be required. There would be a less than significant impacts related to water supplies, landfill capacity, and compliance with solid waste regulations.

Project with Building A Residential/Commercial

The summary of findings for the Project with Building A Residential/Commercial would be comparable to the findings for the Project. The only difference is that this scenario would result in a lower water demand and not generate as much solid waste as the Project. Similar to the Project, the Project with Building A Residential/Commercial would result in less than significant impacts related to utilities and service systems, and no mitigation is required.

SECTION 4.0 ALTERNATIVES

4.1 INTRODUCTION

Section 15126.6 of the California Environmental Quality Act (CEQA) Guidelines addresses the discussion of alternatives in an EIR. Key provisions of the State CEQA Guidelines are identified throughout this section to explain the basis for the alternatives evaluation in this Draft EIR. Section 15126.6 of the State CEQA Guidelines states the following:

- (a) Alternatives to the Proposed Project. An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives which are infeasible. The Lead Agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason.
- (b) Purpose. Because an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives or would be more costly.

4.1.1 CRITERIA FOR SELECTING ALTERNATIVES

Feasibility

When developing alternatives for evaluation in an EIR, the feasibility of implementing the alternative must be considered. Section 15126.6(f)(1) of the State CEQA Guidelines states the following:

Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives.

It has been recognized that, for purposes of CEQA, “feasibility” encompasses “desirability” to the extent that the latter is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors. This balancing is harmonized with CEQA’s fundamental recognition that policy considerations may render alternatives impractical or undesirable.

Avoid or Substantially Lessen Significant Impacts

Section 15126.6(b) of the State CEQA Guidelines states that “[b]ecause an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public

Resources Code Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly”.

The Project and Project with Building A Residential/Commercial, evaluated in Sections 3.1 through 3.11 of this Draft EIR, would result in a range of impacts but no significant and unavoidable impacts are expected after mitigation. Although the level of significance after mitigation (if any) may be the same for each threshold and/or environmental topic, the degree or severity of impact may be slightly different under each alternative and reduced or increased compared to the Project and Project with Building A Residential/Commercial.

The potentially significant adverse environmental impacts of the Project and Project with Building A Residential/Commercial, which require mitigation, include:

- **Cultural Resources** (historic resources [501 and 523 South Arroyo Parkway] and unknown archaeological resources),
- **Noise** (potential for vibration-related building damage to Whole Foods Market and 501 and 523 South Arroyo Parkway), and
- **Tribal Cultural Resources** (unknown tribal cultural resources).

Please refer to the Executive Summary and Sections 3.1 through 3.11 of this Draft EIR for additional details regarding the environmental analysis of the Project.

Ability to Achieve Project Objectives

The ability of an alternative to meet most of a project’s objectives is an important component when evaluating alternatives. Section 15126.6(f) of the State CEQA Guidelines states the following:

The range of alternatives required in an EIR is governed by a ‘rule of reason’ that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project.

Section 15124 of the State CEQA Guidelines requires an EIR to include a statement of a proposed project’s objectives. The Affinity Project seeks to achieve the following key objectives:

1. Reinforce and strengthen Arroyo Parkway as a major commercial corridor and the Central District’s economic vitality through the development of multi-story buildings with a variety of complementary commercial and/or residential uses in underutilized areas with higher development capacity.
2. Provide jobs, services, revenues, and opportunities that will support Pasadena as an economically vital city and allow for continued fiscal health.
3. Develop assisted living facilities that have access to local commercial services, health care facilities, community facilities, and public transit.
4. Satisfy local and regional demand for varying levels of care (independent living, residential care, continuing care) to individuals, depending on need, that are transit-accessible and pedestrian-friendly.

5. Improve Pasadena's infrastructure and urban form through modernized buildings that are energy- and water-efficient.
6. Preserve and integrate Pasadena's historic resources as part of a complementary development that reduces the risk of resource demolition, deterioration by neglect, and/or impacts from natural circumstances.
7. Invest sustainably by providing for the needs of existing and future residents and businesses while in proximity to transportation opportunities.

4.1.2 ALTERNATIVES TO THE PROPOSED PROJECT

In accordance with Section 15126.6(a) of the State CEQA Guidelines, this section summarizes the range of alternatives considered in the EIR. The following alternatives have been considered and eliminated from detailed consideration for the reasons identified in Section 4.2, below:

- Alternative Site, and
- Project with No Variance for Historic Resources.

Alternatives that are considered in detail in this Draft EIR include:

- Alternative 1: No Project/No Development,
- Alternative 2: Project Development with Existing Zoning,
- Alternative 3: All Residential Project with Variance for Historic Resources, and
- Alternative 4: All Medical Office Project with Variance for Historic Resources.

Table 4-1, Summary of Alternatives, presents the proposed land uses, amount of development (aboveground square feet [sf]), the maximum height above ground level, total parking spaces and subterranean levels required, and the floor area ratio (FAR) for the Project and Project with Building A Residential/Commercial and Alternatives 2 through 4 (i.e., the "build" alternatives).

The alternatives in Table 4-1 include 79,553 sf of commercial land uses associated with Whole Foods Market and 501 and 523 South Arroyo Parkway. It is assumed these existing land uses would operate as a grocery store and restaurants, respectively, same as the Project. As with the Project, the 275-space subterranean parking structure used by Whole Foods Market would remain and would not be connected to any new subterranean parking for all alternatives. The parking numbers listed in Table 4-1 refer only to new subterranean parking provided for the new development. Alternatives 3 and 4 are assumed to require a PD Plan, like the Project and Project with Building A Residential/Commercial. A complete description of each alternative is provided further below.

**TABLE 4-1
SUMMARY OF ALTERNATIVES**

	Land Uses	Total SF ^a	Max DU	Max Height ^b	New Parking ^c	FAR
Project Scenarios						
Project	Assisted Living, Medical Office, Commercial	417,929	95	93.5 ft	850 spaces/ 5 levels	2.89
Project with Building A Residential/Commercial	Assisted Living, Residential, Commercial	417,929	289	93.5 ft	650 spaces/ 4 levels	2.89
Alternatives						
Alternative 2—Project Development with Existing Zoning	Assisted Living, Medical Office, Commercial	217,280	159	50 ft ^d	387 spaces/ 3 levels	1.50
Alternative 3—All Residential Project with Variance for Historic Resources	Residential, Commercial	417,929	289	93.5 ft	607 spaces/ 4 levels	2.89
Alternative 4—All Medical Office Project with Variance for Historic Resources	Medical Office, Commercial	417,929	0	93.5 ft	1,218 spaces/ 7 levels	2.89
SF: square feet; DU: dwelling units; Max: maximum; ft: feet; FAR: floor area ratio						
^a Refers to total aboveground development including 79,553 sf of existing, on-site development to be retained (465, 501, and 523 S. Arroyo Parkway) ^a Refers to highest point, including parapet but not including appurtenances, of any proposed building on the site ^c Refers to subterranean parking structure levels ^d Or 65 feet with height averaging						

4.2 ALTERNATIVES ELIMINATED FROM DETAILED CONSIDERATION

Section 15126.6(c) of the CEQA Guidelines specifies that an EIR should (1) identify alternatives that were considered by the lead agency but were eliminated from detailed consideration because they were determined to be infeasible during the scoping process and (2) briefly explain the reasons underlying the lead agency's determination. Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are (1) failure to meet most of the basic project objectives; (2) infeasibility; or (3) inability to avoid significant environmental impacts.

4.2.1 ALTERNATIVE SITE

Section 15126.6(f)(2) of the State CEQA Guidelines sets forth the following criteria for determining whether to identify an alternative site because "An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative". Section 15126.6(f)(2) of the State CEQA Guidelines (14 CCR) states the following:

- (A) Key question. The key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.
- (B) None feasible. If the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR. For example, in some cases there may be no feasible alternative locations for a geothermal plant or mining project which must be in proximity to natural resources at a given location.

- (C) Limited new analysis required. Where a previous document has sufficiently analyzed a range of reasonable alternative locations and environmental impacts for projects with the same basic purpose, the lead agency should review the previous document. The EIR may rely on the previous document to help it assess the feasibility of potential project alternatives to the extent the circumstances remain substantially the same as they relate to the alternative.

Development of the Project or Project with Building A Residential/Commercial on an alternative site was not carried forward for detailed consideration due to the lack of available alternate sites to accommodate a project of similar size, and inability to meet many of the objectives established for the Project.

The Project site is a 3.3-acre property that is presently owned by the Applicant. There are no vacant or underutilized sites of sufficient size along Arroyo Parkway and within walking distance of multiple transit facilities, both relevant to the Project objectives, that could feasibly accommodate the Project. Additionally, the Applicant does not own other feasible alternative sites and the City is not aware of any other feasible alternative location that would avoid or substantially lessen any potential significant impact of the Project. Further, the Applicant cannot be expected nor required to acquire, control, or have access to another site that could accommodate the Project. As noted above, the Project or Project with Building A Residential/Commercial would result in no significant and unavoidable impacts. Therefore, due to lack of viable and comparable sites in the site vicinity that would allow for development of the Project in a manner that would avoid or substantially lessen the Project's significant impacts (before mitigation), development of the Project on an alternative site has been eliminated from consideration.

4.2.2 PROJECT WITH NO VARIANCE FOR HISTORIC RESOURCES

Based on comments received on the Notice of Preparation (NOP), an alternative PD project without a variance for historic resources to increase the height of Buildings A and B was considered. This alternative would result in a total of 401,171 sf of aboveground development, including the 73,671-sf Whole Foods Market. To accommodate a project of this size, this alternative would involve demolition of 8 (of the 9) existing buildings, including the two historic buildings, totaling 51,794 sf, located at 491, 495, 499, 501, 503, 523, 541, and 577 South Arroyo Parkway, and construction of 327,500 sf of new development in 2 buildings representing a floor area ratio (FAR) of 2.77. These buildings would have up to 5 stories and maximum heights, including parapets, of 65 feet (with height averaging). This alternative would have up to 709 parking spaces in 5 subterranean levels.

As discussed above, there are no significant and unavoidable impacts associated with the Project or Project with Building A Residential/Commercial. Furthermore, the significant impacts that require mitigation to avoid or reduce to a less than significant level are all construction related. This alternative would result in a new significant impact due to demolition of two historic buildings that would be considered significant and unavoidable. The introduction of a significant and unavoidable impact due to an alternative, when there are no such impacts associated with either the Project or the Project with Building A Residential/Commercial, resulted in the elimination of this alternative from detailed consideration by the City.

4.3 ALTERNATIVES CARRIED FORWARD FOR DETAILED CONSIDERATION

The analysis of each of the Project alternatives identified below includes the following:

- A description of the alternative.
- An analysis of environmental impacts in comparison to the possible impacts of the Project and Project with Building A Residential/Commercial. Pursuant to the State CEQA Guidelines, if an alternative would cause one or more significant effects in addition to those that would be caused by the Project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the Project as proposed.
- An assessment of the alternative's ability to meet the Project objectives.

The comparison of impacts between each alternative and the proposed Project assumes that the general nature and types of (1) existing regulations and (2) mitigation measures (MMs) identified in Section 3.0, Environmental Analysis, of this Draft EIR would also be applicable to each of the alternatives, where appropriate. No MMs are applied to the No Project/No Development Alternative, which assumes that the existing conditions on the Project site would remain unchanged.

4.3.1 ALTERNATIVE 1: NO PROJECT/NO DEVELOPMENT

Description of the Alternative

Section 15126.6(e) of the State CEQA Guidelines requires that an EIR evaluate a "no project" alternative in order to allow decision makers to compare the impacts of approving a proposed project with the impacts of not approving that project. Section 15126.6(e)(3) of the State CEQA Guidelines describes the two general types of no project alternative: (1) when the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the no project alternative would be the continuation of that plan and (2) when the project is not a land use/regulatory plan, such as a specific development on an identifiable property, the no project alternative is the circumstance under which that project is not processed (i.e., no development occurs). In addition, Section 15126.6(e)(2) of the State CEQA Guidelines specifies that the "No Project analysis shall discuss the existing conditions at the time the Notice of Preparation (NOP) is published, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services".

Under the No Project/No Development Alternative, the existing environmental setting would remain unchanged. The City would not approve a PD Plan and rezone the site to a PD zone nor would the City approve the Project or Project with Building A Residential/Commercial. This Alternative assumes the Project site would continue to remain in its existing state without demolition of any existing structures and site improvements and would continue the use and operation of the existing land uses present at the time the NOP was distributed in August 2021.

Comparative Analysis of Environmental Impacts

Air Quality

Alternative 1 would not involve any construction activities (including demolition, excavation, and building construction) or operation of a greater amount of development on the site. In the absence of construction activities and no increase in traffic generation, this alternative would not generate criteria air pollutant emissions beyond existing conditions. Although the air quality related impacts

of the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 1 related to air quality would be comparatively less.

Cultural and Paleontological Resources

Alternative 1 would not result in the adaptive reuse of the historic buildings (501 and 523 South Arroyo Parkway) that would be integrated in the Project and Project with Building A Residential/Commercial. Therefore, the potential significant impact related to alterations to these buildings associated with integration into the Project and occupation by new tenants, requiring implementation of MM CUL-1, would not occur.

In the absence of any construction activities, Alternative 1 would not result in the potential for impacts to unknown historic (buried), archaeological, or paleontological resources that may be encountered during grading activities. As such, the potential for impacts to cultural resources resulting from implementation of the Project or Project with Building A Residential/Commercial would not occur under Alternative 1 and implementation of MM CUL-2 would not be required. Although impacts related to historic and archaeological resources with the Project and Project with Building A Residential/Commercial are less than significant with mitigation, the impacts of Alternative 1 related to cultural and paleontological resources would be comparatively less without mitigation.

Energy

Alternative 1 would not involve any construction activities or operation of a greater amount of development on the site. In the absence of construction activities, no increase in on-site land use and related activity, and no increase in traffic generation, this alternative would not result in any change in energy use. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 1 related to energy would be comparatively less.

Greenhouse Gas Emissions

Alternative 1 would not involve any construction activities or operation of a greater amount of development on the site. In the absence of construction activities and no increase in traffic generation, this alternative would not generate greenhouse gas (GHG) emissions beyond existing conditions. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 1 related to GHG emissions would be comparatively less.

Hazards and Hazardous Materials

Alternative 1 would not involve the use, transport, disposal, or emission of hazardous materials associated with the proposed Project. However, continued use of common hazardous materials related to the existing land uses on the site (e.g., cleaning supplies, paints, solvents) would occur. All transport, use, and disposal of hazardous materials under this alternative would continue to be conducted in compliance with applicable regulations and would not result in significant impacts.

In the absence of construction activities, Alternative 1 would not have the potential to expose construction personnel or other individuals to asbestos-containing materials (ACMs) or lead-based paint (LBP) that could potentially occur with the Project or Project with Building A Residential/Commercial associated with the demolition activities. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 1 related to hazards and hazardous materials would be comparatively less.

Land Use and Planning

Under Alternative 1, there would be no change in the existing conditions on the Project site and no change in zoning from CD-6 to PD-39. Alternative 1 would not involve any new development and would not conflict with any local or regional planning programs; however, development on the site permissible on the site under existing zoning would also not be implemented and would leave the site in its current underutilized condition, thereby failing to reinforce and strengthen Arroyo Parkway as a major commercial corridor. While the impacts with the Project and Project with Building A Residential/Commercial related to land use and planning are less than significant, it is acknowledged that some may prefer to have the site remain in its existing land use configuration. However, Alternative 1 would not support regional and local planning policies related to reducing vehicle trips per capita by increasing density, including housing, near transit. Nor would the existing condition, even if fully occupied by commercial uses, provide as many jobs near transit as the Project or Project with Building A Residential/Commercial. Therefore, while Alternative 1 would avoid any physical land use changes, the Project's land use benefits would not be achieved.

Noise

Alternative 1 would not involve any construction activities or operation of a greater amount of development on the site. In the absence of construction activities, Alternative 1 would not result in construction noise or vibration. Therefore, the potential significant impact related to vibration affecting the on-site buildings to be retained, requiring implementation of MM NOI-1, would not occur.

Although the increase in vehicle trips would not result in a perceptible change in noise levels, there would not be a change in operational noise under Alternative 1. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant with mitigation, the impacts of Alternative 1 related to noise and vibration would be comparatively less without mitigation.

Public Services and Recreation

Under Alternative 1, there would be no increase in the amount of development on the site. Therefore, the impact of Alternative 1 relative to the demand for public services and recreation would be less than the Project or Project with Building A Residential/Commercial. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 1 related to public services and recreation would be comparatively less.

Transportation

In the absence of construction activities, Alternative 1 would not result in construction-related traffic. Also, under Alternative 1, there would no increase in vehicle trips associated with new land uses. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 1 related to transportation—including circulation system policies, the City's Transportation Impact Analysis (TIA) Guidelines, traffic safety, and emergency access—would be comparatively less. At the same time, the vehicles miles traveled (VMT) per capita would be higher under Alternative 1 than the Project or Project with Building A Residential/Commercial, because of the lower service population present on the site that drives the vehicle trips.

Tribal Cultural Resources

In the absence of any construction activities, Alternative 1 would not result in the potential for impacts to unknown tribal cultural resources that may be encountered during excavation activities. As such, the potential for impacts to tribal cultural resources resulting from implementation of the Project or Project with Building A Residential/Commercial would not occur under Alternative 1, and implementation of MM TCR-1 would not be required. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant with mitigation, the impacts of Alternative 1 related to tribal cultural resources would be comparatively less without mitigation.

Utilities and Service Systems

Under Alternative 1, there would be no increase in the amount of development on the site. Therefore, the impact of Alternative 1 relative to the demand for utilities and service systems would be less than the Project or Project with Building A Residential/Commercial. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 1 related to utilities and service systems would be comparatively less.

Ability to Meet Project Objectives

Alternative 1 would not attain Project objectives 1 through 7.

Conclusion

Alternative 1 would avoid all potential impacts from the Project or Project with Building A Residential/Commercial, which are less than significant for each environmental topic addressed in this Draft EIR with adherence to applicable regulations and mitigation. However, in the absence of the Project or Project Building A Residential/Commercial, no land use benefits would be achieved.

4.3.2 ALTERNATIVE 2: PROJECT DEVELOPMENT WITH EXISTING ZONING

Description of the Alternative

Alternative 2 assumes the site is developed with the same land uses as the Project or Project with Building A Residential/Commercial but with application of existing zoning (i.e., no PD Plan). The site is zoned CD-6 (Central District, Arroyo Corridor/Fair Oaks subdistrict). Alternative 2 is analyzed with two scenarios, where appropriate based on the results of the comparative analysis, same as the Project. As shown in Table 4-1 above, Alternative 2 would result in a total of 217,280 sf of aboveground development, including the 79,553 sf of existing development to be retained (i.e., Whole Foods Market and the historic buildings at 501 and 523 South Arroyo Parkway). This amount of total aboveground development reflects the 1.5 FAR consistent with CD-6 zoning.

This alternative would involve demolition of 6 (of the 9) existing buildings totaling 45,912 sf, located at 491, 495, 499, 503, 541, and 577 South Arroyo Parkway, and construction of 2 new buildings with 137,727 sf of new development. Based on the same proportions of proposed land uses with the Project and Project with Building A Residential, Alternative 2 would result in the following:

- Building A: a 62,682-sf, 5-story (aboveground) medical office building with 3,000 sf ground-floor commercial uses;

- Building B: a 75,045-sf, 5-story (aboveground) assisted living building with 34,922 sf of assisted living uses and 40,123 sf of independent living uses including up to 51¹ senior housing units; and
- Up to 387 parking spaces in 3 subterranean levels.²

Alternative 2 would represent an approximately 59 percent reduction in the total new development on the site (i.e., when considering only Building A and Building B) and an approximate 48 percent reduction in overall development on the site (i.e., when including Whole Foods Market and 501 and 523 South Arroyo Parkway) compared to the Project and Project with Building A Residential/Commercial.

Like the Project with Building A Residential/Commercial, Alternative 2 could result in the following in Building A (referred to herein as Alternative 2 with Building A Residential/Commercial):

- 3,000 sf of commercial and a sales/leasing management office on the ground floor;
- Up to 108 residential dwelling units³; and
- Up to 282 parking spaces in 2 subterranean levels (1 fewer levels than Alternative 2 as proposed above)².

Regarding senior living and market-rate housing units, Alternative 2 would represent an approximately 45 percent reduction in the maximum number of units allowed consistent with CD-6 zoning (i.e., 48 DUs/acre) compared to the Project and Project with Building A Residential/Commercial.

Alternative 2 would have maximum building heights, including parapets, of 50 feet or 65 feet with height averaging. This alternative assumes the historic resources would be retained and incorporated into the design, but with no variance proposed. Alternative 2 assumes the retained historic buildings would operate as restaurants, same as the Project. Because the same building footprints are assumed under Alternative 2 as the Project, the same number and locations of trees would be removed, and the planting of two new street trees would be required. The points of ingress/egress and on-site circulation would be the same as the Project.

Alternative 2 would involve the same construction phases and overall schedule as the Project, with construction beginning in 2023 over approximately 34 months. While the overall scope of this alternative is reduced compared to the Project, it would remain a substantial building effort. Because there would be fewer levels of subterranean parking, based on a proportional reduction in grading per level for the Project, this alternative would involve the following volumes of excavation and export:

- Alternative 2: approximately 110,406 cy of soil generating an estimated 7,886 one-way truck trips over the course of 4 months (103 workdays); and

¹ Based on the same proportion of housing units with implementation of the Project with Building A Residential/Commercial (68 percent market rate residential and 32 percent senior living units) to the max dwelling units that would be permitted with 48 du/ac (159). In other words, $159 * 0.68 = 108$ residential units; $159 - 108 = 51$ senior units.

² Based on off-street parking requirements specified in Chapter 17.46 of the PMC. For building B assisted living where parking is determined through the entitlement process, the allocation is based on the same proportion of parking spaces with implementation of the Project and Project with Building A Residential/Commercial.

³ Based on the same proportion of housing units with implementation of the Project with Building A Residential/Commercial (68 percent market rate residential and 32 percent senior living units) to the max dwelling units that would be permitted with 48 du/ac (159). In other words, $159 * 0.68 = 108$ residential units; $159 - 108 = 51$ senior units.

- Alternative 2 with Building A Residential/Commercial: approximately 73,604 cy of soil, generating an estimated 5,257 one-way truck trips over the course of 4 months (103 workdays).

Comparative Analysis of Environmental Impacts

Air Quality

Alternative 2 and Alternative 2 with Building A Residential/Commercial would result in a reduced scope of construction activities, although demolition activities would be the same, and a reduced scope of operational activities that would generate stationary criteria air pollutant emissions. As shown in Table 4-2, Alternative 2 Transportation Analysis Comparison, below under “transportation”, this Alternative would result in a reduced number of daily vehicle trips (VT) and reduced vehicle miles traveled (VMT) per capita, compared to both the Project and the Project with Building A Residential/Commercial. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of this Alternative related to air quality would be comparatively less for the Project and the Project with Building A Residential/Commercial.

Cultural and Paleontological Resources

Alternative 2 and Alternative 2 with Building A Residential/Commercial would result in similar impacts to cultural and paleontological resources as the Project and Project with Building A Residential/Commercial. This alternative would also integrate the historic buildings (501 and 523 South Arroyo Parkway). Therefore, this Alternative would result in the potential significant impact related to alterations to these buildings associated with integration into the Project and occupation by new tenants, requiring implementation of MM CUL-1. This Alternative would result in less excavation than the Project and Project with Building A Residential/Commercial commensurate with the reduction in subterranean parking levels; however, the potential for impacts to unknown historic (buried) and archaeological resources is associated with any excavation in both disturbed and native soils. Therefore, like the Project and Project with Building A Residential/Commercial, this Alternative would result less than significant impacts with implementation of MM CUL-2, and less than significant impacts related to paleontological resources.

Energy

Alternative 2 and Alternative 2 with Building A Residential/Commercial would result in less construction-related energy use and long-term mobile (i.e., vehicle) and stationary (i.e., not transportation/mobile) energy demand than the Project and Project with Building A Residential/Commercial. However, when taking into consideration that this Alternative would result in the same amount of demolition to redevelop an underutilized site and the resulting development would be approximately half as dense as the Project, energy use during construction would be less efficient than for the Project or Project with Building A Residential/Commercial. As discussed above, this Alternative would result in a reduced VT and VMT compared to the Project and Project with Building A Residential/Commercial. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of this Alternative related to energy use would be comparatively less for the Project and the Project with Building A Residential/Commercial. Nonetheless, on balance, it is anticipated that this Alternative would also result in less than significant impacts related to the wasteful, inefficient, or unnecessary consumption of energy; and less than significant impacts related to conflict with plans for renewable energy or energy efficiency. Like the Project and Project with Building A Residential/Commercial, this Alternative would result less than significant impacts related to energy.

Greenhouse Gas Emissions

Alternative 2 and Alternative 2 with Building A Residential/Commercial would generate reduced GHG emissions from construction and operation of the reduced development intensity compared to the Project and Project with Building A Residential/Commercial. However, this alternative would result in reduced VT and VMT per capita than the Project and Project with Building A Residential/Commercial. A lower VMT reflects a lesser relative contribution of the site per capita and per service population to GHG emissions. As this Alternative is based on the existing zoning for the site, development of this alternative would also be considered consistent with the City's Climate Action Plan (CAP). Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of this Alternative related to GHG emissions would be comparatively less.

Hazards and Hazardous Materials

Alternative 2 and Alternative 2 with Building A Residential/Commercial would result in the same potential to expose construction personnel or other individuals to ACMs or lead-based paint LBP that could occur with the Project or Project with Building A Residential/Commercial, as this impact is associated with demolition activities. Construction of this alternative would result in the transport and handling of the same hazardous materials typical of construction activities and would also result in less than significant impacts through compliance with applicable regulations. Similarly, because this alternative proposes the same land uses as the Project or Project with Building A Residential/Commercial, operation of this Alternative would result in the use and generation of the same hazardous materials. As with the Project, all transport, use, and disposal of hazardous materials under this alternative, including biomedical waste, would be conducted in compliance with applicable regulations and would result in less than significant impacts. Like the Project and Project with Building A Residential/Commercial, this Alternative would result less than significant impacts related to hazards and hazardous materials.

Land Use and Planning

Under Alternative 2 and Alternative 2 with Building A Residential/Commercial, there would be no change in zoning on the site from CD-6 to PD-39 and the development would be consistent with the existing zoning and applicable goals and policies of the *City of Pasadena General Plan* (General Plan). However, as discussed in Section 3.6, Land Use and Planning, of this Draft EIR, adoption of a PD zone simultaneously establishes applicable land use regulations and development standards specific to that zoning district. Also, PD Plans are developed in consideration of existing zoning requirements that are applicable to a project site while also providing flexibility in site usage and building design. However, when taking into consideration that this Alternative would result in the same amount of demolition to redevelop an underutilized site and the resulting development would be approximately half as dense as the Project, this represents a less efficient use of the land than for the Project or Project with Building A Residential/Commercial.

Regarding land use plans, policies, or regulations adopted for the purpose of avoiding or reducing an environmental effect, for the City of Pasadena these are focused on historic resources, GHG emissions/sustainability, and trees/open space. This Alternative would result in the same potential impact on historic resources and require implementation of MM CUL-1, as discussed above, as the Project. Alternative 2 would be less consistent with Southern California Association of Government's (SCAG's) 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), as the reduced amount of redevelopment on an underutilized site, particularly near transit, would result in a land use pattern that contributes less towards the GHG emissions reduction targets compared to the Project or Project with Building A Residential/Commercial. This alternative would provide less mixed-use development near transit

and other existing infrastructure (e.g., roads, utilities, services). As discussed above, this Alternative would result in a reduced VT and VMT per capita compared to the Project and Project with Building A Residential/Commercial. A lower VMT reflects a lesser relative contribution of the site per capita and per service population to GHG emissions. This Alternative would support regional and local planning policies related to reducing vehicle trips per capita by increasing density, including housing, near transit, although not to the same degree as the Project or Project with Building A Residential/Commercial. This Alternative would result in the same number of tree removals and the same requirement for planting of two new street trees as the Project or Project with Building A Residential/Commercial. Therefore, like the Project and Project with Building A Residential/Commercial, this Alternative would result in less than significant impacts related to land use and planning.

Noise

Alternative 2 and Alternative 2 with Building A Residential/Commercial would generate the same level of construction noise and vibration as the Project and Project with Building A Residential/Commercial and require implementation of MM NOI-1 to reduce potential vibration impacts to the remaining on-site buildings to a less than significant level. Although the increase in vehicle trips with the Project or Project with Building A Residential/Commercial would not result in a perceptible change in noise levels, this Alternative would generate less traffic. The noise generated from stationary uses from this alternative would be similar to the Project and Project with Building A Residential/Commercial and would also be less than significant. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant with mitigation, the impacts of this Alternative related to noise and vibration would be comparatively less due to the reduction in operational noise generation.

Public Services and Recreation

Alternative 2 and Alternative 2 with Building A Residential/Commercial would result in a reduced demand for public services (i.e., fire protection, police protection, schools, libraries) and recreational facilities than the Project and Project with Building A Residential/Commercial, commensurate with the reduction in development, including a reduction in resident population. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant, the impacts of this Alternative related to public services and recreation would be comparatively less.

Transportation

The Pasadena Department of Transportation (DOT) calculated the transportation metrics for each of the “build” alternatives (i.e., all but the No Project Alternative), where some redevelopment would occur on the site. As shown in Table 4-2, Alternative 2 Transportation Analysis Comparison, this Alternative would result in a reduced VT and VMT per capita compared to the Project and the Project with Building A Residential/Commercial. The City’s transportation metrics related to bicycle and transit networks and pedestrian accessibility are similar to the Project, as this is related mainly—though not solely—on location rather than type of development.

**TABLE 4-2
ALTERNATIVE 2 TRANSPORTATION ANALYSIS COMPARISON**

Transportation Performance Metrics	Significant Impact Cap (Existing)	Incremental Change (Existing + Alternative 2/ Exchange Alternative 2)	Incremental Change (Existing + Project / Exchange Project)	Significant Impact for Alternative?
VMT Per Capita	>22.6	16.5 / 6.4	19.5 / 8.2	No
VT Per Capita	>2.8	1.8 / 1.2	2.0 / 1.4	No
Proximity and Quality of Bicycle Network	<31.7%	31.8% / 31.8%	32.0% / 32.0%	No
Proximity and Quality of Transit Network	<66.6%	66.7% / 66.7%	66.8% / 66.8%	No
Pedestrian Accessibility	<3.9	3.9 / 3.9	3.9 / 3.9	No
VMT: vehicle miles traveled; VT: vehicle trips Source: Pasadena DOT 2022a.				

Therefore, this Alternative would not exceed any of the CEQA transportation thresholds defined in the City's TIA Guidelines. This Alternative would result in less than significant impacts related to conflict with the City's TIA Guidelines. This Alternative would result in the same ground-level circulation pattern; therefore, like the Project and Project with Building A Residential/Commercial, this Alternative would result in less than significant impacts related to circulation system policies, traffic safety, and emergency access. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant, the impacts of this Alternative related to transportation would be comparatively less.

Tribal Cultural Resources

Alternative 2 and Alternative 2 with Building A Residential/Commercial would result in similar impacts to tribal cultural resources as the Project and Project with Building A Residential/Commercial. This Alternative would result in less excavation than the Project and Project with Building A Residential/Commercial commensurate with the reduction in subterranean parking levels; however, the potential for impacts to unknown tribal cultural resources is associated with any excavation in both disturbed and native soils. Therefore, this Alternative would result in the same potential impact and require implementation of MM TCR-1 to reduce this impact to a less than significant level, same as the Project and Project with Building A Residential/Commercial.

Utilities and Service Systems

Alternative 2 and Alternative 2 with Building A Residential/Commercial would result in a reduced demand for utilities and service systems, including water supply, water and wastewater infrastructure, wastewater treatment, dry utilities (i.e., electricity, natural gas, telecommunications), and solid waste generation, commensurate with the reduced amount of redevelopment. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant, the impacts of this Alternative related to utilities and service systems would be comparatively less.

Ability to Meet Project Objectives

Alternative 2 and Alternative 2 with Building A Residential/Commercial would only partially meet Project objectives 1 through 7, as this Alternative would provide the same mix of land uses, with a potential exchange of residential for medical office; would retain and integrate the on-site historic structures; develop multi-story buildings with complementary uses in an underutilized area with transit and pedestrian accessibility; and provide jobs, services, revenues, and opportunities to support the City's fiscal health. However, as discussed above, this Alternative would provide approximately half the density and development as the Project or Project with Building A Residential/Commercial while resulting in the same amount of demolition to redevelop an underutilized site, which overall is an undesirable outcome. Additionally, as discussed above, because of the reduced density under this Alternative, especially on a transit-accessible site, this Alternative would be a less energy-efficient use of the site compared to the Project or Project with Building A Residential/Commercial.

Conclusion

Alternative 2 and Alternative 2 with Building A Residential/Commercial would result in comparatively reduced impacts related to air quality, GHG emissions, noise, public services, recreation, transportation, and utilities and service systems. This alternative would result in similar impacts related to cultural and paleontological resources, hazards and hazardous materials, land use and planning, and tribal cultural resources. Regarding energy, while this Alternative would result in a reduced VT and VMT compared to the Project and Project with Building A Residential/Commercial, it would also represent a less efficient use of the site. As discussed above, this Alternative would result in the same amount of demolition to redevelop an underutilized site and the resulting development would be approximately half as dense as the Project. Notably, this Alternative would not reduce any of the impacts identified for the Project or Project with Building A Residential/Commercial that would require mitigation during construction to reduce the impact to a less than significant level.

4.3.3 ALTERNATIVE 3: ALL RESIDENTIAL PROJECT WITH VARIANCE FOR HISTORIC RESOURCES

Description of the Alternative

Alternative 3 assumes the demolition of 6 (of the 9) existing buildings totaling 45,912 sf, construction of 2 new buildings totaling 338,376 sf, and 79,553 sf of existing development to be retained (i.e., Whole Foods Market and the historic buildings at 501 and 523 South Arroyo Parkway), same as the Project or Project with Building A Residential/Commercial. However, Alternative 3 assumes the new buildings would include up to 289 market-rate residential units (i.e., apartments and/or condominiums) except for ground-floor commercial in Building A.

As shown in Table 4-1 above, Alternative 3 would result in a total of 417,929 sf of aboveground development, including the existing buildings to be retained, as follows:

- Building A: a 154,000-sf, 7-story (aboveground) residential building and ground-floor commercial uses;
- Building B: a 184,376-sf, 7-story (aboveground) residential building; and
- Up to 607 parking spaces in 4 subterranean levels.

Alternative 3 would have maximum building heights, including parapets, of 93.5 feet, the same as the Project. This alternative assumes the historic resources would be retained and incorporated into the design with a variance for historic resources proposed. Alternative 3 assumes the retained

historic buildings would operate as restaurants, same as the Project. Because the same building footprints are assumed under Alternative 3 as the Project, the same number and locations of trees would be removed, and the planting of two new street trees would also be required as a planned condition of approval. The points of ingress/egress and on-site circulation would be the same as the Project.

Alternative 3 would involve the same construction phases and overall schedule as the Project, with construction beginning in 2023 over approximately 34 months. Because there would be one fewer level of subterranean parking, like the Project with Building A Residential/Commercial that has one less subterranean level than the Project, Alternative 3 would involve excavation and export of an estimated 147,211 cy of soil, generating an estimated 10,515 one-way truck trips, over the course of 4 months (103 workdays). This would equate to an average of 102 one-way trips per workday.

Comparative Analysis of Environmental Impacts

Air Quality

Alternative 3 would result in the same estimated construction-related criteria air pollutant emissions as the Project with Building A Residential/Commercial, as this alternative would involve the same amount of aboveground development and levels of subterranean parking. As shown in Table 4-3, Alternative 3 Transportation Analysis Comparison, below under “transportation”, this alternative would result in a reduced VT and VMT per capita compared to the Project and Project with Building A Residential/Commercial. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 3 related to air quality would be comparatively less.

Cultural and Paleontological Resources

Alternative 3 would result in the same potential impacts to cultural resources as the Project with Building A Residential/Commercial. This alternative would also integrate the historic buildings (501 and 523 South Arroyo Parkway). Therefore, Alternative 3 would result in the potential significant impact related to alterations to these buildings associated with integration into the Project and occupation by new tenants, requiring implementation of MM CUL-1. This alternative would have the same amount of excavation as the Project with Building A Residential/Commercial. Therefore, Alternative 3 would result in the same potential impact and require implementation of MM CUL-2 to reduce this impact to a less than significant level, same as the Project and Project with Building A Residential/Commercial. This Alternative would less than significant impacts related to paleontological resources, same as the Project with Building A Residential/Commercial.

Energy

Alternative 3 would result in the same construction-related energy use as the Project with Building A Residential/Commercial. As discussed above, this alternative would result in a reduction in both VT and VMT per capita compared to the Project and Project with Building A Residential/Commercial. As such, Alternative 3 would result in reduced long-term mobile (i.e., vehicle) energy demand; however, stationary (i.e., not transportation/mobile) energy demand would be similar to the Project and Project with Building A Residential/Commercial. Accordingly, it is expected that Alternative 3 would also result in less than significant impacts related to the wasteful, inefficient, or unnecessary consumption of energy or conflicts with plans for renewable energy or energy efficiency. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 3 related to energy would be comparatively less.

Greenhouse Gas Emissions

Alternative 3 would generate the same construction related GHG emissions as the Project with Building A Residential/Commercial, because Alternative 3 would have the same amount of excavation. As discussed above, this alternative would result in a reduction in both VT and VMT per capita compared to the Project and Project with Building A Residential/Commercial. Vehicle trips are a major driver of GHG emissions. As such, Alternative 3 would result in reduced long-term mobile (i.e., vehicle) GHG emissions. A lower VMT reflects a smaller relative contribution of the site per capita and per service population to GHG emissions. However, stationary (i.e., not transportation/mobile) GHG emissions would be similar to the Project and Project with Building A Residential/Commercial because there would be a similar amount of land uses. As Alternative 3 would have the same construction GHG emissions and reduced operational emissions, development of this Alternative would also be considered consistent with the City's Climate Action Plan (CAP). Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 3 related to GHG emissions would be comparatively less.

Hazards and Hazardous Materials

Alternative 3 would result in the same potential to expose construction personnel or other individuals to ACMs or lead-based paint LBP that could occur with the Project or Project with Building A Residential/Commercial, as this impact is associated with demolition activities. Construction of this alternative would result in the transport and handling of the same hazardous materials typical of construction activities and would also result in less than significant impacts through compliance with applicable regulations. Alternative 3 would not result in the generation of biomedical waste but would still use hazardous materials common to commercial uses, such as cleaners and solvents. As with the Project, all transport, use, and disposal of hazardous materials under this alternative would be conducted in compliance with applicable regulations and would result in less than significant impacts. Like the Project and Project with Building A Residential/Commercial, Alternative 3 would result in less than significant impacts related to hazards and hazardous materials.

Land Use and Planning

Under Alternative 3, there would be a change in zoning to a PD zone and adoption of a PD Plan. Also, a variance for historic resources would be requested to implement these land uses, the same as the Project and Project with Building A Residential/Commercial. Because a PD zone simultaneously establishes applicable land use regulations and development standards specific to that zoning district and is developed in consideration of existing zoning requirements, with approval of the zone change to a PD zone and approval of this alternative, including Design Review, Alternative 3 would be considered compatible with the City's zoning designations. However, as this alternative would provide only market-rate residential units (with a small amount of ground-floor) commercial uses, there would be less mixed-use development near transit and other existing infrastructure (e.g., roads, utilities, services) and no provision of senior care or housing facilities that are needed in the region. Nonetheless, Alternative 3 would support regional and local planning policies related to reducing vehicle trips per capita by increasing density, including housing, near transit.

Regarding land use plans, policies, or regulations adopted for the purpose of avoiding or reducing an environmental effect, for the City of Pasadena, these are focused on historic resources, GHG emissions/sustainability, and trees/open space. Alternative 3 would result in the same potential impact on historic resources and require implementation of MM CUL-1, similar to the Project. Alternative 3 would be consistent with SCAG's 2020-2045 RTP/SCS, as this alternative would place multi-family housing with some commercial uses in an underutilized site near transit,

thereby resulting in a land use pattern that contributes towards the GHG emissions reduction targets. Alternative 3 would result in the same number of tree removals and the same requirement for planting of two new street trees as the Project or Project with Building A Residential/Commercial. Therefore, like the Project and Project with Building A Residential/Commercial, Alternative 3 would result less than significant impacts related to land use and planning.

Noise

Alternative 3 would generate the same level of construction noise and vibration as the Project and Project with Building A Residential/Commercial and require implementation of MM NOI-1 to reduce potential vibration impacts to the remaining on-site buildings to a less than significant level. Like the Project or Project with Building A Residential/Commercial, although Alternative 3 would generate a higher volume of vehicle trips than the existing conditions, it would also not result in a perceptible change in noise levels. This is because it generally takes a doubling (or a halving) of traffic volumes to generate a change in noise levels that is perceptible to human hearing. The noise generated from stationary uses from this alternative would be similar to the Project and Project with Building A Residential/Commercial and would also be less than significant. Therefore, like the Project and Project with Building A Residential/Commercial, Alternative 3 would result less than significant impacts related to noise with implementation of MM NOI-1.

Public Services and Recreation

Alternative 3 would result in a similar demand for police protection, schools, libraries, and recreational facilities as the Project with Building A Residential/Commercial, because this alternative would result in the same amount of aboveground development and number of residential dwelling units (289). However, without the provision of assisted living facilities, it is expected this alternative would result in slightly less demand for Pasadena Fire Department (PFD) services than the Project or Project with Building A Residential/Commercial. This is because PFD services associated with more frequent ambulance calls related to the assisted living facility would be eliminated. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 3 related to public services and recreation would be comparatively less.

Transportation

Pasadena DOT calculated the transportation metrics for each alternative. As shown in Table 4-3, Alternative 3 Transportation Analysis Comparison, this alternative would result in reduced VT and VMT per capita, compared to the Project and Project with Building A Residential/Commercial. The Alternative 3 metrics related to bicycle and transit networks and pedestrian accessibility are similar to the Project and Project with Building A Residential/Commercial. Alternative 3 would not result in any significant transportation impacts.

**TABLE 4-3
ALTERNATIVE 3 TRANSPORTATION ANALYSIS COMPARISON**

Transportation Performance Metrics	Significant Impact Cap (Existing)	Incremental Change (Existing + Alternative 3)	Incremental Change (Existing + Project / Exchange Project)	Significant Impact for Alternative?
VMT Per Capita	>22.6	4.6	19.5 / 8.2	No
VT Per Capita	>2.8	1.7	2.0 / 1.4	No
Proximity and Quality of Bicycle Network	<31.7%	31.8%	32.0% / 32.0%	No
Proximity and Quality of Transit Network	<66.6%	66.7%	66.8% / 66.8%	No
Pedestrian Accessibility	<3.9	3.9	3.9 / 3.9	No
VMT: vehicle miles traveled; VT: vehicle trips				
Source: Pasadena DOT 2022b.				

Therefore, Alternative 3 would not exceed any of the CEQA transportation thresholds defined in the City's TIA Guidelines. Although impacts with the Project or Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 3 related to the City's TIA Guidelines would be comparatively less due to the reduction in both VT and VMT per capita. Alternative 3 would result in the same ground-level circulation pattern; therefore, like the Project and Project with Building A Residential/Commercial, this Alternative would result in less than significant impacts related to circulation system policies, traffic safety, and emergency access.

Tribal Cultural Resources

Alternative 3 would result in similar impacts to tribal cultural resources as the Project with Building A Residential/Commercial, as this alternative would have the same amount of excavation. Therefore, Alternative 3 would result in the same potential impact and require implementation of MM TCR-1 to reduce this impact to a less than significant level, same as the Project and Project with Building A Residential/Commercial.

Utilities and Service Systems

Although Alternative 3 would result in the same number of residential dwelling units as the Project with Building A Residential/Commercial, this alternative would not include assisted living facilities that would demand utilities. Alternative 3 would generate approximately 723 residents associated with up to 289 units⁴ and approximately 9 employees associated with the commercial uses on the ground floor of Building A. As shown in Table 4-4, Alternative 3 Utility Comparison, compared to the Project and Project with Building A Residential/Commercial, this alternative would result in reduced water demand, wastewater generation, and solid waste generation based on the applicable demand/generation rates for each utility.

⁴ Based on a rate of 2.5 persons per household derived from the Southern California Association of Governments (SCAG) 2019 Profile for the City of Pasadena (SCAG 2019).

**TABLE 4-4
ALTERNATIVE 3 UTILITY COMPARISON**

Scenario	Net Water Demand (afy)	Net Wastewater Generation (gpd)	Solid Waste Generation (tpy)
Alternative 3	36 ^a	38,168 ^b	1,236 ^c
Project	76	76,844	2,175
Project with Building A Residential/Commercial	68	76,844	1,433
^a Based on water demand of 195 gpd/du (same as Project with Building A Residential/Commercial) plus 3.36 afy for commercial uses and 0.19 afy for landscaping less 30.72 afy for existing uses to be replaced (see Table 3.11-8 in Section 3.11, Utilities and Service Systems, of this Draft EIR) ^b Based on Los Angeles County Sanitation Districts wastewater loading rates of 156 gpd/du for residential of five units or more and 1,000 gpd/1,000 sf for 8,882 sf of restaurant less 15,798 gpd for existing uses to be replaced ^c Based on the City's 2019 disposal rate of 9.2 PPD per capita and 13.4 PPD per employee afy: acre-feet per year; gpd: gallons per day; tpy: tons per year; du: dwelling unit; sf: square feet; PPD: pounds per day			

Electric and natural gas services are regulated by the California Public Utilities Commission (CPUC), which requires that these utilities provide services as required by the public. Telecommunications services are provided on demand in a free market system. Although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 3 related to utilities and service systems would be comparatively less.

Ability to Meet Project Objectives

Alternative 3 would not meet objectives 3 and 4 because this alternative would not provide assisted living facilities or otherwise provide for varying levels of housing for seniors. As such, this Alternative would not provide assisted living facilities with nearby access to local commercial services, health care facilities, community facilities, and public transit. Nor would this Alternative contribute to satisfying local and regional demand for varying level of care to individuals. Alternative 3 would partially meet objectives 1 and 2. The ground floor commercial uses proposed in Building A under this alternative would provide jobs, services, and revenues, in a mixed-use setting in an underutilized site; thereby contributing to the fiscal health of the City and the Central District. However, Alternative 3 would result in a net reduction in commercial land uses on the site compared to the existing conditions.

Alternative 3 would meet objectives 5, 6, and 7. The buildings constructed under this alternative would comply with State and local energy- and water-efficiency requirements and would retain and integrate the historic resources on the site. Also, as discussed above, this alternative would result in reduced VT and VMT per capita and reduced water demand, wastewater generation, and solid waste generation compared to the Project and Project with Building A Residential/Commercial. As such, Alternative 3 would result in a sustainable investment in land uses providing for the needs of residents and businesses in proximity to transit opportunities.

Conclusion

Alternative 3 would result in comparatively reduced impacts related to air quality, energy, GHG emissions, public services, recreation, transportation, and utilities and service systems. For all other topics, including cultural and paleontological resources, hazards and hazardous materials, land use and planning, noise, and tribal cultural resources, Alternative 3 would result in similar impacts. Notably, this alternative would not reduce any of the impacts identified for the Project and Project with Building A Residential/Commercial that would require mitigation during construction to reduce the impacts to a less than significant level.

4.3.4 ALTERNATIVE 4: ALL MEDICAL OFFICE PROJECT WITH VARIANCE FOR HISTORIC RESOURCES

Description of the Alternative

Alternative 4 assumes the demolition of 6 (of the 9) existing buildings totaling 45,912 sf, construction of 2 new buildings totaling 338,376 sf, and 79,553 sf of existing development to be retained (i.e., Whole Foods Market and the historic buildings at 501 and 523 South Arroyo Parkway), the same as the Project or Project with Building A Residential/Commercial. However, Alternative 4 assumes the new buildings would include solely medical office uses except for ground-floor commercial in Building A.

As shown in Table 4-1 above, Alternative 4 would result in a total of 417,929 sf of aboveground development, including the existing buildings to be retained, as follows:

- Building A: a 154,000-sf, 7-story (aboveground) medical office building and ground-floor commercial uses;
- Building B: a 184,376-sf, 7-story (aboveground) medical office building; and
- Up to 1,218 parking spaces in 7 subterranean levels.

Alternative 4 would have maximum building heights, including parapets, of 93.5 feet, the same as the Project. This alternative assumes the historic resources would be retained and incorporated into the design with a variance for historic resources proposed. Alternative 4 assumes the retained historic buildings would operate as restaurants, the same as the Project. Because the same building footprints are assumed under Alternative 4 as the Project, the same number and locations of trees would be removed, and the planting of two new street trees would be required. The points of ingress/egress and on-site circulation would be the same as the Project.

Alternative 4 would involve the same construction phases and overall schedule as the Project, with construction beginning in 2023 over approximately 34 months. Because Alternative 4 would propose two additional levels of subterranean parking, based on a proportional increase in grading per level for the Project, Alternative 4 would involve the excavation and export of approximately 257,614 cy of soil generating an estimated 18,401 one-way truck trips over the course of 4 months (103 workdays). This alternative would result in approximately 40 percent more excavation (or 73,604 cy) than the Project and approximately 75 percent more excavation (or 110,406 cy) than the Project with Building A Residential/Commercial.

Comparative Analysis of Environmental Impacts

Air Quality

Alternative 4 would result in greater construction-related criteria air pollutant emissions than the Project or Project with Building A Residential/Commercial, as this alternative would involve a total of seven levels of subterranean parking. This alternative would result in approximately 40 percent more excavation (or 73,604 cy) than the Project and approximately 75 percent more excavation (or 110,406 cy) than the Project with Building A Residential/Commercial. Therefore, there would be a greater amount of excavation activity with off-road equipment and a greater number of truck trips for soil export. Similarly, as shown in Table 4-5, Alternative 4 Transportation Analysis Comparison, below under “transportation”, this alternative would result in an increased VT and VMT per capita, compared to the Project and Project with Building A Residential/Commercial. Therefore, the impacts of Alternative 4 related to air quality would be comparatively greater than the Project and Project with Building A Residential/Commercial.

Cultural and Paleontological Resources

Alternative 4 would also integrate the historic buildings (501 and 523 South Arroyo Parkway). Therefore, Alternative 4 would result in the potential significant impact related to alterations to these buildings associated with integration into the Project and occupation by new tenants, requiring implementation of MM CUL-1. Although Alternative 4 would require a greater depth of excavation than the Project and the Project with Building A Residential/Commercial, Alternative 4 would result in the same potential impacts to cultural resources as the potential for impacts to unknown historic (buried) and archaeological resources is associated with any excavation in both disturbed and native soils. Therefore, Alternative 4 would result in the same potential impact as the Project and Project with Building A Residential/Commercial and require implementation of MM CUL-2 to reduce this impact to a less than significant level. This Alternative would have less than significant impacts related to paleontological resources, the same as the Project and Project with Building A Residential/Commercial.

Energy

Alternative 4 would result in greater construction-related energy use than the Project or Project with Building A Residential/Commercial, as this alternative would involve a total of seven levels of subterranean parking. This alternative would result in approximately 40 percent more excavation (or 73,604 cy) than the Project and approximately 75 percent more excavation (or 110,406 cy) than the Project with Building A Residential/Commercial. Therefore, there would be a greater amount of excavation activity with off-road equipment and a greater number of truck trips for soil export.

Similarly, as shown in Table 4-5, Alternative 4 Transportation Analysis Comparison, below under “transportation”, this alternative would result in an increased VT and VMT per capita, compared to the Project and Project with Building A Residential/Commercial. As such, Alternative 4 would result in greater long-term mobile (i.e., vehicle) energy demand; however, stationary (i.e., not transportation/mobile) energy demand would be similar to the Project and Project with Building A Residential/Commercial. Therefore, Alternative 4 would be less energy efficient in construction and operation than the same amount of above-ground development as the Project or Project with Building A Residential/Commercial. Therefore, the impacts of Alternative 4 related to energy use would be comparatively greater than the Project and Project with Building A Residential/Commercial.

Greenhouse Gas Emissions

Alternative 4 would result in greater construction related GHG emissions than the Project or Project with Building A Residential/Commercial, as this alternative would involve a total of seven levels of subterranean parking. This alternative would result in approximately 40 percent more excavation (or 73,604 cy) than the Project and approximately 75 percent more excavation (or 110,406 cy) than the Project with Building A Residential/Commercial. Therefore, there would be a greater amount of excavation activity with off-road equipment and a greater number of truck trips for soil export. Similarly, as shown in Table 4-5, Alternative 4 Transportation Analysis Comparison, below under “transportation”, this alternative would result in an increased VT and VMT per capita, compared to the Project and Project with Building A Residential/Commercial. Vehicle trips are a major driver of GHG emissions, and a higher VMT reflects a greater relative contribution of the site’s GHG emissions. Therefore, the impacts of Alternative 4 related to GHG emission would be comparatively greater than the Project and Project with Building A Residential/Commercial.

Hazards and Hazardous Materials

Alternative 4 would result in the same potential to expose construction personnel or other individuals to ACMs or lead-based paint LBP that could occur with the Project or Project with Building A Residential/Commercial, as this impact is associated with demolition activities. Construction of this alternative would result in the transport and handling of the same hazardous materials typical of construction activities and would also result in less than significant impacts through compliance with applicable regulations. Alternative 4 would result in the generation of biomedical waste and other hazardous materials common to commercial and medical uses. As with the Project, all transport, use, and disposal of hazardous materials under this alternative would be conducted in compliance with applicable regulations and would result in less than significant impacts. Like the Project and Project with Building A Residential/Commercial, Alternative 4 would result less than significant impacts related to hazards and hazardous materials.

Land Use and Planning

Under Alternative 4, there would also be change in zoning to a PD zone and adoption of a PD Plan. Similarly, a variance for historic resources would be requested to implement these land uses, the same as the Project and Project with Building A Residential/Commercial. Because a PD zone simultaneously establishes applicable land use regulations and development standards specific to that zoning district and is developed in consideration of existing zoning requirements, with approval of the zone change to a PD zone and approval of this alternative, including Design Review, Alternative 4 would be considered compatible with the City's zoning designations. However, this alternative would provide less mixed-use development near transit and other existing infrastructure (e.g., roads, utilities, services), and would provide no senior care or housing facilities that are needed in the region.

Regarding land use plans, policies, or regulations adopted for the purpose of avoiding or reducing an environmental effect, for the City of Pasadena, these are focused on historic resources, GHG emissions/sustainability, and trees/open space. Alternative 4 would result in the same potential impact on historic resources and require implementation of MM CUL-1, as the Project. Alternative 4 would be consistent with SCAG's 2020-2045 RTP/SCS, as this alternative would place a higher density land use on an underutilized site near transit. However, the provision of solely medical office with limited commercial, and no mix of housing and/or senior care and housing, would result in a land use pattern that contributes to higher GHG emissions than the Project or Project with Building A Residential/Commercial. Also, this alternative would result in an increased VT and VMT per capita, compared to the Project and Project with Building A Residential/Commercial. Alternative 4 would result in the same number of tree removals and the same requirement for planting of two new street trees as the Project or Project with Building A Residential/Commercial. Therefore, the impacts of Alternative 4 related to land use and planning would be comparatively greater than the Project and Project with Building A Residential/Commercial.

Noise

Alternative 4 would generate the same level of construction noise and vibration as the Project and Project with Building A Residential/Commercial and require implementation of MM NOI-1 to reduce potential vibration impacts to the remaining on-site buildings to a less than significant level. Although there would be a greater amount of excavation associated with this Alternative, this would not affect the noise generation on a daily basis during the excavation phase of construction. Like the Project or Project with Building A Residential/Commercial, although Alternative 4 would generate a higher volume of vehicle trips than the existing conditions, it would also not result in a perceptible change in noise levels. This is because it generally takes a doubling of traffic volumes to generate a change in noise levels that is perceptible to human hearing (i.e., about 3 dBA). The

noise generated from stationary uses from this alternative would be similar to the Project and Project with Building A Residential/Commercial and would also be less than significant. Like the Project and Project with Building A Residential/Commercial, Alternative 4 would result in less than significant impacts related to noise with implementation of MM NOI-1.

Public Services and Recreation

Alternative 4 would result in a reduced demand for public services tied to resident population (i.e., schools and/or libraries) and recreational facilities as the Project with Building A Residential/Commercial, because this alternative would not include any housing. Alternative 4 would result in a similar demand for fire protection and police protection services, because these services are tied to all land development regardless of type. Therefore, although impacts with the Project and Project with Building A Residential/Commercial are less than significant, the impacts of Alternative 4 related to public services and recreation would be comparatively lesser than the Project and Project with Building A Residential/Commercial.

Transportation

Pasadena DOT calculated the transportation metrics for each alternative. As shown in Table 4-5, Alternative 4 Transportation Analysis Comparison, this alternative would result in an increased VT and VMT per capita, compared to the Project and Project with Building A Residential/Commercial. Additionally, the VT and VMT per capita would exceed the significance threshold for these metrics. The Alternative 4 metrics related to bicycle and transit networks and pedestrian accessibility are similar to the Project and Project with Building A Residential/Commercial.

**TABLE 4-5
ALTERNATIVE 4 TRANSPORTATION ANALYSIS COMPARISON**

Transportation Performance Metrics	Significant Impact Cap (Existing)	Incremental Change (Existing + Alternative 4)	Incremental Change (Existing + Project / Exchange Project)	Significant Impact for Alternative?
VMT Per Capita	>22.6	28.6	19.5 / 8.2	Yes
VT Per Capita	>2.8	2.9	2.0 / 1.4	Yes
Proximity and Quality of Bicycle Network	<31.7%	32.1%	32.0% / 32.0%	No
Proximity and Quality of Transit Network	<66.6%	66.9%	66.8% / 66.8%	No
Pedestrian Accessibility	<3.9	3.9	3.9 / 3.9	No
VMT: vehicle miles traveled; VT: vehicle trips				
Source: Pasadena DOT 2022c.				

Therefore, Alternative 4 would exceed the CEQA transportation thresholds defined in the City's TIA Guidelines, resulting in a new significant impact compared to the Project or Project with Building A Residential/Commercial. Therefore, the impacts of Alternative 4 related to transportation would be comparatively greater than the Project and Project with Building A Residential/Commercial.

Tribal Cultural Resources

Alternative 4 would result in similar impacts to tribal cultural resources as the Project with Building A Residential/Commercial, although this alternative would have a greater amount of excavation.

The potential for impacts to unknown tribal cultural resources is associated with any excavation in both disturbed and native soils. Therefore, Alternative 4 would result in the same potential impact and require implementation of MM TCR-1 to reduce this impact to a less than significant level, same as the Project and Project with Building A Residential/Commercial.

Utilities and Service Systems

Based on the employee generation per square foot of the Project, Alternative 4 would generate approximately 1,435 employees associated with the medical office uses and approximately 9 employees associated with the commercial uses on the ground floor of Building A. As shown in Table 4-6, Alternative 4 Utility Comparison, compared to the Project and Project with Building A Residential/Commercial, this alternative would result in higher water demand and solid waste generation based on the applicable demand/generation rates for these utilities. For wastewater generation, Alternative 4 would result in a lower generation than the Project and Project with Building A Residential/Commercial.

**TABLE 4-6
ALTERNATIVE 4 UTILITY COMPARISON**

Scenario	Net Water Demand (afy)	Net Wastewater Generation (gpd)	Solid Waste Generation (tpy)
Alternative 4	86 ^a	60,159 ^b	3,531 ^c
Project	76	76,844	2,175
Project with Building A Residential/Commercial	68	76,844	1,433
^a Based on water demand of 300 gpd/1,000 sf for 335,376 sf of medical office uses plus 3.36 afy for commercial uses and 0.19 afy for landscaping less 30.72 afy for existing uses to be replaced (see Table 3.11-8 in Section 3.11, Utilities and Service Systems, of this Draft EIR) ^b Based on Los Angeles County Sanitation Districts wastewater loading rates of 200 gpd/1,000 sf of professional building and 1,000 gpd/1,000 sf for 8,882 sf of restaurant less 15,798 gpd for existing uses to be replaced ^c Based on the City's 2019 disposal rate of 13.4 PPD per employee to a total of 1,444 employees afy: acre-feet per year; gpd: gallons per day; tpy: tons per year; du: dwelling unit; sf: square feet; PPD: pounds per day			

Electric and natural gas services are regulated by the California Public Utilities Commission (CPUC), which requires that these utilities provide services as required by the public. Telecommunications services are provided on demand in a free market system. Based on the substantive increase in water demand and solid waste generation, the impacts of Alternative 4 related to utilities and service systems would be comparatively greater than the Project and Project with Building A Residential/Commercial but would remain less than significant.

Ability to Meet Project Objectives

Alternative 4 would not meet objectives 3 and 4 because this Alternative would not provide assisted living facilities or otherwise provide for varying levels of housing for seniors. As such, this Alternative would not provide assisted living facilities with nearby access to local commercial services, health care facilities, community facilities, and public transit. Nor would this Alternative contribute to satisfying local and regional demand for varying level of care to individuals.

Alternative 4 would partially meet objective 5. The buildings constructed under this Alternative would comply with State and local energy- and water-efficiency requirements, same as the Project and Project with Building A Residential/Commercial. However, as discussed above, this Alternative would result in greater VT and VMT per capita and result in a new significant impact related to transportation. Additionally, Alternative 4 would result in substantively higher water

demand and solid waste generation, while wastewater generation would be lower than the Project and Project with Building A Residential/Commercial.

Alternative 4 would meet objectives 1, 2, 6, and 7. This Alternative would provide jobs, services, and revenues, on an underutilized site and in proximity to transit opportunities; thereby contributing to the fiscal health of the City and the Central District. Alternative 4 would retain and integrate the historic resources on the site.

Conclusion

Alternative 4 would result in comparatively increased impacts related to air quality, energy, GHG emissions, land use and planning, and utilities and service systems. For transportation, the impacts of Alternative 4 related to conflict with the City's TIA Guidelines would be comparatively greater and impacts related to all other transportation issues (circulation system policies, traffic safety, and emergency access) would be similar. For public services and recreation, Alternative 4 would result in comparatively reduced impacts. For all other topics, including cultural and paleontological resources, hazards and hazardous materials, noise, and tribal cultural resources, Alternative 4 would result in similar impacts. Notably, this Alternative would not reduce any of the impacts identified for the Project and Project with Building A Residential/Commercial that would require mitigation during construction to reduce the impacts to a less than significant level.

4.4 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires the identification of an environmentally superior alternative. Section 15126.6(e)(2) of the State CEQA Guidelines states that, if the No Project Alternative is the environmentally superior alternative, then the EIR shall also identify an environmentally superior alternative among the other alternatives. Table 4-7, Comparison of Alternative Impacts, on page 4-28 provides a summary comparison of impacts resulting from all alternatives to the Project and Project with Building A Residential/Commercial. Table 4-8, Ability of Project Alternatives to Meet Objectives, on page 4-29 provides a summary of each alternatives relative ability to meet the Project objectives.

As shown in Table 4-7, only Alternative 1 would comparatively reduce all environmental impacts of the Project or Project with Building A Residential/Commercial. Of the build alternatives (i.e., Alternatives 2, 3, 4), Alternative 2/Alternative 2 with Building A Residential/Commercial and Alternative 3 would comparatively have a similar reduction in impacts, with all topics either reduced (six topics reduced for each alternative) or equal compared to both the Project and Project with Building A Residential/Commercial. Alternative 2/Alternative 2 with Building A Residential/Commercial and Alternative 3 both have comparatively reduced impacts related to the same topics except energy and noise. Alternative 2/Alternative 2 with Building A Residential/Commercial would have similar impacts related to energy and reduced impacts related to noise. Alternative 3 would have reduced impacts related to energy and similar impacts related to noise. Alternative 4 would comparatively increase environmental impacts for several topics.

The comparatively reduced noise impact for Alternative 2 and Alternative 2 with Building A Residential/Commercial is related to reduced operational traffic generation. However, this change in traffic would not result in an audible change in noise levels (i.e., 3 dBA or more).

The comparative increased energy impact for Alternative 2 and Alternative 2 with Building A Residential/Commercial is related to these scenarios being a less efficient use of land. While this Alternative would not be considered to result wasteful, inefficient, or unnecessary consumption of energy, this Alternative would result in the same amount of demolition to redevelop an underutilized site and the resulting development would be approximately half as dense as

Alternative 3 or the Project and Project with Building A Residential/Commercial. As discussed previously, although this Alternative would result in a reduced VT and VMT per capita, it would not support regional and local planning policies related to reducing vehicle trips per capita by increasing density (including housing) near transit to the same degree as Alternative 3 or Project and Project with Building A Residential/Commercial.

Critically, Alternative 2 and Alternative 2 with Building A Residential/Commercial would be less consistent with the 2020-2045 RTP/SCS than Alternative 3 or the Project and Project with Building A Residential/Commercial. This is because of the reduced amount of redevelopment on an underutilized site, particularly near transit, would result in a land use pattern that contributes less towards the GHG emissions reduction targets compared to Alternative 3, the Project, and Project with Building A Residential/Commercial. This Alternative would also provide less mixed-use development near transit and other existing infrastructure (e.g., roads, utilities, services).

On balance, when considering that the difference in comparative impacts between Alternative 2/Alternative 2 with Building A Residential/Commercial and Alternative 3 ties into overriding land use policies adopted for the purposing of avoiding or reducing an environmental effect, the higher intensity development represented by Alternative 3 would be a preferable scenario.

None of the build alternatives would reduce or eliminate the significant impacts of the Project and Project with Building A Residential/Commercial with or without mitigation. This is because these impacts are related to construction activity and would occur regardless of the scope of construction. Specifically, potential impacts to cultural and tribal cultural resources are associated with any excavation in both disturbed and native soils. The potential impact related to vibration damage to the existing on-site buildings to remain would occur with any of the alternatives because the same type(s) of construction activity and equipment that could result in this impact would be used.

Alternative 3 is concluded to be the environmentally superior alternative because of (1) reduced comparative impacts, (2) the extent of the reduction in VT and VMT per capita compared to both the Project and Project with Building A Residential/Commercial while maximizing the redevelopment of an underutilized site near transit, and (3) a greater consistency with local, regional, and State policies adopted for the purpose of avoiding or reducing an environmental effect.

**TABLE 4-7
COMPARISON OF IMPACTS FOR PROJECT ALTERNATIVES**

PEIR Section & Environmental Issue	Comparison of Each Alternative to Project/Project with Building A Residential/Commercial Impacts			
	Alternative 1 (No Project/ No Development)	Alternative 2 (Project Development with Existing Zoning) ^a	Alternative 3 (All Residential Project with Variance for Historic Resources)	Alternative 4 (All Medical Office Project with Variance for Historic Resources)
3.1 Air Quality	<	<	<	>
3.2 Cultural and Paleontological Resources	<	=	=	=
3.3 Energy	<	=	<	>
3.4 Greenhouse Gas Emissions	<	<	<	>
3.5 Hazards and Hazardous Materials	<	=	=	=
3.6 Land Use and Planning	<	=	=	>
3.7 Noise	<	<	=	=
3.8 Public Services and Recreation	<	<	<	<
3.9 Transportation	<	<	<	>
3.10 Tribal Cultural Resources	<	=	=	=
3.11 Utilities and Service Systems	<	<	<	>
^a Reflects analysis of both Alternative 2 and Alternative 2 with Building A Residential/Commercial; if one comparative impact finding is shown it applies to both scenarios Legend: > – Impact Greater than Project/Project with Building A Residential/Commercial < – Impact Less than Project/Project with Building A Residential/Commercial < / > – Impact Less than Project / Greater than Project with Building A Residential/Commercial = – Impact Same as Project/Project with Building A Residential/Commercial (with mitigation if applicable)				

**TABLE 4-8
ABILITY OF PROJECT ALTERNATIVES TO MEET OBJECTIVES**

Project Objectives	Comparison of Each Alternative to Project Objectives			
	Alternative 1 (No Project/ No Development)	Alternative 2 (Project Development with Existing Zoning)	Alternative 3 (All Residential Project with Variance for Historic Resources)	Alternative 4 (All Medical Office Project with Variance for Historic Resources)
1. Reinforce and strengthen Arroyo Parkway as a major commercial corridor and the Central District's economic vitality through the development of multi-story buildings with a variety of complementary commercial and/or residential uses in underutilized areas with higher development capacity.	○	◐	◐	●
2. Provide jobs, services, revenues, and opportunities that will support Pasadena as an economically vital city and allow for continued fiscal health	○	◐	◐	●
3. Develop assisted living facilities that have access to local commercial services, health care facilities, community facilities, and public transit	○	◐	○	○
4. Satisfy local and regional demand for varying levels of care (independent living, residential care, continuing care) to individuals, depending on need, that are transit-accessible and pedestrian-friendly	○	◐	○	○
5. Improve Pasadena's infrastructure and urban form through modernized buildings that are energy- and water-efficient	○	◐	●	◐
6. Preserve and integrate Pasadena's historic resources as part of a complementary development that reduces the risk of resource demolition, deterioration by neglect, and/or impacts from natural circumstances.	○	◐	●	●
7. Invest sustainably by providing for the needs of existing and future residents and businesses while in proximity to transportation opportunities	○	◐	●	●

SECTION 5.0 OTHER REQUIRED CEQA CONSIDERATIONS

Section 15126 of the State CEQA Guidelines requires that all aspects of a project be considered when evaluating its impact on the environment, including planning, acquisition, development, and operation. An EIR must identify the following for the project being analyzed (the location of the required information in this Draft EIR is presented in parentheses):

- a) Significant environmental effects of the proposed Project (see Table ES-1 and Sections 3.1 through 3.11);
- b) Significant environmental effects which cannot be avoided if the proposed Project is implemented (see Table ES-1, Sections 3.1 through 3.11, and Section 4.0);
- c) Significant irreversible environmental changes which would be involved in the proposed Project should it be implemented (see Section 5.1);
- d) Growth-inducing impacts of the proposed Project (see Section 5.2);
- e) The mitigation measures proposed to minimize significant effects (see Table ES-1 and Sections 3.1 through 3.11); and,
- f) Alternatives to the proposed Project (see Section 4.0)

5.1 **SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES**

Section 15126.2(c) of the State CEQA Guidelines requires a discussion of any significant irreversible environmental changes that would be caused by the Project. Section 15126.2(c) states:

“Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible, since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impact and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current compensation is justified.”

As such, a project would generally result in significant irreversible environmental changes if:

- The proposed consumption of resources is not justified (e.g., the project involved the wasteful or inefficient use of energy);
- The project would involve a large commitment of nonrenewable resources; or
- The project would involve uses in which irreversible damage could result from any potential environmental accidents associated with the project.

The environmental effects related to the implementation of the proposed Project are analyzed in Sections 3.1 through 3.11 of this Draft EIR and in the Initial Study (Appendix A-1). Implementation of the Project would convert all but two of existing commercial buildings to a medical office building, commercial uses, and an assisted living building with subsurface parking and related improvements. The Project with Building A Residential/Commercial would convert the site into a residential building, commercial uses, and an assisted living building. Because the proposed uses would be a redevelopment of the site, neither the Project nor Project with Building A Residential/Commercial is considered a new long-term commitment of land resources. Nevertheless, construction activities would result in the irretrievable commitment of nonrenewable

energy resources, primarily in the form of fossil fuels (including fuel oil), natural gas, and gasoline for automobiles and construction equipment. However, the Project or Project with Building A Residential/Commercial would not be creating a need for jobs or housing. The resulting growth under either scenario would fulfill an existing and anticipated future need that is based on estimates of local and regional population growth. Therefore, the non-renewable resources used in construction would be expected to be consumed by housing and employment-generating land uses that are anticipated, and are unfulfilled, in the City and the wider region. Additionally, the land uses proposed are not unusually wasteful or excessive in terms of construction materials and fossil fuel use.

Over the long term, operation of the new land uses would require the commitment and reduction of nonrenewable and slowly renewable resources, including petroleum fuels and natural gas (for vehicle emissions, lighting, heating, and cooling of structures). Other resources that are slow to renew and/or recover from environmental stressors would also be impacted by long-term implementation of the Project or Project with Building A Residential/Commercial (e.g., air quality through the combustion of fossil fuels and production of greenhouse gases, and water supply through the increased potable water demands for drinking, cooking, cleaning, landscaping, and general maintenance needs). However, the proposed uses would be required to meet Title 24 energy efficiency standards and applicable CALGreen requirements. As such, operation of the proposed uses would be more energy efficient than any existing use on the site. Additionally, the land uses proposed are not unusually wasteful or excessive in terms of fossil fuel use. This is in part because of the higher density development for the Project site. Nonetheless, the Project or Project with Building A Residential/Commercial represent a long-term commitment of essentially non-renewable resources.

Regarding the potential for irreversible damage caused by environmental accidents, while construction and operation of the Project or Project with Building A Residential/Commercial would result in the use, transport, storage, and disposal of hazardous materials and/or wastes typical of urban areas, such as associated with medical/health care facilities, dry cleaners, restaurant and office cleaning/maintenance, and landscape maintenance, as described in Section 3.5, Hazards and Hazardous Materials, all activities would comply with applicable State and federal laws related to hazardous materials transport, use, and storage. This would significantly reduce the likelihood and severity of accidents that could result in irreversible environmental damage, and such an accident resulting in irreversible damage is not considered reasonably foreseeable.

In summary, the Project or Project with Building A Residential/Commercial would result in the irretrievable commitment of limited, slowly renewable, and nonrenewable resources, which would reduce the availability of these particular resource quantities for future generations or for other future uses. However, the use of such resources are anticipated and accounted for in the State, regional, and local regulations, which generally prohibit wasteful practices and require environmentally conservative actions, as summarized in the “Relevant Programs and Regulations” discussion within Sections 3.1 through 3.11 of this Draft EIR. Therefore, although irreversible changes would result from implementation of the Project or Project with Building A Residential/Commercial, such changes would not be considered significant, and no mitigation is required.

5.2 GROWTH-INDUCING IMPACTS

Pursuant to Section 15126.2(d) of the State CEQA Guidelines, this analysis examines ways in which the Project or Project with Building A Residential/Commercial could foster economic or population growth or the construction of additional development, either directly or indirectly, in the surrounding environment. Also, this section discusses whether the Project or Project with Building A Residential/Commercial could encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. Growth can be induced in a number of

ways, such as through the elimination of obstacles to growth, through the stimulation of economic activity within the region, or through the establishment of policies or other precedents that directly or indirectly encourage additional growth. Although growth inducement itself is not considered an environmental effect, it could potentially lead to environmental effects.

Accordingly, a project may foster spatial, economic, or population growth in a geographic area if it meets one or more of the following criteria:

1. Removal of an obstacle to growth (e.g., construction or extension of major infrastructure, providing new access to an area);
2. Foster population growth (e.g., construction of additional housing), either directly or indirectly;
3. Foster economic effects that could result in other activities that could significantly affect the environment (e.g., changes in revenue base, employment expansion);
4. Establish a precedent-setting action that could result in other activities that could significantly affect the environment (e.g., an innovation, a change in zoning, general plan amendment); and/or
5. Development of or encroachment on an isolated or adjacent area of open space (being distinct from an in-fill project).

The potential growth-inducing impacts associated with the Project and Project with Building A Residential/Commercial are evaluated below against these criteria. It should be noted that growth-inducing effects are not necessarily beneficial, detrimental, or of little significance to the environment (Section 15126.2[d] of the State CEQA Guidelines). This issue is presented to provide additional information on ways in which this Project could contribute to significant changes in the environment, beyond the direct consequences of implementing the Project or Project with Building A Residential/Commercial.

1) Would this Project remove obstacles to growth (e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area or through changes in existing regulations pertaining to land development)?

As discussed in Section 3.11, Utilities and Service Systems, no major new infrastructure facilities are required to support the Project or Project with Building A Residential/Commercial beyond the new connections to existing utilities that would be constructed on the site. Existing utility facilities are available adjacent to the Project site; however, new service connections to these existing lines (including water, sewer, electric, telecommunication systems, and storm drain lines) would be needed. There are existing roadways that serve the site and no new roadways or extension of existing roadways would be necessary.

As discussed in Section 2.7, Intended Uses of the EIR, approval of the Planned Development (PD) Zoning District and PD Plan (this includes approval of the Affinity Project, zoning map amendment to rezone the property from CD-6 to PD-39, and variance for Historic Resources for Building Height) would be required to allow for development of the Project or Project with Building A Residential/Commercial. But these changes would be specific to the Project site and would not remove obstacles to growth in the surrounding area. The proposed uses under either scenario are in line with the collective uses and growth within the area and part of the development in the City that has been trending toward greater density development. As such, this type of growth is consistent with the general uses in the Project area.

2) Would this Project result in the need to expand one or more public services to maintain desired levels of service?

As discussed in Section 3.8, Public Services and Recreation, none of the public service agencies consulted—Pasadena Fire Department; Pasadena Police Department; Pasadena's Parks, Recreation, and Community Services Department; and Pasadena Public Library—during the preparation of this Draft EIR indicated that the Project or Project with Building A Residential/Commercial would necessitate the immediate expansion of their existing resources in order to maintain desired levels of service. While Pasadena Unified School District was consulted, there was no response. However, as discussed in Section 3.8, Senate Bill 50 establishes developer fees that are considered full and complete mitigation for school facilities. If any public service agency's resources do need to be expanded because of Citywide growth, funding mechanisms are in place through existing regulations to accommodate such growth. The Project or Project with Building A Residential/Commercial would not, therefore, have significant growth-inducing consequences with respect to public services.

3) Would this Project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?

During construction of the Project or Project with Building A Residential/Commercial, a number of design, engineering, and construction-related jobs would be created at the site. This would be a temporary situation, lasting until construction is completed. The construction crew would obtain commercial goods and services from existing businesses near the site. This would provide economic stimulus in the area; however, these jobs are typically filled by existing residents of the region and would not be substantial enough to foster other activities (e.g., new real estate development) that would have significant effects on the environment.

As discussed in Section 2.0, Environmental Setting and Project Description, operation of the Project would result in up to 222 residents, 737 employees, and up to 694 visitors per day. Operation of the Project with Building A Residential/Commercial would result in up to 715 residents, 95 employees, and up to 128 visitors per day. This would represent an increased demand for economic goods and services in the Project area and could, therefore, encourage the creation of new businesses, the expansion of existing businesses, or investment in commercial uses near the site that address these economic needs.

At any given time, there are a variety of vacant commercial buildings for sale or lease available throughout the City that can accommodate future business. New commercial or mixed-use development not utilizing existing buildings at the respective site would generally involve site redevelopment. With regard to expansion of commercial uses in the City resulting in environmental impacts, both the use of existing buildings (and related updates) or redevelopment of a site are generally relatively low impact activities compared to development on greenfields and/or locations without existing utility and transportation infrastructure. While there could be an indirect, growth-inducing effect caused by the Project (or Project with Building A Residential/Commercial), such development would be within the growth anticipated for the City. As noted in Section 2.6, Approach to Cumulative Impact Analysis, there is over 3.3 million commercial square feet of remaining development capacity throughout the City pursuant to the City's General Plan (refer to Table 2-5) (Pasadena 2021).

Demand for housing from on-site employees not already living in the City may also increase occupancy in the City's vacant dwelling units (estimated at 11,479 dwelling units

in May 2021) (DOF 2021). Additionally, any demand for housing from employees would also be within the growth anticipated for the City, as there are 2,483 residential units in the City's remaining development capacity as of October 2021 (Pasadena 2021). The environmental impacts of future development near the site would have to be considered by the City of Pasadena as part of individual environmental reviews, in accordance with CEQA. Therefore, the Project and Project with Building A Residential/Commercial would not result in significant impacts with regards to indirect growth due to encouragement of economic effects.

4) Would approval of this Project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment?

The Project and Project with Building A Residential/Commercial would not require a General Plan amendment, but approval of a PD district and PD Plan (includes zoning map amendment to rezone the property from CD-6 to PD-39, and variance for Historic Resources for Building Height). Adoption of a PD zoning district would reclassify the Project site from CD-6 to PD-39, while simultaneously establishing applicable land use regulations and development standards that are specific to the newly established zoning district. The regulations and standards that dictate permitted and conditionally permitted land uses and development would be prescribed in the accompanying PD Plan. This ensures the Project or Project with Building A Residential/Commercial is developed as intended. PD Plans are developed in consideration of existing zoning requirements that are applicable to a project site while also providing flexibility in site usage and building design. As noted previously, this change in zoning would be specific to the Project site. Also, development of the Project site using a PD Plan is not precedent setting because it is an existing, accepted part of the Pasadena Zoning Code.

No changes to any of the City's building safety standards (i.e., building, grading, plumbing, mechanical, electrical, fire codes) are proposed or required to implement this Project. Mitigation measures have been identified in Sections 3.1 through 3.11 to require that Project implementation complies with all applicable federal, State, regional, and City standards and ordinances to ensure that there are no conflicts with applicable land development regulations and that environmental impacts are minimized. Finally, creation of commercial, medical, assisted living, and/or residential facilities is not unique, such that its implementation would set a precedent, facilitating other activities and resulting in significant impacts to the environment.

While the Project may induce development or redevelopment at parcels within the Project area, the potential for reuse of unutilized commercial structures and the (re)development of lands in the surrounding area are subject to property owner discretion and often largely influenced by regional economic conditions and market demands that may have limited or major links to the Project. Site improvements may make adjacent areas more attractive to investors and promote redevelopment. These future projects would require independent environmental review under CEQA. Therefore, the impacts of subsequent proposals would require environmental analysis and associated mitigation to avoid or minimize their potential subsequent impacts.

NOTICE OF PREPARATION ENVIRONMENTAL IMPACT REPORT AND SCOPING MEETINGS

TO: Agencies, Organizations, and Interested Parties

SUBJECT: Notice of Preparation of a Draft Environmental Impact Report in Compliance with Title 14, Section 15082(a) of the California Code of Regulations

The City of Pasadena is the lead agency under the California Environmental Quality Act (CEQA) in the preparation of the Environmental Impact Report (EIR) for the project identified below.

AGENCIES: The City requests your agency's views on the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the proposed project, in accordance with California Code of Regulations, Title 14, Section 15082(b).

ORGANIZATIONS AND INTERESTED PARTIES: The City requests your comments and concerns regarding the environmental issues associated with construction and operation of the proposed project.

PROJECT TITLE: Affinity Project

PROJECT LOCATION: The Project site consists of an approximately 3.3-acre site located between 465 and 577 South Arroyo Parkway, City of Pasadena, within the County of Los Angeles. The site encompasses five parcels developed with a total of nine commercial buildings with seven businesses. The site is bound by East Bellevue Drive on the north, South Arroyo Parkway on the east, East California Boulevard on the south, and the Metro Gold Line on the west. Regional access to the site is provided by State Route (SR) 110 located approximately 0.6-mile due south on Arroyo Parkway (see Exhibit 1, Regional Location and Local Vicinity).

PROJECT DESCRIPTION: The Project Applicant requests approval to rezone the Project site from CD-6 (Central District Specific Plan [CDSP], Arroyo Corridor/Fair Oaks subdistrict), to a Planned Development (PD) zone, and approval of a PD Plan. The Project involves demolition of six (of the nine) existing buildings totaling 45,912 square feet (sf), located at 491, 495, 499, 503, 541, and 577 South Arroyo Parkway and construction of two new buildings: (1) a 154,000-square foot (sf), 7-story (aboveground) medical office building with ground-floor commercial uses (Building A); and (2) a 184,376-sf, 7-story (aboveground) assisted living building with 85,800 sf of assisted living uses and 98,576 sf of independent living uses including up to 95 one- and two-bedroom senior housing units (Building B). As proposed, there would be five subterranean levels providing up to 850 parking spaces. Approximately 31,605 sf of open space, including public and private (for solely resident and staff use) space would be provided across the Project site.

Alternatively, the proposed PD Plan would provide the flexibility to exchange the uses in Building A from medical office and ground floor commercial for the following:

- 3,000 sf of commercial and a sales/leasing management office on the ground floor;
- Up to 197 residential dwelling units; and
- Up to 650 parking spaces in four subterranean levels (one less than the Project as proposed).

Although the Project described is anticipated to reflect the Project to be constructed, the flexibility to exchange uses in Building A would enable the Project to respond to the economic needs and demands of the City at the time of Project implementation. The proposed site layout and the aboveground height, mass, and other parameters of the Building A design would remain the same. The PD Plan would define all aspects of site design and provide caps on the types and amounts of allowable land uses, regardless of whether Building A is developed with medical office or residential dwelling units. It is noted that based on the development cap of 87 dwelling units per acre (du/acre), a total of 289 units could be constructed. Therefore, if a total of 197 units were constructed in Building A, only 92 independent living units could be constructed in Building B. Conversely, if 95 independent living units were constructed in Building B, only 194 units could be constructed in Building A. Exhibit 2, Affinity Project Site Plan, illustrates a plan view layout of the proposed Project.

A total of approximately 79,553 sf of the existing development on site would be retained and integrated into the Project, including the Whole Foods grocery store and associated 275-space subterranean parking structure at 465 South Arroyo Parkway and the two historic structures at 501 and 523 South Arroyo Parkway. The Applicant anticipates that restaurant uses would occupy the approximately 5,882 sf of space in the existing buildings to be retained at 501 and 523 South Arroyo Parkway.

A total of five levels of subterranean parking spanning both proposed buildings would also be constructed to serve the new development as well as the existing structures at 501 and 523 Arroyo Parkway under the Project. For the Project with Building A Residential/Commercial, a total of four levels of subterranean parking spanning both proposed buildings with up to 650 parking spaces would be constructed. The Project uses south of Whole Foods Market would have three ingress/egress points—one on California

Boulevard and two on South Arroyo Parkway. Whole Foods Market would retain the entrance on East Bellevue Drive and the exit onto South Arroyo Parkway.

The Project would result in the removal of 23 non-protected non-native trees on the Project site and 2 protected, non-native street trees. The Project would include a total of 25 trees in above-grade planters within the site. The 15 remaining street trees on site, which are protected by the City of Pasadena's City Trees and Tree Protection Ordinance, would be preserved in place.

The Project site is situated within the Central District Specific Plan and zoned CD-6 (Central District Specific Plan, Arroyo Corridor/Fair Oaks subdistrict). The *City of Pasadena General Plan* land use designation is High Mixed Use. As mentioned, the Applicant seeks approval to rezone the site as a PD district. The Applicant is also requesting a zoning variance for historic resources related to building height. Specifically, the Applicant is requesting an increase in allowable building height to offset the reduction in developable area due to preserving the two historic structures on the Project site.

The Project is anticipated to be constructed beginning in 2023 over a period of approximately 34 months. Project construction would occur from Monday through Saturday, without activity on Sundays or holidays, between the hours defined in Section 9.36.070 (Construction Projects) of the City of Pasadena Municipal Code (PMC) (7:00 AM to 7:00 PM Monday through Friday and 8:00 AM to 5:00 PM on Saturday). The Project is anticipated to be opened to the public in 2026.

POTENTIAL ENVIRONMENTAL EFFECTS: An EIR will be prepared to evaluate the Project's potential impacts on the environment and analyze alternatives. Based on the analysis in the IS, the topics anticipated to be discussed in the EIR include: Air Quality, Cultural and Paleontological Resources, Energy, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Land Use and Planning, Noise, Public Services, Recreation, Transportation, Tribal Cultural Resources, and Utilities and Service Systems.

PUBLIC REVIEW PERIOD: The Notice of Preparation (NOP) and Initial Study will be available for public review and comment pursuant to California Code of Regulations, Title 14, Section 15082(b), beginning on August 5, 2021 and ending on September 3, 2021.

RESPONSES AND COMMENTS: The City requests the public's careful review and consideration of this notice, and it invites any and all input and comments from interested agencies and persons regarding the preparation of the EIR. Please indicate a contact person for your agency or organization and send your responses and comments to: Jason Van Patten, Senior Planner; Phone: (626) 744-6760; E-mail: jvanpatten@cityofpasadena.net; Mailing Address: City of Pasadena, Planning and Community Development Department, 175 North Garfield Avenue, Pasadena, CA 91101.

SCOPING MEETING: Two scoping meetings will be held for the Project, as detailed below. The first scoping meeting will be held with the Planning Commission to receive comments on the proposed Affinity Project Initial Study and contents of the proposed EIR. A second scoping meeting will also be held. You are welcome to attend either scoping meeting and present environmental information that you believe should be addressed in the EIR. The scoping meetings will be held as allowed by applicable health orders because of the COVID-19 pandemic; based on the current pandemic conditions, the two scoping meetings are scheduled as follows in a fully virtual format:

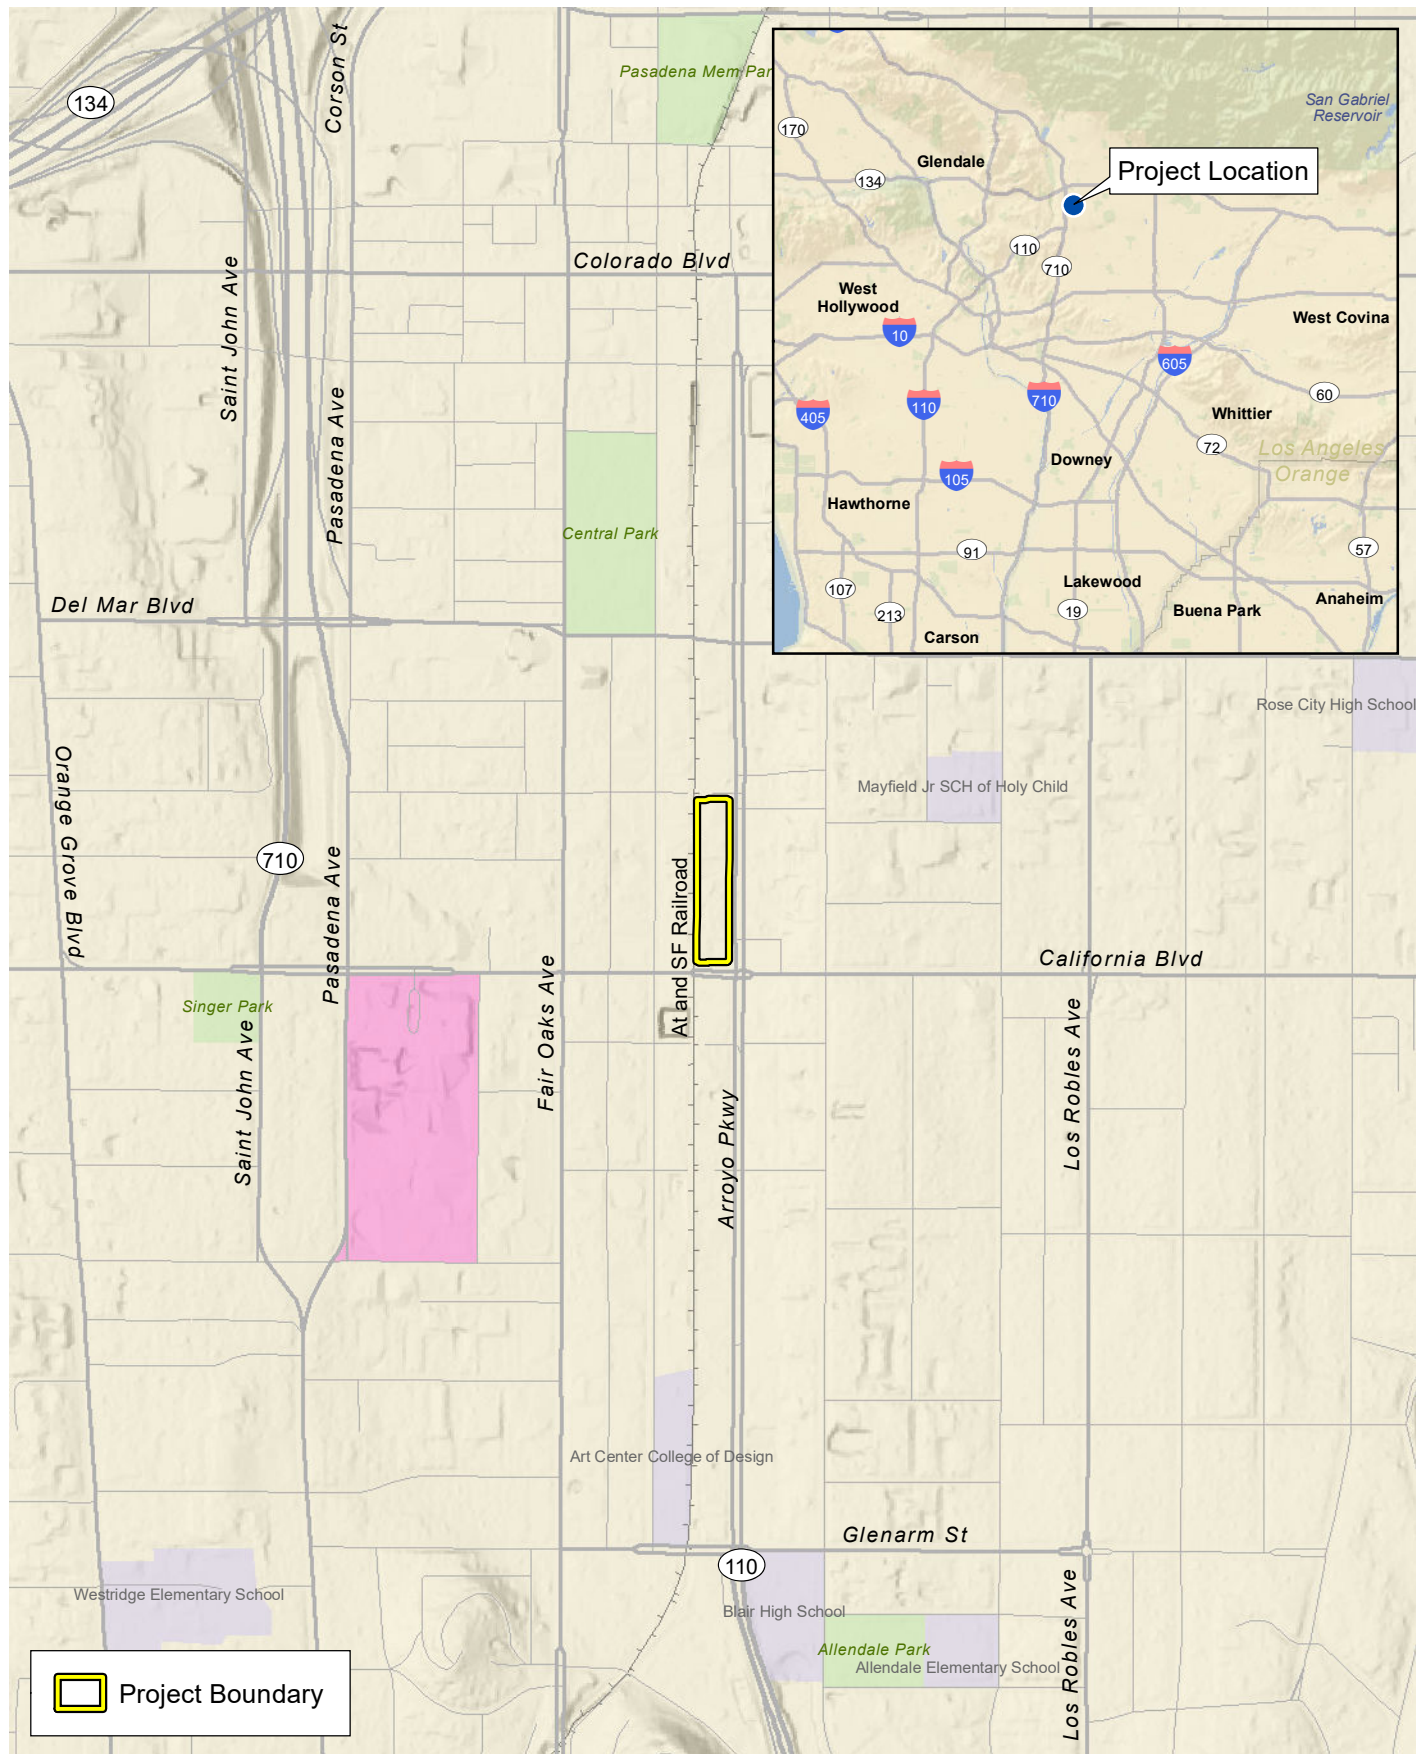

Scoping Meeting #1 (Planning Commission)
Date: August 11, 2021
Time: 6:30 P.M.

Scoping Meeting #2
Date: August 26, 2021
Time: 6:30 P.M.

Please refer to <https://www.cityofpasadena.net/planning/planned-development-39-affinity-project/> for Zoom links to participate in each scoping meeting.

DOCUMENT AVAILABILITY: The NOP and Initial Study are available online at <https://www.cityofpasadena.net/planning/planned-development-39-affinity-project/>. If eventually allowed by health orders during the COVID-19 pandemic, the documents may be made available during regular business hours (8:00 A.M. through 5:00 P.M. Mondays, Tuesdays, Thursdays; 9:30 A.M. through 5:00 P.M. Wednesdays; 8:00 A.M. through 3:30 P.M. alternate Fridays as of July 19, 2021) at the City of Pasadena, Permit Center, 175 N. Garfield Avenue, Pasadena, CA, 91101.

If you require additional information, please contact Jason Van Patten at (626) 744-6760 or submit questions and comments by email at jvanpatten@cityofpasadena.net.

INITIAL STUDY

In accordance with the Environmental Policy Guidelines of the City of Pasadena, this analysis, the associated “Master Application Form,” and/or Environmental Assessment Form and supporting data constitute the Initial Study (IS) pursuant to the California Environmental Quality Act (CEQA) for the proposed Affinity Project (hereinafter referred to as the “Project”). This IS provides the assessment for a determination whether the Project may have a significant effect on the environment.

| 7. Zoning: | CD-6 (Central District, Arroyo Corridor/Fair Oaks Sub-District) |
| 8. Description of the Project: | |

The Affinity Project (Project) proposes partial redevelopment of an approximate 3.3-acre site encompassing nine commercial buildings on five parcels located between 465 and 577 South Arroyo Parkway with medical office, commercial, and assisted living facilities. Exhibit 1, Regional Location and Local Vicinity, illustrates the Project site location. The discussion below provides further details of the Project.

Project Components

The Project Applicant requests approval to rezone the Project site from CD-6 (Central District Specific Plan [CDSP], Arroyo Corridor/Fair Oaks subdistrict), to a Planned Development (PD) zone, and approval of a PD Plan. The Project involves demolition of six (of the nine) existing buildings totaling 45,912 square feet (sf), located at 491, 495, 499, 503, 541, and 577 South Arroyo Parkway and construction of two new buildings: (1) a 154,000-square foot (sf), 7-story (aboveground) medical office building with ground-floor commercial uses (Building A); and (2) a 184,376-sf, 7-story (aboveground) assisted living building with 85,800 sf of assisted living uses and 98,576 sf of independent living uses including up to 95 one- and two-bedroom senior housing units (Building B). As proposed, there would be five subterranean levels providing up to 850 parking spaces. Approximately 31,605 sf of open space, including public and private (for solely resident and staff use) space would be provided across the Project site.

Feet

Exhibit 1

(Rev: 07/20/2021 MMD) R:\Projects\PAS-Pasaden\3PAS012100\Graphics\IS\ex.LV.RL.pdf

Alternatively, the proposed PD Plan would provide the flexibility to exchange the uses in Building A from medical office and ground floor commercial for the following:

- 3,000 sf of commercial and a sales/leasing management office on the ground floor;
- Up to 197 residential dwelling units¹; and
- Up to 650 parking spaces in four subterranean levels (one less than the Project as proposed).

Although the Project initially described is anticipated to reflect the Project to be constructed, the flexibility to exchange uses in Building A would enable the Project to respond to the economic needs and demands of the City at the time of Project implementation. The proposed site layout and the aboveground height, mass, and other parameters of the Building A design would remain the same. The PD Plan would define all aspects of site design and provide caps on the types and amounts of allowable land uses, regardless of whether Building A is developed with medical office or residential dwelling units. It is noted that based on the development cap of 87 dwelling units per acre (du/acre), a total of 289 units could be constructed. Therefore, if a total of 197 units were constructed in Building A, only 92 independent living units could be constructed in Building B. Conversely, if 95 independent living units were constructed in Building B, only 194 units could be constructed in Building A.

Throughout the CEQA documentation, these two development scenarios will be referred to as:

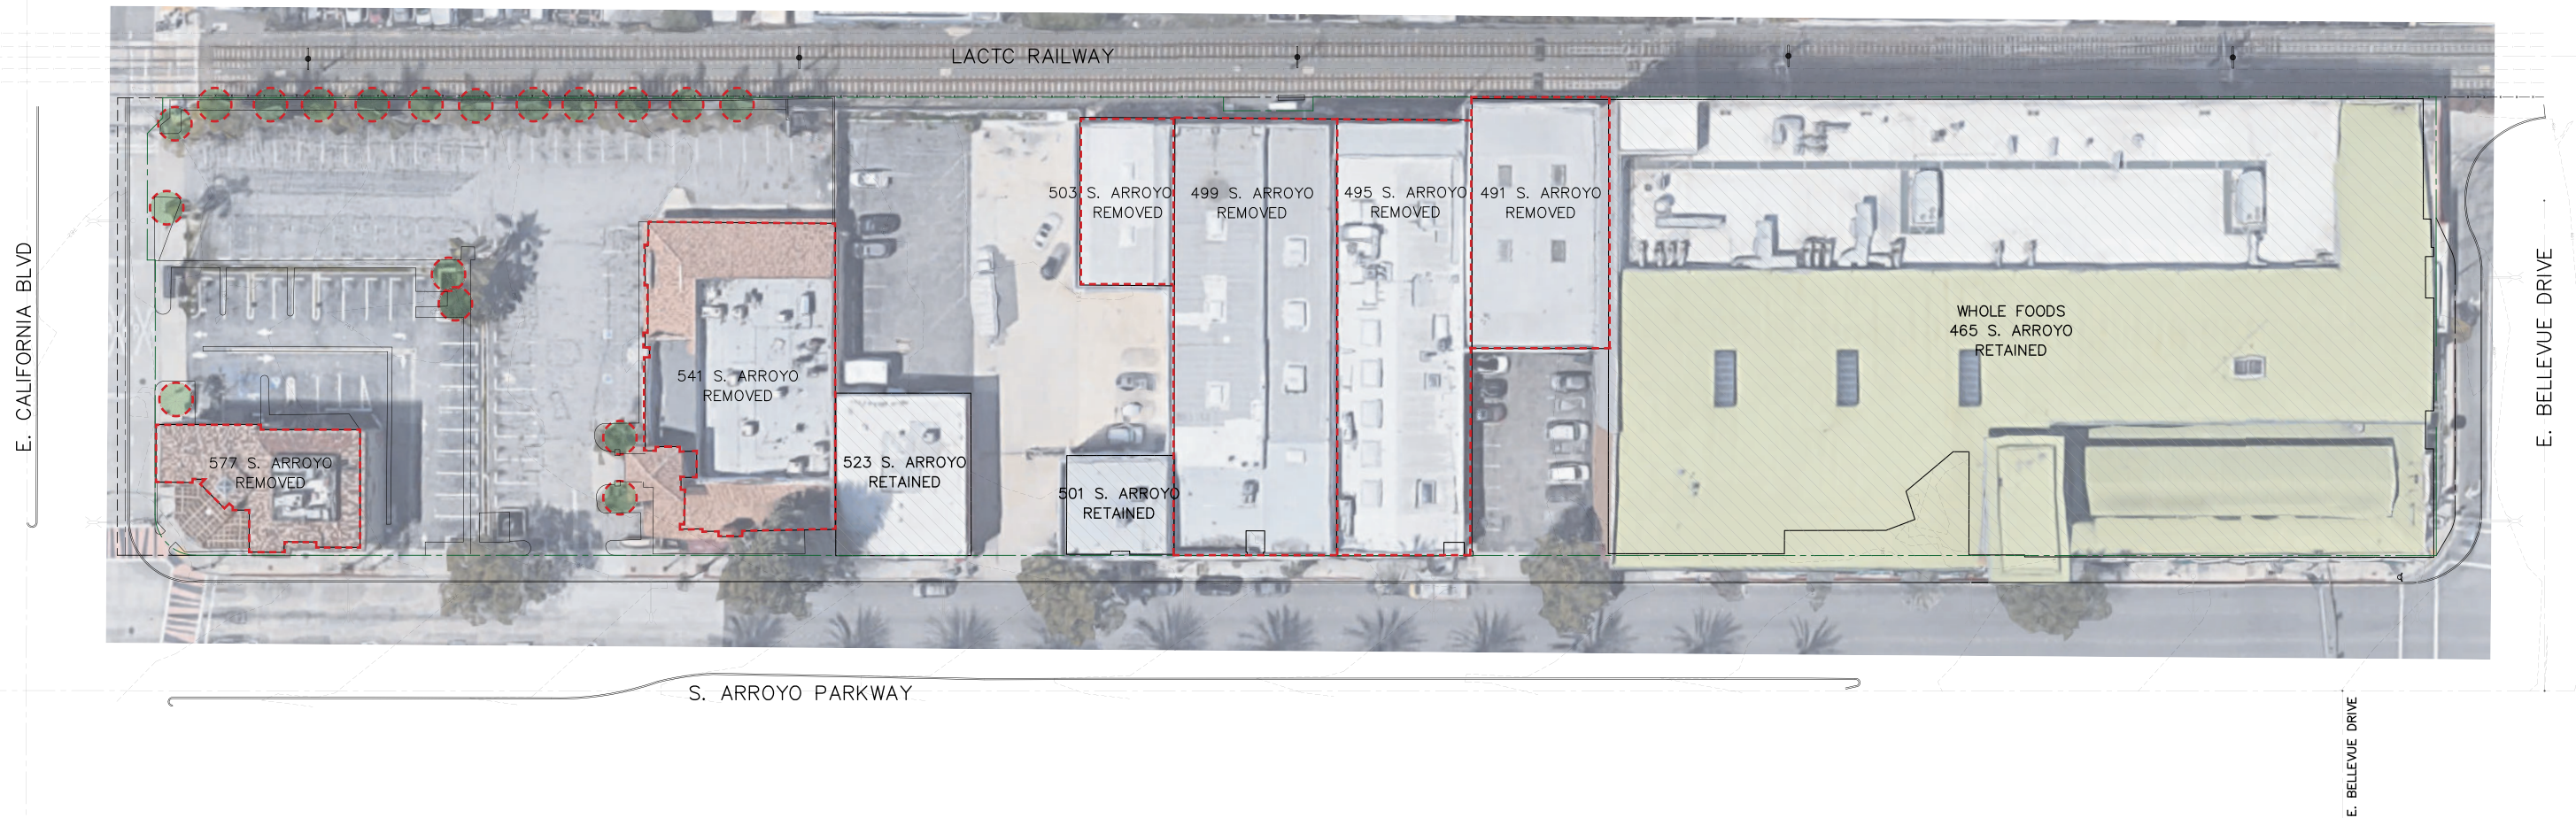

- Project (development of Building A with medical office/commercial) and
- Project with Building A Residential/Commercial (development of Building A with residential/commercial).

Table 1-1, Summary of Project Data, on the following page summarizes the existing and proposed uses for the Project. Exhibit 2, Existing Project Site, illustrates the addresses and locations of the nine existing buildings and other on-site uses; and Exhibit 3, Affinity Project Site Plan, provides an overview of the proposed uses.

Approximately 79,553 sf of existing development would be retained and integrated into the Project. This includes the Whole Foods Market and associated 275-space subterranean parking structure at 465 South Arroyo Parkway, and the two historic structures at 501 and 523 South Arroyo Parkway. The Applicant anticipates that restaurant uses would occupy approximately 5,882 sf of space in the existing historic buildings to be retained at 501 and 523 South Arroyo Parkway.

A total of five levels of subterranean parking spanning both proposed buildings with up to 850 parking spaces would be constructed to serve the new development as well as the existing structures at 501 and 523 South Arroyo Parkway under the Project scenario. When including the new subterranean parking, the Project would consist of approximately 753,439 sf of new construction. For the Project with Building A Residential/Commercial, a total of four levels of subterranean parking spanning both proposed buildings with up to 650 parking spaces would be constructed to serve the new development as well as the existing structures at 501 and 523 South Arroyo Parkway. For both scenarios, the land uses south of Whole Foods Market would have three ingress/egress points—one on California Boulevard and two on South Arroyo Parkway. Whole Foods Market would retain the entrance on Bellevue Drive and the exit onto South Arroyo Parkway.

¹ Anticipated to be market-rate condominiums or apartments of various sizes

Proposed FAR	2.89	
Open Space	8,676	22,929
^a Reflects one less subterranean parking level, all other floor area sizes are the same sf: square feet; N/A: not applicable; FAR: floor area ratio		

Construction Activities

The Project would be constructed beginning in 2023 over a period of approximately 34 months and would be completed in a single phase. Project construction would occur from Monday through Saturday, without activity on Sundays or holidays, between the hours defined in Section 9.36.070 (Construction Projects) of the City of Pasadena Municipal Code (PMC) (7:00 AM to 7:00 PM on Monday through Friday and 8:00 AM to 5:00 PM on Saturday).

Construction would involve demolition, site preparation, excavation and grading, and building construction phases that would involve varying amounts and types of waste streams requiring export. Demolition of the six existing buildings and other on-site improvements, such as paving, light fixtures, and signage, would generate an estimated 4,200 cubic yards (cy) of debris; and excavation to accommodate the subterranean parking structure would generate up to an estimated 184,013 cy of soil for the Project with five levels of subterranean parking. Chapter 8.62 (Waste Management Plan for Certain Construction and Demolition Projects within the City of Pasadena) et. seq. of the PMC is the City's construction and demolition waste management ordinance (C&D ordinance), which requires at least 75 percent of the construction waste stream to be diverted from landfill disposal. Construction and demolition debris, after diversion, would be disposed at Scholl Canyon Landfill, located approximately 2.5 miles northwest of the site, at 3001 Scholl Canyon Road in Glendale. Construction and demolition debris being diverted from landfill disposal may be directed to many different facilities in the region that reuse or recycle this type of material.

Project Operation

The Project is anticipated to be opened to the public in 2026. The medical office building would operate with hours typical of the land use—generally between 8:00 AM and 6:00 PM on weekdays and between 9:00 AM and 1:00 PM on Saturdays. However, operational hours of individual tenants of the medical office building would vary and may be longer or shorter than the typical hours. The medical office uses within the medical office building are expected to result in approximately 523 visitors per day and 646 employees. The ground floor commercial uses within the medical office building are expected to result in approximately 43 visitors per day and 9 employees.

If the Project with Building A Residential/Commercial is constructed, Building A would generate up to 493 residents associated with up to 197 units². As with the Project, the commercial uses on the ground floor of the medical office building are expected to result in approximately 43 visitors per day and 9 employees.

The assisted living building (Building B) would also operate with hours typical of the land use. The assisted living uses are generally operational 24 hours per day with visitation hours anticipated to be daily (Monday through Sunday) between 8:00 AM and 6:00 PM. The assisted living building is expected to result in up to approximately 66 employees, 113 persons cared for, and 109 residents associated with the up to 95 independent living units.

Discretionary Actions by the City

Implementation of the Project would require the following discretionary approvals by the City of Pasadena:

- Adoption of the Planned Development (PD) Zoning District and PD Plan (this includes approval of the Affinity Project and rezoning of the property from CD-6 to PD-39);
- Certification of the Affinity Project Environmental Impact Report;
- Variance for Historic Resources for Building Height;

² Based on a rate of 2.5 persons per household derived from the Southern California Association of Governments (SCAG) 2019 Profile for the City of Pasadena (SCAG 2019).

- Public Street Tree Removal Approval;
- Design Review;
- Vesting Tentative Tract Map or Tentative Tract Map Approval (only if residential units for sale); and
- Other discretionary and ministerial permits and approvals that may be deemed necessary, including but not limited to: master sign plan, temporary street closure permits, encroachment permits, grading permits, excavation permits, foundation permits, and building permits (including lot tie agreement).

Probable Environmental Impacts of the Project

Based on the analysis presented in this IS, the Project would have the potential to result in significant adverse impacts related to one or more environmental checklist questions in the environmental topics listed below. The relevant checklist questions for the following topics will therefore be carried forward for additional analysis in the Draft EIR:

- | | |
|--|---------------------------------|
| • Air Quality | • Noise |
| • Cultural and Paleontological Resources | • Public Services |
| • Energy | • Recreation |
| • Greenhouse Gas Emissions | • Transportation |
| • Hazards and Hazardous Materials | • Tribal Cultural Resources |
| • Land Use and Planning | • Utilities and Service Systems |

Based on the analysis presented in this IS, the Project would result in no impacts or less than significant impacts related to the environmental checklist questions for the topics listed below. The following topics have therefore been scoped out of the Draft EIR:

- | | |
|--------------------------------------|--------------------------|
| • Aesthetics | • Mineral Resources |
| • Agriculture and Forestry Resources | • Population and Housing |
| • Biological Resources | • Wildfire |
| • Geology and Soils | |
| • Hydrology and Water Quality | |

9. Surrounding Land Uses and Setting:

As illustrated on Exhibit 1, the site is bound by East Bellevue Drive on the north, South Arroyo Parkway on the east, East California Boulevard on the south, and the Metro Gold Line (now referred to as the L Line) railroad right-of-way on the west. The Project area is an urban environment, and the site and surrounding area are fully built out with a mix of land uses. The Project site is surrounded by commercial land uses and surface parking to the north, northeast, east, and south. Other land uses to the north include medical offices; Pasadena Humane Society, located approximately 0.1 mile to the northwest; and Central Park, located approximately 0.2-mile northwest of the site. Single- and multi-family residential land uses located, at the nearest, approximately 0.2 mile to the north on Del Mar Boulevard; approximately 0.1 mile to the north-northeast on Bellevue Drive; and less than 0.1 mile to the east along Marengo Avenue. Land uses to the south include a mix of commercial, medical office, and single- and multi-family residential land uses; the latter is located along Marengo Avenue and California Boulevard to the southeast. To the west, there is a mix of commercial and non-profit (i.e., npr/KPCC and Union Station Homeless Services) uses. Further from the site, land uses include a mix of commercial, medical, light industrial, single- and multi-family residential, and public (e.g., schools, churches, parks). Regional access to the site is provided by State Route 110 located approximately 0.6-mile due south on Arroyo Parkway. Local access is provided by adjacent surface streets and Metro's Del Mar Station located approximately 0.2 mile to the north.

10. Other public agencies whose approval is required:

- Los Angeles Regional Water Quality Control Board (National Pollutant Discharge Elimination System [NPDES] permitting) and
- Los Angeles County Metropolitan Transportation Authority (for construction within 100 feet of a Metro light rail line).

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resource Code Section 21080.3.1? If so, has consultation begun?

Consultation pursuant to Section 21080.3.1 of the *Public Resources Code* and Assembly Bill (AB) 52 was initiated and is ongoing with the California Native American tribes affiliated with the City of Pasadena and who have requested consultation and the consultation process is ongoing. Refer to Section 2.18, Tribal Cultural Resources, of this IS for further information.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|---|---|--|
| <input type="checkbox"/> Aesthetics | <input checked="" type="checkbox"/> Greenhouse Gas Emissions | <input checked="" type="checkbox"/> Public Services |

DETERMINATION: (to be completed by the Lead Agency)

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	
I find that, although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the project. A MITIGATED NEGATIVE DECLARATION will be prepared.	
I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.	X
I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment., but at least effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards , and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.	
I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.	

Prepared By

Date

Reviewed By

Date

Printed Name

Printed Name

EVALUATION OF ENVIRONMENTAL IMPACTS:

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect is significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Unless Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less than Significant Impact.” The Lead Agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section 21, “Earlier Analysis,” may be cross-referenced).
- 5) Earlier analysis may be used where, pursuant to the tiering, program Environmental Impact Report (EIR), or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. See CEQA Guidelines Section 15063(c)(3)(D). Earlier analyses are discussed in Section 21 at the end of the checklist.
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are “less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier documents and the extent to which address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) The explanation of each issue should identify:
 - a) The significance criteria or threshold, if any, used to evaluate each question; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significant.

SECTION 2.0 ENVIRONMENTAL CHECKLIST FORM**2.1 AESTHETICS**

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

Pursuant the Senate Bill (SB) 743, the Project site is an infill project and is located within a transit priority area. SB 743, via Section 21099(d) of the Public Resources Code, defines criteria for evaluating certain transit-oriented infill projects under CEQA, as follows:

“Aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment.”

As discussed in Section 1.0, the Project site is zoned CD-6, which is defined in Section 17.30.020 of the PMC as “...intended to provide for a broad mix of uses at the periphery of the urban core, including employment generating uses that are adaptable to changing economic conditions, as well as to establish Arroyo Parkway as a visually important and attractive gateway to Downtown”. Pursuant to the CDSP, employment-generating uses including commercial, service, office, and certain industrial uses are permitted or conditionally permitted in the CD-6 zone. High-Quality Transit Areas (HQTAs) are areas within one-half mile of a fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes or less during peak commuting hours. Transit Priority Areas (TPAs) are areas within one-half mile of a major transit stop that is existing or planned (SCAG 2020). The floor area ratio (FAR) for the Project would be 2.89 (refer to Table 1-1), and SCAG has identified the site as within both a TPA and a HQTA. Specifically, the Metro’s Fillmore Station is located approximately 0.15 mile to the south of the site and the Del Mar Station is located approximately 0.2 mile to the north. Arroyo Parkway along the east side of the Project site is a Metro bus corridor for lines 177 and 256, with bus stops situated at the northeast and southwest corners of the site.

Accordingly, the City has concluded the Project qualifies as an employment center project, which is defined in Section of the Public Resources Code as "... a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a transit priority area" as well as a mixed-use project. Therefore, consistent with Section 21099(d) of the Public Resources Code, the aesthetic effects of the Project are not considered significant environmental impacts, and this issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

If the Project with Building A Residential/Commercial is constructed, the development would qualify as both a residential and mixed-use project pursuant to SB 743. Therefore, consistent with Section 21099(d) of the Public Resources Code discussed above, the aesthetic effects of the Project with Building A Residential/Commercial are not considered significant environmental impacts, and this issue will not be further evaluated in the Draft EIR.

2.2 AGRICULTURE AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
--------------------------------------	--	------------------------------------	--------------

Would the project:

- a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

☐
☐
☐
☒

WHY?

Project

The City is a developed urban area surrounded by hillsides to the north and northwest. The City contains no Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the most recent maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency (FMMP 2017). Therefore, the Project would not impact agriculture resources. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project analysis above, there is no Farmland within the City. Therefore, the Project with Building A Residential/Commercial would not impact agricultural resources. This issue will not be further evaluated in the Draft EIR.

Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
--------------------------------------	--	------------------------------------	--------------

Would the project:

- b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

☐
☐
☐
☒

WHY?

Project

The City has no land zoned for agricultural use other than commercial growing areas and land within certain specific plan areas. The Project site is zoned CD-6 (Central District Specific Plan, Arroyo Corridor/Fair Oaks

subdistrict), which is not one of the zones that permits commercial growing areas. Accordingly, there are no conflicts with agricultural zoning, and Williamson Act contracts are not applicable to the Project site. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, there is no conflict with agricultural zoning on the Project nor are there Williamson Act contracts applicable to the site. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220[g]), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104[g])?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

There is no forest land, timberland, or any Timberland Production Zones in the City; therefore, the proposed Project would not result in the loss of forest land, timberland, or Timberland Production areas. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, there is no forest land, timberland, or any Timberland Production Zones in the City. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

There is no forest land in the City; therefore, the proposed Project would not result in the conversion or loss of forest land. No part of the Project site includes forest land as defined by the State, including forest land (Public Resources Code section 12220[g]), timberland (as defined by Public Resources Code section 4526), or Timberland Production (as defined by Government Code section 51104[g]). This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, there is no forest land in the City. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

As discussed in Threshold 2.2(a), there is no designated Farmland in the City. Therefore, the proposed Project would not indirectly result in the conversion of farmland to a non-agricultural use. Likewise, as discussed in Thresholds 2.2(c) and 2.2(e), there are no forestry resources that would be converted to non-forest use by the proposed Project. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, there is no Farmland or forestry resources in the City and there would be no indirect conversion of agricultural or forestry resources. This issue will not be further evaluated in the Draft EIR.

2.3 AIR QUALITY

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

The City is within the South Coast Air Basin (SCAB). On March 3, 2017, the South Coast Air Quality Management District (SCAQMD) adopted the 2016 Air Quality Management Plan (AQMP), which is a regional and multi-agency effort (SCAQMD, California Air Resources Board, Southern California Association of Governments [SCAG], and U.S. Environmental Protection Agency [USEPA]). The 2016 AQMP incorporates the latest scientific and technical information and planning assumptions, including the 2016–2040 Regional Transportation Plan/Sustainable Communities Strategy; updated emission inventory methodologies for various source categories; and SCAG's latest growth forecasts.

Short-term construction and long-term operation of the Project would result in a net increase in stationary and mobile source criteria air pollutants emissions in the SCAB compared to the existing uses on the site. Therefore, consistency with the 2016 AQMP will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

Short-term construction and long-term operation of the Project with Building A Residential/Commercial would result in a net increase in stationary and mobile source criteria air pollutants emissions in the SCAB compared to the existing uses on the site. Therefore, consistency with the 2016 AQMP will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

The SCAB is an airshed that is designated a non-attainment area for selected criteria pollutants. As stated in Threshold 2.3(a), construction and operation of the Project would result in a net increase in air pollutants.

The Project's potential to result in a cumulatively considerable increase in those pollutants for which the SCAB is in non-attainment, when considered in combination with other development planned in the SCAB, will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the potential for the Project with Building A Residential/Commercial to result in a cumulatively considerable increase in those pollutants for which the SCAB is in non-attainment will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Expose sensitive receptors to substantial pollutant concentrations?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

Land uses surrounding the Project site are commercial, with the Metro L (Gold) Line railroad right-of-way abutting the site to the west. The nearest sensitive receptors are residential land uses located on South Marengo Avenue approximately 250 feet (ft) to the east. While it is unlikely that construction and operation of the Project would adversely affect these receptors due to distance, the potential to expose any nearby sensitive receptors to substantial pollutant concentrations will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the potential for construction and operation of the Project with Building A Residential/Commercial to expose any nearby receptors to substantial pollutant concentrations, though unlikely, will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

According to the SCAQMD's *CEQA Air Quality Handbook*, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding (SCAQMD 1993). The Project does not

propose to operate any of these land uses and would not otherwise be expected to produce objectionable odors.

Short-term construction equipment and activities would generate odors, such as diesel exhaust emissions from construction equipment and paving activities. However, these odors would be temporary and would dissipate rapidly from the source with an increase in distance. Therefore, the impacts would be short-term and would not be objectionable to a substantial number of people. There would be a less than significant impact, and this topic will not be further evaluated in Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial does not propose any land uses identified in the SCAQMD's *Air Quality Handbook* as associated with odor complaints (SCAQMD 1993). Short-term construction activities for the Project with Building A Residential/Commercial would be nearly identical to the Project's construction activities, except for differences associated with the interior buildout of Building A. Therefore, as for the Project, odors from construction activities would be temporary and dissipate rapidly. This topic will not be further evaluated in the Draft EIR.

2.4 BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

The Project site is located in an urbanized area of the City and is currently developed with several buildings, parking lots, and other disturbed/developed areas. Existing groundcovers, shrubs, and trees within the site would be removed during Project construction. Due to the urbanized and disturbed nature of the Project site, the site does not support habitat for candidate, sensitive, or special status species in local or regional plans, policies, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. Thus, no impact on sensitive species would occur with the Project. This issue will not be further evaluated in the Draft EIR. Tree removals are discussed further below under Threshold 2.4(e).

Project with Building A Residential/Commercial

As discussed for the Project above, the Project site is in an urbanized area and is fully developed. No impact on sensitive species would occur and this issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

As discussed above in Threshold 2.4(a), the Project site is in a highly urbanized area. Review of aerial photographs by qualified biologists shows that there are no natural drainage streams or open channels on the Project site. There are no riparian or other sensitive natural vegetation communities located on the site. Therefore, implementation of the Project would not result in an adverse impact to riparian habitat or other sensitive natural communities, and no impact would occur. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project site is in an urbanized area, and there are no sensitive natural vegetation communities on the site. No impact on sensitive natural communities would occur and this issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?**Project**

As discussed above in Threshold 2.4(a), the Project site is located in a highly urbanized area. There are no drainages, including jurisdictional waterways, located on the site, and no impact would occur. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project site is in an urbanized area and there are no drainages on the site. No impact on jurisdictional waterways would occur, and this issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

Wildlife corridors and habitat linkages are features that promote habitat connectivity and are generally characterized as undisturbed canyon and riverine stream habitat areas. The Project site does not serve as a key wildlife movement corridor due to its disturbed and developed nature and the presence of roads, railroad tracks, and urban development around the Project site. The Project site is developed with several buildings, with the Metro L (Gold) Line tracks located adjacent and parallel to the western Project boundary. South Arroyo Parkway and California Boulevard, bordering the eastern and southern site boundaries,

respectively, are major arterials in the City. The developed and disturbed character of the Project site and major transportation corridors on three site boundaries impede wildlife movement through the Project site. As a result, the Project site supports the movement of almost exclusively local, urban-adapted wildlife, that also readily use surrounding areas.

Construction activities would create dust and noise within and adjacent to the work areas. During active construction, wildlife movement may be deterred by noise and human activity; however, most wildlife movement in the Project area would occur at night while construction activities would occur during the day. Direct and indirect impacts, such as noise pollution and human activity, are considered adverse but less than significant since the inability to use the site or immediately surrounding areas for local movement during construction activities would affect a small number of individuals representing an extremely small percentage of the overall regional populations. As a result, there would not be a substantial adverse effect on regional wildlife movement or regional wildlife populations. Therefore, the Project would not substantially affect the movement of any native resident or land-based wildlife species.

The Migratory Bird Treaty Act (MBTA) prohibits activities that result in the direct take (defined as killing or possession) of a migratory bird. Additionally, Sections 3503 and 3503.5 of the *California Fish and Game Code* make it unlawful to take, possess, or destroy the nests and eggs of birds of prey. Section 3513 of the *California Fish and Game Code* duplicates the federal protection of migratory birds and prohibits the taking and possession of any migratory non-game bird, as designated in the MBTA. To ensure that construction activities comply with the MBTA and the *California Fish and Game Code*, the City of Pasadena would apply the following condition of approval to the Project.

If construction is initiated during the breeding season for nesting birds (i.e., March 1–September 15) and nesting raptors (i.e., January 1–July 31), the Project Applicant shall perform, or direct the performance of, a pre-construction survey for nesting birds and/or raptors shall be conducted by a qualified Biologist within three days prior to any construction activities on the Project site and in the immediately surrounding area (i.e., perform survey within 300 ft for nesting birds and within 500 ft for nesting raptors). A qualified Biologist shall be knowledgeable and experienced in conducting nesting bird surveys within Southern California and in determining appropriate buffer size to prevent bird nesting failure. If the Biologist does not find any active nests in or immediately adjacent to the Project site, construction work shall be allowed to proceed and no further action is required.

If the Biologist finds an active nest in or immediately adjacent to the Project site and determines that the nest may be impacted or breeding activities substantially disrupted due to planned construction activities, the Biologist shall delineate an appropriate buffer zone around the nest depending on the sensitivity of the species and the nature of the construction activity. Any nest found during survey efforts shall be mapped on the construction plans. The active nest shall be protected until nesting activity has ended. To protect any nest site, the following restrictions to construction activities shall be required until nests are no longer active, as determined by a qualified Biologist: (1) construction limits shall be established within a buffer around any occupied nest (the buffer shall be 25–100 ft for nesting birds and 300–500 ft for nesting raptors), unless otherwise determined by a qualified Biologist and (2) access and surveying shall be restricted within the buffer of any occupied nest, unless otherwise determined by a qualified Biologist. Encroachment into the buffer area around a known nest shall only be allowed if the Biologist determines that the proposed activity would not disturb the nest occupants. Construction in a buffer area can proceed when the qualified Biologist has determined that fledglings have left the nest or the nest has failed.

If construction activities are initiated during the non-breeding season, there would be no potential impact to nesting birds and raptors. Therefore, with implementation of the Project feature described above, which would be ensured as a condition of approval, potential impacts to nesting migratory birds and raptors during

their breeding seasons due to Project construction would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the developed and disturbed character of the Project site and major transportation corridors on three site boundaries impede wildlife movement through the Project site. As a result, the Project site supports the movement of almost exclusively local, urban-adapted wildlife, that also readily use surrounding areas. Short-term construction activities for the Project with Building A Residential/Commercial would be nearly identical to those of the Project, except for differences associated with the interior buildout of Building A. Therefore, as with the Project, the Project with Building A Residential/Commercial would not substantially affect the movement of any native resident or land-based wildlife species. The same steps to ensure that construction activities comply with the MBTA and the *California Fish and Game Code* described for the Project would apply to construction of the Project with Building A Residential/Commercial. With implementation of the above described above, potential impacts to nesting migratory birds and raptors during their breeding seasons due to Project with Building A Residential/Commercial construction would be less than significant. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

The only local ordinance protecting biological resources in the City of Pasadena is “City Trees and Tree Protection Ordinance” (codified in Chapter 8.52 of the PMC). This ordinance was set forth with the goal of protecting landmark, native, and specimen trees so that the tree canopy cover in the City is preserved and expanded. A *City of Pasadena Tree Inventory* (Tree Inventory) was prepared for the Project by Carlberg Associates (Carlberg Associates 2021). As summarized in Table 2-1, Tree Inventory Summary, on the following page, a total of 40 trees were inventoried on the Project site and the adjacent public right-of-way (ROW). Of these, 17 trees located in the ROW are protected under the City Ordinance. The remaining 23 trees are located within the Project site and are not protected. The proposed Project would result in the removal of 23 trees on the Project site and 2 street trees (ST32 and ST38). The remaining 15 protected streets trees in the ROW would be protected in place during construction and remain after the Project is implemented.

The Urban Forestry section of the City’s Public Works Department typically requires a fee, dependent on the size of the tree(s) being removed, to be remitted into the City’s street tree fund. For the Project, a planned condition of approval calls for planting of one new street tree along both Arroyo Parkway and California Boulevard. The Project would also include a total of 25 trees in above-grade planters within the site. With compliance with the Project’s conditions of approval, the Project would not conflict with the applicable local ordinance. There would be a less than significant impact. This issue will not be further evaluated in the Draft EIR.

**TABLE 2-1
TREE INVENTORY SUMMARY**

Tree ID	Tree Species		Protected Tree?	Disposition
	Common Name	Scientific Name		
Trees on Private Property				
1	queen palm	<i>Syagrus romanzoffiana</i>	No	Remove

Project with Building A Residential/Commercial

Construction of the Project with Building A Residential/Commercial would result in removal of the same existing trees and installation of the same proposed landscaping, including a requirement to plant two new street trees, as with the Project. Therefore, as discussed for the Project, above, the Project with Building A Residential/Commercial would not conflict with the City Trees and Tree Protection Ordinance. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

The proposed Project does not conflict with any Significant Ecological Areas, Wildflower Reserve Areas, or Sensitive Environmental Resource Areas, as none exists within the Project site. Neither the Project site nor the City proper is within or adjacent to an adopted Habitat Conservation Plan or Natural Community Conservation Plan. Therefore, the Project would not conflict with any regional or State plans protecting biological resources and there would be no impact. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, there are no regional or State plans protecting biological resources within the City. Therefore, the Project with Building A Residential/Commercial would not conflict with any such plans. This issue will not be further evaluated in the Draft EIR.

2.5 CULTURAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

Two of the nine existing buildings on the site, located at 501 and 523 South Arroyo Parkway, are previously recorded as historic resources. Five of the remaining buildings on the site are more than 45 years old. Therefore, a historic resources assessment will be conducted as part of the EIR to (1) evaluate the significance of the five historic-period structures and (2) determine whether the Project would indirectly impact the two known historic resources. Potential impacts to historical resources will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, potential impacts to historic resources due to construction and operation of the Project with Building A Residential/Commercial will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

The Project site is a developed area and has been previously graded and disturbed. Therefore, no surface archaeological resources are expected to be present. However, excavation into underlying native (i.e., undisturbed) soils to accommodate the subterranean parking levels has the potential to encounter unknown archaeological resources. A cultural resources study will be conducted as part of the EIR to determine whether the site has the potential to contain archaeological resources. Potential impacts to archaeological resources will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, potential impacts to unknown archaeological resources due to construction and operation of the Project with Building A Residential/Commercial will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

As discussed under Threshold 2.5(b) above, Project construction would involve excavation into native soils. Project-related earth disturbance in native soils always has the potential to unearth previously undiscovered remains, resulting in a potentially significant impact. If human remains are encountered during Project construction, those remains would require proper treatment, in accordance with applicable laws. Sections 7050.5 through 7055 of the *California Health and Safety Code* describe the general provisions for human remains. Specifically, Section 7050.5 of the *California Health and Safety Code* describes the protocols to be followed if human remains are accidentally discovered during excavation of a site. In addition, the requirements and procedures set forth in Section 5097.98 of the *California Public Resources Code* would be implemented. Specifically, if human remains are found during excavation, construction activities must stop in the vicinity of the find and in any area that is reasonably suspected to overlie adjacent remains until the County Coroner has been notified; the remains have been investigated; and appropriate recommendations have been made for the treatment and disposition of the remains. Following compliance with State regulations, which detail the appropriate actions necessary in the event human remains are encountered, potential impacts would be less than significant. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, potential impacts related to encounter of unanticipated human remains due to construction of the Project with Building A Residential/Commercial would be addressed through compliance with applicable State regulations. This issue will not be further evaluated in the Draft EIR.

2.6 ENERGY

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project would result in a net increase in energy demand compared to the existing condition, and construction of the Project would require use of energy as fuel and electricity. The Project's short-term and long-term use of energy will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, construction and operation of the Project with Building A Residential/Commercial would result in a net increase in energy demand. This issue will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

As discussed in Threshold 2.6(a), the Project would result in new demands for energy. The Project's consistency with applicable plans and policies related to renewable energy and/or energy efficiency will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the consistency of the Project with Building A Residential/Commercial with the applicable plans and policies related to renewable energy and/or energy efficiency will be further evaluated in the Draft EIR.

2.7 GEOLOGY AND SOILS

Information in this section is derived from the *Geotechnical Investigation, 465-577 South Arroyo Parkway, Pasadena, California* (Geotechnical Investigation) prepared by Geocon West, Inc. and dated July 2021 (Geocon 2021). The Geotechnical Investigation is provided in its entirety in Appendix A of this IS.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

The numerous faults in Southern California include active, potentially active, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS) for the Alquist-Priolo Earthquake Fault Zone Program. An active fault is defined as one that has had surface displacement within Holocene time (about the last 11,700 years). A potentially active fault has demonstrated surface displacement during Quaternary time (approximately the last 1.6 million years) but has had no known Holocene movement. Faults that have not moved in the last 1.6 million years are considered inactive. The County of Los Angeles and the City of Pasadena are both affected by Alquist-Priolo Earthquake Fault Zones (Alquist-Priolo Zones). The Project site is not within an Alquist-Priolo Zone nor is there a known active fault traversing the site (Geocon 2021). Therefore, the surface rupture of a known fault within the Project site that would result in substantial adverse effects is not considered reasonably foreseeable. There would be no impact and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project site is not within an Alquist-Priolo Zone nor is there a known active fault traversing the site (Geocon 2021). Therefore, the surface rupture of a known fault within the Project site that would result in substantial adverse effects is not considered reasonably foreseeable. There would be no impact and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) Strong seismic ground shaking?				

WHY?

Project

The Project site is located in the seismically active southern California region and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active or potentially active faults. The closest surface trace of a potentially active fault is the Eagle Rock Fault, located approximately 0.5 mile to the southwest (Pasadena 2002b). The closest surface trace of an active fault to the site is the Raymond Fault located approximately 1.2 miles to the south. Other nearby active faults are the Sierra Madre Fault Zone, Verdugo Fault, and Hollywood Fault located approximately 4.0 miles to the northeast, 4.4 miles to the west-northwest, and 5.6 miles to the west-southwest, respectively. The active San Andreas Fault Zone is located approximately 28 miles northeast of the site (Geocon 2021, Pasadena 2002b).

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Basin. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. Thrust faults are not exposed at the surface and do not present a potential surface fault rupture hazard at the site; however, these deep thrust faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the site. The Project site is underlain at depth by the Los Angeles segment of the Puente Hills Blind Thrust (Geocon 2021).

Consistent with its location in a seismically active region, the site may be subject to strong ground shaking resulting from a major earthquake on one or more faults in the area within the lifetime of the Project. Seismic ground shaking from major earthquakes in the region is not anticipated to be greater than at any other sites in Southern California. The potential for strong ground shaking is an existing seismic hazard that affects the site, and the Project would not exacerbate this condition. Based on the site-specific seismic analysis, the Geotechnical Investigation concluded that the effects of ground shaking on the Project can be minimized if the proposed structures are designed and constructed in conformance with current building codes and engineering practices. Conformance to the seismic design criteria calculated for the Project does not constitute a guarantee or assurance that substantive structural damage or ground failure would not occur if a large earthquake occurs; the primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive. The Geotechnical Investigation concluded the Project is feasible provided the geotechnical recommendations are incorporated into its design and construction (Geocon 2021).

Earthquake-resistant design and materials used in new construction must meet the current seismic engineering standards of the California Building Code (CBC) Seismic Zone 4 requirements (incorporated by reference in the PMC), in effect at the time of design and construction of the Project. Compliance with these standards would reduce the risk to people and structures to the maximum extent practicable under current engineering practice. The Geotechnical Investigation outlines the site- and Project-specific requirements to meet CBC standards. Therefore, the Project would not directly or indirectly cause substantial adverse effects

due to strong seismic ground shaking. There would be a less than significant impact and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, consistent with its location in a seismically active region, the site may be subject to strong ground shaking resulting from a major earthquake on one or more faults in the area within the lifetime of the Project with Building A Residential/Commercial. The Geotechnical Investigation concluded the Project, and by extension the Project with Building A Residential/Commercial, is feasible provided the geotechnical recommendations are incorporated into its design and construction (Geocon 2021). As discussed above, compliance with applicable CBC requirements would reduce the risk to people and structures to the maximum extent practicable under current engineering practice. The Geotechnical Investigation outlines the site- and Project-specific requirements to meet CBC standards. Therefore, the Project with Building A Residential/Commercial would not directly or indirectly cause substantial adverse effects due to strong seismic ground shaking. There would be a less than significant impact and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?				

WHY?

Project

Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine to medium-grained, primarily sandy soil. In addition to the requisite soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to induce liquefaction. The Seismic Hazard Zone Map for the Pasadena Quadrangle indicates that the site is not within an area designated as having a potential for liquefaction. Groundwater was not encountered in on-site borings drilled to a maximum depth of approximately 91 feet below ground surface (bgs). Additionally, the historic high groundwater level in the site vicinity is between approximately 50 and 100 feet bgs. Therefore, the Geotechnical Investigation concludes the potential for liquefaction to occur beneath the site is considered low (Geocon 2021).

Separate from the issue of liquefaction, the presence of groundwater or shallow, perched water or seepage can adversely affect new construction. The Geotechnical Investigation states that due to lack of groundwater encountered in on-site borings and the reported depth of historic high groundwater, groundwater is not expected to be encountered during construction or have a detrimental effect on the Project including the subterranean levels. The Geotechnical Investigation indicates that hydrostatic design of the basement level to offset potential buoyancy is not required; however, the report does suggest waterproofing of subterranean slabs and walls. The Geotechnical Investigation states it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed, especially in

impermeable fine-grained soils, which are heavily irrigated or after seasonal rainfall. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity (Geocon 2021). There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Geotechnical Investigation concludes the potential for liquefaction to occur beneath the site is considered low (Geocon 2021). Additionally, separate from the issue of liquefaction, the Geotechnical Investigation states it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed, especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity (Geocon 2021). There would be no impact due to construction and operation of the Project with Building A Residential/Commercial, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv) Landslides?				

WHY?

Project

The topography at the site is gently sloping to the south and southeast. The site is not located within an area identified as a "Hillside" area or an area identified as having a potential for slope stability hazards. Additionally, the site is not identified on the Seismic Hazard Zone Map for the Pasadena Quadrangle as within an area identified as susceptible to seismically induced landslides. There are no known landslides near the site nor is the site in the path of any known or potential landslides. Therefore, the Geotechnical Investigation concludes the potential for slope stability hazards to adversely affect the site is considered low (Geocon 2021). There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Geotechnical Investigation concludes the potential for slope stability hazards to adversely affect the site is considered low (Geocon 2021). There would be no impact due to construction and operation of the Project with Building A Residential/Commercial, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The largest source of erosion and topsoil loss, particularly in a developed environment, is uncontrolled drainage during construction activities. Grading and other earthwork associated with Project construction may temporarily expose soils on the Project site to wind and/or water erosion. Since the Project area of earth disturbance is greater than one acre, compliance with the State Water Resources Control Board's (SWRCB's) National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with the Construction and Land Disturbance Activities³ (Construction General Permit) would be required. Pursuant to the Construction General Permit, the City would be required to prepare, or have prepared by the Construction Contractor, a Storm Water Pollution Prevention Plan (SWPPP) that would include erosion-control Best Management Practices (BMPs). There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, construction of the Project with Building A Residential/Commercial would be required to comply with the Construction General Permit, including implementation of erosion-control BMPs. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction, or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?**Project**

Secondary seismic hazards related to the underlying geologic unit include several types of ground failure that can occur as a result of severe ground shaking. The probability for each type of ground failure depends on the severity of the earthquake, the site's distance from the fault, the local topography, and subsoil and groundwater conditions, among other factors. In addition, there can be soil engineering characteristics

³ Order No. 2009-0009-DWQ, NPDES No. CAS000002, adopted by the SWRCB on September 2, 2009 (effective for all project sites on July 1, 2010) and most recently amended by Order No. 2012-0006-DWQ on July 17, 2012.

inherent in the underlying sediments on a site that can adversely affect structures if not appropriately managed during construction, including subsidence, hydroconsolidation, and other forms of collapse. Liquefaction and landslides are addressed above under Thresholds 2.7(a)(iii) and 2.7(a)(iv). Lateral spreading is a phenomenon related to liquefaction. Because there is no risk of liquefaction at the site, there would be no impact related to lateral spreading and no mitigation is required.

Subsidence occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. The Project site is not located within an area of known ground subsidence. No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the site or in the general site vicinity. There appears to be little or no potential for ground subsidence due to withdrawal of fluids or gases at the site (Geocon 2021).

Based on the laboratory testing of on-site soil samples, the Geotechnical Investigation concluded that the native, granular alluvial soils underlying the site are suitable for reuse as engineered fill where the grading recommendations provided in the investigation are implemented. Also, the Geotechnical Investigation determined there were no seismic or soil conditions present on the site that would preclude construction of the Project, provided all geotechnical recommendations are incorporated into the design and construction (Geocon 2021). Therefore, the Project would not be located on a site that is unstable nor would the site become unstable as a result of the Project such that there would be on- or off-site ground failure. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would not be located on a site that is unstable nor would the site become unstable as a result of the Project such that there would be on- or off-site ground failure. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

The existing site soils are considered to be “non-expansive” and to have a “very low” ($EI < 20$) expansive potential in accordance with Section 1803.5.3 of the 2019 CBC. Based on the depth of the proposed subterranean levels and granular nature of the site soils, the Geotechnical Investigation concluded the Project would not be prone to the effects of expansive soil (Geocon 2021). There would be no impact and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would not be located on a site with expansive soil. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?**Project**

The Project would not involve the use of septic tanks or alternative wastewater disposal systems. There would be no impact and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would not involve the use of septic tanks or alternative wastewater disposal systems. There would be no impact and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project site is a developed area and has been previously graded and disturbed. However, excavation into underlying native (i.e., undisturbed) soils to accommodate the subterranean parking levels has the potential to encounter unknown paleontological resources. A cultural resources study will be conducted as part of the EIR to determine whether the site has the potential to contain paleontological resources. Potential impacts to paleontological resources will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, potential impacts to unknown paleontological resources due to construction and operation of the Project with Building A Residential/Commercial will be further evaluated in the Draft EIR.

2.8 GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project would result in a net increase in the generation of greenhouse gas (GHG) emissions associated with land uses on the site. The Project's short-term and long-term GHG emissions will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would result in a net increase in GHG emissions. This issue will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

As discussed in Threshold 2.8(a), the Project would result in increased GHG emissions. The Project's consistency with applicable plans and policies related to reduction of GHG emissions, including the City of Pasadena's *Climate Action Plan*, will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would result in increased GHG emissions. The consistency of the Project with Building A Residential/Commercial with applicable GHG emissions plans and policies will be further evaluated in the Draft EIR.

2.9 HAZARDS AND HAZARDOUS MATERIALS

Information in this section is derived in part from the *Phase I Environmental Site Assessment; 465, 491, 503, 525 and 577 South Arroyo Parkway, Pasadena, California 91105* (Phase I ESA) prepared by EMG and dated April 2020 (EMG 2020). The Phase I ESA is provided in its entirety in Appendix B of this IS. The findings of the Phase I ESA would apply equally to the Project and Project with Building A Residential/Commercial because the location and general scale of proposed buildings and subterranean parking structure would be the same for both development scenarios.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

Medical and medically related land uses involve substances that are categorized as hazardous materials due to the generation of biomedical waste. These types of materials are typical of any medical facility and would not be considered acutely hazardous or unusual. Also, each proposed building would have a 50-kilovolt standby emergency engine diesel generator. Potential impacts related to the generation of biomedical waste and storage of fuel onsite will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would not generate as much biomedical waste (categorized as hazardous materials) as the Project, since only the assisted living building would generate such materials. This development scenario would instead generate a mix of non-hazardous municipal waste and biomedical waste. Like the Project, the buildings would each have a standby emergency generator. As discussed for the Project above, potential impacts related to the generation of biomedical waste and storage of fuel onsite will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

Construction of the Project would involve the use of common hazardous materials such as gasoline, oil, paints, thinners, solvents, acids, curing compounds, grease, and other chemicals that could pose risks to construction workers or lead to soil and groundwater contamination, if not properly stored, used, or disposed. Standard construction practices would be observed such that any materials released are appropriately contained and remediated as required by local, State, and federal law. These materials are common to typical construction activities, and compliance with existing hazardous material regulations on the storage, use, and disposal of hazardous materials at construction sites would prevent hazards to the public or environment through reasonably foreseeable upset or accident conditions.

Given the age of the buildings on the Project site to be demolished, asbestos-containing materials (ACMs) and lead-based paint (LBP) may be present within interior and/or exterior materials and surfaces. The SCAQMD's Rule 1403 provides guidelines for the proper removal and disposal of asbestos-containing materials. In accordance with Rule 1403, structures that may contain asbestos are required to be subject to an asbestos survey by a Certified Asbestos Consultant (certified by California Occupational Safety and Health Administration [CalOSHA]) to identify building materials that contain asbestos. Under this rule, removal of asbestos must include prior SCAQMD notification; compliance with removal procedures and time schedules; asbestos-handling and clean-up procedures; and storage, disposal, and landfilling requirements. In California, asbestos abatement must be performed and monitored by contractors with appropriate certifications from the California Department of Health Services (DHS). In addition, CalOSHA has regulations to protect worker safety during potential exposure to asbestos under Title 8 of the *California Code of Regulations* (Section 1529 Asbestos). All demolition that could result in the release of asbestos must be conducted according to the CalOSHA standards. These standards were developed to protect the general population and construction workers from respiratory and other hazards associated with exposure to these materials. In California, lead abatement must also be performed and monitored by contractors with appropriate certifications from the California DHS. In addition, the CalOSHA has adopted regulations to protect worker safety during potential exposure to lead under Title 8 of the *California Code of Regulations* (Section 1532.1 Lead). All demolition that could result in the release of lead must be conducted according to these standards, which were developed to protect the general population and construction workers from respiratory and other hazards associated with lead exposure. Compliance with SCAQMD Rule 1403 and the CalOSHA's Title 8 regulations on asbestos and lead abatement would be a condition of Project approval and would ensure that handling and disposal of these materials is conducted safely and accident conditions during demolition activities would not be reasonably foreseeable.

As such, the transport, use, and disposal of hazardous materials required for construction and the presence of ACMs and LBP in buildings to be demolished would not present a significant hazard through reasonably foreseeable accident and upset conditions, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

Construction of the Project with Building A Residential/Commercial would involve use of the same common hazardous materials and likely generation of ACMs and LBP during demolition as the Project. As discussed for the Project above, the transport, use, and disposal of hazardous materials required for construction and the presence of ACMs and LBP in buildings to be demolished would not present a significant hazard through reasonably foreseeable accident and upset conditions with compliance with applicable federal, State, and local regulations, and no mitigation is required. This issue will not be further evaluated in the Draft EIR

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project site is within approximately one-quarter mile of the following three schools:

- Mayfield Junior School, 405 South Euclid Avenue;
- The Waverly School, 67 West Bellevue Drive; and
- Aria Montessori School, 693 South Euclid Avenue.

As discussed under Thresholds 2.9(a) and 2.9(b) above, construction and operation of the Project would involve the use of common hazardous substances, potential encounter of hazardous building materials, and use of medical and medically related materials that can be categorized as hazardous. While these materials would not be considered acutely hazardous or unusual, potential impacts to existing schools in proximity to the Project site due to hazardous emissions or handling of hazardous materials on the site will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed above under Threshold 2.8(a), while the Project with Building A Residential/Commercial would generate relatively less biomedical waste than the Project, this development scenario would still generate biomedical waste. Also, as discussed for the Project above, construction and operation of the Project would not involve the use of acutely hazardous or unusual materials. However, potential impacts to existing schools in proximity to the site related to handling of hazardous materials will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

Based on review of the Cortese List data resources, the Project site is not located on the State of California Hazardous Waste and Substances Sites List of sites published by CalEPA and compiled pursuant to Section 65962.5 of the *California Government Code* (referred to as the Cortese List). There is one site on the Cortese List located in the City of Pasadena, which is the Jet Propulsion Laboratory (CalEPA 2020).

A Phase I ESA was conducted for the Project site. The purpose of a Phase I ESA is to identify “recognized environmental conditions”, which are defined as “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property”. Therefore, a Phase I ESA addresses the potential for site contamination due to past or present land uses and the potential for future site contamination based on current conditions on and surrounding a site. The contents of Phase I ESAs are defined by national record review requirements in accordance with both the American Society for Testing and Materials (ASTM) E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and the USEPA Standards and Practices for All Appropriate Inquiries (40 Code of Federal Regulations [CFR] Part 312). The Phase I ESA for the proposed Project was conducted in accordance with these standards.

The Phase I ESA concluded that there was one Historical Recognized Environmental Condition (REC)⁴. As part of the Phase I ESA, the review of the historical data available for the site and the regulatory database report identified that a service station, the former ARCO station located at 125 East California Boulevard, was located on the Project site from approximately the 1930s to 2002 and utilized at least three underground storage tanks (USTs). This facility was located on the southern portion of the site, the site of the current restaurant at 577 South Arroyo Parkway. An unauthorized gasoline release impacting groundwater was first reported in 1988 and soil vapor extraction operations were initiated. In 1998, three USTs were removed from the site and various soil and groundwater investigations were subsequently conducted. The station received a “no further action” letter from the Pasadena Fire Department dated May 24, 2000; however, the site also received an additional clarification letter regarding the “no further action” letter stating that while the site has complied with the regulatory requirements for the site investigation/remediation, contamination remained at the site below regulatory action levels. A Declaration of Environmental Restriction allowing access for remediation was recorded on August 21, 2002, that was to terminate 90 days after No Further Action was received. Quarterly monitoring was conducted, and 761 cy of soil was removed. The Los Angeles Regional Water Quality Control Board (LARWQCB) granted case closure on December 3, 2004, with no property use

⁴ An Historical REC is defined under ASTM E1527 – 13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

restrictions, activity and use limitations, institutional controls, or engineering controls. The monitoring wells were abandoned in 2005. While this site has a "no further action" status and is considered a Historical REC (EMG 2020; Appendix B), this topic will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, potential impacts related to gasoline release in 1988 at the former ARCO station creating a significant hazard to the public or the environment will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the Project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

The Project site is not within an airport land use plan or within two miles of a public airport or public use airport. The nearest public use airport is the Hollywood Burbank Airport (formerly Bob Hope Airport), located more than 12 miles west of the Project site. Therefore, the proposed Project would not result in a safety hazard for people residing or working in the Project area, nor for people visiting the Project. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the site is not near any air facility, and development of the Project with Building A Residential/Commercial would not result in a safety hazard for people residing or working in the Project area, nor for people visiting the Project with Building A Residential/Commercial development scenario. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

The City of Pasadena Emergency Operations Plan addresses the City's planned response to emergencies associated with natural disasters and technological incidents. It provides an overview of operational concepts, identifies components of the City's emergency management organization within the Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS), and describes the overall responsibilities of the federal, State, county entities, and the City for protecting life and property and ensuring the overall well-being of the population (Pasadena 2011). Further, the City maintains a SEMS/NIMS Emergency Response Plan, which addresses planned responses to emergency/disaster situations associated with natural disasters, technological incidents, and national security emergencies. In case of a disaster, the Pasadena Fire Department is responsible for implementing the plan, and the Pasadena Police Department devises evacuation routes based on the specific circumstance of the emergency.

Construction and operation of the Project would not place any permanent or temporary physical barriers on any existing public streets. As such, the proposed Project would not obstruct any emergency evacuation or response activities. Construction staging would not interfere with circulation along Arroyo Parkway, California Boulevard, or any other nearby roadways. Among the standard conditions of approval for the Project, the Applicant would be required to submit a Construction Staging and Traffic Management Plan to the Public Works Department and no construction truck idling or staging, material storage, or construction trailer are allowed in the public ROW. For these reasons, the proposed Project would not interfere with any emergency response or emergency evacuation plans. Potential impacts would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, construction and operation of the Project with Building A Residential/Commercial would not interfere with any emergency response or emergency evacuation plans as the site layout, including circulation, would be the same as the Project. Potential impacts would be less than significant, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
h) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

The Project site and surrounding area is not within a Very High Fire Hazard Severity Zone (VHFHSZ) (CAL FIRE 2020). Implementation of the Project would not expose people or structures to wildfire risks. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project site is not within a VHFHSZ. This issue will not be further evaluated in the Draft EIR.

2.10 HYDROLOGY AND WATER QUALITY

Information in this section is derived in part from the *Hydrology/LID Study, 555 Arroyo Parkway* (Hydrology Study) prepared by Fuscoe Engineering and dated July 2021 (Fuscoe Engineering 2021).

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

The Project site is within the jurisdiction of the LARWQCB (Region 4). The Project could result in short-term, construction-related impacts to surface water quality from grading and other construction activities (e.g., erosion, spills, and leaks from construction equipment). Compliance with non-storm water management and pollution-control BMPs, as outlined in the SWPPP required for the Project consistent with the NPDES General Permit for Storm Water Associated with Construction Activities (Order No 2009-009-DWQ as amended by 2010-0014-DWQ and 2012- 0006-DWQ, NPDES No. CAS000002), would ensure the pollutant levels in runoff during construction do not violate water quality standards. Because the Project site is over one acre, Construction General Permit requirements would include the preparation of a SWPPP, implementation and monitoring of BMPs, implementation of best available technology for toxic and non-conventional pollutants, implementation of best conventional technology for conventional pollutants, and periodic submittal of performance summaries and reports to the LARWQCB.

The Project site is entirely developed, with the portion of the site south of the Whole Foods Market having a 97 percent impervious surface area. The existing buildings primarily drain runoff via roof drains that either connect to an underground curb drain or release just above the pavement or sidewalk. The storm water runoff then outfalls through sheet flow along driveways and street-adjacent curb drains onto the Arroyo Parkway sidewalk or directly connects to the municipal storm drain system. In the existing condition, storm water runoff discharges untreated into the municipal storm drain system.

In the City of Pasadena, all development and redevelopment projects must comply with the latest Los Angeles County Public Works Low Impact Development (LID) Standards Manual. The LID Standards Manual complies with the requirements of the NPDES Municipal Separate Storm Sewer (MS4) Permit for storm water and non-storm water discharges from the MS4 within the coastal watersheds of Los Angeles County (CAS004001, Order No. R4-2012-0175). The LID BMPs are engineered facilities that are designed to retain and/or biotreat runoff on a site. Per the County LID Manual, the Project is deemed a designated project because it is a redevelopment project that results in the creation or addition or replacement of 5,000 sf or more of impervious surface on a site that was previously developed. All designated projects must detain the water quality volume on-site through infiltration, evapotranspiration, water runoff harvest and use, or a combination thereof unless it is demonstrated that it is technically infeasible to do so.

The proposed on-site storm drain facilities would consist of catch basins, area drains, gutters, roof drains, pipes, and planters (biofiltration and non-biofiltration). These drains would route to either storm water infiltration facilities below the lowest basement, such as a drywell, or a detention tank before a biofiltration

planter, which would intercept the low flows and provide water quality treatment in order to meet the County LID Ordinance. In the case that biofiltration is selected for LID, pumps would be required to make the system successful. High flows and bypass flows would flow to the adjacent Arroyo Parkway either through sheet flow or the underground storm drain system overflow pipes that would connect to a parkway drain or curb drain. In the proposed condition, the site would be divided into four drainage areas that would have impervious surface areas of 94 percent, 98 percent, and 100 percent (two of the four drainage areas would be 100 percent).

The Hydrology Study prepared for the Project determined that, with implementation of the planned LID features—either infiltration or biofiltration—there would be a slight decrease in storm water runoff volumes. Table 2-2, Pre- and Post-Development Storm Water Discharges, summarizes the runoff discharges for 2-year, 5-year, 10-year, 25-year, and 50-year storm events.

**TABLE 2-2
PRE- AND POST-DEVELOPMENT STORM WATER DISCHARGES**

Drainage Area	2 Year Event	5 Year Event	10 Year Event	25 Year Event	50 Year Event
Existing (cfs)	2.84	4.80	6.20	8.14	9.27
Proposed (cfs)	3.43	5.42	6.62	8.14	9.27
LID Flow Reduction	0.80	0.80	0.80	0.80	0.80
Difference (cfs)	-0.21	-0.18	-0.38	-0.80	0.80
cfs: cubic feet per second					
Source: Fuscoe Engineering. 2021 (July). <i>Hydrology/LID Study, 555 South Arroyo Parkway</i> . Los Angeles, CA: Fuscoe Engineering. Appendix C.					

Implementation of the planned LID features would ensure both the quantity and quality of runoff discharged from the Project site would not violate LARWQCB standards or otherwise degrade surface or groundwater quality. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would implement the same LID features to manage storm water runoff as the Project. Therefore, as discussed for the Project above, implementation of the planned LID features would ensure both the quantity and quality of runoff discharged from the Project site would not violate LARWQCB standards or otherwise degrade surface or groundwater quality. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

A project can result in a significant impact on groundwater supplies if it causes a demonstrable and sustained reduction of groundwater recharge capacity or changes the potable water levels such that it reduces the ability of a water utility to use the groundwater basin for public water supplies or storage of imported water, reduces the yields of adjacent wells or well fields, or adversely changes the rate or direction of groundwater flow.

The Project would result in a net increase in potable water demand for indoor and outdoor use. Additionally, a finite amount of water would be used during construction for dust suppression. The sufficiency of water supplies for the Project will be further evaluated in the Utilities and Service Systems section of the Draft EIR. These potable water supplies may be in part derived from the City's groundwater sources but would not change the volume of water withdrawn from the Raymond Basin, as such withdrawal is controlled by the Raymond Basin Management Board.

Additionally, the Project would not involve an increase in impervious surfaces that would impede stormwater infiltration. As discussed under Threshold 2.10(a) above, the Project site would have a similar coverage of impervious surface area with Project implementation. Therefore, implementation of the Project would not materially affect groundwater recharge. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the sufficiency of water supplies for the Project with Building A Residential/Commercial will be further evaluated in the Utilities and Service Systems section of the Draft EIR, as these potable water supplies may be in part derived from the City's groundwater sources. The Project with Building A Residential/Commercial would result in the same post-development coverage of impervious surfaces as the Project, which is similar to the existing conditions. Therefore, as discussed, there would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Result in substantial erosion or siltation on- or off-site?				

WHY?**Project**

As discussed under Threshold 2.10(a) above, the Project site would remain largely impermeable with Project implementation. As in the existing condition, any storm water discharging from the site would enter the municipal storm drain system via Arroyo Parkway. Also, the site is not located in proximity to a stream or other drainage. Therefore, the Project would not result in substantial erosion or siltation on- or off-site. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would result in the same post-development drainage pattern as the Project. Therefore, as discussed for the Project above, the Project with Building A Residential/Commercial would not result in substantial erosion or siltation on- or off-site. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?				

WHY?**Project**

As discussed under Threshold 2.10(a) above, the Hydrology Study prepared for the Project determined that, with implementation of the planned LID features—either infiltration or biofiltration—there would be a slight decrease in storm water runoff volumes. The appropriate LID features would be a requirement of building permit review and a condition of approval for the Project. The site would remain largely permeable with Project implementation, with the same general drainage pattern on the site. Therefore, the Project would

not substantially increase the rate or amount of surface runoff such that on- or off-site flooding would occur. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would implement the same LID features to manage storm water runoff as the Project. Therefore, as discussed for the Project above, the Project with Building A Residential/Commercial would not substantially increase the rate or amount of surface runoff such that on- or off-site flooding would occur. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?				

WHY?

Project

As discussed under Threshold 2.10(a) above, the Hydrology Study prepared for the Project determined that, with implementation of the planned LID features—either infiltration or biofiltration—there would be a slight decrease in storm water runoff volumes. The site would remain largely impermeable with Project implementation and would maintain the same general drainage pattern on the site as the existing condition. Therefore, the Project would not create or contribute runoff that would exceed the capacity of the municipal storm drainage system. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would implement the same LID features to manage storm water runoff as the Project. Therefore, as discussed for the Project above, the Project with Building A Residential/Commercial would not create or contribute runoff that would exceed the capacity of the municipal storm drainage system. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course or a stream or river or through the addition of impervious surfaces, in a manner that would:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Impede or redirect flood flows?				

WHY?**Project**

As discussed under Threshold 2.10(a) above, the Project site would remain largely impermeable with Project implementation. As in the existing condition, any storm water discharging from the site would enter the municipal storm drain system via Arroyo Parkway. Also, the site is not located in proximity to a stream or other drainage. Therefore, the Project would not impede or redirect flood flows. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would result in the same post-development drainage pattern as the Project. Therefore, as discussed for the Project above, the Project with Building A Residential/Commercial would not impede or redirect flood flows. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?**Project**

No portions of the City are within a 100-year floodplain, as identified by the Federal Emergency Management Agency (FEMA). As shown on FEMA FIRM panel 06037C1375F, the Project site is located in Zone X (FEMA 2008). Zone X is located outside of the special flood hazard areas subject to inundation by the one percent annual chance of flood (100-year floodplain), and no floodplain management regulations are required. In addition, according to the City's Dam Failure Inundation Map (Plate P-2 of the Safety Element) the Project site is not located in a dam inundation area (City of Pasadena 2002a). The City is not located in proximity to any inland bodies of water or the Pacific Ocean to be inundated by either a seiche or tsunami. Therefore, the Project would neither introduce pollutants to the site nor risk release of pollutants due to inundation, including during intense storm events. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the City is not in a 100-year floodplain nor at risk of inundation by either a seiche or tsunami. The Project site is not within a dam inundation area (City of Pasadena 2002a). Therefore, the Project with Building A Residential/Commercial would neither introduce pollutants to the site nor risk release of pollutants due to inundation, including during intense storm events. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

As discussed under Threshold 2.10(a) above, implementation of the Project would not adversely affect water quality through compliance with the Construction General Plan and LID/County MS4 requirements during construction or operation, respectively.

The Raymond Basin, the Pasadena Water and Power's (PWP's) source of groundwater, is defined by the California Department of Water Resources as a very-low priority pursuant to the 2014 Sustainable Groundwater Management Act (DWR 2019). As such, there is currently no sustainable groundwater management plan applicable to the Project site. Regardless, as discussed under Threshold 2.10(b) above, the increase in demand for potable water during construction and operation of the Project, which may be in part derived from the City's groundwater sources, would not change the volume of water withdrawn from the Raymond Basin, as such withdrawal is controlled by the Raymond Basin Management Board as an adjudicated basin. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, there is currently no sustainable groundwater management plan applicable to the site. Regardless, as discussed under Threshold 2.10(b) above, the increase in demand for potable water during construction and operation of the Project with Building A Residential/Commercial, which may be in part derived from the City's groundwater sources, would not change the volume of water withdrawn from the Raymond Basin, as such withdrawal is controlled by the Raymond Basin Management Board as an adjudicated basin. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

2.11 LAND USE AND PLANNING

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?**Project**

The Project would not physically divide an existing community, as the Project would involve the redevelopment of five adjacent parcels that consist solely of commercial land uses. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would not divide an existing community because it would involve the redevelopment of five adjacent parcels that consist solely of commercial land uses. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The primary land use planning documents that govern the Project site are the City's General Plan, the Central District Specific Plan, and the Pasadena Zoning Code. The General Plan land use designation is High Mixed Use and the site is zoned CD-6 (Central District Specific Plan, Arroyo Corridor/Fair Oaks subdistrict). No General Plan amendment is proposed as part of the Project. However, the Applicant seeks approval to rezone the site as a Planned Development (PD) district and approval of a PD Plan. The City's PD zone is a special purpose zoning district defined, pursuant to Section 17.26.020(C) of the PMC. The PD zoning district is "intended for sites where an applicant proposes and the City desires to achieve a particular mix of uses, appearance, land use compatibility, or special sensitivity to neighborhood character." The Applicant is also requesting a zoning variance for historic resources. Specifically, the Applicant is requesting an increase in allowable building height to offset the reduction in developable area due to the preservation of the two historic structures on the Project site. Consistency with the applicable plans and policies of the City and the

region (i.e., SCAG) will be further evaluated in the Draft EIR, with a focus on plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would also involve approval to rezone the site as a PD District, approval of a PD Plan, and a zoning variance for historic resources. Consistency with the applicable plans and policies of the City and the region (i.e., SCAG) will be further evaluated in the Draft EIR, with a focus on plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect.

2.12 MINERAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?**Project**

No active mining operations exist in the City. There are two areas in Pasadena that have been identified by the CGS as Mineral Resource Zone 2, which is defined as areas where geologic data indicate the significant PCC-Grade aggregate resources are present. These two areas are Eaton Wash and Devil's Gate Reservoir, which were both formerly mined for aggregate (CGS 1982, 2010). Neither the Project site nor surrounding areas are presently utilized for mineral production and mining is not an allowed use in the City's zoning code. Therefore, the proposed Project would not result in the loss of an available known mineral resource with value to the region. There will be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, neither the Project site nor surrounding areas are presently utilized for mineral production and mining is not a permitted use in the City's zoning code. Therefore, the Project with Building A Residential/Commercial would not result in the loss of available known mineral resources with value to the region. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?**Project**

The City's General Plan Land Use Element does not identify any mineral recovery sites within the City (Pasadena 2015b). No active mining operations exist in the City, and mining is not currently allowed within any of the City's designated land uses. Therefore, the proposed Project would not result in significant impacts from the loss of a locally important mineral resource recovery site, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, no active mining operations exist in the City, and mining is not currently allowed within any of the City's designated land uses. Therefore, the Project with Building A Residential/Commercial would not result in significant impacts from the loss of a locally important mineral resource recovery site, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

2.13 NOISE

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The proposed Project would generate noise from construction activity and operational mobile (e.g., cars, trucks, ambulances) and stationary noise sources (e.g., idling vehicles and heating, ventilating, and air conditioning ([HVAC] equipment). The Applicant anticipates that there would be regular ambulance visits to the assisted care facility (approximately 10 per month). Potential impacts from temporary construction and permanent operational noise generation will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would generate noise from construction activity and operational mobile (e.g., cars, trucks, ambulances) and stationary noise sources (e.g., idling vehicles and heating, ventilating, and air conditioning ([HVAC] equipment) similar to the Project. Potential impacts from temporary construction and permanent operational noise generation will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

Depending on the type of construction activities employed, construction of the Project could generate groundborne vibration that could affect nearby buildings, including the three existing buildings to be retained on the site. Potential impacts related to generation of vibration will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, depending on the type of construction activities employed, construction of the Project with Building A Residential/Commercial could generate groundborne vibration that could affect

nearby buildings, including the three existing buildings (i.e., two historic structures and Whole Foods Market) to be retained on the site. Potential impacts related to generation of vibration will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

There are no public or private airports located within two miles of the Project site. The closest airport to the site is the Hollywood Burbank Airport (formerly Bob Hope Airport), located more than 12 miles west-northwest of the site. Accordingly, the Project would not expose people to excessive airport-related noise. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the site is not near any air facility, and development of the Project with Building A Residential/Commercial would not expose people to excessive airport-related noise. This issue will not be further evaluated in the Draft EIR.

2.14 POPULATION AND HOUSING

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through the extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project involves the construction and operation of medical office, commercial, and an assisted living building with both assisted living uses and independent living uses, which would result in a new permanent resident population on the Project site of up to 109 persons in the up to 95 senior housing units. While it is unlikely that all residents of the independent living units of the assisted living building would relocate to the City, for purposes of this analysis it is assumed that persons occupying the independent living units would be new residents. The City considers the independent living units within the assisted living building to be residential units because each unit would have a kitchen and areas for living and sleeping. Conversely, the assisted living uses would not have a kitchen, and are not considered residential units by the City for planning and zoning purposes. The assisted living facilities would care for up to an estimated 113 persons.

The medical office building is expected to result in 881 employees and the assisted living building is expected to result in 66 employees. The current (as of May 2021, the most recent published data) unemployment rate in the City of Pasadena is 8.4 percent and in the County of Los Angeles is 10.1 percent and has averaged 5.2 percent in the County from 2015 through 2019 (i.e., the five calendar years prior to the COVID-19 pandemic)(EDD 2021a, 2021b). Therefore, most or all of new employment positions generated by the Project are anticipated to be filled by the local labor pool in the region and would not require relocation to the City such that unplanned population growth exceeding projections would occur.

The Land Use Element of the City's General Plan identifies a total development capacity of 4,272 residential units and 2,112,000 sf of commercial land uses in the Central District (Pasadena 2015b). The Project includes 98,576 sf of independent living uses, with up to 95 residential units, 85,800 sf of assisted living uses, and 154,000 sf of medical office and commercial uses. As of May 31, 2021, building permits have been issued for 1,721 residential units and 792,757 sf of commercial land uses. Therefore, there is adequate remaining development capacity in the Central District to accommodate the Project. Furthermore, the Project site is in a developed urban area with an established roadway network and in-place infrastructure. Therefore, development of the Project and its potential employment opportunities would not require extending or improving infrastructure in a manner that would indirectly facilitate population growth. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial could result in new permanent population of up to 493 persons⁵ in the up to 197 units, and the assisted living building (Building B) could result in a permanent

⁵ Based on average household size of 2.5 for the City of Pasadena per the most recent (2019) profile of the City generated by the Southern California Association of Governments (SCAG 2019).

resident population of 109 persons in the up to 95 independent living units. As discussed in Section 1.0 of this Initial Study, based on the development cap of 87 du/acre, a total of 289 units could be constructed. Therefore, if a total of 197 units were constructed in Building A, only 92 independent living units could be constructed in Building B. Conversely, if 95 independent living units were constructed in Building B, only 194 units could be constructed in Building A. Because the dwelling units in Building A would have a higher average population (2.5 persons) than the independent living units (1.14 persons), as the more conservative approach it is assumed the Project with Building A Residential/Commercial would be implemented with 197 units in Building A and 92 units in Building B as this would result in a higher population generation. This scenario would result in a total population of approximately 664 persons in the same size buildings as the Project (338,376 sf). As with the Project, the assisted living building is expected to result in 66 employees. Under this development scenario, Building A would include a leasing/sales management office that would employ a small number of individuals and potentially employ maintenance personnel as well. As discussed above for the Project, based on the unemployment rate in the City in the five calendar years prior to the pandemic, it is expected that most or all of new employment positions generated by the Project with Building A Residential/Commercial would be filled by the local labor pool in the region and would not require relocation to the City such that unplanned population growth exceeding projections would occur.

There is adequate remaining development capacity (2,551 residential units and 1,319,243 sf of commercial land uses) in the Central District to accommodate the Project with Building A Residential/Commercial. As discussed for the Project above, development of the Project with Building A Residential/Commercial would not indirectly induce substantial population growth because the site development would not require extending or improving infrastructure, and job opportunities are not anticipated to require substantial relocation. There would be a less than significant impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

The Project site does not contain any existing dwelling units, and there are no persons currently residing at the site. Therefore, the proposed Project would not displace any people or housing. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, there are no existing dwelling units or persons residing on the site. Therefore, the Project with Building A Residential/Commercial would not displace any people or housing. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

2.15 PUBLIC SERVICES

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
i) Fire protection?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) Police protection?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
iv) Parks?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
v) Other public facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

As discussed in Section 2.14, Population and Housing, above, the Project would result in direct population growth in the City. There would be increased demand for fire protection and police protection services related to both the increased population and the increased scale of building development on the site. The Project's resident population would generate an increased demand for parks and other public facilities, such as libraries. The increased demand for these public services and whether it would result in the need for new or expanded facilities that could result in environmental impacts will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would result in increased demand for fire protection and police protection services. The increased residential population with development of the Project with Building A Residential/Commercial, which would be greater than with the Project, would generate an increased demand for parks and other public facilities, such as libraries. The increased demand for these public services and whether it would result in the need for new or expanded facilities that could result in environmental impacts will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
iii) Schools?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

As discussed in Section 2.14, Population and Housing, above, the Project would result in direct population growth in the City. However, because the population would be senior individuals, there would not be an increased demand for schools. There would be no impact, and no mitigation is required. However, as discussed below, because the proposed development may involve development of a residential building that would increase demand for schools, whether this would result in the need for new or expanded facilities that could result in environmental impacts will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would result in an increased demand for schools because, unlike the assisted living building, the dwelling units in the proposed residential building under this development scenario could include families with school-age children. Therefore, the increased demand for schools and whether it would result in the need for new or expanded facilities that could result in environmental impacts will be further evaluated in the Draft EIR.

2.16 RECREATION

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

As discussed in Section 2.14, Population and Housing, above, the Project would result in direct population growth in the City. The Project's resident population would generate an increased demand for recreational facilities in the City and local region. The increased demand for these recreational facilities and whether they would result in the deterioration of these facilities will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would result in increased demand for recreational facilities in the City and local region. The increased residential population with development of the Project with Building A Residential/Commercial, which would be greater than with the Project, would generate an increased demand for recreational facilities. The increased demand for these facilities and whether it would result in the deterioration of these facilities will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

As discussed in Section 2.14, Population and Housing, above, the Project would result in direct population growth in the City. There would be increased demand for recreational facilities related to both the increased population and the increased scale of building development on the site. The increased demand for recreation facilities and whether it would result in the need for expanded recreational facilities that could result in environmental impacts will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would result in increased demand for recreational facilities in the City and local region. The increased residential population with development of the Project with Building A Residential/Commercial, which would be greater than with the Project, would generate an increased demand for recreational facilities. The increased demand for recreation facilities and whether it would result in the need for expanded recreational facilities that could result in environmental impacts will be further evaluated in the Draft EIR.

2.17 TRANSPORTATION

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The City of Pasadena has adopted transportation performance measures and thresholds of significance to determine transportation and traffic impacts under CEQA. The performance measures and CEQA thresholds are consistent with the City's adopted General Plan and SB 743 and include Vehicle Miles Traveled (VMT) per capita, vehicle trips (VT) per capita, proximity and quality of bicycle network, proximity and quality of transit network, and pedestrian accessibility. The measures support the City's vision of creating a community where people can circulate without cars, which relies upon an integrated multimodal transportation system that provides choices and accessibility for everyone in the City. The Project would generate increased vehicle trips. Therefore, consistency of the Project with the City's plans, ordinances, and policies addressing the circulation system, specifically the City's General Plan and the City's *Transportation Impact Analysis Current Practice and Guidelines* (TIA guidelines), will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would generate increased vehicle trips. Both development scenarios would have separate transportation studies to reflect the different proposed land uses. Therefore, consistency of the Project with Building A Residential/Commercial with the City's plans, ordinances, and policies addressing the circulation system, specifically the City's General Plan and TIA guidelines, will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)(1)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

Section 15064.3(b)(1) of the State CEQA Guidelines refers to evaluating transportation impacts using VMT for land use projects. The City's TIA guidelines were prepared to reflect the requirements of SB 743. The City of Pasadena Department of Transportation has prepared a transportation analysis based on the requirements of SB 743 and determined whether there would be transportation impacts pursuant to CEQA.

Specifically, the objectives of this analysis is to assess the impact the development would have on the City's transportation system by estimating incremental changes in VMT per capita, VT per capita, the Project's impact on service population proximity access to transit and bike facilities and walk accessibility score. The results of this analysis will be presented for further evaluation in the Draft EIR.

Project with Building A Residential/Commercial

The Project with Building A Residential/Commercial would generate increased vehicle trips. Both development scenarios would have separate transportation studies to reflect the different proposed land uses. The results of these analyses will be presented for further evaluation in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?

Project

The proposed Project would not involve any alterations to the configuration of existing public or private roadways, such as new lanes, curves, or crossings outside the boundaries of the Project site. The Project uses south of Whole Foods Market would have three ingress/egress points—one on California Boulevard and two on South Arroyo Parkway. These driveways would be required to comply with all applicable design standards in Section 17.46 Parking and Loading of the PMC to ensure safe circulation to and from, and within, the Project. The new driveway approaches and associated curb and gutter would be required to be built to the City's standard plans as a condition of approval. Whole Foods Market would retain the entrance on Bellevue Drive and the exit onto South Arroyo Parkway. Therefore, the Project would not increase hazards due to a geometric design feature or incompatible use. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, because the Project with Building A Residential/Commercial would have the same site plan, including circulation, as the Project, there would be no alterations to the configuration of existing public or private roadways outside the boundaries of the site. As such, the Project with Building A Residential/Commercial would not increase hazards. There would be no impact, and no mitigation is required. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Result in inadequate emergency access?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

The proposed Project would not involve any alterations to existing public or private roadways and would not result in the elimination of a through-route or the narrowing of any roadways outside the boundaries of the site. However, the Project would result in a greater intensity of land uses on the site, including medical and assisted living uses that would require emergency vehicles to visit on a regular basis. Therefore, the emergency access for the Project site and adjacent areas will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, because the Project with Building A Residential/Commercial would have the same site plan as the Project, including circulation, there would be no alterations to the configuration of existing public or private roadways outside the boundaries of the site. However, the Project with Building A Residential/Commercial would result in a greater intensity of land uses on the site, including assisted living uses that may require emergency vehicles to visit on a regular basis. Therefore, the emergency access for the Project site and adjacent areas will be further evaluated in the Draft EIR.

2.18 TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project is subject to compliance with AB 52, which requires consideration of impacts to “tribal cultural resources”, defined in Section 21074 of the *Public Resources Code*, as part of the CEQA process. AB 52 requires the City to notify any groups (who have requested notification) who are traditionally or culturally affiliated with the geographic area of a project for which a Negative Declaration, Mitigated Negative Declaration, or an EIR is required pursuant to CEQA. The AB 52 process was initiated in May 2020, and this consultation process remains ongoing at the time this IS was circulated. Therefore, the potential for the Project to cause a substantial adverse change to a listed or eligible tribal cultural resource will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the AB 52 process for site development was initiated in May 2020 and is ongoing. Because the location and scale of proposed buildings and subterranean parking structure would be the same, the results of the consultation would apply equally to both development scenarios. Therefore, the potential for the Project with Building A Residential/Commercial to cause a substantial adverse change to a listed or eligible tribal cultural resource will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

As discussed under Threshold 2.18(a), the AB 52 process was initiated in May 2020 and remains ongoing. Therefore, the potential for the Project to cause a substantial adverse change to a significant tribal cultural resource will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the AB 52 process for site development was initiated in May 2020 and is ongoing. Because the location and scale of proposed buildings and subterranean parking structure would be the same, the results of the consultation would apply equally to both development scenarios. Therefore, the potential for the Project with Building A Residential/Commercial to cause a substantial adverse change to a significant tribal cultural resource will be further evaluated in the Draft EIR.

2.19 UTILITIES AND SERVICE SYSTEMS

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities the construction or relocation of which could cause significant environmental effects?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project would increase demand for potable water, electricity, natural gas, and telecommunications facilities and would increase the generation of wastewater. Potential impacts related to the need for new or expanded water, wastewater, and dry utilities whose construction could result in environmental impacts will be further evaluated in the Draft EIR.

As discussed in Section 2.10, Hydrology and Water Quality, the Hydrology Study prepared for the Project determined that there would be a decrease in storm water runoff volumes due to the infiltration of LID design, either infiltration or biofiltration, consistent with City and County requirements. Therefore, implementation of the Project would not result in the relocation or construction of new or expanded storm drainage infrastructure beyond that constructed on the site as part of the Project. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would increase demand for potable water, electricity, natural gas, and telecommunications facilities and would increase the generation of wastewater. Potential impacts related to the need for new or expanded water, wastewater, and dry utilities whose construction could result in environmental impacts will be further evaluated in the Draft EIR.

As discussed in Section 2.10, Hydrology and Water Quality, the Hydrology Study prepared for the Project determined that there would be a decrease in storm water runoff volumes due to the infiltration of LID design, either infiltration or biofiltration, consistent with City and County requirements. The Project with Building A Residential/Commercial would implement the same LID features to manage storm water runoff as the Project. Therefore, implementation of the Project with Building A Residential/Commercial would not result in the relocation or construction of new or expanded storm drainage infrastructure beyond that constructed on the site as part of the Project. This issue will not be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project would increase demand for potable water. The PWP has concluded the Project does not meet the thresholds to require a Water Supply Assessment pursuant to SB 610 (Sections 10910 et. seq. of the California Water Code) (Dion 2020). However, potential impacts related to the sufficiency of water supplies for the Project will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would increase demand for potable water. The PWP has concluded that this scenario also does not need the thresholds to require a Water Supply Assessment. Potential impacts related to the sufficiency of water supplies for the Project with Building A Residential/Commercial will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

The Project would increase the generation of wastewater. Wastewater from the City of Pasadena is treated by the Sanitation Districts of Los Angeles County (Sanitation Districts) at the San Jose Creek Water Reclamation Plant (WRP) next to the City of Whittier, Whittier Narrows WRP in the City of El Monte, and/or the Los Coyotes WRP in the City of Cerritos (Pasadena 2015a). Potential impacts to Sanitation Districts' facilities from the Project will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project with Building A Residential/Commercial would increase generation of wastewater. Potential impacts to Sanitation Districts' facilities from the Project with Building A Residential/Commercial will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

Construction of the Project would generate a finite volume of waste. Section 8.62 et. seq. of the PMC is the City's construction and C&D ordinance. The Project would be subject to the C&D ordinance and therefore required to divert at least 75 percent of the construction waste stream from landfill disposal. Operation of the Project would result in increased long-term generation of municipal (non-hazardous) solid waste and biowaste. Potential impacts related to landfill space, biowaste disposal, and compliance with applicable solid waste regulations will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, construction of the Project with Building A Residential/Commercial would generate a finite volume of waste that would be essentially the same as the Project. Construction of this development scenario would also be subject to the City's C&D ordinance to reduce the construction waste stream. Operation of the Project with Building A Residential/Commercial would result in increased long-term generation of municipal (non-hazardous) solid waste and biowaste. This development scenario would generate relatively more municipal waste and relatively less biowaste than the Project. Potential impacts related to landfill space, biowaste disposal, and compliance with applicable solid waste regulations will be further evaluated in the Draft EIR.

2.20 WILDFIRE

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
If located in or near State Responsibility Areas or lands classified as Very High Fire Hazard Severity Zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

WHY?**Project**

The Project site and surrounding area is not within or near State Responsibility Areas or a VHFHSZ (CAL FIRE 2020). Implementation of the Project would not expose people or structures to wildfire risks. This issue will not be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed for the Project above, the Project site is not within a VHFHSZ. This issue will not be further evaluated in the Draft EIR.

2.21 EARLIER ANALYSIS

Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in a prior EIR or negative declaration. See CEQA Guidelines Section 15063(c)(3)(D). The EIR is not tiered from a previous CEQA document. All documents used in the preparation of this IS are provided in Section 3.0, Initial Study Reference Documents.

2.22 MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Does the project:				
a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?

Project

As discussed in Section 2.4, Biological Resources, the Project would not significantly impact biological resources. The Project site is fully developed and highly disturbed, with minimal, ornamental vegetation on the site. The Project would not degrade the quality of the environment; would not substantially reduce the habitat of fish or wildlife species; would not cause a fish or wildlife population to drop below self-sustaining levels; would not threaten to eliminate a plant or animal community; and would not reduce the number of or restrict the range of a Rare or Endangered plant or animal.

As discussed in Section 2.5, Cultural Resources, and Section 2.18, Tribal Cultural Resources, the potential for the Project to impact the on-site historic resources and unknown historic (buried), archaeological, tribal cultural, and/or paleontological resources will be further evaluated in the Draft EIR.

Project with Building A Residential/Commercial

As discussed in Section 2.4, Biological Resources, the Project with Building A Residential/Commercial would not significantly impact biological resources. The Project site is fully developed and highly disturbed, with minimal, ornamental vegetation on the site. The Project with Building A Residential/Commercial would not degrade the quality of the environment; would not substantially reduce the habitat of fish or wildlife species; would not cause a fish or wildlife population to drop below self-sustaining levels; would not threaten to eliminate a plant or animal community; and would not reduce the number of or restrict the range of a Rare or Endangered plant or animal.

As discussed in Section 2.5, Cultural Resources, and Section 2.18, Tribal Cultural Resources, the potential for the Project with Building A Residential/Commercial to impact the on-site historic resources and unknown historic (buried), archaeological, tribal cultural, and/or paleontological resources will be further evaluated in the Draft EIR.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

Within the City of Pasadena, there are planned, ongoing, and proposed projects that may cumulatively increase environmental impacts in the Project area. These impacts are potentially significant and will be further evaluated in the Draft EIR. The Draft EIR will evaluate cumulative impacts for the Project based on buildout of the City's General Plan as the basis of growth projections.

Project with Building A Residential/Commercial

As discussed for the Project above, the Draft EIR will evaluate cumulative impacts for the Project with Building A Residential/Commercial based on buildout of the City's General Plan as the basis of growth projections.

	Potentially Significant Impact	Less than Significant with Mitigation	Less than Significant Impact	No Impact
Would the project:				
c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

WHY?**Project**

Construction and operation of the Project could have the potential to generate significant adverse impacts on human beings, either directly or indirectly. The Draft EIR will provide analyses of the potential impacts related to air quality, cultural resources, paleontological resources, energy, greenhouse gas emissions, hazards and hazardous materials, land use and planning, noise, public services and recreation, transportation, tribal cultural resources, and utility and service systems.

Project with Building A Residential/Commercial

Construction and operation of the Project with Building A Residential/Commercial could have the potential to generate significant adverse impacts on human beings, either directly or indirectly. The Draft EIR will provide analyses of the potential impacts related to air quality, cultural and paleontological resources,

energy, greenhouse gas emissions, hazards and hazardous materials, land use and planning, noise, public services and recreation, transportation, tribal cultural resources, and utility and service systems.

Jason Van Patten
City of Pasadena
175 N. Garfield Avenue
Pasadena, CA 91101

RE: Planned Development #39 (Affinity Project)
– Notice of Preparation of an Environmental
Impact Report (NOP)
SCH # 2021080103
GTS # 07-LA-2021-03677
Vic. LA-710/PM: T31.757

Dear Jason Van Patten:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced NOP. The Project involves demolishing six buildings totaling 45,912 square feet (sf) and constructing two new buildings. Building A would be a 154,000 sf, 7-story medical office building with ground-floor commercial uses. Building B would be a 184,376 sf, 7-story building with 85,800 sf of assisted living uses and 98,576 sf of independent living uses, including up to 95 senior housing units. There would also be five subterranean levels providing up to 850 parking spaces. In addition, the project would enable the flexibility to alter the uses in Building A to provide different amounts of commercial, residential, and parking uses. Although the project does not expect to alter the uses in Building A, this flexibility will allow the project to respond to the economic needs and demands of the City at the time of project implementation. The City of Pasadena is the Lead Agency under the California Environmental Quality Act (CEQA).

The project is located approximately .6 miles away from State Route 110 (SR-110), and approximately 5,200 feet away from where the Interstate 210 (I-210), State Route 134 (SR-134), and Interstate 710 (I-710) meet. From reviewing the NOP, Caltrans has the following comments.

Caltrans looks forward to reviewing the Vehicle Miles Traveled (VMT) analysis for this project. For information on determining transportation impacts in terms of VMT on the State Highway System, see the *Technical Advisory on Evaluating Transportation Impacts in CEQA* by the California Governor's Office of Planning and Research (OPR), dated December 2018: http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf. The City can also refer to Caltrans' updated *Vehicle Miles Traveled-Focused Transportation Impact Study Guide* (TISG), dated May 2020 and released on Caltrans' website in July 2020: <https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/sb-743/2020-05-20-approved-vmt-focused-tisg-a11y.pdf>. Caltrans' new TISG is largely based on the OPR 2018 Technical Advisory.

Note that the updated TISG states, "Additional future guidance will include the basis for requesting transportation impact analysis that is not based on VMT. This guidance will include a simplified safety analysis approach that reduces risks to all road users and that focuses on multi-modal conflict analysis as

well as access management issues.” Since releasing the TISG, Caltrans has released interim safety analysis guidance, dated December 2020 and found here, for the City’s reference: <https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/sb-743/2020-12-22-updated-interim-lidgr-safety-review-guidance-a11y.pdf>.

The following information is included for your consideration. The mission of Caltrans is to provide a safe and reliable transportation network that serves all people and respects the environment. Furthermore, Caltrans encourages Lead Agencies to implement Transportation Demand Management (TDM) strategies that reduce VMT and Greenhouse Gas (GHG) emissions. A TDM strategy that the City should consider for this project is keeping vehicle parking to a minimum, since research has shown that surplus parking can induce VMT.

Also, any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will need a Caltrans transportation permit. Caltrans recommends that the project limit construction traffic to off-peak periods to minimize the potential impact on State facilities. If construction traffic is expected to cause issues on any State facilities, please submit a construction traffic control plan detailing these issues for Caltrans’ review.

If you have any questions about these comments, please contact Emily Gibson, the project coordinator, at Emily.Gibson@dot.ca.gov, and refer to GTS # 07-LA-2021-03677.

Sincerely,

Frances Duong for

MIYA EDMONSON

Jason Van Patten, Senior Planner
City of Pasadena
Planning and Community Development Department
175 North Garfield Avenue
Pasadena, CA 91101

Dear Mr. Van Patten:

NOP Response for Affinity Project

The Los Angeles County Sanitation Districts (Districts) received a Notice of Preparation (NOP) of a Draft Environmental Impact Report for the subject project on August 5, 2021. The proposed project is located within the jurisdictional boundary of District No. 16. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to local sewer lines, which are not maintained by the Districts, for conveyance to either or both the Districts' Arroyo Seco Section 4 Trunk Sewer, located in the northern terminus of Garfield Avenue at Hardison Place, or Arroyo Seco Section 5 Trunk Sewer, also located in the northern terminus of Garfield Avenue at Hardison Place. The Districts' 21-inch diameter Arroyo Seco Section 4 Trunk Sewer has a capacity of 69.0 million gallons per day (mgd) and conveyed a peak flow of 2.1 mgd when last measured in 2015. The Districts' 16-inch diameter Arroyo Seco Section 5 Trunk Sewer has a capacity of 4.3 mgd and conveyed a peak flow of 0.4 mgd when last measured in 2015.
2. The wastewater generated by the proposed project will be treated at the Whittier Narrows Water Reclamation Plant (WRP) located near the City of South El Monte, which has a capacity of 15.0 mgd and currently processes an average flow of 9.9 mgd, or at the Los Coyotes WRP located in the City of Cerritos, which has a capacity of 37.5 mgd and currently processes an average flow of 21.3 mgd.
3. The expected average wastewater flow from the project site, described in the NOP and Initial Study as a 154,000 square feet (sf) medical office or a 197-unit apartment with 3,000 sf commercial uses; a 85,800 sf of assisted living uses; a 95-unit apartment, but no more than 289 units in the entire project site; and a total of 5,882 sf of restaurant uses, is 92,642 gallons per day (gpd). For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, under Services, then Wastewater Program and Permits, select Will Serve Program, and scroll down to click on the [Table 1, Loadings for Each Class of Land Use](#) link.
4. The Districts are empowered by the California Health and Safety Code to charge a fee to connect facilities (directly or indirectly) to the Districts' Sewerage System or to increase the strength or quantity of wastewater discharged from connected facilities. This connection fee is a capital facilities fee that is used by the Districts to upgrade or expand the Sewerage System. Payment of a connection fee may be required before this project is permitted to discharge to the Districts' Sewerage System. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, under Services, then Wastewater (Sewage) and select Rates & Fees. In determining the impact to the Sewerage System and applicable connection fees, the

Districts will determine the user category (e.g. Condominium, Single Family home, etc.) that best represents the actual or anticipated use of the parcel(s) or facilities on the parcel(s) in the development. For more specific information regarding the connection fee application procedure and fees, the developer should contact the Districts' Wastewater Fee Public Counter at (562) 908-4288, extension 2727.

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CCA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise the developer that the Districts intend to provide this service up to the levels that are legally permitted and to inform the developer of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2743 or at mandyng@lacsdc.org.

Very truly yours,

Mandy Ng

RE: Affinity Project – 465 and 577 South Arroyo Parkway
Notice of Preparation of Environmental Impact Report (EIR)

Dear Mr. Van Patten:

Thank you for coordinating with the Los Angeles County Metropolitan Transportation Authority (Metro) regarding the proposed Affinity Project (Project) located at 465 and 577 South Arroyo Parkway in the City of Pasadena (City). Metro is committed to working with local municipalities, developers, and other stakeholders across Los Angeles County on transit-supportive developments to grow ridership, reduce driving, and promote walkable neighborhoods. Transit Oriented Communities (TOCs) are places (such as corridors or neighborhoods) that, by their design, allow people to drive less and access transit more. TOCs maximize equitable access to a multi-modal transit network as a key organizing principle of land use planning and holistic community development.

Per Metro's area of statutory responsibility pursuant to sections 15082(b) and 15086(a) of the Guidelines for Implementation of the California Environmental Quality Act (CEQA: Cal. Code of Regulations, Title 14, Ch. 3), the purpose of this letter is to provide the City with specific detail on the scope and content of environmental information that should be included in the Environmental Impact Report (EIR) for the Project. In particular, this letter outlines topics regarding the Project's potential impacts on the Metro L Line (Gold) facilities and services which should be analyzed in the EIR, and provides recommendations for mitigation measures as appropriate. Effects of a project on transit systems and infrastructure are within the scope of transportation impacts to be evaluated under CEQA.¹

In addition to the specific comments outlined below, Metro is providing the City and Applicant with the Metro Adjacent Development Handbook (attached), which provides an overview of common concerns for development adjacent to Metro right-of-way (ROW) and transit facilities, available at <https://www.metro.net/devreview>.

Project Description

The Project includes demolition of six existing buildings located at 491, 495, 499, 503, 541, and 577 South Arroyo Parkway and construction of one 7-story assisted living building and one 7-story medical office building with ground floor commercial. The project is proposing a total of five subterranean levels providing up to 850 parking spaces.

¹ See CEQA Guidelines section 15064.3(a); Governor's Office of Planning and Research Technical Advisory on Evaluating Transportation Impacts In CEQA, December 2018, p. 19.

Recommendations for EIR Scope and Content

Light Rail Adjacency

1. Rail Operations: The Metro L Line (Gold) currently operates weekday peak service as often as every six minutes in both directions. Trains may operate in and out of revenue service, 24 hours a day, seven days a week, in the ROW adjacent to the Project.
2. Impact Analysis: Due to the Project's proximity to the L Line (Gold) ROW, the EIR must analyze potential effects on light rail operations and identify mitigation measures as appropriate. Critical impacts to be studied should include (without limitation): impacts of Project construction and operation on and potential damage to the structural and systems integrity of tracks and related infrastructure; disruption to light rail service. Specific impacts and mitigation measures that should be studied include:
 - a. Disturbance to Light Rail Structural Support: The Project includes excavation and construction of underground structures. Tiebacks supporting these structures have the potential to disturb adjoining soils and jeopardize support of the light rail tracks.

Recommended mitigation measures:

- i. Technical Review: The Applicant shall submit engineering drawings and calculations, as well as construction work plans and methods, to evaluate any impacts to the Metro L Line (Gold) infrastructure in relationship to the Project. Before issuance of any building permit for the Project, the Applicant shall obtain Metro's approval of final construction plans.
- ii. Structure Setback: Where the Project site is immediately adjacent to Metro ROW, all building structures (above ground and below grade) and projections shall be set back at least five (5) feet from the property line shared by the Project property and Metro to allow adequate space for construction and property maintenance activities. Property owners will generally not be permitted to access Metro property to construct or maintain private development and/or landscaping, except as approved as indicated in paragraphs 3.d and 3.e below.
- iii. Construction Safety: The construction and operation of the Project shall not disrupt the operation and maintenance activities of the Metro L Line (Gold) or the structural and systems integrity of Metro's light rail infrastructure. Not later than one month before Project construction, the Applicant shall contact Metro to schedule a pre-construction meeting with all Project construction personnel and Metro Real Estate, Construction Management, and Construction Safety staff. During Project construction, the Applicant shall:
 1. Construct a protection barrier to prevent objects, material, or debris from falling onto the ROW;
 2. Notify Metro of any changes to demolition and construction activities that may impact the use of the ROW;
 3. Permit Metro staff to monitor demolition and construction activities to ascertain any impact to the L Line (Gold) ROW.
- b. Overhead Catenary System (OCS) Setback: Overhead catenary wires and support structures adjacent to the Project power Metro trains. OCS wires should be treated like any high voltage electrical utility wires. The Project's structures, including protrusions that face the ROW (e.g.

balconies, awnings and other appurtenances), are proposed to be in close proximity to the OCS and can pose an electrocution hazard during Project construction and operation.

Recommended mitigation measures:

- i. Technical Review: The Applicant shall submit engineering drawings and calculations, as well as construction work plans and methods including any crane placement and radius, to evaluate any impacts to the Metro L Line (Gold) infrastructure in relationship to the Project. Before issuance of any building permit for the Project, the Applicant shall obtain Metro's approval of final construction plans.
 - ii. OCS Protection: The Applicant shall take all necessary measures to protect the OCS from damage due to Project activities during and after construction, pursuant to applicable California Department of Industrial Relations regulations (Cal. Code of Regulations, Title 8). The Applicant shall post proper signage for equipment working around the OCS wires.
 - iii. Setback: Any building protrusions facing the ROW (e.g. balconies, awnings and other appurtenances), as well as landscaping shall be set back at least ten (10) feet from the OCS wires and support structures.
 - iv. Construction Safety: The construction and operation of the Project shall not disrupt the operation and maintenance activities of the Metro L Line (Gold) or the structural and systems integrity of Metro's light rail infrastructure. Not later than one month before Project construction, the Applicant shall contact Metro to schedule a pre-construction meeting with all Project construction personnel and Metro Real Estate, Construction Management, and Construction Safety staff. During Project construction, the Applicant shall:
 1. Work in close coordination with Metro to ensure that Station access, visibility, and structural integrity are not compromised by construction activities or permanent build conditions;
 2. Construct a protection barrier to prevent objects, material, or debris from falling onto the ROW;
 3. Notify Metro of any changes to demolition and construction activities that may impact the use of the ROW;
 4. Permit Metro staff to monitor demolition and construction activities to ascertain any impact to Metro L Line (Gold);
 5. Apply for and obtain approval from Metro for any special operations, including the use of a pile driver or any other equipment that could come into close proximity to the OCS or support structures, not later than one month before the start of Project construction.
3. Advisories to Applicant: The Applicant is encouraged to contact Metro Development Review early in the design process to address potential impacts. The Applicant should also be advised of the following:
- a. Occupational Safety and Health Administration (OSHA) Requirements: Demolition, construction and/or excavation work in proximity to Metro ROW with potential to damage light rail tracks and related infrastructure may be subject to additional OSHA safety requirements.
 - b. Technical Review: Metro charges for staff time spent on engineering review and construction monitoring.

- c. ROW Entry Permit: For temporary or ongoing access to Metro ROW for demolition, construction, and/or maintenance activities, the Applicant shall complete Metro's Track Allocation process with Metro Rail Operations and obtain a Right of Entry Permit from Metro Real Estate. Approval for single tracking or a power shutdown, while possible, is highly discouraged; if sought, the Applicant shall apply for and obtain such approval from Metro not later than two months before the start of Project construction.
- d. Cost of Impacts: The Applicant will be responsible for costs incurred resulting from Project construction/operation issues that cause delay or harm to Metro service delivery or infrastructure, including single-tracking or bus bridging around closures. The Applicant will also bear all costs for any noise mitigation required for the Project.
- e. Maintenance: Metro will require prompt removal of graffiti and trash along the concrete block wall and landscaped area adjacent to Metro ROW. For these and other maintenance activities that will require access to Metro property, the Applicant must obtain a Temporary Right of Entry Permit before accessing property and coordinate activities through Rail Operations Track Allocation process, as discussed above.

Transit Supportive Planning: Recommendations and Resources

Considering the Project's proximity to Fillmore Station, Metro would like to identify the potential synergies associated with transit-oriented development:

1. Transit Oriented Development (TOD) Planning Grant: The City is a recipient of Metro's TOD Planning Grant in support of updates to several Specific Plans. The TOD Planning Grant's objective is to develop and adopt transit-supportive regulations that promote equitable, sustainable, and transit-supportive planning to increase transit ridership. One of the plans to be updated is the Central District Specific Plan (Specific Plan Update), which encompasses the Project site. The City should encourage alignment and evaluate the Project's consistency with the Specific Plan Update including the proposed policies, development standards, and implementation measures.
2. Transit Supportive Planning Toolkit: Metro strongly recommends that the Applicant review the Transit Supportive Planning Toolkit which identifies 10 elements of transit-supportive places and, applied collectively, has been shown to reduce vehicle miles traveled by establishing community-scaled density, diverse land use mix, combination of affordable housing, and infrastructure projects for pedestrians, bicyclists, and people of all ages and abilities. This resource is available at <https://www.metro.net/about/funding-resources/>.
3. Land Use: Metro supports development of commercial and residential properties near transit stations and understands that increasing development near stations represents a mutually beneficial opportunity to increase ridership and enhance transportation options for the users of developments. Metro encourages the City and Applicant to be mindful of the Project's proximity to the Fillmore Station, including orienting pedestrian pathways towards the station.
4. Transit Connections and Access: Metro strongly encourages the Applicant to install Project features that help facilitate safe and convenient connections for pedestrians, people riding bicycles, and transit users to/from the Project site and nearby destinations. The City should consider requiring the installation of such features as part of the conditions of approval for the Project, including:
 - a. Walkability: The provision of wide sidewalks, pedestrian lighting, a continuous canopy of shade trees, enhanced crosswalks with ADA-compliant curb ramps, and other amenities along all public street frontages of the development site to improve pedestrian safety and comfort to access the nearby Fillmore Station.

- b. Bicycle Use and Micromobility Devices: The provision of adequate short-term bicycle parking, such as ground-level bicycle racks, and secure, access-controlled, enclosed long-term bicycle parking for residents, employees, and guests. Bicycle parking facilities should be designed with best practices in mind, including highly visible siting, effective surveillance, ease to locate, and equipment installation with preferred spacing dimensions, so bicycle parking can be safely and conveniently accessed. Similar provisions for micro-mobility devices are also encouraged
 - c. First & Last Mile Access: The Project should address first-last mile connections to transit and is encouraged to support these connections with wayfinding signage inclusive of all modes of transportation. For reference, please review the First Last Mile Strategic Plan, authored by Metro and the Southern California Association of Governments (SCAG), available on-line at: http://media.metro.net/docs/sustainability_path_design_guidelines.pdf.
5. Parking: Metro encourages the incorporation of transit-oriented, pedestrian-oriented parking provision strategies such as the reduction or removal of minimum parking requirements and the exploration of shared parking opportunities. These strategies could be pursued to reduce automobile-orientation in design and travel demand.
6. Wayfinding: Any temporary or permanent wayfinding signage with content referencing Metro services or featuring the Metro brand and/or associated graphics (such as Metro Bus or Rail pictograms) requires review and approval by Metro Signage and Environmental Graphic Design.
7. Transit Pass Programs: Metro would like to inform the Applicant of Metro's employer transit pass programs, including the Annual Transit Access Pass (A-TAP), the Employer Pass Program (E-Pass), and Small Employer Pass (SEP) Program. These programs offer efficiencies and group rates that businesses can offer employees as an incentive to utilize public transit. The A-TAP can also be used for residential projects. For more information on these programs, please visit the programs' website at <https://www.metro.net/riding/eapp/>.

If you have any questions regarding this letter, please contact me by phone at 213-922-2671, by email at DevReview@metro.net, or by mail at the following address:

Quick Overview

Purpose of Handbook

The Metro Adjacent Development Handbook (Handbook) is intended to provide information and guide coordination for projects adjacent to, below, or above Metro transit facilities (e.g. right-of-way, stations, bus stops) and services.

Overarching Goal

By providing information and encouraging early coordination, Metro seeks to reduce potential conflicts with transit services and facilities, and identify potential synergies to expand mobility and improve access to transit.

Intended Audience

The Handbook is a resource for multiple stakeholder groups engaged in the development process, including:

- Local jurisdictions who review, entitle, and permit development projects,
- Developers,
- Property owners,
- Architects, engineers, and other technical consultants,
- Builders/contractors,
- Utility companies, and
- other Third Parties.

Handbook Content

The Handbook includes:

- **Introduction** of Metro's Development Review coordination process, common concerns, and typical stages of review.
- **Information** on best practices during three key coordination phases to avoid potential conflicts or create compatibility with the Metro transit system:
 - Planning & Conceptual Design,
 - Engineering & Technical Review, and
 - Construction Safety & Monitoring.
- **Glossary** with definitions for key terms used throughout the Handbook.

RULE OF THUMB: 100 FEET

Metro's Development Review process applies to projects that are within 100 feet of Metro transit facilities.

While the Handbook summarizes key concerns and best practices for adjacency conditions, it does not replace Metro's technical requirements and standards.

Prior to receiving approval for any construction activities adjacent to, above, or below Metro facilities, Third Parties must comply with the Metro Adjacent Construction Design Manual, available on Metro's website.

Contact Us

For questions, contact the Development Review Team:

- Email: devreview@metro.net
- Phone: 213.418.3484
- Online In-take Form: <https://jpropublic.metro.net/in-take-form>

Additional Information & Resources

- Metro Development & Construction Coordination website:
<https://www.metro.net/devreview>
- Metro GIS/KML ROW Files:
<https://developer.metro.net/portfolio-item/metro-right-of-way-gis-data>
- Metrolink Standards and Procedures:
<https://www.metrolinktrains.com/about/agency/engineering--construction>

Metro will continue to revise the Handbook, as needed, to reflect updates to best practices in safety, operations, and transit-supportive development.

Background

Who is Metro?

The Los Angeles County Metropolitan Transportation Authority (Metro) plans, funds, builds, and operates rail, bus, and other mobility services (e.g. bikeshare, microtransit) throughout Los Angeles County (LA County). On average, Metro moves 1.3 million people each day on buses and trains. With funding from the passage of Measure R (2008) and Measure M (2016), the Metro system is expanding. Over the next 40 years, Metro will build over 60 new stations and over 100 miles of transit right-of-way (ROW). New and expanded transit lines will improve mobility across LA County, connecting riders to more destinations and expanding opportunities for development that supports transit ridership. Metro facilities include:

Metro Rail: Metro operates heavy rail (HRT) and light rail (LRT) transit lines in underground tunnels, along streets, off-street in dedicated ROW, and above street level on elevated structures. Heavy rail trains are powered by a “third rail” along the tracks. Light rail vehicles are powered by overhead catenary systems (OCS). To support rail operations, Metro owns and maintains traction power substations (TPSS), maintenance yards, and other infrastructure.

Metrolink/Regional Rail: Metro owns a majority of the ROW within LA County on which the Southern California Regional Rail Authority (SCRRA) operates Metrolink service. Metrolink is a commuter rail system with seven lines that span 388 miles across five counties, including: Los Angeles, Orange, Riverside, San Bernardino, Ventura, and North San Diego. As a SCRRA member agency and property owner, Metro reviews development activity adjacent to Metro-owned ROW on which Metrolink operates, and coordinates with Metrolink on any comments or concerns. Metrolink has its own set of standards and processes, see link on page 1.

Metro Bus Rapid Transit (BRT): Metro operates accelerated bus transit, which acts as a hybrid between rail and traditional bus service. Metro BRT may operate in a dedicated travel lane within a street or freeway, or off-street along dedicated ROW. Metro BRT stations may be located on sidewalks within the public right-of-way, along a median in the center of streets, or off-street on Metro-owned property.

Metro Bus: Metro operates 170 bus lines across more than 1,400 square miles in LA County. The fleet serves over 15,000 bus stops with approximately 2,000 buses. Metro operates “Local” and “Rapid” bus service within the street, typically alongside vehicular traffic, though occasionally in “bus-only” lanes. Metro bus stops are typically located on sidewalks within the public right-of-way, which is owned and maintained by local jurisdictions. Metro’s [NextGen Bus Plan](#) re-envision bus service across LA County to make service improvements that better serve riders.

Why is Metro interested in adjacent development?

Metro Supports Transit Oriented Communities: Metro is redefining the role of the transit agency by expanding mobility options, promoting sustainable urban design, and helping transform communities throughout LA County. Metro seeks to partner with local, state, and federal jurisdictions, developers, property owners and other stakeholders across LA County on transit-supportive planning and developments to grow ridership, reduce driving, and promote walkable neighborhoods. Transit Oriented Communities (TOCs) are places (such as corridors or neighborhoods) that, by their design, allow people to drive less and access transit more. TOCs maximize equitable access to a multi-modal transit network as a key organizing principle of land use planning and holistic community development.

Adjacent Development Leads to Transit Oriented Communities: Metro supports private development adjacent to transit as this presents a mutually beneficial opportunity to enrich the built environment and expand mobility options. By connecting communities, destinations, and amenities through improved access to public transit, adjacent developments have the potential to:

- reduce auto dependency,
- reduce greenhouse gas emissions,
- promote walkable and bikeable communities that accommodate more healthy and active lifestyles,
- improve access to jobs and economic opportunities, and
- create more opportunities for mobility – highly desirable features in an increasingly urbanized environment.

Opportunity: Acknowledging an unprecedented opportunity to influence how the built environment develops along and around transit and its facilities, Metro has created this document. The Handbook helps ensure compatibility between private development and Metro's transit infrastructure to minimize operational, safety, and maintenance issues. It serves as a crucial first step to encourage early and active collaboration with local stakeholders and identify potential partnerships that leverage Metro initiatives and support TOCs across LA County.

Metro Purview & Concerns

Metro Purview for Review & Coordination

Metro is interested in reviewing development, construction, and utility projects within 100 feet of Metro transit facilities, real estate assets, and ROW – as measured from the edge of the ROW outward – both to ensure the structural safety of existing or planned transit infrastructure and to maximize integration opportunities with adjacent development. The Handbook seeks to:

- Improve communication and coordination between developers, jurisdictions, and Metro.
- Identify common concerns associated with developments adjacent to Metro ROW.
- Highlight Metro operational needs and requirements to ensure safe, continuous service.
- Prevent potential impacts to Metro transit service or infrastructure.
- Maintain access to Metro facilities for riders and operational staff.
- Avoid preventable conflicts resulting in increased development costs, construction delays, and safety impacts.
- Streamline the review process to be transparent, clear, and efficient.
- Assist in the creation of overall marketable and desirable developments.

Key Audiences for Handbook

The Handbook is intended to be used by:

- Local jurisdictions who review, entitle, and permit development projects and/or develop policies related to land use, development standards, and mobility,
- Developers, property owners,
- Architects, engineers, design consultants,
- Builders/contractors,
- Entitlement consultants,
- Environmental consultants,
- Utility companies, and
- other Third Parties.

Metro Assets & Common Concerns for Adjacent Development

The table on the facing page outlines common concerns for development projects and/or construction activities adjacent to Metro transit facilities and assets. These concerns are discussed in greater detail in the following chapters of the Handbook.

METRO ASSETS

COMMON ADJACENCY CONCERNS

UNDERGROUND ROW

Transit operates below ground in tunnels.

- Excavation near tunnels and infrastructure
- Clearance from support structures (e.g. tiebacks, shoring, etc)
- Coordination with utilities
- Clearance from ventilation shafts, surface penetrations (e.g. emergency exits)
- Surcharge loading of adjacent construction
- Explosions
- Noise and vibration/ground movement
- Storm water drainage

AERIAL ROW

Transit operates on elevated guideway, typically supported by columns.

- Excavation near columns and support structures
- Column foundations
- Clearance from OCS
- Overhead protection and crane swings
- Setbacks from property line for maintenance activities to occur without entering ROW
- Coordination with utilities
- Noise reduction (e.g. double-paned windows)

AT-GRADE ROW

Transit operates in dedicated ROW at street level; in some cases tracks are separated from adjacent property by fence or wall.

- Pedestrian and bicycle movements and safety
- Operator site distance/cone of visibility
- Clearance from OCS
- Crane swings and overhead protection
- Trackbed stability
- Storm water drainage
- Noise/vibration
- Driveways near rail crossings
- Setbacks from property line for maintenance activities to occur without entering ROW
- Utility coordination

BUS STOPS

Metro operates bus service on city streets. Bus stops are located on public sidewalks.

- Lane closures and re-routing service during construction
- Temporary relocation of bus stops
- Impacts to access to bus stops

NON-REVENUE/OPERATIONAL

Metro owns and maintains property to support operations (e.g. bus and rail maintenance facilities, transit plazas, traction power substations, park-and-ride parking lots).

- Excavation and clearance from support structures (e.g. tiebacks, shoring, etc)
- Ground movement
- Drainage
- Utility coordination
- Access to property

Metro Coordination Process

Typical Stages of Metro Review and Coordination

Early coordination helps avoid conflicts between construction activities and transit operations and maximizes opportunities to identify synergies between the development project and Metro transit services that are mutually beneficial.

*Phases above may include fees for permits and reimbursement of Metro staff time for review and coordination.

Coordination Goal: Metro encourages developers to consult with the Development Review Team early in the design process to ensure compatibility with transit infrastructure and minimize operational, safety, and maintenance issues with adjacent development. The Development Review team will serve as a case manager to developers and other Third Parties to facilitate the review of plans and construction documents across key Metro departments.

Level of Review: Not all adjacent projects will require significant review and coordination with Metro. The level of review depends on the Project's proximity to Metro, adjacency conditions, and the potential to impact Metro facilities and/or services. For example, development projects that are excavating near Metro ROW or using cranes near transit facilities require a greater level of review and coordination. Where technical review and construction monitoring is needed, Metro charges fees for staff time, as indicated by asterisk in the above diagram.

Permit Clearance: Within the City of Los Angeles, Metro reviews and clears Building & Safety permits for projects within 100 feet of Metro ROW, pursuant to [Zoning Information 1117](#). To ensure timely clearance of these permits, Metro encourages early coordination as noted above.

To begin consultation, submit project information via an online [In-Take Form](#), found on Metro's website. Metro staff will review project information and drawings to screen the project for any potential impacts to transit facilities or services, and determine if require further review and coordination is required. The sample sections on the facing page illustrate adjacency condition information that helps Metro complete project screening.

Contact:

Metro Development Review Team

Website: <https://www.metro.net/devreview>

Online In-take Form: <https://jpublic.metro.net/in-take-form>

Email: devreview@metro.net

Phone: 213.418.3484

Sample Section: Adjacency Conditions

AT-GRADE CONDITION

A. Distance from property line to nearest permanent structure (e.g. building facade, balconies, terraces). Refer to Section 1.3 Building Setback of Handbook.

B. Distance from property line to nearest temporary construction structures (e.g. scaffolding).

C. Distance from property line to nearest Metro facility.

D. Clearance from nearest temporary and/or permanent structure to overhead catenary system (OCS). Refer to Section 1.4, OCS Clearance of Handbook.

BELOW-GRADE CONDITION

E. Vertical distance from top of Metro tunnel to closest temporary and/or permanent structure (e.g. tiebacks, foundation). Refer to Section 2.2, Proximity to Tunnels & Underground Infrastructure of Handbook.

F. Horizontal distance from exterior tunnel wall to nearest structure.

G. Horizontal distance from Metro track centerline to nearest structure.

Best Practices

Best Practices for Developer Coordination

Metro encourages developers of projects adjacent to Metro ROW and/or Real Estate Assets to take the following steps to facilitate Metro project review and approval:

1. **Review Metro resources and policies:** The Metro Development & Construction Coordination website and Handbook provide important information for those interested in constructing on, adjacent, over, or under Metro ROW, non-revenue property, or transit facilities. Developers and other Third Parties should familiarize themselves with these resources and keep in mind common adjacency concerns when planning a project.
2. **Contact Metro early during design process:** Metro welcomes the opportunity to provide feedback early in project design, allowing for detection and resolution of important adjacency issues, identification of urban design and system integration opportunities, and facilitation of permit approval. Metro encourages project submittal through the online [In-Take Form](#) to begin consultation.
3. **Maintain communication:** Frequent communication with Metro during project design and construction will reinforce relationships and allow for timely project completion. Contact us at devreview@metro.net or at 213.418.3484.

Best Practices for Local Jurisdiction Notification

To improve communication between Metro and the development community, Metro suggests that local jurisdictions take the following steps to notify property owners of coordination needs for properties adjacent to Metro ROW by:

- **Updating GIS and parcel data:** Integrate Metro ROW files into the City/County GIS and/or Google Earth Files for key departments (e.g. Planning, Public Works, Building & Safety) to notify staff of Metro adjacency and need for coordination during development approval process. Download Metro's ROW files [here](#).
- **Flag Parcels:** Create an overlay zone as part of local Specific Plan(s) and/or Zoning Ordinance(s) to tag parcels that are within 100 feet Metro ROW and require coordination with Metro early during the development process [e.g. City of Los Angeles Zone Information and Map Access System (ZI-1117)].
- **Provide Resources:** Direct all property owners and developers interested in parcels within 100 feet of Metro ROW to Metro's resources (e.g. website, Handbook).

Metro

Downtown
Santa
Monica

Site Plan & Conceptual Design

Site Plan & Conceptual Design

1.1 Supporting Transit Oriented Communities

Transit-oriented communities (TOCs) are places that, by their design, make it more convenient to take transit, walk, bike or roll than to drive. By working closely with the development community and local jurisdictions, Metro seeks to ensure safe construction near Metro facilities and improve compatibility with adjacent development to increase transit ridership.

RECOMMENDATION: Consider site planning and building design strategies to that support transit ridership, such as:

- Leveraging planning policies and development incentives to design a more compelling project that capitalizes on transit adjacency and economy of scales.
- Programming a mix of uses to create lively, vibrant places that are active day and night.
- Utilizing Metro policies and programs that support a healthy, sustainable, and welcoming environment around transit service and facilities.
- Prioritizing pedestrian-scaled elements to create spaces that are comfortable, safe, and enjoyable.
- Activating ground floor with retail and outdoor seating/activities to bring life to the public environment.
- Reducing and screening parking to focus on pedestrian activity.
- Incorporating environmental design elements that help reduce crime (e.g. windows and doors that face public spaces, lighting).

The Wilshire/Vermont Metro Joint Development project leveraged existing transit infrastructure to catalyze a dynamic and accessible urban environment. This project accommodates portal access into the Metro Rail system and on-street bus facilities.

1.2 Enhancing Access to Transit

Metro seeks to create a comprehensive, integrated transportation network and supports infrastructure and design that allows safe and convenient access to its multi-modal services. Projects in close proximity to Metro's services and facilities present an opportunity to enhance the public realm and connections to/from these services for transit riders as well as users of the developments.

RECOMMENDATION: Design projects with transit access in mind. Project teams should capitalize on the opportunity to improve the built environment and enhance the public realm for pedestrians, bicyclists, persons with disabilities, seniors, children, and users of green modes. Metro recommends that projects:

- Orient major entrances to transit service, making access and travel safe, intuitive, and convenient.
- Plan for a continuous canopy of shade trees along all public right-of-way frontages to improve pedestrian comfort to transit facilities.
- Add pedestrian lighting along paths to transit facilities and nearby destinations.
- Integrate wayfinding and signage into project design.
- Enhance nearby crosswalks and ramps.
- Ensure new walkways and sidewalks are clear of any obstructions, including utilities, traffic control devices, trees, and furniture.
- Design for seamless, multi-modal pedestrian connections, making access easy, direct, and comfortable.

The City of Santa Monica leveraged investments in rail transit and reconfigured Colorado Avenue to form a multi-modal first/last mile gateway to the waterfront from the Downtown Santa Monica Station. Photo by PWP Landscape Architecture

Site Plan & Conceptual Design

1.3 Building Setback

Buildings and structures with a zero lot setback that closely abut Metro ROW can pose concerns to Metro during construction. Encroachment onto Metro property to construct or maintain buildings is strongly discouraged as this presents safety hazards and may disrupt transit service and/or damage Metro infrastructure.

RECOMMENDATION: Include a minimum setback of five (5) feet from the property line to building facade to accommodate the construction and maintenance of structures without the need to encroach upon Metro property. As local jurisdictions also have building setback requirements, new developments should comply with the greater of the two requirements.

Entry into the ROW by parties other than Metro and its affiliated partners requires written approval. Should construction or maintenance of a development necessitate temporary or ongoing access to Metro ROW, a Metro Right of Entry Permit must be requested and obtained from Metro Real Estate for every instance access is required. Permission to enter the ROW is granted solely at Metro's discretion.

Coordination between property owners of fences, walls, and other barriers along property line is recommended. See Section 1.5.

Refer to Section 3.2 – Track Access and Safety for additional information pertaining to ROW access in preparation for construction activities.

A minimum setback of five (5) feet between an adjacent structure and Metro ROW is strongly encouraged to allow project construction and ongoing maintenance without encroaching on Metro property.

1.4 Overhead Catenary System (OCS) Clearance

Landscaping and tree canopies can grow into the OCS above light rail lines, creating electrical safety hazards as well as visual and physical impediments for trains. Building appurtenances facing rail ROW, such as balconies, may also pose safety concerns to Metro operations as objects could fall onto the OCS.

RECOMMENDATION: Design project elements facing the ROW to avoid potential conflicts with Metro transit vehicles and infrastructure. Metro recommends that projects:

- Plan for landscape maintenance from private property and prevent growth into Metro ROW. Property owners will not be permitted to access Metro property to maintain private development.
- Design buildings such that balconies do not provide building users direct access to Metro ROW.
- Maintain building appurtenances and landscaping at a minimum distance of ten (10) feet from the OCS and support structures. If Transmission Power (TP) feeder cable is present, twenty (20) feet from the OCS and support structures is required. Different standards will apply for Metro Trolley Wires, Feeder Cables (wires) and Span Wires.

Adjacent structures and landscaping should be sited and maintained to avoid conflicts with the rail OCS.

Scaffolding and construction equipment should be staged to avoid conflicts with the rail OCS.

Site Plan & Conceptual Design

1.5 Underground Station Portal Clearance

Metro encourages transit-oriented development. Where development is planned above station entrances, close coordination is needed for structural safety as well as access for patrons, operations, and maintenance. Below are key design rules of thumb for development planned to cantilever over an entrance to an underground Metro Rail station.

RECOMMENDATION:

1. Preserve 25 feet clearance at minimum from plaza grade and the building structure above.
2. Preserve 10 feet clearance at minimum between portal roof and building structure above.
3. Coordinate structural support system and touchdown points to ensure a safe transfer of the building loads above the station portal.
4. Coordinate placement of structural columns and amenities (e.g. signage, lighting, furnishings) at plaza level to facilitate direct and safe connections for people of all mobile abilities to and from station entrance(s).
5. Develop a maintenance plan for the plaza in coordination with Metro.

Projects that propose to cantilever over Metro subway portals require close coordination with Metro Engineering.

1.6 Shared Barrier Construction & Maintenance

In areas where Metro ROW abuts private property, barrier construction and maintenance responsibilities can be a point of contention with property owners. When double barriers are constructed, the gap created between the Metro-constructed fence and a private property owner's fence can accumulate trash and make regular maintenance challenging without accessing the other party's property.

RECOMMENDATION: Coordinate with Metro Real Estate to create a single barrier condition along the ROW property line. With an understanding that existing conditions along ROW boundaries vary throughout LA County, Metro recommends the following, in order of preference:

- **Enhance existing Metro barrier:** if structural capacity allows, private property owners and developers should consider physically affixing improvements onto and building upon Metro's existing barrier. Metro is amenable to barrier enhancements such as increasing barrier height and allowing private property owners to apply architectural finishes to their side of Metro's barrier.
- **Replace existing barrier(s):** if conditions are not desirable, remove and replace any existing barrier(s), including Metro's, with a new single "shared" barrier built on the property line.

Metro is amenable to sharing costs for certain improvements that allow for clarity in responsibilities and adequate ongoing maintenance from adjacent property owners without entering Metro's property. Metro Real Estate should be contacted with case-specific questions and will need to approve shared barrier design, shared financing, and construction.

Double barrier conditions allow trash accumulation and create maintenance challenges for Metro and adjacent property owners.

Metro prefers a single barrier condition along its ROW property line.

Site Plan & Conceptual Design

1.7 Project Orientation & Noise Mitigation

Metro may operate in and out of revenue service 24 hours per day, every day of the year, which can create noise and vibration (i.e. horns, power washing). Transit service and maintenance schedules cannot be altered to avoid noise for adjacent developments. However, noise and vibration impacts can be reduced through building design and orientation.

RECOMMENDATION: Use building orientation, programming, and design techniques to reduce noise and vibration for buildings along Metro ROW:

- Locate secondary or “back of house” rooms (e.g. bathrooms, stairways, laundry rooms) along ROW, rather than primary living spaces that are noise sensitive (e.g. bedrooms and family rooms).
- Use upper level setbacks and locate living spaces away from ROW.
- Enclose balconies.
- Install double-pane windows.
- Include language disclosing potential for noise, vibration, and other impacts due to transit proximity in terms and conditions for building lease or sale agreements to protect building owners/sellers from tenant/buyer complaints.

Developers are responsible for any noise mitigation required, which may include engineering designs for mitigation recommended by Metro or otherwise required by local municipalities. A recorded Noise Easement Deed in favor of Metro may be required for projects within 100 feet of Metro ROW to ensure notification to tenants and owners of any proximity issues.

Building orientation can be designed to face away from tracks, reducing the noise and vibration impacts.

Strategic placement of podiums and upper-level setbacks on developments near Metro ROW can reduce noise and vibration impacts.

1.8 At-Grade Rail Crossings

New development is likely to increase pedestrian activity at rail crossings. Safety enhancements may be needed to upgrade existing rail crossings to better protect pedestrians.

RECOMMENDATION: Coordinate with Metro, the California Public Utilities Commission (CPUC), and any other transit operators using the crossing (e.g. Metrolink) to determine if safety enhancements are needed for nearby rail crossings.

While Metro owns and operates the rail ROW, the CPUC regulates all rail crossings. Contact the CPUC early in the design process to determine if they will require any upgrades to existing rail crossings. The CPUC may request to review development plans and hold a site visit to understand future pedestrian activity. Metro's Corporate Safety Department can support the developer in coordination with the CPUC.

Gates and pedestrian arms are common types of safety elements for pedestrians at rail crossings.

Safety elements of a gate and pedestrian arms have been constructed at the Monrovia Station.

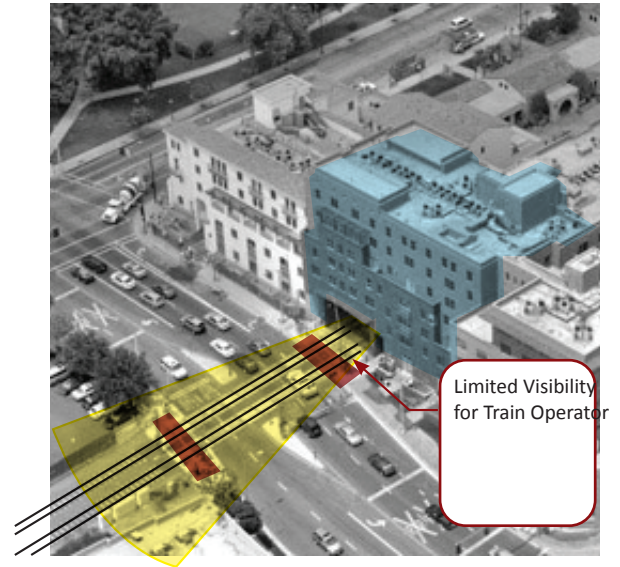

Site Plan & Conceptual Design

1.9 Sight-Lines at Crossings

Developments adjacent to Metro ROW can present visual barriers to transit operators approaching vehicular and pedestrian crossings. Buildings and structures in close proximity to transit corridors can reduce sight-lines and create blind corners where operators cannot see pedestrians. This requires operations to reduce train speeds, which decreases efficiency of transit service.

RECOMMENDATION: Design buildings to maximize transit service sight-lines at crossings, leaving a clear cone of visibility to oncoming vehicles and pedestrians.

Metro Rail Operations will review, provide guidance, and determine the extent of operator visibility for safe operations. If the building envelope overlaps with the visibility cone near pedestrian and vehicular crossings, a building setback may be necessary to ensure safe transit service. The cone of visibility at crossings and required setback will be determined based on vehicle approach speed.

Limited sight-lines for trains approaching street crossings create unsafe conditions.

Visibility cones allow train operators to respond to safety hazards.

1.10 Driveway/Access Management

Driveways adjacent to on-street bus stops can create conflict for pedestrians walking to/from or waiting for transit. Additionally, driveways accessing parking lots and loading zones at project sites near Metro Rail and BRT crossings can create queuing issues along city streets and put vehicles in close proximity to fast moving trains and buses, which pose safety concerns.

RECOMMENDATION: Site driveways and other vehicular entrances to avoid conflicts with pedestrians, bicycles, and transit vehicles by:

- Placing driveways along side streets and alleys, away from on-street bus stops and transit crossings to minimize safety conflicts between active ROW, transit vehicles, and people, as well as queuing on streets.
- Locating vehicular driveways away from transit crossings or areas that are likely to be used as waiting areas for transit services.
- Placing loading docks away from sidewalks where transit bus stop activity is/will be present.
- Consolidating vehicular entrances and reduce width of driveways.
- Using speed tables to slow entering/exiting automobiles near pedestrians.
- Separating pedestrian walkways to minimize conflict with vehicles.
- Encouraging safe non-motorized travel.

Driveways in close proximity to each other compromise safety for those walking to/from transit and increase the potential for vehicle-pedestrian conflicts.

Site Plan & Conceptual Design

1.11 Bus Stop & Zones Design

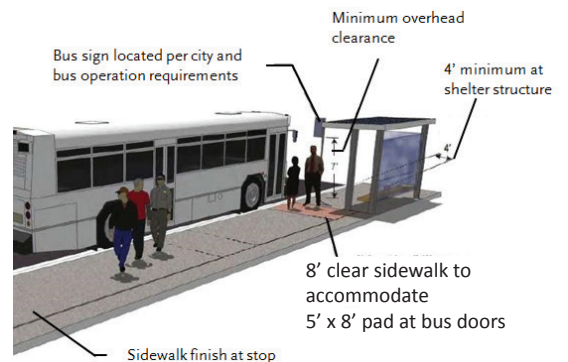

Metro Bus serves over 15,000 bus stops throughout the diverse landscape that is LA County. Typically located on sidewalks within public right-of-way owned and maintained by local jurisdictions, existing bus stop conditions vary from well-lit and sheltered spaces to uncomfortable and unwelcoming zones. Metro is interested in working with developers and local jurisdictions to create a vibrant public realm around new developments by strengthening multi-modal access to/from Metro transit stops and enhancing the pedestrian experience.

RECOMMENDATION: When designing around existing or proposed bus stops:

- Review Metro's Transit Service Policy, which provides standards for design and operation of bus stops and zones for near-side, far-side, and mid-block stops.
- Review Metro's Transfers Design Guide for more information at <https://www.metro.net/projects/station-design-projects/>
- Accommodate 5' x 8' landing pads at bus doors (front and back door, which are typically 23 to 25 feet apart).
- Locate streetscape elements (e.g. tree planters, street lamps, benches, shelters, trash receptacles and newspaper stands) outside of bus door zones to protect transit access and ensure a clear path of travel.
- Install a concrete bus pad within each bus stop zone to avoid street asphalt damage.
- Replace stand-alone bus stop signs with bus shelters that include benches and adequate lighting.
- Design wide sidewalks (15' preferred) that accommodate bus landing pads as well as street furniture, landscape, and user travel space.
- Consider tree species, height, and canopy shape (higher than 14' preferred) to avoid vehicle conflicts at bus stops. Trees should be set back from the curb and adequately maintained to prevent visual and physical impediments for buses when trees reach maturity. Avoid planting of trees that have an invasive and shallow root system.

A concrete bus pad should be located at bus stops and bus shelters should be located along sidewalks to ensure an accessible path of travel to a clear boarding area.

Well-designed and accessible bus stops are beneficial amenities for both transit riders and users of adjacent developments.

EXCEED RATED CAPACITY

Engineering & Technical Review

Engineering & Technical Review

2.1 Excavation Support System Design

Excavation near Metro ROW has the potential to disturb adjoining soils and jeopardize support of existing Metro infrastructure. Any excavation which occurs within the geotechnical foul zone relative to Metro infrastructure is subject to Metro review and approval and meet Cal/OSHA requirements. This foul zone or geotechnical zone of influence shall be defined as the area below a track-way as measured from a 45-degree angle from the edge of the rail track ballast. Construction within this vulnerable area poses a potential risk to Metro service and requires additional Metro Engineering review.

RECOMMENDATION: Coordinate with Metro Engineering staff for review and approval of the excavation support system drawings and calculations prior to the start of excavation or construction. Tiebacks encroaching into Metro ROW may require a tieback easement or license, at Metro's discretion.

Any excavation/shoring within Metrolink operated and maintained ROW will require compliance with SCRRRA Engineering standards and guidelines.

See page 7 for a sample section showing Metro adjacent conditions.

An underground structure located within the ROW foul zone would require additional review by Metro.

2.2 Proximity to Tunnels & Underground Infrastructure

Construction adjacent to, over, or below underground Metro facilities (tunnels, stations and appendages) is of great concern and should be coordinated closely with Metro Engineering.

RECOMMENDATION: Coordinate with Metro early in the design process when proposing to build near underground Metro infrastructure. Metro typically seeks to maintain a minimum eight (8) foot clearance from existing Metro facilities to new construction (shoring or tiebacks). It will be incumbent upon the developer to demonstrate, to Metro's satisfaction, that both the temporary support of construction and the permanent works do not adversely affect the structural integrity, safety, or continued efficient operation of Metro facilities.

Dependent on the nature of the adjacent construction, Metro will need to review the geotechnical report, structural foundation plans, sections, shoring plan sections and calculations.

Metro may require monitoring where such work will either increase or decrease the existing overburden (i.e. weight) to which the tunnels or facilities are subjected. When required, the monitoring will serve as an early indication of excessive structural strain or movement. See Section 3.4, Excavation Drilling/Monitoring for additional information regarding monitoring requirements.

See page 7 for a sample section showing Metro adjacent conditions.

Adjacent project structures in close proximity to underground Metro infrastructure will require additional review by Metro.

2.3 Protection from Explosion/Blast

Metro is obligated to ensure the safety of public transit infrastructure from potential explosive sources which could originate from adjacent underground structures or from at-grade locations, situated below elevated guideways or near stations. Blast protection setbacks or mitigation may be required for large projects constructed near critical Metro facilities.

RECOMMENDATION: Avoid locating underground parking or basement structures within twenty (20) feet from an existing Metro tunnel or facility (exterior face of wall to exterior face of wall). Adjacent developments within this 20-foot envelope may be required to submit a Threat Assessment and Blast/Explosion Study for Metro review and approval.

An underground structure proposed within twenty (20) feet of a Metro structure may require a Threat Assessment and Blast/Explosion Study.

THIS PAGE INTENTIONALLY LEFT BLANK.

Construction Safety & Management

Construction Safety & Management

3.1 Pre-Construction Coordination

Metro is concerned with impacts to service requiring rail single line tracking, line closures, speed restrictions, and bus bridging occurring as a result of adjacent project construction. Projects that will require work over, under, adjacent, or on Metro property or ROW and include operation of machinery, scaffolding, or any other potentially hazardous work are subject to evaluation in preparation for and during construction to maintain safe transit operations and passenger well-being.

RECOMMENDATION: Following an initial screening of the project, Metro may determine that additional on-site coordination may be necessary. Dependent on the nature of the adjacent construction, developers may be requested to perform the following as determined on a case-by-case basis:

- Submit a construction work plan and related project drawings and specifications for Metro review.
- Submit a contingency plan, show proof of insurance coverage, and issue current certificates.
- Provide documentation of contractor qualifications.
- Complete pre-construction surveys, perform baseline readings, and install movement instrumentation.
- Complete readiness review and perform practice run of transit service shutdown per contingency plan.
- Designate a ROW observer or other safety personnel and an inspector from the project's construction team.
- Establish a coordination process for access and work in or adjacent to ROW for the duration of construction.

Project teams will be responsible for the costs of adverse impacts to Metro transit operations caused by work on adjacent developments, including remedial work to repair damage to Metro property, facilities, or systems. Additionally, a Construction Monitoring fee may be assessed based on an estimate of required level of effort provided by Metro.

All projects adjacent to Metrolink infrastructure will require compliance with SCRRRA Engineering Standards and Guidelines.

Metro may need to monitor development construction near Metro facilities.

3.2 Track Access and Safety

Permission from Metro is required to enter Metro property for rail construction and maintenance along, above, or under Metro ROW as these activities can interfere with Metro utilities and service and pose a safety hazard to construction teams and transit riders. Track access is solely at Metro's discretion and is discouraged to prevent electrocution and collisions with construction workers or machines.

RECOMMENDATION: Obtain and/or complete the following to work in or adjacent to Metro Rail ROW:

1. **Construction Work Plan:** Dependent on the nature of adjacent construction, Metro may request a construction work plan, which describes means and methods and other construction plan details, to ensure the safety of transit operators and riders.
2. **Safety Training:** All members of the project construction team will be required to attend Metro Rail Safety Training before commencing work activity. Training provides resources and procedures when working near active rail ROW.
3. **Right of Entry Permit/Temporary Construction Easement:** All access to and activity on Metro property, including easements necessary for construction of adjacent projects, must be approved through a Right-of-Entry Permit and/or a Temporary Construction Easement obtained from Metro Real Estate and may require a fee.
4. **Track Allocation:** All work on Metro Rail ROW must receive prior approval from Metro Rail Operations Control. Track Allocation identifies, reserves, and requests changes to normal operations for a specific track section, line, station, location, or piece of equipment to allow for safe use by a non-Metro entity. If adjacent construction is planned in close proximity to active ROW, flaggers must be used to ensure safety of construction workers and transit riders.

Trained flaggers ensure the safe crossing of pedestrians and workers of an adjacent development.

Construction Safety & Management

3.3 Construction Hours

Building near active Metro ROW poses safety concerns and may require limiting hours of construction which impact Metro ROW to night or off-peak hours so as not to interfere with Metro revenue service. To maintain public safety and access for Metro riders, construction should be planned, scheduled, and carried out in a way to avoid impacts to Metro service and maintenance.

RECOMMENDATION: In addition to receiving necessary construction approvals from the local jurisdiction, all construction work on or in close proximity to Metro ROW must be scheduled through the Track Allocation Process, detailed in Section 3.2.

Metro prefers that adjacent construction with potential to impact normal, continuous Metro operations take place during non-revenue hours (approximately 1am-4am) or during non-peak hours to minimize impacts to service. The developer may be responsible for additional operating costs resulting from disruption to normal Metro service.

Construction during approved hours ensures the steady progress of adjacent development construction and minimizes impacts to Metro's transit service.

3.4 Excavation/Drilling Monitoring

Excavation is among the most hazardous construction activities and can pose threats to the structural integrity of Metro's transit infrastructure.

RECOMMENDATION: Coordinate with Metro Engineering to review and approve excavation and shoring plans during design and development, and well in advance of construction (see Sections 2.1 and 2.2).

Geotechnical instrumentation and monitoring will be required for all excavations occurring within Metro's geotechnical zone of influence, where there is potential for adversely affecting the safe and efficient operation of transit vehicles. Monitoring of Metro facilities due to adjacent construction may include the following as determined on a case-by-case basis:

- Pre- and post-construction condition surveys
- Extensometers
- Inclinometers
- Settlement reference points
- Tilt-meters
- Groundwater observation wells
- Movement arrays
- Vibration monitoring

Excavation and shoring plans must be reviewed by Metro to ensure structural compatibility with Metro infrastructure and safety during adjacent development construction.

A soldier pile wall used for Regional Connector station at 2nd/Hope.

Construction Safety & Management

3.5 Crane Operations

Construction activities adjacent to Metro ROW may require moving large, heavy loads of building materials and machinery using cranes. Cranes referenced here include all power-operated equipment that can hoist, lower, and horizontally move a suspended load. To ensure safety for Metro riders, operators, and transit facilities, crane operations adjacent to Metro ROW must follow the safety regulations and precautions below and are subject to California Occupational Safety and Health Administration (Cal/OSHA) standards.

RECOMMENDATION:

Coordinate with Metro to discuss construction methods and confirm if a crane work plan is required. Generally, crane safety near Metro's ROW and facilities largely depends on the following factors: 1) Metro's operational hours and 2) swinging a load over or near Metro power lines and facilities. Note:

1. **Clearance:** A crane boom may travel over energized Metro OCS only if it maintains a vertical 20-foot clearance and the load maintain a horizontal 20-foot clearance.
2. **Power:** Swinging a crane boom with a load over Metro facilities or passenger areas is strictly prohibited during revenue hours. To swing a load in the "no fly zone" (see diagrams to right), the construction team must coordinate with Metro to de-energize the OCS.
3. **Weathering:** When not in use, the crane boom may swing 360 degrees with the movement of the wind, including over energized Metro OCS, only if the trolley is fully retracted towards the crane tower and not carrying any loads.
4. **Process:** Developers and contractors must attend Metro Track Allocation (detailed in Section 3.2) to determine if Metro staff support is necessary during crane erection and load movement.
5. **Permit:** Developers must apply for a Metro Right-of-Entry permit to swing over Metro facilities.

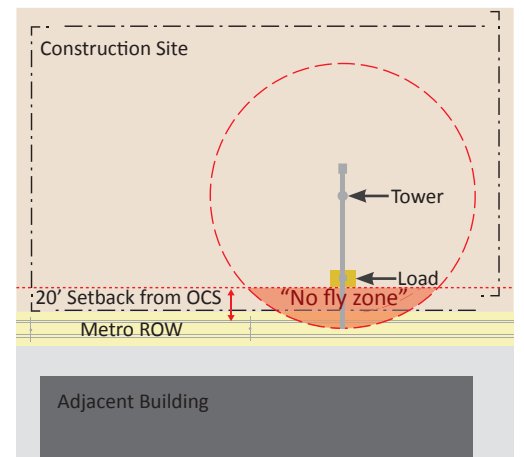

Project teams will bear all costs associated with impacts to Metro Rail operations and maintenance.

Cranes and construction equipment should be staged to avoid conflicts with the rail OCS.

Plan View: Crane swing and load are restricted near Metro ROW.

Plan View: While crane boom swings over "no fly zone," the trolley and load are retracted to maintain clearance from OCS.

3.6 Construction Barriers & Overhead Protection

During construction, falling objects can damage Metro facilities and pose a safety concern to the riders accessing them.

RECOMMENDATION: Erect vertical construction barriers and overhead protection compliant with Metro and Cal/OSHA requirements to prevent objects from falling into Metro ROW or areas designed for public access to Metro facilities. A protection barrier shall be constructed to cover the full height of an adjacent project and overhead protection from falling objects shall be provided over Metro ROW as necessary. Erection of the construction barriers and overhead protection for these areas shall be done during Metro non-revenue hours.

Overhead protection is required when moving heavy objects over Metro ROW or in areas designated for public use.

Constructed above is a wooden box over the entrance portal for overhead protection at the 4th/Hill Station.

Construction Safety & Management

3.7 Pedestrian & Emergency Access

Metro's riders rely on the consistency and reliability of access and wayfinding to and from stations, stops, and facilities. Construction on adjacent property must not obstruct pedestrian access, fire department access, emergency egress, or otherwise present a safety hazard to Metro operations, its employees, riders, and the general public. Fire access and safe escape routes within all Metro stations, stops, and facilities must be maintained at all times.

RECOMMENDATION: Ensure pedestrian and emergency access from Metro stations, stops, and transit facilities is compliant with the Americans with Disabilities Act (ADA) and maintained during construction:

- Temporary fences, barricades, and lighting should be installed and watchmen provided for the protection of public travel, the construction site, adjacent public spaces, and existing Metro facilities.
- Temporary signage should be installed where necessary and in compliance with the latest California Manual on Uniform Traffic Control Devices (MUTCD) and in coordination with Metro Art and Design Standards.
- Emergency exits shall be provided and be clear of obstructions at all times.
- Access shall be maintained for utilities such as fire hydrants, stand pipes/connections, and fire alarm boxes as well as Metro-specific infrastructure such as fan and vent shafts.

Sidewalk access is blocked for a construction project, forcing pedestrians into the street or to use less direct paths to the Metro facility.

3.8 Impacts to Bus Routes & Stops

During construction, bus stop zones and routes may need to be temporarily relocated. Metro needs to be informed of activities that require stop relocation or route adjustments in order to ensure uninterrupted service.

RECOMMENDATION: During construction, maintain or relocate existing bus stops consistent with the needs of Metro Bus Operations. Design of temporary and permanent bus stops and surrounding sidewalk areas must be compliant with the ADA and allow passengers with disabilities a clear path of travel to the transit service. Existing bus stops must be maintained as part of the final project. Metro Bus Operations Control Special Events Department and Metro Stops & Zones Department should be contacted at least 30 days before initiating construction activities.

Temporary and permanent relocation of bus stops and layover zones will require coordination between developers, Metro, and other municipal bus operators and local jurisdictions.

Construction Safety & Management

3.9 Utility Coordination

Construction has the potential to interrupt utilities that Metro relies on for safe operations and maintenance. Utilities of concern to Metro include, but are not limited to, condenser water piping, potable/fire water, storm and sanitary sewer lines, and electrical/telecommunication services.

RECOMMENDATION: Coordinate with Metro Real Estate during project design to gauge temporary and permanent utility impacts and avoid conflicts during construction.

The contractor shall protect existing above-ground and underground Metro utilities during construction and coordinate with Metro to receive written approval for any utilities pertinent to Metro facilities that may be used, interrupted, or disturbed.

When electrical power outages or support functions are required, approval must be obtained through Metro Track Allocation in coordination with Metro Real Estate for a Right of Entry Permit.

To begin coordination with Metro Real Estate, visit www.metro.net/devreview and select the drop-down “Utility Project Coordination.”

Coordination of underground utilities is critical to safely and efficiently operate Metro service.

3.10 Air Quality & Ventilation Protection

Hot or foul air, fumes, smoke, steam, and dust from adjacent construction activities can negatively impact Metro facilities, service, and users.

RECOMMENDATION: Ensure that hot or foul air, fumes, smoke, and steam from adjacent facilities are discharged beyond 40 feet from existing Metro facilities, including but not limited to ventilation system intake shafts and station entrances. Should fumes be discharged within 40 feet of Metro intake shafts, a protection panel around each shaft shall be required.

A worker breaks up concrete creating a cloud of silica dust.

Glossary

Cone of Visibility

A conical space at the front of moving transit vehicles allowing for clear visibility of travel way and/or conflicts.

Construction Work Plan (CWP)

Project management document outlining the definition of work tasks, choice of technology, estimation of required resources and duration of individual tasks, and identification of interactions among the different work tasks.

Flagger/Flagman

Person who controls traffic on and through a construction project. Flaggers must be trained and certified by Metro Rail Operations prior to any work commencing in or adjacent to Metro ROW.

Geotechnical Foul Zone

Area below a track-way as measured from a 45-degree angle from the edge of the rail track ballast.

Guideway

A channel, track, or structure along which a transit vehicle moves.

Heavy Rail Transit (HRT)

Metro HRT systems include exclusive ROW (mostly subway) trains up to six (6) cars long (450') and utilize a contact rail for traction power distribution (e.g. Metro Red Line).

Joint Development (JD)

JD is the asset management and real estate development program through which Metro collaborates with developers to build housing, retail, and other amenities on Metro properties near transit, typically through ground lease. JD projects directly link transit riders with destinations and services throughout LA County.

Light Rail Transit (LRT)

Metro LRT systems include exclusive, semi-exclusive, or street ROW trains up to three (3) cars long (270') and utilize OCS for traction power distribution (e.g. Metro Blue Line).

Measure R

Half-cent sales tax for LA County approved in November 2008 to finance new transportation projects and programs. The tax expires in 2039.

Measure M

Half-cent sales tax for LA County approved in November 2016 to fund transportation improvements, operations and programs, and accelerate projects already in the pipeline. The tax will increase to one percent in 2039 when Measure R expires.

Metrolink

A commuter rail system with seven lines throughout Los Angeles, Orange, Riverside, San Bernardino, Ventura, and North San Diego counties governed by the Southern California Regional Rail Authority (SCRRA).

Metro Adjacent Construction Design Manual

Volume III of the Metro Design Criteria & Standards, which outlines the Metro adjacent review procedure as well as operational requirements when constructing over, under, or adjacent to Metro facilities, structures, and property.

Metro Bus

Metro "Local" and "Rapid" bus service runs within the street, typically alongside vehicular traffic, though occasionally in "bus-only" lanes.

Metro Bus Rapid Transit (BRT)

High quality bus service that provides faster and convenient service through the use of dedicated ROW, branded vehicles and stations, high frequency and intelligent transportation systems, all-door boarding, and intersection crossing priority. Metro BRT may run within dedicated ROW or in mixed flow traffic on streets.

Metro Design Criteria and Standards

A compilation of documents that govern how Metro transit service and facilities are designed, constructed, operated, and maintained.

Metro Rail

Urban rail system serving LA County consisting of six lines, including two subway lines and four light rail lines.

Metro Rail Design Criteria (MRDC)

Volume IV of the Metro Design Criteria & Standards which establishes design criteria for preliminary engineering and final design of a Metro Rail Project.

Metro Transit Oriented Communities

Land use planning and community development program that seeks to maximize access to transportation as a key organizing principle and promote equity and sustainable living by offering a mix of uses close to transit to support households at all income levels, as well as building densities, parking policies, urban design elements, and first/last mile facilities that support ridership and reduce auto dependency.

Noise Easement Deed

Easement granted by property owners abutting Metro ROW acknowledging noise due to transit operations and maintenance.

Overhead Catenary System (OCS)

One or more electrified wires situated over a transit ROW that transmit power to light rail trains via pantograph, a current collector mounted on the roof of an electric vehicle. Metro OCS is supported by hollow poles placed between tracks or on the outer edge of parallel tracks.

Right of Entry Permit

Written approval granted by Metro Real Estate to enter Metro ROW and property.

Right of Way (ROW)

Legal right over property reserved for transportation purposes to construct, protect, maintain and operate transit services.

Southern California Regional Rail Authority (SCRRA)

A joint powers authority made up of an 11-member board representing the transportation commissions of Los Angeles, Orange, Riverside, San Bernardino and Ventura counties. SCRRA governs and operates Metrolink service.

Threat Assessment and Blast/Explosion Study

Analysis performed when adjacent developments are proposed within twenty (20) feet from an existing Metro tunnel or facility.

Track Allocation/Work Permit

Permit granted by Metro Rail Operations Control to allocate a section of track and perform work on or adjacent to Metro Rail ROW. This permit should be submitted for any work that could potentially foul the envelope of a train.

Wayfinding

Signs, maps, and other graphic or audible methods used to convey location and directions to travelers.

Re: 2021080103, Planned Development #39 (Affinity Project), Los Angeles County

Dear Mr. Van Patten:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
 - a. A brief description of the project.
 - b. The lead agency contact information.
 - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
 - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).
2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).
 - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).
3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
 - a. Alternatives to the project.
 - b. Recommended mitigation measures.
 - c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).
4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
 - a. Type of environmental review necessary.
 - b. Significance of the tribal cultural resources.
 - c. Significance of the project's impacts on tribal cultural resources.
 - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).
5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).
6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
 - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
 - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

- 7. Conclusion of Consultation:** Consultation with a tribe shall be considered concluded when either of the following occurs:
- a.** The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
 - b.** A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).
- 8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document:** Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).
- 9. Required Consideration of Feasible Mitigation:** If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).
- 10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:**
- a.** Avoidance and preservation of the resources in place, including, but not limited to:
 - i.** Planning and construction to avoid the resources and protect the cultural and natural context.
 - ii.** Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
 - b.** Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
 - i.** Protecting the cultural character and integrity of the resource.
 - ii.** Protecting the traditional use of the resource.
 - iii.** Protecting the confidentiality of the resource.
 - c.** Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
 - d.** Protecting the resource. (Pub. Resource Code §21084.3 (b)).
 - e.** Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
 - f.** Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).
- 11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource:** An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
- a.** The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
 - b.** The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
 - c.** The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. **Tribal Consultation**: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. **No Statutory Time Limit on SB 18 Tribal Consultation**. There is no statutory time limit on SB 18 tribal consultation.
3. **Confidentiality**: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places; features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. **Conclusion of SB 18 Tribal Consultation**: Consultation should be concluded at the point in which:
 - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
 - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
 - a. If part or all of the APE has been previously surveyed for cultural resources.
 - b. If any known cultural resources have already been recorded on or adjacent to the APE.
 - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
 - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
 - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
 - b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
 - a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
 - b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
 - a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, § 15064.5(f) (CEQA Guidelines § 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
 - b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
 - c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code § 7050.5, Public Resources Code § 5097.98, and Cal. Code Regs., tit. 14, § 15064.5, subdivisions (d) and (e) (CEQA Guidelines § 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address:
Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

**Notice of Preparation of a Draft Environmental Impact Report for the Proposed
Affinity Project**

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Draft Environmental Impact Report (EIR). Please send a copy of the Draft EIR upon its completion and public release directly to South Coast AQMD as copies of the Draft EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website¹ as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod² land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds³ and localized significance thresholds (LSTs)⁴ to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road

¹ South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: <http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook>.

² CalEEMod is available free of charge at: www.caleemod.com.

³ South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf>.

⁴ South Coast AQMD's guidance for performing a localized air quality analysis can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>.

mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA *operational* thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment⁵.

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the Draft EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook¹, South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2016 Air Quality Management Plan⁶, and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy⁷.

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at lsun@aqmd.gov.

Sincerely,

Lijin Sun

I am writing in support of the proposed Affinity project on Arroyo Parkway.

I have lived and worked in Pasadena for over 40 years. The housing shortage continues to challenge our community and this project would allow older homeowners a viable option to move from their homes and remain within Pasadena. As an active Realtor in the area, I know that where to relocate if they were to sell, is a major concern with these seniors.

I have reviewed the plans and believe this medical and assisted living project is long overdue. These are complimentary uses, tied together with a very attractive courtyard between the historic buildings. This project will provide an ideal environment for people in the assisted living building to get together with family and friends, and to remain in the community they love. The medical/research building achieves the right level of prominence for this location, while still fitting in.

The thoughtful design will also encourage pedestrian activity down Arroyo Parkway from Old Pasadena. Having a Metro Station on each side will minimize traffic, which is also the right approach in this area.

Please work closely with the developer team to make any necessary refinements, and help make this project happen soon. It would be a terrific addition to the area and help with our shortage of single family homes.

RE: 491-577 S. Arroyo Parkway Project

Dear Commissioners:

As a Pasadena resident, owning part of an historic building, (Pasadena's first co-op, The Barcelona,) I write to support the Affinity Project on Arroyo Parkway.

Pete Kutzer is the kind of developer that has a "goodness of fit" for Pasadena. When I was president of the South Pasadena Chamber of Commerce from 2003 to 2015, we got to know each other, and watch as three high-quality firms attempted to create an appropriate infill project called Downtown SouthPas. It was sensitive and right-sized for the community. Yet, all were pushed away for fear of change. Today, that same site is a sensitively designed and vibrant corner at Fair Oaks and Mission – a product of The Kutzer Company, who knew how to proceed to get both residents' embrace and commercial viability.

Pete and I met before the Pandemic and discussed The Affinity plans. Recently I reviewed the project again. It looks like an excellent mix of senior housing, medical offices and retail. It's close to the Metro Gold Line stop at Del Mar Station, and Metro buses 177 and others on Del Mar, as well as Pasadena Transit bus stops on California and S. Arroyo Parkway. If you conclude that the design respects the vision of the Design Review Board in preserving Arroyo Parkway buildings, concentrating the taller buildings near the Gold Line, and providing walkable, pedestrian friendly perimeter, then there are good reasons to approve these plans.

Pasadena, like many California communities, is trying to respond to housing demands, without destroying our neighborhoods. We're even opening up for ADUs. We've allowed density bonuses for housing on all three sides of me – blocking a once protected sightline of the City Hall dome and San Gabriel Mountains, for Barcelona Owners.

I do not see similar downsides to the Affinity. Instead, this proposal brings in a solution for Pasadena's families, with specialized housing, so they can stay local as they transition in their lives. Since it also brings in a healthcare component, it feels like a two-for one deal.

Thank you volunteering, for guiding Pasadena with design sensitivity as well as allowing for commercial viability. When a developer with a track record of respectful, right-sized, historically sensitive projects, such as The Kutzer Company, seek approval – I am very confident, and offer my support. I am at 626-710-2360 if you'd like to reach me.

Sincerely,

Scott Feldmann
The Barcelona

RE: 491-577 S. Arroyo Parkway

Dear Members of the Design Commission:

USC Chan Division of Occupational Science and Occupational Therapy is invested in supporting people of every age can enjoy life to the fullest. Our vision aspires to promote community, work, and living spaces that are inclusive and health-promoting, which includes attention to the design and flow of the physical space to craft a future environment where people thrive. In harmony with this vision, the Occupational Therapy Faculty Practice (OTFP) consults with organizations and communities that share our vision and core values that strive to create inclusive environments that consider the range individual needs across the lifespan. Specifically, we recognize that the health of the individual is in part constructed by a reciprocal interaction with their environment. While environmental adaptations are not novel in the realm of health and safety, OTFP supports the creation of environments that enhance well-being rather than solely decrease risk to health.

With this in mind, we have been supporting the applicant's team in the design of the Affinity Project in considering how community members might manage their physical health and mental well-being within the site (e.g., exercise facilities, community space, green space), how to facilitate safe and efficient navigation of the environment for individuals of all ability levels (e.g. cognition, vision, mobility), room designs that support open communication, and other health-promoting design choices. Throughout the last year, OTFP has been working with the applicant's team on ideation, design, and layout to explore and implement best practices including the consideration of design principles that support inclusiveness and productive aging. OTFP finds that the project is exemplary in design and function to support ease of use and enjoyment for all members of the community including but not limited to those with limited mobility.

As a partner in this exciting project, we look forward to continuing our collaborative process until completion. We look forward to continued work ensuring that all aspects of the site have been thoughtfully considered with respect to the breadth of diversity and abilities.

Sincerely,

Marissa Marchioni, OTD, OTR/L, CEAS
USC Occupational Therapy Faculty Practice

City of Pasadena Design Commission,

I am writing in support of the proposed Affinity project at 555 S. Arroyo Parkway. As the President and CEO of the Old Pasadena Management District, I have more than 15 years of experience in Pasadena, and have been fortunate to support the positive evolution of the community. I also have known the local principals (Pete Kutzer at Edgewood and Patrick Chraghchian at Adept) for many years, and have seen the quality and success of their projects, especially in thoughtful design that activates the streetscape and the surrounding areas.

While this project is not located within Old Pasadena and my Board has taken no official position, I believe that Affinity's combination of uses - including medical/research and assisted living - is particularly needed in Pasadena, and putting them next to each other near the Metro is a terrific idea. I especially appreciate the preservation of the historic buildings, the inviting common areas, and pedestrian-friendly nature of the improvements.

I look forward to the Affinity receiving all necessary approvals, and the positive impact it will have in the neighborhood, and in Pasadena as a whole.

Thank you,

Steve Mulheim
President & CEO
OLD PASADENA MANAGEMENT DISTRICT

Hello,

The Chamber of Commerce and Civic Association of Pasadena fully supports the project at Arroyo Parkway and Del Mar Boulevard.

The project will be attractive and re-energize an area that has fallen to neglect in recent years. Several aspects of the project will be significant and positive additions to Pasadena.

Thank you,

Paul Little
President and CEO

RE: The Affinity Project Planned Development #39 – Providing Housing for Seniors

Planning Department:

The Affinity mixed-use development project, addresses two critical needs of The City of Pasadena. One, the need for additional medical office space for our growing medical and technology industry and two, housing for seniors.

Pasadena has among the highest concentrations of residents aged 50 and older in the Los Angeles region. According to market research, the Independent Living vacancy in 2019 was 0.5% for Pasadena. The Affinity will provide a much-needed option for people who wish to remain in the community as they age.

An added benefit, is its location near mass transit. Residents will have access to destinations throughout southern California and can possibly forego the need to own a vehicle. Proximity to the Metro line, also provides convenient access to onsite medical facilities to the broader community as well as nearby residents.

This seems like a great project for the Arroyo Parkway corridor.

Sincerely,

Mary Frances Schillaci

Subject: Affinity Project on Arroyo Parkway

Dear Michi:

My brother and I are the tenants across the street from the proposed project, the Affinity Project. We own the Parkway Grill and the Arroyo Chophouse restaurants and we feel that this project is sorely needed in our great City.

As is apparent, the buildings that occupy the real estate in question have been dilapidated for years and have been an eye sore and in need of some much needed reimagined/vital new uses.

I can not think of a better location for Medical, Research and Assisted Living uses that have synergy that works extremely well together.

I very much like the plans for preserving the two historic structures across the street from our restaurants and using the courtyard between them as the public center of the project.

I also feel that the development is the perfect fit for that corner, and will bring the kinds of jobs and economic activity that has been missing for the last couple of decades.

I feel that the proximity to Huntington Memorial Hospital is ideal.

My brother and I have hosted our Fall Food and Wine Festival at Parkway Grill and the Chophouse for the past 37 Years with all proceeds going to the Hospital. The funds have generally gone to the Trauma Center as more and more hospitals have closed theirs due to the expense involved in operating their own. This has been a very important endeavor for us, as one never knows when a family member or loved one may need to go to a Great Trauma Center.

In my opinion this project is long overdue.

We are 100% in favor of the Affinity Project.

Best to you,

Gregg Smith

Attention:

City of Pasadena Design Commission
Michi Takeda
Hale Building
175 N. Garfield Avenue, 2nd Floor
Pasadena, CA 91101

Dear Commissioners:

I am a 34 year resident of Pasadena and a former commissioner in the City. I therefore appreciate what you do and the time that you devote to reviewing and considering projects for our City.

I am writing to you to express my opinion that an assisted living project is an important component for our City now and in the future. We all are aging and at some point, many of us may need a place where cutting-edge healthcare and research is available outside the hospital environment. It is then, if not right now, when we would look to The Affinity, and find a well designed, state of the art and (travel) accessible resource.

I have reviewed the Affinity Planned Development proposal and appreciate that it makes very good use of the space at 555 S. Arroyo Parkway. The location is very appropriate for access given the Gold Line stations, reducing potential traffic. The building designs works well with the existing historic structures and, being a fan of natural light and outdoor spaces, I again think this design (incorporating courtyards, and extensive landscaping) provides a very inviting atmosphere for potential residents as well as the entire community, if and when they have an opportunity to visit the facility.

I think The Affinity Planned Development would be a welcome asset to the City, for all residents now. With the evolving and expanding world of healthcare, it should also provide great potential for the future.

Thank you again for the time you are devoting to the review and consideration of this project.

RE: PD#39 - Affinity Project – 465-577 S. Arroyo Parkway

Planning Commissioners:

Frequently the need for more housing is in the news. However, we don't often hear about the need for new housing for seniors. The Affinity Project is a mixed-use development that will provide both assisted and independent housing options for seniors. The project will also include much needed medical office space in the growing medical and technology corridor near Huntington Memorial Hospital.

I think this project will be a welcome addition to the area that will provide health and wellness services to residents and the greater community as well. I hope to see the project move forward in a timely manner so we can see the positive economic benefits this plan will bring to our town.

Best regards,

Michelle Ficarra

Re: 491-577 Arroyo Parkway

Dear Commissioners

Livable Pasadena is very concerned about the proposed project at 491-577 Arroyo Parkway. This massive project would substantially change the feel of a major entry point to Pasadena. It would transform Arroyo Parkway from a commercial district into a medical care corridor. The project also would dramatically increase our water usage, which we already are being asked to reduce. The impact this project would have on our water should be studied as part of the EIR.

As designed, this project would loom over everything nearby. There are very little setbacks and practically no green space. There are two landmark districts and a historic district within a block of the proposed project. And yet there are no proposed buffers between this gigantic development and the existing adjacent neighborhoods. The neighborhoods, and the livability of this area, need to be protected. The proposed project should be held to the fifty feet requirement in that area and should be required to maintain setbacks. This is essential to maintain the trees, sidewalks, and neighborhood feel of the area.

This proposed project also would negatively impact the surrounding area by adding significantly to the noise, lighting, and traffic on already congested streets. The surrounding neighbors now fight high traffic volume and traffic congestion along Marengo, California, and the surrounding streets. The streets are not going to be able to absorb the car traffic envisioned by the developer. Increasing traffic not only impacts the commuters in the immediate area, but also would push increased traffic to surrounding streets and could affect the safety of all pedestrians, bikers, and other drivers. We urge the Planning Commission to require traffic impact studies before any project of this magnitude is considered. The streets in question here already are operating at an LOS of F. The study should consider how to mitigate the impact of traffic or the area will become completely impassable.

Traffic is a very serious consideration in Pasadena. Livable Pasadena raised community funds to do a traffic study, looking at traffic conditions and traffic operations in Pasadena – particularly in light of the large development projects that are being proposed. The study examined traffic as a system, rather than narrowly looking at a single intersection. It is important to look at traffic as a whole and how it interconnects. The single LOS statistics for any given intersection may hide real problems because the LOS (such as in the city's

traffic studies) is reported as the average of all four-intersection approaches. For example, you can have a LOS F on one approach with cars backed up and waiting through multiple signal cycles, and a free-flowing LOS A on another approach. The average of these two intersections would be LOS C, which could be viewed as adequate. Traffic reports that only show the overall average LOS will gloss over the real problems. The impact of new development, and the resulting additional traffic, could be under-estimated and would negatively impact an already bad situation. This traffic study also looked at traffic conditions leading up to an intersection, including the long delays of some approaches. We observed, for example, that at the intersection of Arroyo and California cars are waiting up to 4 signal cycles. This can result in aggressive driving, in which cars are running red lights trying to get through the signal rather than wait another light. This makes a very unsafe situation for pedestrians, people on bicycles, and other drivers. And this is before the dramatically increased traffic that would come with the proposed project. We hope that the city will take seriously the findings of this study and will incorporate these issues into the scope of the EIR.

Finally, Livable Pasadena supports the important concerns raised by the Magnolia Landmark District and supports the Planning Commissioners' proposed moratorium on Planned Developments. As explained by the Magnolia Landmark District, the proposed project conflicts with the development goals of our General Plan. The project undeniably will increase the daily car trips throughout Pasadena and does nothing to help alleviate the need for car related travel. Adding 650 parking spaces does not Pasadena more walkable. Is this what was envisioned in our Mobility Element? Certainly, the answer is no. We urge the Planning Commission to require the developer to bring this proposed development in-line with our General Plan. Indeed, the proposed moratorium on planned developments would allow the city the time to ensure that there is consistency between developments and city planning documents. Planned Developments, by their very nature, directly impact large portions of Pasadena. It is critical that they align with our General and Specific Plans.

Thank you,

Megan Foker

RE: City of Pasadena, Planning Commission Meeting
To be held on August 11, 2021 for the purpose of scoping an EIR for the
Planned Development #39 - Affinity Project

Dear Honorable Planning Chair and Commissioners,

“Livable Pasadena” has previously hired PRISM Engineering to conduct a comprehensive traffic study to determine measured real-world traffic conditions in the City. This study was previously submitted to the City (dated 3/14/20). I am referencing in this letter the online location where this document can be downloaded again as needed:

<http://www.prism.engineering/pasadenatrafficvids.html>

I have been asked by “Livable Pasadena” to comment on the salient concerns relating to traffic conditions and impacts that could be anticipated by the proposed ***Development #39 - Affinity Project***. The project will be located along the west side of Arroyo Parkway between E. Bellevue Dr. and E. California Blvd., and will construct an additional 154K SF of Medical Office building, a 184K SF Assisted Living building, 197 new DU, and 650 additional parking spaces, bringing the project block total to 850 parking spaces, mostly for cars, in 5 levels of underground garage.

Comment #1

By its very design and plan, it seems that the project’s focus is to become a huge magnet for cars, by providing 850 parking spaces in such a small area of the City. The City has been working for more than a decade to become a city that depends less on the car, so this project seems to actively fight against that stated goal, and in fact would help defeat it. In the City’s ***General Plan Mobility Element*** there is a stated goal or guiding principle to make the City of Pasadena “***a city where people can circulate without cars***” (*Principle 5 of 8 Guiding Principles in General Plan Mobility Element*). The project does not seem to be even remotely compatible with the City’s stated goals, as contained in the General Plan legal document. “Vehicle Traffic” is a major component of this project with 850 parking spaces (200 existing and 650 additional), and as such will have a huge traffic impact to Arroyo Parkway and any nearby intersections, because it will be bringing into an already extremely congested LOS F roadway system, 650 more cars, possibly every hour on the hour, depending on turnover times in the

850 space parking garage. These additional thousands of vehicles per day will create a potential *safety-compromising* impact (an EIR impact that must be examined) to the local intersections surrounding the project. One of these intersections on the southeast corner of the project has already been identified as extremely overly congested (E. California at Arroyo) with LOS F conditions. There have also been several accidents at or near this intersection over the past few years that include rear end accidents on Arroyo, a broadside accident on California striking the Light Rail Train, and several last minute high risk intersection turns (relating to running of red lights on account of extreme congestion) in the intersection. Many injuries have been the result of these accidents (which are easily searchable on the State's traffic accident database system). There is a pattern of accidents at this location, and possibly others nearby as well.

Comment #2

During an am peak hour or a pm peak hour, often a parking garage experiences its greatest inbound and outbound traffic flows. In an 850 space parking garage related to homes and doctors, these parking spaces will likely empty and fill up several times in a day. In other words, it will be more than 850 cars coming and going in an hour, but much higher on a daily basis. This should be studied as part of a comprehensive traffic study, to see where these cars can possibly come from, and where they can exit, in order to lessen the extreme impact that is anticipated. Traffic on Arroyo and California is already at peak congestion levels, with cars missing the signal cycle nearly as a default now. Adding an additional 650 cars to the mix will have uncertain results, but it will most certainly be LOS F much worse than the LOS F that already exists (over 3 signal cycles delay for Arroyo traffic). It will likely result in more drivers becoming more aggressive, impatient, taking chances, running red lights, or hitting a train, or a pedestrian, or a cyclist. This project will bring so much traffic to the immediate area surrounding the project that the area will become even more unfriendly to bikes, peds, and cars as well. It will result in too much traffic.

Comment #3

When traffic volumes in a congested area become too high, the solution of the past has been to build bridges, build a freeway, or an expressway, in order to reduce the number of conflicts of high volumes of traffic. When traffic volumes are allowed to cross paths, when the volumes are extremely high, this creates a dangerous condition. It creates aggressive driving. The opposite of traffic calming will occur. The City, if they approve this project, would be obligated by its own General Plan to mitigate the traffic impacts and to find solutions where the vehicle traffic will not thwart the stated goals of the General Plan Mobility Element (to create a car-free circulation option). In addition, the EIR would need to address the obvious impacts to safety that will occur in the future should the parking be allowed. Traffic accidents and congestion are already at unacceptable levels. Increasing the traffic by 650 cars is an extremely high number of cars to add to a congested roadway system.

Comment #4

VMT (Vehicle Miles Traveled) is an environmental impact addressed in an EIR. This project, with its 850 parking spaces, will significantly increase the VMT to the area surrounding the project. The project's density cannot possibly be any real-world "offset" to the very real and significant traffic and safety impacts that will simultaneously take place, as a direct result of the project. The huge increase to vehicle miles traveled (VMT) coming into the area as a result of 850 parking spaces in a highly concentrated area will be an impact that cannot be mitigated without significant infrastructure changes (including building bridges, and eliminating traffic signals and resulting delays). This vehicle magnet (the parking garage), to be located in one of the most congested areas of the City, seems like a plan that is highly incompatible with the City's stated goals and guiding principles as contained in the City's General Plan, as well as the Mobility Element.

Respectfully submitted,

Comments on EIR Scoping for Planned Development #39 - Affinity Project, Pasadena, CA

August 25, 2021

Att: Jason Van Patten

Senior Planner

City of Pasadena

Planning and Community Development Department

175 North Garfield Ave.

Pasadena, CA 91101

Re: 491-577 Arroyo Parkway

Dear Mr. Van Patten:

Livable Pasadena would like to submit the following additional concerns and requests for inclusion in the EIR for the proposed project.

First, we believe that, as a threshold issue, the drafting of an EIR for this project is premature. The proposed project is not “stable,” which is a requirement under CEQA. CEQA requires that an EIR contain “[a]n accurate, stable and finite project description.” (*Cty. of Inyo v. City of Los Angeles* (1977) 71 Cal. App. 3d 185, 193; see also *Washoe Meadows Community v. Department of Parks and Recreation* (2017) 17 Cal.App.5th 277, 288; CEQA Guidelines § 15124.) For example, in the recent case, *Stoipthemillenniumhollywood.com v. City of Los Angeles* (2019) 39 Cal.App.5th 1 (“*Millennium*”), the court held that a project description was inadequate under CEQA when the EIR failed to specify “the siting, size, mass, or appearance of any building proposed to be built at the project site” and only provided an “impacts envelope” with “conceptual” designs. (Id. at 18.) The developer at issue here has presented two different concepts for their proposed project, resulting in an inconsistent and unstable project description. That could trigger different building designs and different physical layouts, which could result in significantly different project impacts. Until the physical concept is firm, the project does not qualify for an EIR under CEQA.

Furthermore, the purpose and intended use of the project still is uncertain. The developer has proposed several different uses for the project space and has not settled on a final project. The change of the use could dramatically change the impact the project has on the community. For example, various projects could differ greatly in the use of water, the impact on traffic, and the impact on air quality. Therefore, until the proposed project is clearly defined, both in physical planning and in use, an EIR is premature. Once the project is finalized, the EIR will have to include all possible projects and all possible building specifics. Currently, however, it is just too early to move to the EIR drafting stage. Without a firm physical concept and clearly defined use for the project, an EIR would fail to meet CEQA’s fundamental purpose to “provide public agencies and the public in general with detailed information about the effect which a proposed project is likely to have on the environment.” (Pub. Resources Code, § 21061.) The unstable project description included in the initial study fails to meet CEQA’s public disclosure objectives.

If the city is determined to continue with this project and draft an EIR, Livable Pasadena urges the city to include a study and analysis of the impact this project would have on our water and on the heat index. Only a week ago, the City Council announced a dire water shortage and increased city-wide restrictions on water consumption. This alone should be enough of a reason to add a study of the impact on water usage to the EIR. We asked for a full water analysis in our earlier letter, and we reiterate that request here. We also have asked City Council to require a water use analysis for all projects. The potential impact of this massive project on our water supply is too great to ignore. The project proposes development with significantly more density than included in any approved land use plan for the city and thus would not have been included in the city's urban water management plan. Due to the high levels of water usage that would be required for medical and assisted living uses, preparation of a water supply assessment or other water use analysis must be included in the EIR. Just because the impact is unknown does not mean that the impact goes away. Pasadena cannot go into the project blind.

Climate change is very real. Adding a project of this magnitude with limited green space, while also taking away existing mature trees on the site, will only exacerbate the problems we are facing with increased heat. We will lose the shade giving and cooling impact on our neighborhoods from mature trees and green planting. The proposed above ground tree boxes will not make up for this loss. The result will be increased concrete area, increased car emissions, and an increased heat index. We would be creating an urban heat island effect, which is intensified in areas with large swaths of concrete or blacktop. An urban heat island is described as "dense urban areas with fewer trees, less green space, more buildings, higher energy use, and more impervious asphalt and concrete. These characteristics create urban heat islands where nighttime temperatures may be as much as 22°F higher than surrounding areas." *Climate Change, Health, and Equity: A Guide for Local Health Departments* (2018)¹. This study also demonstrates that increased heat levels can result in significant health impacts. CEQA requires an EIR to analyze health impacts as well as increased energy usage. (CEQA Guidelines § 15126.2 [EIR must analyze "health and safety problems" resulting from the project]; *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 510; CEQA Guidelines App. G, VI.) The impact this project would have on our heat index, therefore, should be carefully considered as part of the EIR.

We ask the city to slow down and require a fully developed project before moving to the EIR planning stage. Once the drafting of an EIR is appropriate, we urge the city to include a study of the impacts this project will have on our water and on our heat index, as well as the other concerns raised in our earlier letter.

Megan Foker

August 10, 2021

Planning Commission
City of Pasadena
100 North Garfield Ave.
Pasadena, CA 91101

The Madison Heights Neighborhood Association is disappointed to see this planned development moving through the city process so quickly. As you can imagine, MHNA residents are surprised by and deeply concerned about what is currently proposed. The loss of 23 trees alone is a considerable issue, but the addition of 650 new parking spaces, traffic, loss of mountain views, limited walkability, minimal addition of green space, and lack of community outreach are also serious problems. These seem to violate key tenets of the City's General Plan, especially the mobility element and protecting single-family neighborhoods. We hope the city and commission will find a way for the environmental report to respond to the following concerns:

1. How will residents of MHNA be able to access transportation resources as the area becomes severely impacted by the number of vehicle trips this project will produce ☐
2. Will the cumulative impacts of ALL future development adjacent to the area be studied ☐
3. How will this project enhance the surrounding historic neighborhoods and not overshadow established single family areas ☐
4. How will the City address the water issue, considering we are already being asked to limit our use ☐

Pasadena is a great city, and our residents should be heard to help keep it that way.

Thank you,

John Latta

August 10, 2021

Planning Commission
City of Pasadena
175 North Garfield Avenue
Pasadena, CA 91109

RE- 465-577 Arroyo Parkway

The residents of Magnolia Avenue are alarmed by the planned development proposal to build both a 154,000 square-foot medical office building and a 184,376 square-foot, 92-unit assisted living complex (complete with 850 parking spaces) just a block and a half from our historic boundaries.

This project does not adhere to the goals of our General Plan, which aims to make Pasadena a city where people can circulate without cars. Non-auto travel is emphasized in our General Plan in order to recognize the goal of improving Pasadena's environment and quality of life, but medical office use is one of the highest trip-generating uses with employees and patients coming and going all day. Consider the services that are required for this type of care facility and medical office:

- ☐ Arrivals and departures of staff three times per day for caregiver shifts, as well as daily shifts of administrative, nursing, housekeeping, food service and maintenance departments;
- ☐ Daily deliveries of food, pharmaceuticals, and supplies;
- ☐ Multiple trash pick-ups for regular trash, medical waste, and recycling;
- ☐ Visits by the family and friends of as many as 100 residents;
- ☐ Regular visits by medical professionals, social workers, therapists, nurses, care managers, hospice staff, fiduciaries, consultants, entertainers, etc.;
- ☐ Technician visits for maintenance of facility equipment, resident TVs, telephones, computers, etc.;
- ☐ Occasional movers for residents moving in or out; and
- ☐ Emergency vehicles at any time of the day or night. (This happens because facility procedures require that whenever a resident has a fall and there is an injury, or if a resident suddenly has a serious health condition, facility staff are required to call 911, which almost always results in blaring sirens.)

All of these activities will transform the adjacent historic neighborhoods of quiet streets and single-family homes into very busy and noisy living environments. Why not plan this development near Huntington Hospital, where the zoning, streets, and infrastructure are already in place to support this type of traffic? The truth is that Arroyo Parkway was never meant to be a medical corridor or accommodate such massive transportation needs. This is the wrong place for this complex especially with the Metro train crossing. We ask this commission to closely look at the intersection of Marengo and California for safety purposes for all transportation uses. This intersection frequently backs up from the train crossings and is unsafe for bikes, walkers and cars. Safety IS an environmental impact and must be reviewed closely for this project to proceed.

Pasadena Land Use regulations were meant to help neighborhoods evolve without sacrificing their unique characteristics or charm. The sheer number of parking spaces alone proves that there is no intention of reducing car usage for this proposed development. This proposed use will erode our surrounding historical neighborhood if it moves forward, and therefore the commission must find a way to focus on reducing car usage for this proposed development.

The other issue that needs to be addressed is of the concern that we already have so many skilled nursing and assisted living facilities within our city limits, specifically along Fair Oaks. We appreciate the present need for elder care right now, but this commission needs to ensure we are not creating an over-abundance of this type of facility in our city.

As with so many other cases, it seems that the guidance of our General Plan is thrown out the window and properties are green-lit for whatever a developer can dream up. This planned development is completely incompatible with our General Plan, which promises to *protect* the character of our neighborhoods. This commission needs to appreciate and respect the differences between healthy, comfortable residential neighborhoods, and thriving commercial districts. We wholeheartedly agree with the handful of commissioners who would like to consider suspending PDs until the specific plan process is complete. We must ensure this idea of a high-growth, high-density model for Arroyo Parkway and South Fair Oaks Specific Plan has been thoroughly discussed throughout our community before moving forward. As of now, public participation has been down for the last year and a half due to COVID and most local residents are not even aware of this massive project.

This development is too tall, lacks enough green space, and will cause massive use of cars next to our neighborhood. This part of Pasadena does not have the proper infrastructure to support such an endeavor, and we are concerned that all of this new traffic will make it nearly impossible for residents to access adjacent roads for our own transportation needs. Please help.

Thank you for your consideration,
Residents of Magnolia Landmark District

RE- 465-577 Arroyo Parkway

In review of the proposed 154,000 square-foot medical office building and a 184,376 square-foot, 92-unit assisted complex (complete with 850 parking spaces) just a block and a half from historic boundaries. Also, not to mention next to the Goldline, one of the busiest intersections in Pasadena. Not to mention the traffic issue, but consider the water usage associated with the medical aspect and the 92-units.

As past President of Pasadena Beautiful Foundation, I ask that consideration to the design to include a design more compatible to Pasadena's historic contribution to trees and garden design, not a commercial design building that is out of touch with Pasadena's historic architectural status. Pasadena has a well known history with trees and plantings that enhance our values and enhance the City of Pasadena. Look at the Neuroscience Building at Cal Tech on the corner of Wilson and Del Mar Blvd, also to mention the HMRI building on S Fair Oaks, and the Kaiser Medical on the corner of Green and Los Robles. great examples of design that compliments the City of Pasadena. We need to consider more green space in the final, overall design.

In as much the EIR meeting is occurring tonight, I would suggest that an EIR of water usage be addressed too.

Chuck Livingstone

Past President

Re: 465-577 Arroyo Parkway

Protect Pasadena Trees is an organization which works to maintain and encourage a healthy tree canopy within Pasadena boundaries. It is imperative we ensure that the city we pass down to our children isn't made of just parking lots and concrete developments as we grow to provide more commercial districts and housing. The planned development for 465-577 Arroyo Parkway is very concerning to our organization because there are areas within the plan where setbacks are set at zero along Arroyo Parkway which does not allow for in-ground tree planting anywhere around the periphery of the development.

Our new specific plan must adopt more stringent policies on tree planting and protection both on public and private property, including the following:

- We should not allow subterranean garages from going lot line to lot line, destroying all trees on the property;
- We must require planting of large trees between building lot lines to create an urban canopy within dense urban areas;
- We must require street setbacks to be changed to encourage the integration of trees into new development plans, and the city must show demonstrated effort in encouraging the developer to design with trees in mind. It is concerning areas adjacent to single family homes of Madison Heights would be directly abutting such drastic concrete deserts

City staff and council are responsible for protecting us from development that contradicts this fundamental imperative. While our city does have some tree ideals in place, it is clear they are not enough, particularly in the Central District and South Fair Oaks Specific Plan. The city needs to take a stronger stance on incorporating mature trees into our urban center. We must create a city that has strong urban forestry efforts with dense vegetation and a beautiful urban canopy. We need to band together and insist on stronger and more stringent views towards our urban canopy.

Aside from diminishing the beauty of the city's streetscape by requiring zero setbacks, maintaining mature trees has the practical and effect of reducing the heat island effect, which occurs in cities with an excess of concrete and a shortage of vegetation. Many communities are now taking steps to reduce urban heat islands through policy initiatives which include stronger tree and landscape ordinances, comprehensive plans and design guidelines protecting trees, and zoning codes which provide enough perimeter around new buildings to plant trees in order to create canopies. If we don't follow suit, we are putting at risk the trees that provide the

evaporative cooling needed to keep our urban heat island index low. We have all experienced the high temperature and pollution of those hot summer days in our city, and the removal of trees has been a major contributor. The current solution adopted by developers, potted plants on concrete, will never provide protection from growing urban heat islands the way a mature canopy of trees will.

Pasadena has been purposefully developing a tree canopy since 1855, when trees were first planted along city streets. Since the city is in the midst of revising all of the Specific Plans, we as citizens need to question this policy of urban edge development as it relates to our tree canopy. We have an opportunity to voice our concerns and shape the guidelines that will affect our city for decades. All future big developments like 465-577 Arroyo Parkway must take our tree canopy into consideration. It is the city's duty to protect its current residents from development that might hinder the livability of our city which includes a healthy and walkable environment.

Thank you,

Frances Morrison, on behalf of Protect Pasadena Trees

Re: 491-577 Arroyo Parkway – “Affinity Project”

Dear Mr. Van Patten:

The WPRA contends that the drafting of an EIR for the Affinity Project is premature and will not be acceptable until the developers define and commit to the use of Building A. According to the project description published on Pasadena’s website:

...the proposed PD Plan would provide the flexibility to exchange the uses in Building A from medical office and ground floor commercial for the following:

- *3,000 sf of commercial and a sales/leasing management office on the ground floor;*
- *Up to 197 residential dwelling units;*

Consequently, the proposed project is not “stable,” a requirement under CEQA which requires an EIR to contain a finite project description. Until the physical concept is firm, the project does not qualify for an EIR under CEQA.

Furthermore, the WPRA urges the city to include a comprehensive analysis of the impact this project would impose on our city’s water usage. A building of apartments and/or condominiums would have a much different water and sewer need than medical offices. Also, the traffic flow exiting and entering Building A would be different for living units than for offices.

Until the proposed project is clearly defined, both in physical planning and in use, an EIR is premature. The WPRA strongly encourages the City to press for focus on this project and publish the finalized use of Building A before progressing any further.

Thank you for your consideration of our point of view.

Respectfully,

A handwritten signature in black ink, appearing to read "Dan Beal". The signature is fluid and cursive, with the first name "Dan" and last name "Beal" clearly distinguishable.

Good Morning,

As a long-time Linda Vista resident, I am in support of The Affinity Project on South Arroyo Parkway. The project will bring much-needed assisted living to the heart of the City, making it easier to stay in Pasadena near family as they age. My father is an assisted living facility, so I know how valuable they are to a community.

The new medical/research facilities within the project will provide a great boost to the medical research corridor. The timing for the project could not be better as we watch the healthcare and life sciences industries grow. It is exciting to see Pasadena at the forefront of this growth and for The Affinity to help make the long-time vision for this area a reality.

Best, Natalie

Mr. Van Patton,

I am submitting CEQA Scoping Comments in my individual capacity, as follows.

1. I agree with, and support, the following comments of Livable Pasadena as to the asserted "Project Description":

. . . (T)he drafting of an EIR for this project is premature. The proposed project is not "stable," which is a requirement under CEQA. CEQA requires that an EIR contain "[a]naccurate, stable and finite project description." (Cty. of Inyo v. City of Los Angeles (1977) 71 Cal. App. 3d 185,193; see also Washoe Meadows Community v. Department of Parks and Recreation (2017) 17 Cal.App.5th 277,288; CEQA Guidelines § 15124.)

CEQA does not permit proposing a Project of several "alternatives". Therefore, NO EIR or other CEQA work should proceed until the Project Description is stabilized and finalized.

2. Historic Status/Aesthetics. The EIR must include a strong, robust Historic Resources Analysis for two reasons. First, some community Historic Preservation commentators in Pasadena question just how historic the two buildings are that are the basis of the claim for an increase in the allowable building height of other Project buildings. The massing and height of this Project is of community great concern, and any false use of historic status in this regard must be avoided. Therefore, a Historic Resources Analysis must study and analyze the historic status of the two buildings in question in detail.

Second, the EIR should include an Aesthetics section, or, if an Aesthetics section of the EIR is not "allowed" due to some state or CEQA law reason, then a strong, robust Historic Resources Analysis must be included in the EIR if there are historic resources on site in order to study and analyze issues that would otherwise be studied and mitigated through an EIR Aesthetics section; and/or, with or without historic resources on site, the Land Use and Planning section of the EIR should be expanded in order to study and analyze issues that would otherwise be studied and mitigated through an EIR Aesthetics section, including application of the applicable Specific Plan. Such issues include impacts of massing and height in relationship to setting, and adjacent properties and uses, whether historic or not; impacts on the surrounding street scape on both sides of Arroyo Parkway.

Thank you for your attention to these comments.

Sincerely,

Nina Chomsky

Support for Affinity Planned Development #39

Dear Planning Commission:

I want to express my support for the proposed mixed-use development on Arroyo Parkway. This is an ideal location for a new medical facility, as it is in the heart of Pasadena's growing medical and technology corridor. The project also includes senior housing, both independent living and assisted living and memory care. Located near medical providers will make it very convenient for senior residents seeking medical care.

As a long time resident of Pasadena, over the years I've seen how Pasadena's medical industry has grown. I am the Training Consultant for Huntington Memorial Hospital's Pet Therapy Program and I can see the many benefits that this project will bring to the area. Not only will it serve Pasadena residents, but it will provide the resources needed to attract top medical professionals to our city.

This will be an exciting addition to our growing medical and health-care related industry and it has my support.

Sincerely,
Maggie Crawford

RE: 465-577 S. ARROYO PARKWAY

The citizens of Pasadena are alarmed by the proposed planned development as presented for 465-577 S. Arroyo Parkway. This plan is designed well beyond city infrastructure capacities, neither enhances nor encourages a small-town feel, is not of an appropriate scale for the surrounding historic neighborhoods, encourages very little green space, and will have a *devastating cumulative impact on traffic on every major intersection surrounding the area*. The proposed plan and resulting massive, densely populated project is immeasurably frustrating to residents who are watching their city being altered in ways they never imagined.

Overall, the buildings proposed for this planned development are too tall, too dense, and lacking the proper setbacks that make a neighborhood feel inviting. Let's not forget that the issues of density and traffic will only be compounded once all the development in the area is completed by adding additional projects such as 590 South Fair Oaks. Please refer to a traffic engineer [video](#) capturing the delay at the corner of Arroyo Parkway and California Blvd. from this last January of 2020. You will see the intersection fails close to four times. This development will not work within our city infrastructure and most elderly people struggle to get to the doctor by walking, bus or train.

In light of all we are learning now about the risks of high-density living, long-term exposure to poor air quality, and the relationship between building to the urban edge and the urban heat island index, I believe the citizens of Pasadena should be alarmed by the current plans for this development. This development does not reflect the Pasadena anyone has imagined; traffic snarled, too dense and a massive concrete jungle. Please help keep what makes Pasadena so special; trees, mountain views, easy access, historical framework and a small town feel.

Thank you for your consideration,

Erika Foy

Dear Ms. Varsh,

(I am resending this email because the first I sent had computer problems)

As Executive Director of the Pasadena Senior Center, I know all too well the need for residential opportunities for older adults in our community which offer graduated care and memory care.

I've just viewed the presentation on the proposed Affinity Project on Arroyo Parkway. Not only was I pleased with their efforts to preserve those architectural aspects that are so important but also to create a multi-use structure that fulfills current needs for the residents of the Pasadena community. It's located in a part of Pasadena that allows older adults easy access to a variety of businesses and entertainment, thus encouraging residents to be active and engaged. It also maintains Whole Foods that has come to be an integral part of the Pasadena landscape and food resource. That section of land has been under-utilized for a very long time. I am in favor of the project as it is currently proposed.

Please feel free to contact me if you have any questions.

Most sincerely,
Akila

KRISTIN TECHENTIN HARRISON

I was disappointed to hear that the project at Arroyo Parkway and California was up at the Planning Commission when our General Plan and our Specific Plan are not completed. As a homeowner who lives two short blocks away on Magnolia Avenue, I have been aware of and watching the project carefully since it is so obviously out of place for this location and intersection.

I believe that the people who are considering approving this massive of a structure on this very difficult corner have not been down to the site. This corner has the short, left turn bays on both sides of Arroyo Parkway, at California and Bellevue, due to the median down the length of the street. Those bays hold about three cars and then a back-up starts in the next lane to be able to take a left. This causes huge delays and then the Gold Line disruptions to the north/south flow adds to it. At Bellevue, there is a “No U Turn” posted on that signal, but people already do that maneuver and that is without the block being developed. My understanding is that the developers are relying on everyone accessing the building on the northbound traffic side from Bellevue and then traveling under the buildings and exiting on California where the cars are already backed up due to the Gold Line. I believe there is an exit and entrance on the southbound side of Arroyo, but that only allows one direction to head when leaving the campus. The ingress and egress for this large of a project is horrible. I also believe they have planned on having lighted walkways for residents to get to the other side of the street, mid-street. This will cause slower movement of traffic on Arroyo Parkway, which will cause drivers to start speeding through the adjacent neighborhoods. This is already something that we observe in Madison Heights between Glenarm and California during both morning and evening rush hours.

The traffic and noise from the elevated traffic for this corner is not my only concern, but it is a big one. The daily, hourly trips to doctors, hence the need for 650 parking spots, will make this critical Pasadena intersection even more congested than it already is, with drivers already having to sit through the light for three to four cycles to turn south onto Arroyo Boulevard from California Boulevard, as well as from Arroyo Boulevard east on to California Boulevard. After that turn there are the Gold Line tracks. Again, difficult congestion spots. This project with currently proposed entrances and exits, along with the added number of cars, trucks, and ambulances, will make this intersection even more congested.

The design of this building is not to scale with others in the area. Not only is it tall, it is so densely built, without any consideration for greenery, that it will

create an urban heat index. We need to require that anything built on this site has building setbacks large enough to be able to plant real trees in the ground and ones that can grow to two or three stories. We need them to do living roofs and they should be required to plant leafing trees in the sidewalk. This will help soften that urban concrete feeling that is happening all over the city, with new residential projects built right up to the sidewalks.

Two additional concerns are the parkway trees and sidewalks. The existing parkway trees are narrow and far between. This type of development usually only allows for plantings in pots. We need to insist that they do not build to the property line so that trees can be planted in the ground both up next to the building and in the parkway. It not only makes it more comfortable to walk for pedestrians, but trees soften the visual impact of the buildings. We need the sidewalks sufficiently wide enough and shaded to encourage pedestrian usage. This is already a heavily utilized street, and the safety of pedestrians should be of the utmost concern.

I have traveled and appreciated many cities that have had to deal with urbanization, and although Pasadena is not on the same scale as them, we seem to be doing a worse job. Both Seattle and Dallas have mature trees adjacent to both sides of their downtown buildings, which soften their impact on the urban environment. Their buildings are tall but with the tree canopy and the wide sidewalks it does not feel as urban as Pasadena is beginning to feel. If we have to develop, we need to control what we want it to look like, not just let developers cram in whatever is the most profitable for them.

Thank you,
Kristin Harrison

RE: The Affinity Project Planned Development #39 – Providing Housing for Seniors

Dear Honorable Planning Commission:

I am a 19-year resident of Pasadena and writing in support of the Affinity project, City of Pasadena Planned Development Project #39. The Affinity mixed-use development project addresses two critical needs faced by our City. First is the on-going need for more housing for seniors, and a related need is for additional medical office space for Pasadena's growing medical and technology industry.

As you may know, Pasadena has among the highest concentrations in the Los Angeles region of residents aged 50 and older. Given that the Independent Living vacancy rate in 2019 was 0.5% for Pasadena, there is a real need for additional housing options for our seniors. The Affinity will provide a much-needed option for housing for people who want to remain in the community as they age and their housing needs change.

The project is the right type in the right place. In addition to locating housing for seniors near transit, the project also includes additional medical office space near Huntington Hospital and in the area of Pasadena where such uses are appropriately located.

This is a well-planned project that is appropriate for and consistent with the Arroyo Parkway corridor, and I respectfully encourage your support.

Sincerely,

Tricia Keane

Dear Ms. Varsh:

I am writing to express my support for the Affinity Project on Arroyo Parkway in Pasadena. It is a lovely and much-needed development for the area, with goals and uses consistent with the neighborhood and the demographics of the City of Pasadena. I understand it will soon come before the planning commission and I therefore wanted to register my strong approval of the project.

I am a long-term resident of Pasadena, and have been active in the life of the City, including my ongoing service as a director of the Oak Knoll Neighborhood Association (albeit my endorsement of this project is solely as an individual). I care greatly about development in Pasadena, and urge approval of outstanding projects such as this one which will add to the beauty of Pasadena and will provide much needed health-related resources to the community.

Thank you for considering my views regarding approval of the Affinity Project.

Sincerely,

Dean Kitchens

Dear Pasadena Planning Commission:

I want to express my support for The Affinity project, the proposed mixed-use development on Arroyo Parkway. Since I have an older parent, the idea of a new housing project for seniors is very appealing to me.

We hear a lot about the need for more housing, but housing for seniors is not always a priority. This project will provide both assisted and independent housing, which is great for people like my mother, who want to stay in the area. The fact that the facility is near public transit is another plus. So many seniors have to give up driving. To have the ability to use the Metro or take a bus will not only be convenient, it will help residents feel more independent, not having to rely on friends or family for transportation.

I understand that the development also includes a medical office facility. That makes perfect sense near senior housing. Currently I drive my mom to many different doctor and health-care related appointments all over Pasadena. Having a Class A medical facility so close will be great for those senior residents. It will be a great addition to Pasadena and should help attract quality medical providers.

Sincerely,
Nikki Maciejowski

Subject: The Affinity Project - 465-577 S. Arroyo Parkway in Pasadena

Dear City Planners/Planning Staff,

I'm writing to support the mixed-use project called The Affinity. This property consists of a full city block and when completed, I believe it will greatly enhance the Arroyo Parkway corridor and contribute positively to the lives of area residents.

Plans for the development include two key components -- new medical office space and assisted and independent housing options for seniors. It goes without saying that housing is in high demand, and seniors do not have a lot of options for housing if they want to remain in the Pasadena and South Pasadena areas. We have high concentrations of residents aged 50 and older, so a project that addresses the needs of our seniors will be a welcomed resource in the community.

People also want to have the care they need as they age. This project would allow continuing care for both independent living and longer-term needs including assisted and memory care. Building a modern medical facility close to those people with increasing health-related needs is a good fit. The medical resource will serve residents and the greater community as well. But perhaps equally importantly, it will support the area's growing health and wellness industry and help to attract top medical professionals to the city.

I hope you will approve this project that will add so much to the area.

Best regards,

Julie Rosenberg

RE: PD#39 - Affinity Project – 465-577 S. Arroyo Parkway

Planning Commissioners:

Frequently the need for more housing is in the news. However, we don't often hear about the need for new housing for seniors. The Affinity Project is a mixed-use development that will provide both assisted and independent housing options for seniors. The project will also include much needed medical office space in the growing medical and technology corridor near Huntington Memorial Hospital.

I think this project will be a welcome addition to the area that will provide health and wellness services to residents and the greater community as well. I hope to see the project move forward in a timely manner so we can see the positive economic benefits this plan will bring to our town.

Best regards,

Hello,

Following is my comment for tonight's Planning Commission Meeting...

Re: 491-577 Arroyo Parkway

Dear Commissioners,

I write to encourage you to maintain or increase setbacks for this development and to require in-ground trees planted and maintained along all streets that border this development.

Although other buildings along Arroyo Parkway do come up to the sidewalk with no set-back, because something was done in the past does not mean we cannot change based on our needs today. Set-backs and plantings make sense and they make dollars and cents. Set-backs with green space and in-ground trees will help to cool the streetscape, encouraging walking. Nobody wants to walk along a street with heat radiating from buildings and roadway. Plants and trees will mitigate the reflective heat from the asphalt roadway, concrete sidewalk and glass and stone of the building itself. Trees will shade and help cool the building, reducing costs for air conditioning. In addition, trees sequester carbon. As responsible stewards of our city, the addition of in-ground trees should be required of this and all developments in Pasadena as one thing we can do the combat global warming.

In addition, please consider robust requirements for use of Metro and other non-car means of transportation to reduce traffic impacts. Please do everything possible to move trips out of cars and into public transit and bicycles.

I understand these items will add to the up-front costs of the development but believe they will keep this a highly sought-after development which will allow in turn the owners to compete with new buildings as they come online and to charge premium rents for years to come.

Thank you for your consideration,

Tammy Silver

I would like to express my concern about the planned development at 491-577 Arroyo Parkway encompassing a large medical office building and an assisted living complex.

This intersection is already overburdened with traffic, particularly at rush hour. This complex would contribute to the excessive amount of traffic and noise in an already congested area. Pedestrian and bicyclist safety should also be a consideration.

The massive size of the buildings with minimal setbacks and little green space creates an aesthetically unappealing corridor that is incompatible with neighboring landmark districts.

The City of Pasadena is currently proposing a 15% reduction in water usage due to drought conditions. How does this massive project fit within the scope of this reduction? It is disturbing that projects are being considered for approval that dramatically increase our water usage.

I strongly urge you to consider how the added traffic, water shortage, looming buildings on historical areas, noise and lack of greenery all contribute to a less healthy city for our future.

Thank you for your consideration of this important issue.

Susan Stevens

August 4, 2021

City of Pasadena Planning Commission
Hale Building
175 N. Garfield Ave., 2nd Floor
Pasadena, CA 91101

Dear Members of the Planning Commission:

I write to express my support for the proposed Affinity Project on Arroyo Parkway. I have had the opportunity to see the plans for this project and am truly excited about it. Having recently retired from the California Institute of Technology as General Counsel, I am very interested in remaining connected to Pasadena. The proposed Affinity Project would provide some much-needed senior living in one of the most vibrant parts of Pasadena. Rather than being cut off and isolated, the Affinity project will allow seniors to continue being an active part of the community with a variety of opportunities within walking distance, including access to two Gold Line stations.

Equally important to me, the project preserves the nature of that very special area on the Arroyo Parkway. The plan includes restoring two historic buildings on the site and creating a public courtyard in addition to a mixed-use facility with medical offices. Based on what I have seen of the proposal, the result will be a beautiful, pedestrian friendly addition to Pasadena while at the same time serving seniors, such as myself, with a chance to remain active in the community.

For these reasons, I hope that the Planning Commission favorably reviews this project and thank you for your consideration of my input.

Sincerely yours,

Victoria D. Stratman

Dear Ms. Varsh,

I recently learned about the Affinity Project on Arroyo Parkway. After reviewing some of the available materials on line, I am very impressed with this project. It provides a lot of benefits to the City and looks very thoughtful in anticipating needs for additional parking and other considerations to make it a positive addition to the City. I'm also impressed with the high quality people who are involved in the project. Thank you for considering my comment, and for all you do for the City.

Best wishes,

Steve

Good Morning Tess and David,

I have been a commercial broker in Pasadena for over 50 years. I have seen Pasadena grow into a City where large corporations want their headquarters and smaller businesses thrive due to a population that supports it's businesses.

I have had the opportunity to study "The Affinity" proposed development project. For the last 10 years, I had envisioned a developer designing and building a project of this nature.

Once this project is built it will no doubt be a model for like projects across the United States. People interested in the assisted living business are looking for a more workable model to serve senior citizens.

How will this project advance the image of assisted living homes?

1. Creates a vibrant meeting place for friends and relatives in an atmosphere enjoyable to both.
2. In their normal everyday life they once had, they once again will be able to engage with all age groups. Shopping at their favorite stores, eating at a variety of restaurants, close to medical offices and Huntington Hospital.
3. The best part of all that this project offers is that friends and relatives would want to visit the seniors more often. It is a far cry visiting seniors in a sterile assisted living home where there is a small bedroom, a small recreation room and a cafeteria that serves bland unappetizing food. It will give seniors a new lease on life and living the last years in a more enjoyable atmosphere.

These developers are true humanitarians and will give Pasadena an image no other City will have. I foresee that this facility will have a waiting list to get in.

Please approve this development as I see this type of project as a future model for other assisted living homes.

Call me with any specified questions.

Sincerely,

Carole Walker | Executive Vice President
Redstone Commercial Real Estate

Dear Mr. Patten,

It was nice talking to you this afternoon. I am writing this email to express my concern about the environmental effect of the Affinity Project.

1. This project's region centered at the cross of California and Arroyo Pkwy is already very crowded and busy. Bringing in more population and business will only make the situation even worse, such as more traffic, more noise, and more air pollution.
2. The project requests more resource consumption, such as water and electricity supply. By adding ~300 living units plus ground-floor commercial units and medical offices, do we know how much water is needed in the coming decade(s)? Are we ready?

Have you heard that Oakley, Utah, has enacted a moratorium on new home construction due to water shortage? We are not there yet. But do we know where we are in terms of water availability?

Pasadena keeps adding multi-home/office buildings. It is good that the city is gaining more property tax income. While the city finance is getting better, our living environment is not. For example, it has been years there is water trickling down along S. Euclid Ave in between Del Mar and California. Rotted leaves smell stinky (because there is no street sweeper). The neighborhood called the city numerous times; the problem is still not solved. We have not seen a street sweeper along S. Marengo Ave for years. Leaves, tree drops, and trashes stay at the separation along the road center (see the photo below) until a strong windy day. Every year the Pasadena police department asks for donations with more and more amount. This list can go on and on. The speedy enhancement of population and resource-consuming have cast a long-term negative impact on the Pasadena living condition and environment.

With best regards,
Shiaoyan

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**Affinity - Existing**
Los Angeles-South Coast County, Summer**1.0 Project Characteristics****1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Hospital	12.68	1000sqft	0.29	12,680.00	0
High Turnover (Sit Down Restaurant)	11.80	1000sqft	0.27	11,800.00	0
Hardware/Paint Store	21.44	1000sqft	0.49	21,440.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2026
Utility Company	Pasadena Water and Power				
CO2 Intensity (lb/MW hr)	802	CH4 Intensity (lb/MW hr)	0	N2O Intensity (lb/MW hr)	0

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Existing - operations only for uses to be removed. CO2 Intensity factor from Pasadena 2020 power content label and requirements for 2026

Land Use - Hospital is veterinarian

Hardware/paint is furniture store

Restaurant is two restaurants

Construction Phase - no construction

Off-road Equipment - No construction

Vehicle Trips - Weekday trip rates per TIA, trip lengths reduced to emulate Exchange, as it has lower rates (for conservatism).

Energy Use - Per applicant

Water And Wastewater - per Applicant

Waste Mitigation - .

Fleet Mix - .

Affinity - Existing - Los Angeles-South Coast County, Summer

Affinity - Existing - Los Angeles-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**Affinity - Existing
Los Angeles-South Coast County, Annual****1.0 Project Characteristics****1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Hospital	12.68	1000sqft	0.29	12,680.00	0
High Turnover (Sit Down Restaurant)	11.80	1000sqft	0.27	11,800.00	0
Hardware/Paint Store	21.44	1000sqft	0.49	21,440.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2026
Utility Company	Pasadena Water and Power				
CO2 Intensity (lb/MW hr)	802	CH4 Intensity (lb/MW hr)	0	N2O Intensity (lb/MW hr)	0

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Existing - operations only for uses to be removed. CO2 Intensity factor from Pasadena 2020 power content label and requirements for 2026

Land Use - Hospital is veterinarian

Hardware/paint is furniture store

Restaurant is two restaurants

Construction Phase - no construction

Off-road Equipment - No construction

Vehicle Trips - Weekday trip rates per TIA, trip lengths reduced to emulate Exchange, as it has lower rates (for conservatism).

Energy Use - Per applicant

Water And Wastewater - per Applicant

Waste Mitigation - .

Affinity - Existing - Los Angeles-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Fleet Mix - .

Land Use - Data from project description
 Lot acreage estimates

Construction Phase - Project schedule per client

Off-road Equipment - 2 buildings

Off-road Equipment - Const equipment by client - 2 buildings

Off-road Equipment - Const equipment by client

Off-road Equipment - Const equipment by client

Affinity-Proposed - Los Angeles-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Const equipment by client

Trips and VMT - Haul trips and distance per client

Demolition -

Grading - .

Vehicle Trips - Trip rates per TIA and to account for increased trips from converted use (in high-turnover land use). trip length adjustments per Pasadena DOT CEQA study

Woodstoves - No fireplaces

Energy Use - Provided by Applicant. High Turnover also includes electrical and NG consumption for converted uses

Water And Wastewater - Water use per City Will Serve letter

Construction Off-road Equipment Mitigation -

Area Mitigation -

Energy Mitigation -

Waste Mitigation -

Fleet Mix - .

Stationary Sources - Emergency Generators and Fire Pumps - 2 -200 KVA emerg generators

CO2 Intensity (lb/MWhr)	802	CH4 Intensity (lb/MWhr)	0	N2O Intensity (lb/MWhr)	0

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 Intensity Factor for 2026, per 2020 Power Content Label and what is legally required
<https://ww5.cityofpasadena.net/water-and-power/wp-content/uploads/sites/54/2021/08/2020-Power-Content-Label-for-Website.pdf>

Land Use - Data from project description
 Lot acreage estimates

Construction Phase - Project schedule per client

Off-road Equipment - 2 buildings

Off-road Equipment - Const equipment by client - 2 buildings

Off-road Equipment - Const equipment by client

Affinity-Proposed - Los Angeles-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Const equipment by client

Off-road Equipment - Const equipment by client

Trips and VMT - Haul trips and distance per client

Demolition -

Grading - .

Vehicle Trips - Trip rates per TIA and to account for increased trips from converted use (in high-turnover land use). trip length adjustments per Pasadena DOT CEQA study

Woodstoves - No fireplaces

Energy Use - Provided by Applicant. High Turnover also includes electrical and NG consumption for converted uses

Water And Wastewater - Water use per City Will Serve letter

Construction Off-road Equipment Mitigation -

Area Mitigation -

Energy Mitigation -

Waste Mitigation -

Fleet Mix - .

Stationary Sources - Emergency Generators and Fire Pumps - 2 -200 KVA emerg generators

 Lot acreage estimates

Construction Phase - Project schedule per client

Off-road Equipment - 2 buildings

Off-road Equipment - Const equipment by client - 2 buildings

Off-road Equipment - Const equipment by client

Off-road Equipment - Const equipment by client

Affinity-Exchange Project - Los Angeles-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Const equipment by client

Trips and VMT - Haul trips and distance per client

Demolition -

Grading - .

Vehicle Trips - Trip rates per TIA and to account for increased trips from converted use (in high-turnover land use). Apt Mid rise is trip generation rate for sr adult housing (independent living). VMT per Pasadena DOT traffic study.

Woodstoves - No fireplaces

Energy Use - Provided by Applicant. High Turnover also includes electrical and NG consumption for converted uses

Water And Wastewater - Water use per City Will Serve letter. High turnover land use includes water for converted uses

Construction Off-road Equipment Mitigation -

Energy Mitigation -

Waste Mitigation -

Fleet Mix - .

Stationary Sources - Emergency Generators and Fire Pumps - 2 -200 KVA emerg generators

Land Use - Data from project description

Lot acreage estimates

Construction Phase - Project schedule per client

Off-road Equipment - 2 buildings

Off-road Equipment - Const equipment by client - 2 buildings

Off-road Equipment - Const equipment by client

Off-road Equipment - Const equipment by client

Affinity-Exchange Project - Los Angeles-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Const equipment by client

Trips and VMT - Haul trips and distance per client

Demolition -

Grading - .

Vehicle Trips - Trip rates per TIA and to account for increased trips from converted use (in high-turnover land use). Apt Mid rise is trip generation rate for sr adult housing (independent living). VMT per Pasadena DOT traffic study.

Woodstoves - No fireplaces

Energy Use - Provided by Applicant. High Turnover also includes electrical and NG consumption for converted uses

Water And Wastewater - Water use per City Will Serve letter. High turnover land use includes water for converted uses

Construction Off-road Equipment Mitigation -

Energy Mitigation -

Waste Mitigation -

Fleet Mix - .

Stationary Sources - Emergency Generators and Fire Pumps - 2 -200 KVA emerg generators

Land Use - Data from project description

Lot acreage estimates

Construction Phase - Project schedule per client

Off-road Equipment - 2 buildings

Off-road Equipment - Const equipment by client - 2 buildings

Off-road Equipment - Const equipment by client

Affinity-Exchange Project - Los Angeles-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Const equipment by client

Off-road Equipment - Const equipment by client

Trips and VMT - Haul trips and distance per client

Demolition -

Grading - .

Vehicle Trips - Trip rates per TIA and to account for increased trips from converted use (in high-turnover land use). Apt Mid rise is trip generation rate for sr adult housing (independent living). VMT per Pasadena DOT traffic study.

Woodstoves - No fireplaces

Energy Use - Provided by Applicant. High Turnover also includes electrical and NG consumption for converted uses

Water And Wastewater - Water use per City Will Serve letter. High turnover land use includes water for converted uses

Construction Off-road Equipment Mitigation -

Energy Mitigation -

Waste Mitigation -

Fleet Mix - .

Stationary Sources - Emergency Generators and Fire Pumps - 2 -200 KVA emerg generators

EXECUTIVE SUMMARY

The Arroyo Parkway, LLC is proposing to construct two new buildings within an approximately 3.3-acre area in Pasadena, California (Project). The Project involves the demolition of six existing buildings at 491, 495, 499, 503, 541, and 577 S. Arroyo Parkway and construction of two new buildings: (1) a 154,000 square foot, 7-story (aboveground) medical office building with ground-floor commercial uses (Building A); and (2) a 184,376 square foot, 7-story (aboveground) assisted living building with 85,000 square feet of assisted living uses and 98,576 square feet of independent living uses including up to 95 one- and two-bedroom senior housing units (Building B).

Alternatively, the proposed PD Plan would provide the flexibility to exchange the uses in Building A from medical office and ground-floor commercial for the following:

- 3,000 sf of commercial and a sales/leasing management office on the ground floor;
- Up to 197 residential dwelling units; and
- Up to 650 parking spaces in four subterranean levels (one less than the Project as proposed).

A total of approximately 79,553 sf of the existing development on site would be retained and integrated into the Project, including the Whole Foods grocery store and associated 275-space subterranean parking structure at 465 South Arroyo Parkway and the two historic period buildings at 501 and 523 South Arroyo Parkway.

PaleoWest, LLC (PaleoWest) was contracted by Psomas to complete a Historical Resource Assessment Report for the historic-period buildings located within the Project area in compliance with the California Environmental Quality Act (CEQA) and City of Pasadena Historic Preservation Ordinance (Local Register). PaleoWest identified six historic-period buildings on three properties within the Project area:

at 491 and 495 S. Arroyo Parkway (APN 5722-008-002); 501 and 503 S. Arroyo Parkway (APN 5722-008-012); and 523 and 541 S. Arroyo Parkway (APN 5722-008-017). No additional historic-period buildings were identified within the Project area. The City of Pasadena is the Lead Agency for the purposes of the CEQA.

This report summarizes the methods and results of the historical resource investigation. This investigation included background research, survey, and evaluation of the buildings. The purpose of the investigation was to determine the potential for the Project to impact historical resources under CEQA.

A search of the South Central Coastal Information Center (SCCIC) included a review of all documented sites and cultural resources reports on file for the specified area. The results from the information center indicated that 17 cultural resources investigations were previously conducted within a radius of 0.5-mile of the Project area (herein referred to as “study area”). Of the 17 previous reporting investigations identified in the study area, the SCCIC indicated that none of the studies overlapped with the current Project area. The SCCIC search did not identify any archaeological sites within the Project area but did identify three historic built environment resources in the Project area (Pacific Electric Railroad Garage, P-19-183400; 501 S. Arroyo Parkway, P-19-183401; and 523 S. Arroyo Parkway, P-19-183402). The Pacific Railroad Garage is partially extant. The buildings was integrated into the existing commercial building occupied by Whole Foods. Currently, the east and north façades of this building remain, while the remainder of the building was removed and replaced with new construction in 2007. Both

buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway were previously recommended as eligible for the local register and are, therefore, considered historical resources for the purposes of CEQA. No additional locally listed or National Register of Historic Places- (NRHP-) or California Register of Historical Resources- (CRHR-) eligible properties are within the Project area.

An intensive pedestrian survey of the Project area was conducted by PaleoWest on May 4, 2020. During the field survey, the exteriors of the subject buildings within the Project area were analyzed, photographed, and recorded. The buildings at 491, 495, 499, 503, and 541 S. Arroyo Parkway were evaluated for historical significance by applying the criteria of the CRHR and the Local Register using data gathered during the pedestrian survey and information acquired through historical research. The current condition of the two previously recorded resources at 501 and 523 S. Arroyo Parkway was noted and the existing DPR 523 Series forms were updated. PaleoWest recommends that the buildings at 491, 495, 499, 503, and 541 S. Arroyo Parkway are not eligible for inclusion in the CRHR or the Local Register. PaleoWest concurs with the previous recommendation that the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway are eligible for the Local Register and observed no changes that would compromise that assessment. Further, PaleoWest recommends that the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway are locally eligible for the CRHR under Criterion C. Therefore, the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway are historical resources for the purposes of CEQA.

Collectively, the buildings located at 491, 495, 499, 501, 503, 523, and 541 S. Arroyo Parkway could represent a potential historic district; however, the district does not retain sufficient integrity to convey its historical significance. Therefore, it is not a historical resource for the purposes of CEQA.

Based on available plans, the Project will not involve the physical destruction of the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway, nor will it result in any significant physical modifications that will comprise the historic integrity of the buildings. The proposed Project will have an effect on the integrity of the setting, but those changes will not physically alter the buildings and are not substantial enough to compromise the overall historic integrity or obstruct the view of the buildings from the public right of way (ROW). Further, the setting has already been significantly altered due to new construction and the modification of buildings over time. Based on this analysis it was found that the proposed project would not have a significant adverse impact on historic resources.

1.0 INTRODUCTION

The Arroyo Parkway, LLC is proposing to construct two new buildings within an approximately 3.3-acre area in Pasadena, California (Project). PaleoWest was contracted by Psomas to complete a Historical Resource Assessment Report for the historic period buildings located within the Project area in compliance with the California Environmental Quality Act (CEQA). The City of Pasadena is the Lead Agency for the purposes of CEQA. This report is intended to support the environmental analysis of the project and its potential environmental impacts, as outlined under CEQA.

The purpose of this report is to determine if historical resources, as defined under CEQA, are located within the Project area, or within the surrounding vicinity, and to assess the potential impacts of the Project to said resources. CEQA defines historic resources as any object, building, structure, site, area, place, record, or manuscript that is listed or determined eligible for listing in the CRHR, a local register or historic inventory program, or is determined to be historically significant by a lead agency (CEQA Guidelines Section 15064.5(a)).

Under CEQA, potential impacts to historical resources are determined through an assessment of whether a project has the potential to result in a “substantial adverse change in the significance of a historic resource.” “Substantial adverse change” is defined in CEQA as the “physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.”

The significance of an historical resource is considered in the CEQA Guidelines to be materially impaired when a project:

- (A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the [CRHR]; or
- (B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
- (C) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the [CRHR] as determined by a lead agency for purposes of CEQA.

If a project is found to result in a substantial adverse change in the significance of a historic resource, a historic resources assessment would also evaluate whether that effect can be reduced or eliminated through designed alternatives or mitigation measures. If impacts on a historical resource stemming from a project are found, these may qualify as an environmental impact under CEQA.

To address the issues related to historical resources, this report first identifies all historical resources that have the potential to be impacted by the Project, followed by an assessment of potential impacts, and the recommendation of any mitigation measures that may result in a reduced impact to a level of less-than-significant.

The report was prepared by PaleoWest architectural historian Justin Castells, M.A. who meets the Secretary of the Interior's Professional Qualification Standards in history and architectural history.

1.1 PROJECT LOCATION AND DESCRIPTION

The Project area encompasses 3.3 acres in the City of Pasadena, Los Angeles County, California (Figure 1-1). The Project area is situated within the Pasadena, CA 7.5' U.S. Geological Survey (USGS) topographic quadrangle (Figure 1-2). The Project area is bounded by E. Bellevue Drive on the north, S. Arroyo Parkway on the east, E. California Boulevard on the south, and the Metro Gold Line ROW on the west (Figure 1-3). The elevation of the Project area is approximately 790 feet above mean sea level (amsl).

The Project involves the demolition six existing buildings at 491, 495, 499, 503, 541, and 577 S. Arroyo Parkway to develop a 154,000 square foot, 7-story medical office building and a 184,376 square foot, 7-story senior living facility. The Project will also include the retention of two historic-period buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway. The Project would also include up to 850 parking spaces in 5 subterranean levels. Approximately 79,553 sf of the existing development would be retained and integrated into the Project, including the Whole Foods grocery store and associated 275-space subterranean parking structure at 465 South Arroyo Parkway, and the two historic buildings at 501 and 523 S. Arroyo Parkway.

The maximum building heights for the Project to the top of parapet, not including appurtenances, would range from 90 feet 6 inches to 93 feet 6 inches above ground level. However, the buildings will feature prominent setbacks throughout the site to reduce massing, create public space throughout the Project area, and to retain a buffer surrounding the two retained historical resources at 501 and 523 S. Arroyo Parkway.

The proposed building façades incorporate numerous window openings to provide views and to avoid blank, massive-looking building faces. The façades would also be articulated with patios, window shades, and varying surface treatments to provide variation and break up the surface of the buildings. Portions of both the proposed buildings would be set back from the widest part of the building envelope and some portions of the buildings would extend only to Level 4 and Level 6. Additionally, the ground floor would be slightly taller than the remaining levels, at 15 feet high. This would act to differentiate the ground floor and, combined with some unique architectural features for this level, create a human-scale and pedestrian-friendly environment. The assisted living building would have a steel stud exterior wall clad with a combination of textured face brick and smooth plaster or precast concrete accents. Trellises and balcony railings would be painted steel with a cement fiber composite soffit and sealed concrete decking. Glazing would be factory finished aluminum or steel operable frames with bronze-, gray-, or green-tinted thermal glass and spandrel glass at floors and vision glass heads. Exterior decks would be a double slab construction with paver tiles. The medical office building would have a combination of aluminum frame glass curtain wall and steel stud exterior wall clad with a mixture of textured face brick and smooth plaster or glass fiber reinforced concrete precast accents on the lower floors of the building. Glazing would be a factory finished aluminum structural silicone glazing system with bronze-, gray-, or green-tinted thermal glass and spandrel glass at floors and vision glass heads. Exterior decks would be a double slab construction with paver tiles. The Project proposes to maintain visual continuity through the consistent application of high-quality building, landscape, and hardscape design and materials. Only non reflective building materials would be used.

The existing historic buildings at 501 and 523 S. Arroyo Parkway would be preserved in place. Specific future tenant improvement plans for these historical resources in the Project area are

still in the conceptual phase at this time. However, the plans do not anticipate demolishing, moving, or making major alterations to these structures.

Construction activities for the project will not include blasting or pile driving, which have the potential to cause damaging vibrations. However, large construction equipment is anticipated, which is noted for having the potential to cause vibrations that may result in cosmetic damage to the buildings being retained as part of the Project, including the historic buildings at 501 and 523 S. Arroyo Parkway. To address the potential vibrations, a mitigation measure has been prepared for the project through the preparation of the Project's Environmental Impact Report (EIR), as required under CEQA. Outlined in the Noise section of the EIR, Mitigation Measure Noise-1 (MM-NOI-1) states that "the potential for vibration-induced cosmetic (i.e., not structural) damage to the structures at 465, 501, and 523 South Arroyo Parkway shall be reduced by implementing the following three steps: (1) setbacks, (2) monitoring, and (3) restoration (if applicable)." These specific requirements of MM-NOI-1 are as follows:

- (1) The Project Applicant shall be responsible for ensuring the construction specifications include the following language: "Construction equipment shall observe setback distances of 30 feet from any of the three on-site buildings being retained (Whole Foods Market and 501 and 523 South Arroyo Parkway) for equipment equivalent to a large bulldozer (29,000 pounds or more) and 20 feet for jackhammers and loaded trucks. Small dozers and other equipment with vehicle weights of less (29,000 pounds) are not anticipated to result in substantial levels of vibration that could cause building damage".
- (2) The Project Applicant shall be responsible for placing a vibration monitor in each of the three on-site buildings to remain on the site. The contractor would need to have vibration measurements taken on the site when heavy equipment or vibration intensive activities occurs near (i.e., less than 30 feet horizontal distance) to these three buildings. Vibration measurements will be compared to the vibration thresholds appropriate for the building that may be impacted. The appropriate vibration thresholds are as follows: 0.12 peak particle velocity (PPV) for 501 and 523 South Arroyo Parkway and 0.30 PPV for Whole Foods Market.

If vibration levels are below these thresholds, it is permissible to have construction activity with large (over 29,000 pounds) equipment, jackhammers, and/or loaded trucks within the setback distances included in item 1 above. Additionally, vibration monitoring shall guide construction activity near the perimeter of these buildings during subterranean excavation and construction activity. If vibration levels are found to exceed the applicable threshold, then the associated construction activity shall immediately halt, and alternative methods for achieving the construction activity shall be determined and employed to reduce the construction-generated vibration exposure to the building(s) to less than the thresholds. While the specific alternative methods to be employed cannot be foreseen, as it would be depending on situation-specific factors, the performance objective of maintaining activity that results in vibration below the applicable thresholds shall guide all decisions.

- (3) If cosmetic damage does occur to one or more of these three buildings because of vibration from Project-related construction activities despite setbacks and monitoring, the Project Applicant shall be responsible for restoring the damage. Cosmetic damage includes things like, for example, cracks in paint/plaster, fallen plaster/stucco from a facade, and cracked glass. Specifically, any restorations to Whole Foods Market shall be implemented to return the damaged area to the same

condition (e.g., materials, colors, style) as present at the start of construction. Any restorations to the buildings at 501 and 523 South Arroyo Parkway shall conform to the Secretary of the Interior's Standards for the Treatment of Historic Properties (Standards), and the determination of whether the planned restorations is consistent with the Standards shall be made by a qualified historic preservation professional meeting the Secretary of the Interior's Professional Qualifications Standards for architectural history or historic architecture (Professional) and to the satisfaction of the City. The restorations to the historic buildings, if necessary, may be either to the conditions present before construction was initiated or, if the planned updates to these buildings are underway may be conducted to meet proposal conditions.

The City's Planning & Community Development Department will be responsible for ensuring that the specifics of this mitigation measure will be included in the Project specifications prior to the issuance of a Demolition Permit. The Project applicant and City inspector will also be responsible for ensuring that the conditions of this mitigation measure are consistently implemented throughout the construction period.

2.0 REGULATORY CONTEXT

2.1 STATE

2.1.1 California Environmental Quality Act

The proposed Project is subject to compliance with CEQA, as amended. Compliance with CEQA statutes and guidelines requires both public and private projects with financing or approval from a public agency to assess the project's impact on cultural resources (Public Resources Code Section 21082, 21083.2 and 21084 and California Code of Regulations 10564.5). Specifically, under Public Resources Code Section 21084.1, a "project that may cause a substantial adverse change in the significance of an historical resources is a project that may have a significant effect on the environment." The first step in the CEQA compliance process in terms of historical resources is to identify any that may be impacted by the project.

"Historical resource" is a term with a defined statutory meaning (Public Resources Code Section 21084.1). The determination of significant impacts on historical and archaeological resources is described in Sections 15064.5(a) and 15064.5(b) of the State CEQA Guidelines. Section 15064.5(a) states that historical resources include the following:

1. A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the [CRHR] (Public Resources Code Section 5024.1).
2. A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, will be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3. Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource will be considered by the lead agency to be historically significant if the resource meets the criteria for listing in the [CRHR] (Public Resources Code Section 5024.1).
4. The fact that a resource is not listed in or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to Section 5020.1[k] of the Public Resources Code), or identified in a historical resources survey (meeting the criteria in Section 5024.1[g] of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code Section 5020.1(j) or 5024.1.

Cultural resources are buildings, sites, humanly modified landscapes, traditional cultural properties, structures, or objects that may have historical, architectural, cultural, or scientific importance based on established criteria. CEQA states that if a project will have a significant impact on important cultural resources, deemed "historically significant," then project alternatives and mitigation measures must be considered.

2.1.2 California Register of Historical Resources

The CRHR established a list of properties that are to be protected from substantial adverse change (Public Resources Code Section 5024.1). A historical resource may be listed in the CRHR if it exhibits significance under one or more of the following criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2. It is associated with the lives of persons important in California's past.
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value.
4. It has yielded or is likely to yield information important in prehistory or history.

In addition to exhibiting significance under one or more of the above criteria, a resource must also retain sufficient historical integrity to convey its significance. Historical integrity is the physical aspects of a resource related to its historic character. Integrity is evaluated through seven aspects: location, design, setting, materials, workmanship, feeling, and association.

The CRHR includes properties that are listed or have been formally determined to be eligible for listing in the NRHP, State Historical Landmarks, and eligible Points of Historical Interest. Other resources require nomination for inclusion in the CRHR. These may include:

- resources contributing to the significance of a local historic district,
- individual historical resources,
- historical resources identified in historic resource surveys conducted in accordance with State Historic Preservation Office procedures,
- historic resources or districts designated under a local ordinance consistent with Commission procedures, and
- local landmarks or historic properties designated under local ordinance.

2.2 LOCAL

2.2.1 City of Pasadena Historic Preservation Ordinance

The City of Pasadena has established an historic preservation program in order to promote “the identification, evaluation, rehabilitation, adaptive use, and restoration of historic structures.” The criteria for the designation of historic monuments, landmarks, historic signs, landmark trees, or landmark districts are applied “according to applicable National Register of Historic Places Bulletins for evaluating historic properties.” These criteria are excerpted below from Section 17.62.040 of the Pasadena Zoning Code (City of Pasadena Online Zoning Code Title 17. https://library.municode.com/ca/pasadena/codes/code_of_ordinances?nodeId=TIT17_ZONING_CODE).

Greene & Greene Structures

Greene & Greene Structures shall include all buildings, sites, structures, objects and interior fixtures designed by the architectural firm of Greene & Greene, or by Charles Sumner Green (1868-1957) or Henry Mather Greene (1870-1954). All structures are automatically designated as Greene & Greene Structures under this category and, as such, are exempt from the designation procedures outlined below.

Historic Monuments

A historic monument shall include all historic resources previously designated as historic treasures before adoption of [Zoning Code Chapter 17.62] in 2002, historic resources that are listed in the National Register at the State-wide or Federal level of significance (including National Historic Landmarks) and any historic resource that is significant at a regional, State, or Federal level, and is an exemplary representation of a particular type of historic resource and meets one or more of the following criteria:

- a) It is associated with events that have made a significant contribution to the broad patterns of the history of the region, State, or nation.
- b) It is associated with the lives of persons who are significant in the history of the region, State, or nation.
- c) It is exceptional in the embodiment of the distinctive characteristics of a historic resource property type, period, architectural style, or method of construction, or that is an exceptional representation of the work of an architect, designer, engineer, or builder whose work is significant to the region, State, or nation, or that possesses high artistic values that are of regional, State-wide or national significance.
- d) It has yielded, or may be likely to yield, information important in prehistory or history of the region, State, or nation.

A historic monument designation may include significant public or semi-public interior spaces and features.

Landmarks

A landmark shall include all properties previously designated a landmark before adoption of [Zoning code Chapter 17.62] in 2002 and any historic resource that is of a local level of significance and meets one or more of the criteria listed below.

A landmark may be the best representation in the City of a type of historic resource or it may be one of several historic resources in the City that have common architectural attributes that represent a particular type of historic resource. A landmark shall meet one or more of the following criteria:

- a) It is associated with events that have made a significant contribution to the broad patterns of the history of the City.
- b) It is associated with the lives of persons who are significant in the history of the City.
- c) It embodies the distinctive characteristics of a type, architectural style, period, or method of construction, or represents the work of an architect, designer, engineer, or builder whose work is of significance to the City or possesses artistic values of significance to the City/
- d) It has yielded, or may be likely to yield, information important locally in prehistory or history.

Historic Signs

A historic sign shall include all signs in the sign inventory as of the date of adoption of the Zoning Code in 2002 and any sign subsequently designated historically significant by the City Council that possesses high artistic values. A historic sign shall meet one or more of the following criteria:

- a) The sign is exemplary of technology, craftsmanship or design of the period when it was constructed, uses historic sign materials and means of illumination, and is not significantly altered from its historic period. Historic sign materials shall include metal or wood facings, or paint directly on the façade of a building. Historic means of illumination shall include incandescent light fixtures or neon tubing on the exterior of the sign. If the sign has been altered, it must be restorable to its historic function and appearance.
- b) The sign is integrated with the architecture of the building.
- c) A sign not meeting criteria a or b above may be considered for inclusion in the inventory if it demonstrates extraordinary aesthetic quality, creativity, or innovation.

All other regulations relating to signs shall comply with Chapter 17.48 (Signs).

Landmark Trees

A tree shall qualify to be of historic or cultural significance and of importance to the community if it meets any one of the following criteria:

- 1. It is one of the largest or oldest trees of the species located in the City;
- 2. It has historical significance due to an association with a historic event, person, site, street, or structure; or
- 3. It is a defining landmark or significant outstanding feature of a neighborhood.

Landmark Districts

A landmark district shall include all landmark districts previously designated before adoption of this Chapter and any grouping of contiguous properties that also meet the following criteria:

- a) Within its boundaries, a minimum of 60 percent of the properties qualify as contributing; and
- b) The grouping represents a significant and distinguishable entity of Citywide importance and one or more of a defined historic, cultural, development and/or architectural context(s) (e.g., 1991 Citywide historic context, as amended, historic context prepared in an intensive level survey or historic context prepared specifically for the nominated landmark district).

When considering applications to designate a landmark district, the Historic Preservation Commission shall use the National Register of Historic Places Bulletin #21: "Defining Boundaries for National Register Properties."

3.0 RESEARCH METHODS

A literature review and records search were conducted by Psomas at the South Central Coastal Information Center (SCCIC) at California State University, Fullerton on July 30, 2020 and provided to PaleoWest. This inventory effort included the Project area and a 0.5-mile radius around the Project area, collectively termed the "Project study area." The objective of this records search was to identify prehistoric or historical cultural resources that have been recorded within the broader context surrounding the Project area during prior cultural resource investigations.

3.1 RECORDS SEARCH

The SCCIC search included a review of all recorded sites and cultural resources reports on file for the Project area, as well as the surrounding vicinity. The results from the information center indicated that 17 cultural resources investigations were previously conducted within the 0.5-mile radius Study Area (Figure 3-1). However, of the 17 previous investigations, the SCCIC indicated that none of the studies overlapped with the current Project area.

While no previous investigations included any portion of the Project area, there are individual resources documented outside the preparation of a cultural resources investigation that are present on site. The SCCIC search identified 63 historic built environment resources previously identified within the 0.5-mile radius Study Area. A copy of the records search results is included in Appendix B.

3.1.1 Project Area

The SCCIC search did not identify any archaeological sites within the Project area, but did identify three historic built environment resources in the Project area:

Table 1. Previously Recorded Historical Resources in the Project Area

Primary No.	Resource Name/ Address	Resource Type	Year Built	Year Recorded	Historic Status (NRHP, CRHR, Local)
P-19-183400	Pacific Electric Railroad Garage/465 S. Arroyo Parkway	Building	1923, 2007	1986	Potentially Local eligible
P-19-183401	Market Basket Warehouse/ 501-503 S. Arroyo Parkway	Building	1940	1989	Local eligible
P-19-183402	Lewis Iron Building/ 523 S. Arroyo Parkway	Building	1922	1989	Local eligible

Preliminary desktop review of the resources identified within the Project area confirmed that both 501 S. Arroyo Parkway and 523 S. Arroyo Parkway appear to be extant. These properties were previously recommended as eligible for the local register and are, therefore, considered historical resources for the purposes of CEQA. The former Pacific Electric Railroad Garage, which was also previously recommended eligible for the Local Register, appears to be partially

extant with the west and north façades integrated into the current commercial building that occupies the north portion of the block.

3.1.2 Project Vicinity

In addition to the resources located within the Project area, multiple historical resources were identified in the records in the surrounding vicinity. For the purposes of this report and the potential analysis of the Project and its indirect impact to the setting and adjacent and nearby historical resources, a separate overlay was outlined to identify those resources that have the potential to be impacted. Referred to here as the “Project Vicinity,” this area was delineated to account for potential indirect impacts, such as visual or atmospheric alterations, resulting from the proposed Project.

The Project Vicinity is centered around the Project area, which corresponds with the entire subject block fronting S. Arroyo Parkway to the east and is bounded by E. Bellevue Drive to the north, E. California Boulevard to the south, and the LA Metro Light Rail alignment to the rear. The boundaries of the Project Vicinity extends approximately one city block in each direction to align with E. Del Mar Boulevard to the north, Edmondson Alley to the west, Pico Street to the south, and S. Marengo Avenue to the west. Within the Project Vicinity, nine historic resources were identified, including seven buildings and two historic districts; one historic district is fully within the Project Vicinity whereas the other is only partially within the delineated area (Figure 3-2).

The following table outlines those previously recorded historical resources located within the defined Project Vicinity:

Table 2. Previously Recorded Historical Resources in the Project Vicinity

Primary No.	Resource Name/ Address	Resource Type	Year Built	Year Recorded	Historic Status (NRHP, CRHR, Local)
P-19-180051	The Home Laundry / 432 S. Arroyo Parkway	Building	1922	1987	NRHP-listed, CRHR-listed, Local-listed
P-19-180068	S. Marengo Historic District	Historic District	1901- 1916	1981	NRHP-listed, CRHR-listed, Local-listed
P-19-180069	Don Carlos Court/ 374-386 S. Marengo Ave	Building	1927	1983	NRHP-listed, CRHR-listed, Local-listed
P-19-180070	Evanston Inn/ 385-395 S. Marengo Ave	Building	1897	1981	NRHP-listed, CRHR-listed, Local-listed
P-19-180680	Bryan Court, Adams Court/ 427 S. Marengo	Historic District	1916	1981	NRHP-listed, CRHR-listed, Local-listed

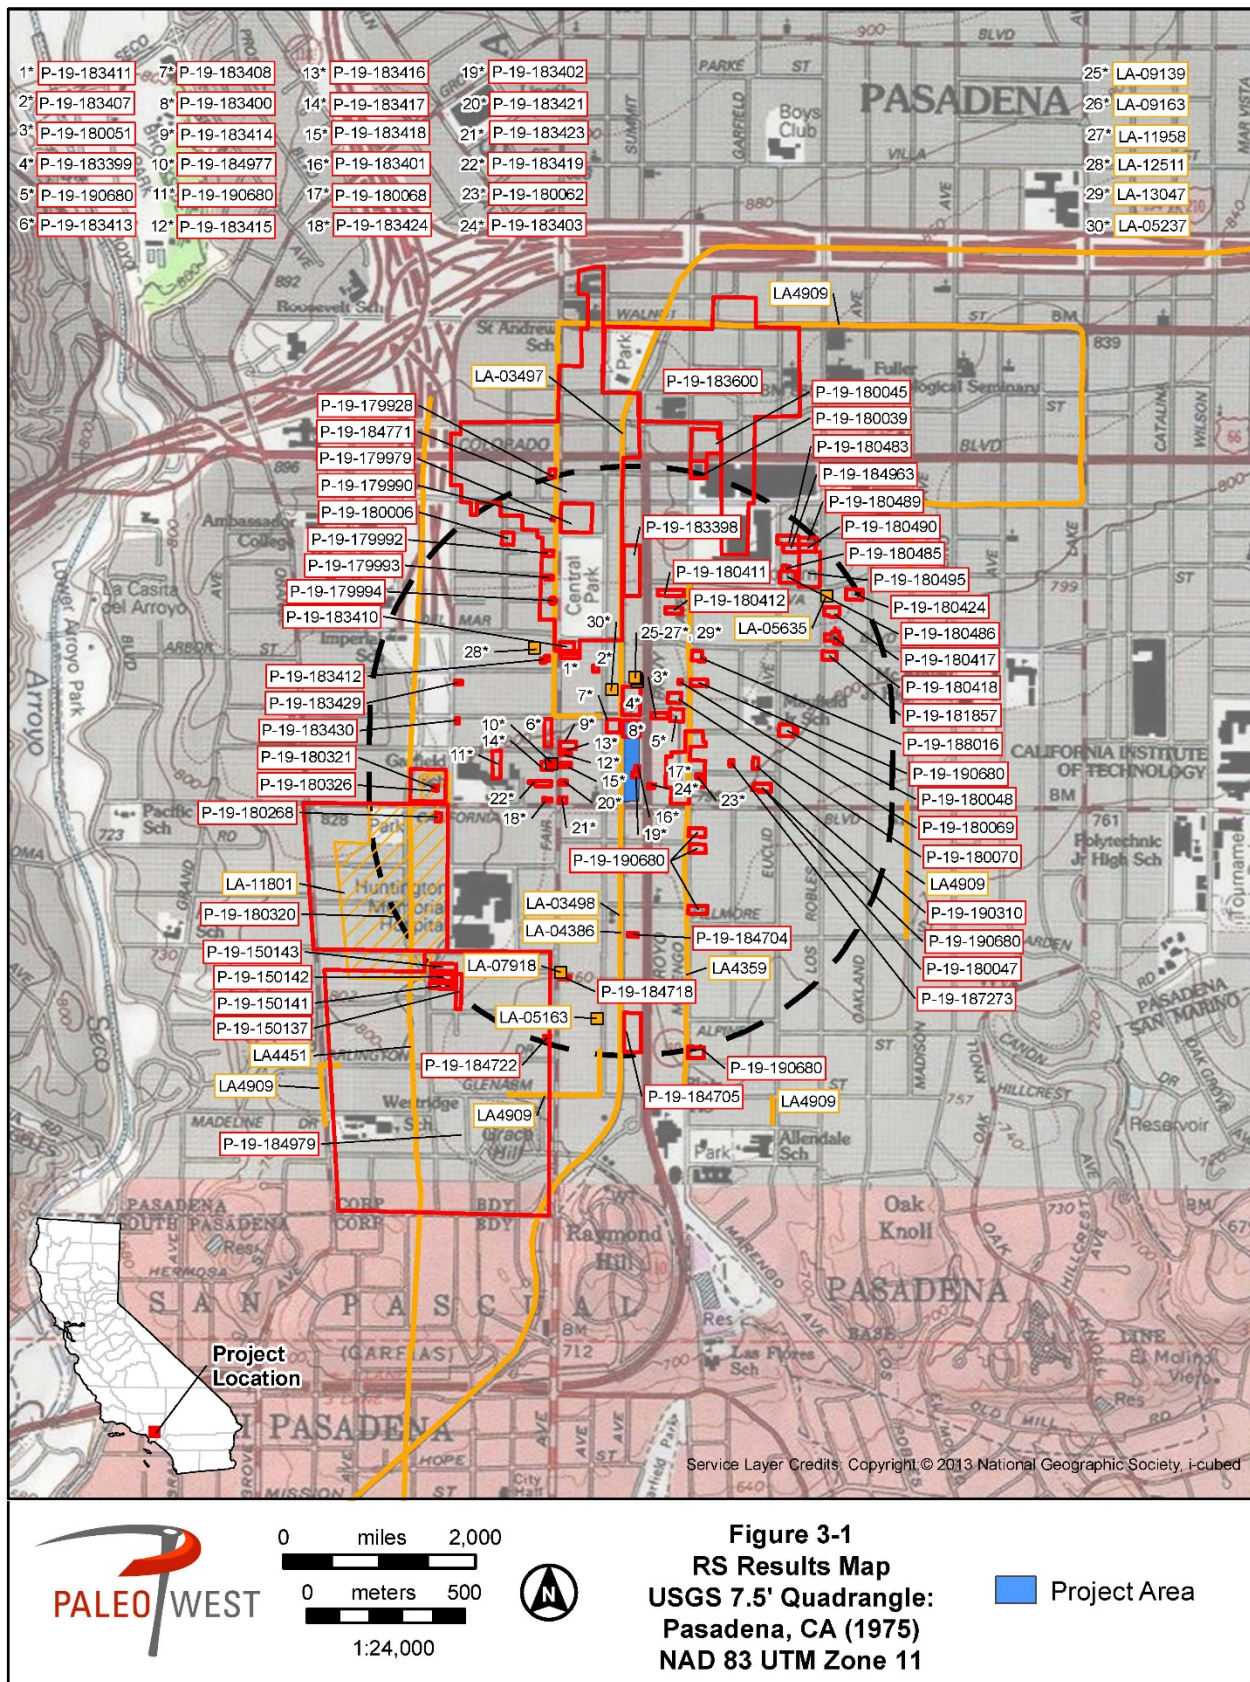

P-19-183343	George S. Hunt Studio & Shop Building/ 161 E. California Blvd.	Building	1927	1991, 2000	Local eligible
P-19-183344	Wallace Neff Office/ 180 E. California Blvd.	Building	1927	1991, 2011	NRHP eligible Local-listed
P-19-183346	Raymond Flowers/ 62 E. California Blvd.	Building	1933	1991, 2004	NRHP eligible Local eligible
P-19-183399	Cornet Building/ 411 S. Arroyo Parkway	Building	1945	1989, 2012	Potentially eligible for NRHP, CRHR, Local (needs re-evaluation)
P-19-183403	Bryan's Cleaners/ 544 S. Arroyo Parkway	Building	1938	1986	Local eligible
P-19-183407	Pasadena Humane Society/ 361 S. Raymond Ave	Building	1929	1989	NRHP-listed, CRHR-listed, Local-listed
P-19-183408	Royal Laundry, Milus Textile Service/ 443 S. Raymond Ave	Building	1927	1991, 2000, 2007	NRHP-listed, CRHR-listed, Local-listed
LD17 (City #)	Marengo-Pico Landmark District	Historic District	1912-1927	2008, 2011	Local-listed

3.2 ADDITIONAL SOURCES

In addition to the records search, general contextual and site-specific research was conducted for the subject property and the surrounding area. Additional sources consulted include the National Register of Historic Places, the Office of Historic Preservation Directory of Properties in the Historic Property Data File, Los Angeles County Assessor files, historical newspapers databases, historic Sanborn Fire Insurance Maps, Los Angeles Public Library databases, newspaper.com., ancestry.com, Pasadena city directories, and the City's California Historic Resource Inventory Database (CHRID) system.

Historical maps consulted include the Los Angeles (USGS 1894, 1900), Altadena (USGS 1928), and Pasadena (USGS 1953, 1966, 1972, 1988, 1955) 7.5-minute USGS quadrangles. The 1894 and 1900 maps depicted the Project area as thoroughly built out, but no extant buildings within the Project area were depicted. The 1928 map showed two buildings within the Project area that roughly correspond with 495 S. Arroyo Parkway and 501 S. Arroyo Parkway. A review of available Sanborn Fire Insurance Maps from 1931 through 1951 was also conducted and reflected in the property history of the Historical Overview section.

4.0 HISTORICAL OVERVIEW

This section of the report summarizes information regarding the historic context of the Project area. Overarching historic themes were identified to establish a historic context within which to evaluate historic-period properties within the Project area.

4.1 CITY OF PASADENA

The following history of Pasadena, unless otherwise noted, was excerpted from “Heritage: A Short History of Pasadena” (City of Pasadena 2020).

In 1886 Pasadena incorporated, largely as a measure to rid the city of its saloon (City of Pasadena 2020). The commercial center of the City was largely localized around the intersection of what is now Fair Oaks Avenue and Colorado Boulevard (Old Pasadena Management District 2020). The industrial center of the city was largely localized along railroad tracks. In the ensuing decade, amenities such as sewers, paved streets, and electric street lighting were installed (City of Pasadena 2020). A three-block commercial area of Colorado Boulevard from DeLacey Avenue to Broadway Avenue (now Arroyo Parkway) was paved with all-weather surface in 1893 as part of the city’s enhancement initiative. Secondary streets and alleys began to expand from Colorado Boulevard where service industries began to be established (O’Connor, et al.1993). On January 1, 1890, the Valley Hunt Club initiated a mid-winter festival with a procession of flower-bedecked horses and carriages. This became a yearly tradition that in 1898 was formally sponsored by the Tournament of Roses Association. An added tourist attraction was the Echo Mountain incline railway which opened in 1893 and included a mountain chalet resort and the Alpine Tavern at Crystal Springs (City of Pasadena 2020).

Through the end of the 1920’s, Pasadena continued to enjoy a reputation as a tourist center and winter resort for the wealthy (City of Pasadena 2020). By 1900 the commercial district of Pasadena had become too crowded and petitions were made to widen Colorado Boulevard. In 1929, work on widening Colorado Boulevard began and buildings were set back 14 feet on each side of Colorado Boulevard, and most of the Victorian façades were replaced by Spanish Colonial Revival and Art Deco frontages (Old Pasadena Management District 2020). With the coming of the Great Depression, every aspect of Pasadena’s economy was affected but the tourist industry was hit so hard that it never recovered. As with the rest of the United States, The Depression disrupted all industry and business within Pasadena and resulted in slow growth for the city. The advent of World War II led to a resurgence in Pasadena and the region. During the war, hotels in Pasadena were used as military command headquarters. The Vista del Arroyo Hotel was purchased by the Army and became a convalescent hospital for the wounded. Led by Caltech and the Jet Propulsion Laboratory, which became focal points of research and development for the war effort, Pasadena evolved into a center for industrial research and light manufacture of scientific and electronic precision instruments. The completion in 1940 of the Arroyo Seco Parkway, the first freeway in the west, provided a fast and direct route from Pasadena to Los Angeles. Pasadena became an attractive place to live for people working in industrial areas in Los Angeles (City of Pasadena 2020).

In the mid-1940’s and early 1950’s, to relieve the housing shortage, new housing tracts were opened in the Linda Vista, San Rafael and Allendale areas and to the east in the Hastings Ranch and Coronet areas. Retail sales showed a steady increase and in 1947, the opening of

Bullock's heralded what was to become an exclusive shopping area on South Lake Avenue. A new shopping center opened in Hastings Ranch in 1956. As the business district moved east of Fair Oaks and Colorado, the area that was once the heart of the city became dilapidated, with high vacancy rates and declining property values. The early '60's saw some major companies leave Pasadena due to lack of land for expansion. Although the problem of central city decline was pointed out in a major report in 1959, little was done to remedy it until the early seventies (City of Pasadena 2020).

4.2 INDUSTRIAL DEVELOPMENT IN THE CITY OF PASADENA

The initial industry in Pasadena during the late nineteenth century was agriculture, most notably with the proliferation of citrus crops throughout the region. These exports led to the initial creation of early transportation networks that relied on a system of growers, packing houses, and shippers, which operated throughout Southern California. In addition to supplying a tangible commercial product for shipment to markets, the citrus crops were an essential marketing tool for Southern California communities during the late nineteenth and early twentieth centuries, including Pasadena. The exotic notion of oranges to the rest of the nation played into the romantic idea of the Mediterranean climate of the region, which in turn led to increased tourism and residential development in Pasadena (1993). Somewhat ironically, these crops that were part of the most prominent marketing tools and the initial catalyst for Pasadena's development became increasingly less common as more agricultural land was subdivided to construct residences, as well as for grand new hotels that supported the growing tourism industry. This trend of urbanization and development was exacerbated with the construction of the Atchison Topeka and Santa Fe Railway (Santa Fe Railway) in 1886 (City of Pasadena, 1993).

To support the new residential and tourism-based economy, which often catered towards the upper classes, a new goods and services economy became an integral part of the industrial and commercial development in Pasadena. Early industrial development in Pasadena was largely concentrated along the north-south axis of the Santa Fe rail tracks, which entered the city through the center of the block between Raymond Avenue and Arroyo Parkway (then Broadway) where the businesses had access to incoming and outgoing freight services (Historic Resources Group, et al. 2007). In 1914, industrial zones were designated adjacent to railroad tracks within the city of Pasadena. While zoned for industrial purposes, these areas also contained residences which largely housed immigrants and minorities (O'Connor, et al. 1993). The industrial district was confined to Arroyo Parkway, Raymond, and Fair Oaks Avenues between Del Mar Boulevard in the north and the Arroyo Seco (now the route of the Pasadena Freeway) in the south. The main industries were laundries, light manufacturing, custom automobile assembly, storage and transport, lumber yards and milling (Historic Resources Group, et al. 2007). This trend of light-industrial uses was solidified in 1920, when the Chamber of Commerce campaigned for only "clean industries" to be allowed within the City to preserve its character and overall cleanliness. Typically, more heavy industrial developments that were being founded throughout Southern California were being limited to Los Angeles or the more industrial suburbs of the region (City of Pasadena, 1993).

4.3 491-541 S. ARROYO PARKWAY

491 S. Arroyo Parkway was constructed in 1945. Sanborn Fire Insurance Maps from 1951 show that 491 S. Arroyo Parkway was used as a warehouse for a garden spray manufacturer and interior doors connecting the building with 495 S. Arroyo Parkway indicate that the two buildings were directly associated with one another (Sanborn Map Company 1951). By 1965 the building housed Servisoft, a water conditioning service (*Independent Star-News* 1965). Research has uncovered little information regarding subsequent occupants of the building. In 2010 permits were approved for new storefronts for the building, which included the current entry and windows (Pasadena Building and Safety Division 2010a).

495 S. Arroyo Parkway was constructed in 1925. As early as 1927 the building was listed as the business location of contractor W.C. Crowell (Los Angeles Directory Co. 1927). In 1928 Crowell was awarded the construction of the Gordon B. Kaufmann designed Athenaeum Building on the California Institute of Technology campus (*Pasadena Evening Post* 1928). In 1931, W.C. Crowell was listed as a member of the Pasadena Junior Chamber of Commerce (The Pasadena Post 1931). Crowell was a prominent builder in Pasadena and was involved in the construction of many notable buildings including the Scottish Rite Cathedral in Pasadena, the NRHP-listed Kindel Building, the Huntington Library, and the Pasadena Civic Auditorium. Sanborn Fire Insurance Maps from 1931 show that 495 S. Arroyo Parkway was used as sheet metal works (Sanborn Map Company 1931), however W.C. Crowell was still listed as a contractor with offices at that location in 1938 and 1939 (Los Angeles Directory Co. 1938, 1939). By 1942 the property was occupied by Destruxol Corp. LTD, a garden chemical manufacturer (*Los Angeles Times* 1942). The Sanborn Fire Insurance Maps from 1951 indicate that the building was a garden spray manufacturer and interior doors connecting the building with 491 S. Arroyo Parkway indicate that the two buildings were directly associated with one another (Sanborn Map Company 1951). By 1956 the building was used as a machine shop while jointly being used by the Destruxol Corporation which occupied the property until at least 1960 (*Los Angeles Times* 1956, *Pasadena Independent* 1960). At some point between 1960 and 1978, Properties International/John K. Woo occupied the property before relocating in 1978 (*Los Angeles Times* 1978a). In 2009 a seismic retrofit permit was issued for the building followed by permits for new storefronts and a new roof for the building in 2010 (Pasadena Building and Safety Division 2009, 2010b, 2010c).

499 S. Arroyo Parkway was constructed in 1921. On the 1931 Sanborn Maps, 499 S. Arroyo Parkway is depicted as having two wire-glass skylights. Interior doors connecting the building with 501 and 503 S. Arroyo Parkway indicate that the buildings were directly associated with one another. The use for the complex is indicated as wholesale grocery (Sanborn Map Company 1931), the Market Basket Warehouse (Heumann 2000a). On the 1951 Sanborn Maps 499 S. Arroyo Parkway is depicted as having two wire-glass skylights. Interior doors connecting the building with 501 and 503 S. Arroyo Parkway indicate that the buildings were directly associated with one another. The use for the complex is indicated as paper warehouse and distribution (Sanborn Map Company 1951). In 2010 permits were issued for storefront installations and alterations on the building (Pasadena Building and Safety Division 2010d, 2010e). In 2011 a permit was issued for a new wall sign and new awnings for the building (Pasadena Building and Safety Division 2011).

503 S. Arroyo Parkway was constructed in 1921. On the 1931 Sanborn Fire Insurance Maps, 503 S. Arroyo Parkway is depicted as a concrete building. Additional associated buildings abut the building to the south but are no longer extant. Interior doors connecting the building with 501 S. Arroyo Parkway indicate that the buildings were directly associated with one another. The use for two buildings, along with 499 S. Arroyo Parkway, is indicated as wholesale grocery

(Sanborn Map Company 1931), the Market Basket Warehouse (Heumann 2000a). On the 1951 Sanborn Fire Insurance Maps 503 S. Arroyo Parkway is depicted as a concrete building. Additional associated buildings about the building to the south but are no longer extant. Interior doors connecting the building with 501 S. Arroyo Parkway indicate that the buildings were directly associated with one another. The use for two buildings, along with 499 S. Arroyo Parkway, is indicated as paper warehouse and distribution (Sanborn Map Company 1951).

541 S. Arroyo Parkway was constructed in 1951. By at least 1959, the building was home to the Westward Ho Steak House (*Star-News* 1959) owned by Ed and Loretta Nicastro (*Star-News* 1962). The restaurant was known locally for live music and for its 10 ounce “small” steak (Gambole 1966). The Westward Ho Steak House operated until 1977 (*Los Angeles Times* 1977). In 1978 a restaurant called Duck Soup opened at the location, operated by Carl Warren, Sam Goldenberg, Mert Wallen, and Joe Dietchmann (*Los Angeles Times* 1978b). Warren, Goldenberg, Wallen, and Dietchmann were all, at the time, either owners or top executives in the International House of Pancakes (Thomey 1968). By 1989 Duck Soup had closed and Manan Restaurant was located in the building (*Monrovia News-Post* 1989). In 2002 a design review was requested for a remodel of the building (Pasadena Building and Safety Division 2002a) and permits were issued for the remodel the same year (Pasadena Building and Safety Division 2002b). Permits were issued in 2004 (Pasadena Building and Safety Division 2004) for a new monument sign and in 2005 for an illuminated wall sign (Pasadena Building and Safety Division 2005).

5.0 FIELD INVESTIGATION

5.1 FIELD METHODS

A pedestrian survey of the Project area was conducted by PaleoWest on May 4, 2020. During the field survey, the exteriors of the buildings within the Project area were analyzed, photographed, and recorded. Any building or structure determined to have been built prior to 1975 or to be potentially eligible for the CRHR were formally evaluated on DPR 523 series forms, which are included in Appendix A.

In addition to the Project Area, the general conditions and character of the surrounding area was observed during the field survey on May 4, 2020. Attention to building types, use, spatial organization, periods of construction, architectural styles, and other characteristics were noted at this time. A subsequent desktop analysis of the previously documented historical resources identified within the Project Vicinity was also conducted in support of this report. This entailed using readily available digital tools, such as street views from February 2021, to confirm current conditions of these resources, and cross-referencing this with existing documentation related to the historic status of each resource, including CHRID entries, DPR 523 forms, and NRHP nominations.

5.2 INTENSIVE PROJECT AREA SURVEY

The general character of the urban context surrounding the Project Area was observed during the intensive field survey on May 4, 2020. Overall, the Project Area is situated within a dynamic urban environment near downtown Pasadena. The building stock and character of the surrounding area features a mixture of commercial, industrial, and residential uses through a mixture of property types that reflect periods of construction from the late nineteenth century to the present-day. This is also embodied in a variety of architectural styles, forms, and building heights, which vary from low-rise commercial and residential developments to larger, mid-rise multi-family and commercial buildings, to more recent mixed-use properties reaching over seven stories tall.

5.2.1 491 S. Arroyo Parkway

491 S. Arroyo Parkway is a one-story Modern Vernacular commercial building constructed in 1945. The building features a flat roof with a short parapet and a barrel vault. The building is of concrete block construction. The east elevation of the building features glass double doors with fixed window surrounds. A bank of large commercial windows mirroring the design of the entry are located adjacent to the entry on the elevation. The west elevation features windows with security bars. The north and south elevations abut the adjacent buildings.

Figure 5-1 491 S. Arroyo Parkway, east elevation, facing west

5.2.2 495 S. Arroyo Parkway

495 S. Arroyo Parkway is a one-story Modern Vernacular commercial building constructed in 1925. The building features a flat roof with a short parapet and a gable vault. The building is of brick construction. The east elevation of the building features a glass entry door flanked by fixed sidelight windows located off-center on the elevation. The entry is recessed and features a cantilevered awning. Two large fixed commercial windows are also located on the east elevation. The east elevation is clad in stucco. The north elevation features an entry door beneath a cantilevered overhang located on the west portion of the elevation. Two recessed fixed windows are located on the east portion of the elevation and a bank of large commercial windows are centered on the elevation. The south elevation abuts the adjacent building. The west elevation is clad in corrugated metal.

Figure 5-2 495 S. Arroyo Parkway, north and east elevations, facing southwest

5.2.3 499 S. Arroyo Parkway

499 S. Arroyo Parkway is a one-story Modern Vernacular commercial building constructed in 1921. The building features a flat roof with a short parapet. The east elevation of the building features a recessed entryway accessed by concrete stairs behind a metal security gate centered on the elevation. The entry is flanked by bands of recessed windows. The elevation is clad in stucco and the top portion of the elevation has seismic retrofit bolts. The north and south portions of the south elevation abut the adjacent buildings. The center portion of the south elevation features three former loading bays that have been filled with fixed windows. Concrete stairs leading to a glass entry door are located on the east section of the center portion of the elevation.

Figure 5-3 499 S. Arroyo Parkway, east elevation, facing west

5.2.4 501 S. Arroyo Parkway

501 S. Arroyo Parkway is a two-story Moderne style warehouse and office building that was constructed in 1940. The building has a square footprint and fronts the west sidewalk along S. Arroyo Parkway with no setback. The building features reinforced concrete construction, is primarily clad with painted board-formed concrete, and is capped with a flat roof profile defined by a raised parapet. The primary (west) façade has a symmetrical composition with regularly spaced, punched fenestration throughout. The entrance is set center at the first floor and is defined by an elongated set of paired doors with full-height, divided-lights and flanking sidelights. On either side of the entrance are metal divided-light casement windows typical to the building. The second-floor features three typical metal windows spaced directly overtop the corresponding fenestration at the first-floor. Panels of fluted concrete are set between the first- and second-floor fenestration. Horizontal molding is set immediately below the first- and second-floor windows and extends the width of the façade.

The south and rear façades are defined by the typical board-formed concrete and regularly spaced typical metal divided-light windows; the horizontal molding continues from the primary façade to the south façade. The north façade directly abuts the north-adjacent building at 499 S. Arroyo Parkway.

Figure 5-4 501 S. Arroyo Parkway, east elevation, facing west

5.2.5 503 S. Arroyo Parkway

503 S. Arroyo Parkway is a one-story utilitarian commercial/industrial building constructed in 1921. The building features a flat roof with a short, stepped parapet centered on the roofline on the east elevation. The east elevation of the building features a large opening filled with a roll-top warehouse door. The north elevation abuts the adjacent building. The south elevation features no doors or fenestration.

Figure 5-5 503 S. Arroyo Parkway, south and east elevations, facing northwest

5.2.6 523 S. Arroyo Parkway

523 S. Arroyo Parkway, constructed in 1922 and identified as the former Lewis Iron Building, is a single-story brick masonry commercial building that fronts the west sidewalk along S. Arroyo Parkway with no setback. It is defined primarily by its flat roof profile with parapet wall and the brick masonry façades, which feature a mixture of running header bond patterns with horizontal banding of contrasting stacked and vertical header bonds. The primary (west) façade is predominantly symmetrical with two large arched storefront window openings with flanking pedestrian doors and an interstitial window set at center. All fenestrations are evenly spaced and set within punched openings. The two arched windows vary slightly with the south window being a full-height picture window with divided fanlight, and the north window featuring divided-lights throughout with a pronounced concrete sill. The two doors at the north and south ends are defined by full glazing panels within wood frames and are covered by simple awnings. The central window is a paired, divided-light casement window.

The north façade is a flush, brick masonry wall with a running bond pattern. The rear (west) façade features a flush stucco-clad wall plane, which is permeated only by a simple, metal door and metal seam awning. The south façade directly abuts the south-adjacent building at 541 S. Arroyo Parkway.

Figure 5-6 523 S. Arroyo Parkway, north and east elevations, facing southwest

5.2.7 541 S. Arroyo Parkway

541 S. Arroyo Parkway is a one-story mission revival-style/ Spanish revival style commercial building constructed in 1951. The building has a rectangular plan with a Spanish tile mansard roof. Mission-style parapets are centered on the south and east elevations. The south elevation features a recessed arched entryway with decorative concrete surrounds on the east portion of the elevation. A square tower with a Spanish tile hipped roof is located above the entry. The tower features two windows filled with wooden slats just below the roofline of the tower on each of the elevations. A fixed multi-light window with decorative concrete surrounds is centered on the elevation beneath the mission-style parapet. To the west of the window is an entry door with decorative concrete surrounds located beneath an awning with Spanish tile. A fixed multi-light window with decorative concrete surrounds is located on the west portion of the elevation beneath a short mission-style parapet. The west elevation features vents and a utility closet. The east elevation features a covered patio area with a Spanish tile roof. A chimney with decorative vents and a hipped Spanish tile roof is located on the roof above the covered patio. The north elevation partially abuts the adjacent building, and the remainder of the elevation has no doors or fenestration.

Figure 5-7 541 S. Arroyo Parkway, southeast elevation, facing northwest

6.0 IDENTIFIED HISTORICAL RESOURCES

6.1 PREVIOUSLY IDENTIFIED RESOURCES

6.1.1 Within the Project Area

501 S. Arroyo Parkway

501 S. Arroyo Parkway, identified as the Market Basket Warehouse Offices, was initially recorded by Carson Anderson in 1989. Anderson did not specify what criteria was considered for its historical significance but noted that it is "one of two or three best intact examples of 1940s Moderne design in the Arroyo Parkway Industrial Area" (Carson 1989). While Anderson noted that the building was part of an interconnected complex of utilitarian buildings, he did not note that these buildings contributed to the significance of 501 S. Arroyo Parkway. In 2000 the building was evaluated by Leslie Heumann of PCR services and was recommended as eligible for the Local Register "as an example of World War II era Modern vernacular commercial design" (Heumann 2000a).

On May 4, 2020 PaleoWest staff revisited 501 S. Arroyo Parkway and noted the existing condition of the building. PaleoWest staff found the building as largely unchanged in any way that would compromise its historic integrity. Therefore, PaleoWest concurs with the 2000 recommendation that 501 S. Arroyo Parkway is eligible for the Local Register and recommends that 501 S. Arroyo Parkway is locally eligible under CRHR Criterion C.

523 S. Arroyo Parkway

523 S. Arroyo Parkway, known as the former Lewis Iron Building, was initially recorded by Jas. Draeger and C. Anderson in 1989 and was not specifically recommended as eligible under any criteria (Draeger and Anderson 1989). In 2000 the building was evaluated by Leslie Heumann of PCR services, and was recommended as eligible for the Local Register "as an example of commercial design by the prominent local architecture firm of Marston and Van Pelt" (Heumann 2000b).

On May 4, 2020 PaleoWest staff revisited 523 S. Arroyo Parkway and noted the existing condition of the building. PaleoWest staff found the building as largely unchanged in any way that would compromise its historic integrity. Therefore, PaleoWest concurs with the 2000 recommendation that 501 S. Arroyo Parkway is eligible for the Local Register and recommends that 501 S. Arroyo Parkway is locally eligible under CRHR Criterion C.

6.1.2 Within the Project Vicinity

Coronet Building, 411 S. Arroyo Parkway

Located immediately north of the Project area, the Coronet Building at 411 S. Arroyo Parkway is a three-story Late Moderne style industrial building. Constructed in 1945, the building was designed by architects Normstrom & Anderson and features hallmarks of the Late Moderne style, including a large pylon sign located near the center of the façade, which is flanked by fluted detailing and metal sash industrial windows. The building is identified as having the potential to be eligible for listing on the NRHP, CRHR, and Local Register, but requires further evaluation (CHRID 2000a).

The three-story industrial building is located along the S. Arroyo Parkway commercial corridor in central Pasadena. The vicinity is defined by a dense, urban setting with a variety of property types and uses, including commercial, industrial, and residential of varied heights from one to seven stories.

Figure 6-1. Cornet Building at 411 S. Arroyo Parkway, view northwest (Google Maps, February 2021).

The Home Laundry Building, 432 S. Arroyo Parkway

The Home Laundry Building at 432 S. Arroyo Parkway is located immediately east of the Project area. Constructed in 1922, the Tudor style industrial building was designed by architects Marson, Van Pelt & Maybury. It is considered significant at the local level as a rare example of the Tudor style in an industrial property, as well as for its overall arrangement and plan with physically integrated commercial and industrial uses. It is also significant for its associations with the Home Laundry company, which was a commercial institution in early twentieth century Pasadena, as well as for its associations with numerous individuals important to the economic development of Pasadena and Southern California, including Daniel M. Linnard, Arnold J. Bertonneau, and Edward K. Hoak (Hlava, 1986).

The Home Laundry Building is set along the busy S. Arroyo Parkway commercial corridor in central Pasadena. The property's setting is urban and increasingly diverse with a variety of commercial and mixed-use developments in the vicinity.

Figure 6-2. The Home Laundry Building at 432 S. Arroyo Parkway, view northeast (Google Maps, February 2021).

Bryan's Cleaners, 544 S. Arroyo Parkway

Bryan's Cleaners is located at 544 S. Arroyo Parkway, immediately east across the street from the Project area. The single-story Streamline Moderne commercial building is identified as being potentially eligible for listing as a Local Landmark for its architectural style (Heumann 2000c).

The building is situated within the commercial setting along S. Arroyo Parkway in central Pasadena. The surrounding area features a mixture of commercial, industrial, and residential developments reflecting an increasingly diverse building stock in a dense, urban setting.

Figure 6-3. Bryan's Cleaners at 544 S. Arroyo Parkway, view northeast (Google Maps, February 2021).

Pasadena Humane Society Building, 361 S. Raymond Avenue

The Pasadena Humane Society Building is located at 361 S. Raymond Avenue, approximately one block northwest of the Project area. Listed on the NRHP in 1986, the two-story Spanish Colonial-Revival style complex was initially constructed in 1929 and expanded over the following years, reflecting the work of architects Hunt & Chambers and Robert Ainsworth. The property was designed and constructed for the Pasadena Humane Society, which continues to occupy the site with expanded facilities to form a centralized campus (CHRID 2000).

The building is located within an urban area of central Pasadena with multiple industrial, commercial, and residential developments within the vicinity.

Figure 6-4. Pasadena Humane Society Building at 361 S. Raymond Avenue, view southwest (Google Maps, February 2021).

Royal Laundry Complex, 443 S. Raymond Avenue

Located one block west of the Project area, the Royal Laundry Complex is a NRHP-listed industrial and commercial building in the central area of Pasadena. Initially constructed in 1927 and expanded in the 1930s, the complex is a collection of industrial buildings that housed a series of large-scale laundry companies during the early-to-mid twentieth century. The complex was significant for its association with the development of Automobile-oriented businesses in Pasadena, as well as for its architecture as an excellent example of both Spanish-Colonial Revival and Streamline Moderne styles in an industrial property. Additionally, the original 1927 portion of the complex is significant for its associations with master architect Gordon B. Kaufmann. The property was listed in the NRHP on September 29, 2007 (McAvoy and Janssen, 2007).

The complex was rehabilitated in the 2000s and converted to commercial office space. Situated in the urban setting of central Pasadena, the building is surrounded by a mixture of commercial, light-industrial, and residential developments.

Figure 6-5. The Royal Laundry Complex at 443 S. Raymond Avenue, view southwest (Google Maps, February 2021).

Raymond Flowers, 62 E. California Boulevard

Located one block west from the southwest corner of the Project Area, the former Raymond Flowers building is eligible for listing in the NRHP as a potential contributor to Pasadena's Japanese Florist Thematic Grouping Historic District. It is also considered individually eligible for designation as a Local Landmark. Constructed in 1933 for J. Oshiro, the property is a rare example of a pre-World War II Japanese-American flower shop. The property was identified in the City's "Ethnic History Research Project," which published findings in March 1995 (CHRID, 2004).

is situated within the commercial setting along E. California Boulevard in central Pasadena. The surrounding area is predominantly commercial and light-industrial in character and features a diverse building stock adding to the overall dynamic urban setting.

Figure 6-6. Former Raymond Flowers building at 62 E. California Boulevard, view south (Google Maps, December 2020).

George S. Hunt Studio & Shop Building, 161-171 E. California Boulevard

Located east along California Boulevard from the southeast corner of the Project area, the George S. Hunt Studio & Shop Building is a Spanish Colonial-Revival and Monterrey style commercial complex that has been determined individually eligible for designation as a Local Landmark for its architectural significance. Constructed in 1925, the complex was designed by renowned furniture maker George S. Hunt, who used the building as his primary studio and shop building, although he maintained multiple showrooms throughout the Los Angeles area through the 1920s. The complex was constructed by F.H. Ruppel, who was a revered contractor in Southern California during the early twentieth century, known for his adobe restoration work and innovations in seismic safety (Heumann, 2000d).

The building is situated within the predominantly commercial setting along E. California Boulevard in central Pasadena. The surrounding area features a mixture of commercial, industrial, and residential developments reflecting an increasingly diverse building stock in a dense, urban setting.

Figure 6-7. George S. Hunt Studio & Shop Building at 161-171 E. California Boulevard, view north (Google Maps, February 2021).

Wallace Neff Office, 180 E. California Boulevard

Located east along California Boulevard from the southeast corner of the Project Area, the Wallace Neff office is a Spanish Colonial-Revival and Monterrey style commercial building that

has been determined individually eligible for listing in the NRHP and has been designated as a contributor to the City's Marengo-Pico Landmark District. Constructed in 1927, the building is individually significant for its architecture and associations with both architect Wallace Neff and builder Frederick H. Ruppel, whom, in addition to designing and constructing the building, used it for their studio and office space. As a contributor to the City's Marengo-Pico Landmark District, the building is significant for its Period Revival architecture (Chima, 2011).

The building is situated within the mixed-use setting along E. California Boulevard in central Pasadena. The surrounding area features a mixture of various residential types, including early twentieth century single-family residences and contemporary condominiums, as well as post-war automobile-oriented commercial properties. Overall, the setting reflects an increasingly diverse building stock in a dynamic urban setting.

Figure 6-8. Wallace Neff Office at 180 E. California Boulevard, view southeast (Google Maps, March 2021).

Don Carlos Court, 374-386 S. Marengo Avenue

Located one block east of the Project Area, Bryan Court is a Spanish Colonial-Revival style Bungalow Court that was constructed in 1927. Designed by architect Clarence Hudson Burrell, the property is a significant example of the Bungalow Court, particularly in the Spanish Colonial-revival style. The property was identified in the 1980s as part of the Bungalow Courts of Pasadena multiple properties listing, and was officially listed in the NRHP in July 1983 (National Park Service 1983).

The buildings at Don Carlos Court are a series of simple Spanish Colonial-Revival style residential cottages arranged facing an insular courtyard. The property is set in the highly urbanized central area of Pasadena with dense multi-family, mixed-use, and commercial developments in the vicinity. However, the Bungalow Court continues to retain its sense of place, due in part to the retention of similar early twentieth properties along S. Marengo Avenue and the insular orientation of the court configuration.

Figure 6-9. The Don Carlos Court at 374-386 S. Marengo Avenue, view west (Google Maps, December 2020).

Evanston Inn, 385-395 S. Marengo Avenue

The Evanston Inn property is located at 385-395 S. Marengo Avenue, one block northeast of the Project area. Initially constructed in 1897 and altered over the following 10 years, the Queen Anne and Colonial style Evanston Inn was identified in 1981 as a rare example of a 19th century wood-frame hotel, which is also significant for its associations with the early development of tourism as an economic driver for Pasadena. The property was listed in the NRHP in September 1984 (Sicha, 1984).

The Evanston Inn property is situated in the highly urban setting of central Pasadena and immediately surrounding by multiple-story, multi-family residential developments, as well as increasingly dense mixed-use and commercial properties further to the north and west. However, the overall streetscape along S. Marengo Avenue continues to retain many low-scale residential buildings that date to the early twentieth century, which continues to contribute to the property's overall sense of place.

Figure 6-10. The Evanston Inn property at 385 S. Marengo Avenue, view west (Google Maps, December 2020).

Bryan Court, 427 S. Marengo Avenue

Located one block east of the Project Area, Bryan Court is a Craftsman style Bungalow Court that was constructed in 1916. Designed by architect D. M. Renton, the property is a significant example of the Bungalow Court, which is a residential property type ubiquitous to early twentieth century Pasadena, and which proliferated throughout California and other parts of the U.S. The property was identified in the 1980s as part of the Bungalow Courts of Pasadena multiple properties listing, and was officially listed in the NRHP in April 1986 (National Park Service 1986).

The buildings at Bryan Court are a series of Craftsman style cottages arranged facing an insular courtyard that served as shared green space among the residents. The property is set in the highly urbanized central area of Pasadena, yet continues to retain its sense of place, due in part to the retention of similar properties along S. Marengo Avenue and the inward facing orientation of the individual buildings.

Figure 6-11. The Craftsman-style Bungalow Court at 467 S. Marengo Avenue, listed on the NRHP as Bryan Court, view west (Google Maps, December 2020).

South Marengo Historic District

Located southeast of the Project Area, the South Marengo Historic District includes twelve Craftsman bungalows that were constructed between 1901 and 1916. The residential buildings face S. Marengo Avenue and are located between Bellevue Drive to the north and California Boulevard to the south. The district was listed on the NRHP on June 2, 1982 and is cited as significant for its exemplary collection of Craftsman style bungalows, which are quintessential to Pasadena's architectural character. The NRHP nomination, which was prepared in 1982, also notes that the district is located in an increasingly urbanized environment with multiple-story buildings in the surrounding area, but continued to retain "the ambiance of a pre-World War I-era street" (Sicha, 1981). Since its recordation and subsequent nomination, this trend has continued with increased development occurring in this central portion of Pasadena; however, the historic district itself continues to retain its sense of place as an early 20th century residential neighborhood.

Figure 6-12. Craftsman-style bungalows at 462 and 467 S. Marengo Avenue, both contributors to the NRHP-listed South Marengo Historic District, view east (Google Maps, December 2020).

Marengo-Pico Landmark District

Located southeast of the Project Area, the Marengo-Pico Landmark District is a relatively small district limited to a portion of the city block bounded by E. California Boulevard (north), S. Marengo Avenue (east), Pico Street (south), and Picher Alley (west). The district features a grouping of single-family residences and one commercial building that were largely constructed between 1912 and 1927. The contributing residences include four Craftsman style bungalows facing S. Marengo Avenue, whereas the one commercial building is the Spanish Colonial Revival style Wallace Neff Office building at 180 E. California Boulevard. The district was designated a Local Landmark District in 2008 as a representation of a rare collection of intact and architecturally significant early twentieth century buildings located south of California Boulevard (City of Pasadena, 2008).

At the time of designation, the surrounding area was noted for its diverse building stock, which includes a mixture of residential and commercial property types that were constructed between the post-war period to recent years. This trend has continued and the overall setting surrounding the Marengo-Pico Landmark District continues to reflect the dynamic character of a centrally located mixed-use area in central Pasadena.

Figure 6-13. Contributing Craftsman Bungalows along S. Marengo Avenue in the Marengo-Pico Landmark District, view west (Google Maps, February 2021).

6.2 RESOURCES REQUIRING EVALUATION

6.2.1 491 S. Arroyo Parkway

California Register of Historical Resources Evaluation

CRHR Criterion 1: 491 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many commercial/industrial buildings constructed throughout California and Pasadena throughout the twentieth century. While the building likely housed many different tenants, the two historical uses that were identified were for a garden spray manufacturer and a water conditioning service. There is no indication that significant historical events related to either of these industries occurred at this location. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 491 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 491 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building has housed several tenants over time and has been the workplace of numerous individuals, however; research has yielded no indication that any person of historical significance is specifically associated with this building. Therefore, 491 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 491 S. Arroyo Parkway does not meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important designer or builder, or as having high artistic value. The building is a common and unremarkable example of Modern Vernacular architecture. It is nearly indistinguishable from other buildings of that style constructed throughout the 20th century. Further, the addition of commercial storefront windows and an entryway has significantly compromised the historical appearance of the building. While the architects and builders of the building were not identified, it is unlikely that the building represents the work of a master. Therefore, 491 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 491 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of twentieth century building construction or the history of Pasadena. Therefore, 491 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance

491 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 491 S. Arroyo Parkway is not located within an existing Landmark District.

6.2.2 495 S. Arroyo Parkway

California Register of Historical Resources Evaluation

CRHR Criterion 1: 495 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many commercial/industrial buildings constructed throughout California and Pasadena throughout the twentieth century. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 495 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 495 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building's long term occupant was W.C. Crowell a contractor and builder responsible for the construction of several significant buildings including the Scottish Rite Cathedral in Pasadena, the NRHP-listed Kindel Building, the Huntington Library, the Atheneum at California Institute of Technology, and the Pasadena Civic Auditorium. While W.C. Crowell undoubtedly made significant contributions to the built environment of Southern California, this building does not convey that significance. Better examples that do convey his significance include the buildings listed above. Research has yielded no information to suggest that other persons, including other occupants of the building, of potential historical significance are specifically associated with this building. Therefore, 495 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 495 S. Arroyo Parkway does not meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important designer or builder, or as having high artistic value. The building is a common and unremarkable example of Modern Vernacular architecture. It is nearly indistinguishable from other buildings of that style constructed throughout the 20th century. Further, the addition of commercial storefront windows and an entryway has significantly compromised the historical appearance of the building. While the architect and builder of the building was not identified, there is a possibility that it was designed and/or constructed by W.C. Crowell. Even in that event, the building is not a masterful example of his work and does not adequately express the significance of his accomplishments as a builder. Therefore, 495 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 495 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of twentieth century building construction or the history of Pasadena. Therefore, 495 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance

495 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 495 S. Arroyo Parkway is not located within an existing Landmark District.

6.2.3 499 S. Arroyo Parkway

California Register of Historical Resources Evaluation

CRHR Criterion 1: 499 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many commercial/industrial buildings constructed throughout California and Pasadena throughout the twentieth century. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 499 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 499 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building has housed several tenants over time and has been the workplace of numerous individuals, however; research has yielded no indication that any person of historical significance is specifically associated with this building. Therefore, 499 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 499 S. Arroyo Parkway does not to meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important designer or builder, or as having high artistic value. The building is a common and unremarkable example of Modern Vernacular architecture. It is nearly indistinguishable from other buildings of that style constructed throughout the 20th century. While the architects and builders of the building were not identified, it is unlikely that the building represents the work of a master. Therefore, 499 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 499 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of twentieth century building construction or the history of Pasadena. Therefore, 499 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance

499 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 499 S. Arroyo Parkway is not located within an existing Landmark District.

6.2.4 503 S. Arroyo Parkway

California Register of Historical Resources Evaluation

CRHR Criterion 1: 503 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and

cultural heritage. The building is one of many commercial/industrial buildings constructed throughout California and Pasadena throughout the twentieth century. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 503 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building has housed several tenants over time and has been the workplace of numerous individuals, however; research has yielded no indication that any person of historical significance is specifically associated with this building. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 503 S. Arroyo Parkway does not to meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important designer or builder, or as having high artistic value. The building is an unremarkable and common example of a utilitarian industrial building. While the neighboring 501 S. Arroyo Parkway is located immediately to the west, it shares none of the characteristics of Moderne design that make the building at 501 S. Arroyo Parkway historically significant. Additionally, the north-adjacent building at 499 S. Arroyo Parkway, with which the subject building appears to share an internal connection, has been evaluated above under this criterion and does not appear to rise to a level of significance for its architecture that would result in a significant association. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 503 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of mid-twentieth century building construction, or the history of Pasadena. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance

503 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 503 S. Arroyo Parkway is not located within an existing Landmark.

6.2.5 541 S. Arroyo Parkway

California Register of Historical Resources Evaluation

The following presents an assessment of the historical significance of 541 S. Arroyo Parkway by applying the procedure and criteria for the CRHR. The purpose of this assessment is to evaluate the eligibility of the resource for listing on the CRHR.

CRHR Criterion 1: 541 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many restaurants constructed throughout California and the United States during the mid-twentieth century. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 541 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 541 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building was constructed by restaurateurs Ed and Loretta Nicastro and was home to their Westward Ho Steak House until 1977. Further, several musicians performed at the restaurant during its period as the Westward Ho Steakhouse. After 1977 several different owners and operators, including a partnership between several International House of Pancakes executives either owned or operated out of the property. Research has yielded no information to suggest that any of these individuals were historically important or that any persons of historical significance are specifically associated with this building. While the Nicastros were prominent business owners and the Westward Ho Steakhouse was a popular dining destination, there is no indication that they made a substantial contribution to the history of Pasadena, California, or the United States. Therefore, 541 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 541 S. Arroyo Parkway does not to meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The building was initially a mission revival-style building but has subsequently undergone renovations that have included Spanish revival-style elements such as the tower over the entryway. Both mission revival and Spanish revival style architecture are ubiquitous in southern California, as is the amalgamation of the two styles. This building is not a remarkable example of either style nor is it a remarkable example of the combination of the two styles. Further, neither the Mission Revival nor the Spanish Revival styles are indicative of the building's 1951 construction date. While the architects and builders of the building were not identified, it is unlikely that the building represents the work of a master. Therefore, 541 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 541 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of mid-twentieth century building construction, the history of the restaurant industry, or the history of Pasadena. Therefore, 541 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance

541 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 541 S. Arroyo Parkway is not located within an existing Landmark District.

6.2.6 Potential South Arroyo Parkway Historic District

A historic district possesses a significant concentration, linkage, or continuity of sites buildings, structures, or objects united historically or aesthetically by plan or physical development. Collectively, the buildings located at 491, 495, 499, 501, 503, 523, and 541 S. Arroyo Parkway represent a potential historic district because they were all constructed within the same general time (1921-1945) within an industrial zone established by the city of Pasadena in 1914 and were all constructed for similar use; however, based on the evaluation below, the potential district is not eligible for historical designation due to lack of integrity.

California Register of Historical Resources Evaluation

CRHR Criterion 1: If it retained integrity, the South Arroyo Parkway Industrial District could locally meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The establishment of industrial zones, while part of the standard practices of city government, is representative of the growth that Pasadena experienced in the early 20th Century. While the South Arroyo Parkway Industrial District was not the only industrial district established by the City of Pasadena, its proximity to the downtown commercial area and the railroad tracks suggests its importance to the economic development of the City.

CRHR Criterion 2: The South Arroyo Parkway Industrial District does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. Research has yielded no information to suggest that any persons of historical significance are specifically associated with the buildings that comprise the South Arroyo parkway Industrial District, collectively. The industrial zone established by the City of Pasadena in 1914 was planned as part of the standard duties of local governments and is not attributed to a single individual. Therefore, the Arroyo Parkway Industrial District is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: The South Arroyo Parkway Industrial District does not meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The buildings were constructed by different developers over time and do not share a significant, planned, or cohesive architectural style. Therefore, The South Arroyo Parkway Industrial District is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: The South Arroyo Parkway Industrial District does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this grouping of properties has the potential to broaden our understanding of mid-twentieth century building construction and city planning, or the history of Pasadena. Therefore, The South Arroyo Parkway Industrial District is not eligible for the CRHR under Criterion 4.

Integrity: The CRHR recognizes a property's historic integrity through seven aspects or qualities. These include location, design, setting, materials, workmanship, feeling, and association. For a property to be eligible, it must retain some, if not most, of these aspects of integrity. With the exception of 501 and 523 S. Arroyo Parkway, the buildings within the potential South Arroyo Parkway Historic District do not generally retain integrity of materials, workmanship, design, feeling, or association. The buildings have been modified over time to accommodate their current uses as commercial buildings. These modifications have led to a loss of historic material and has fundamentally changed the use and design of the buildings. Buildings that were constructed during the period of significance of the potential district have been substantially altered due to new construction over time, fragmenting the association of the extant buildings with their interrelated historical uses and compromising the integrity of setting, feeling, and association. Therefore, the South Arroyo Parkway Industrial District does not retain sufficient integrity to convey its historical significance and is not eligible for listing in the CRHR as a historic district.

City of Pasadena Historic Preservation Ordinance

The South Arroyo Parkway Industrial District is not located within an existing Landmark District and does not retain sufficient integrity to be considered a landmark district, based on the evaluation above.

7.0 IMPACTS ASSESSMENT

7.1 IMPACT ASSESSMENT FRAMEWORK

As outlined in Appendix G of the Environmental Checklist of the CEQA Guidelines, a “project with an effect that may cause a substantial adverse change in the significance of an historic resource is a project that may have a significant effect on the environment” (CEQA Guidelines Section 15064.5). A “substantial adverse change” in terms of historical resources is defined as “physical demolition, destruction, relocation, or alteration such the significance of an historical resource would be impaired”

The CEQA Guidelines go on to state, “Generally, a project that follows the Secretary of the Interior’s Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings or the Secretary of the Interior’s Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings (1995), Weeks and Grimmer, shall be considered as mitigated to a level of less than a significant impact on the historical resource.”

The Secretary of the Interior’s Standards for rehabilitation include the following:

- **Rehabilitation Standard 1:** A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.
- **Rehabilitation Standard 2:** The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.
- **Rehabilitation Standard 3:** Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.
- **Rehabilitation Standard 4:** Changes to a property that have acquired historic significance in their own right will be retained and preserved.
- **Rehabilitation Standard 5:** Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.
- **Rehabilitation Standard 6:** Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.
- **Rehabilitation Standard 7:** Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments That cause damage to historic materials will not be used.
- **Rehabilitation Standard 8:** Archaeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.

- **Rehabilitation Standard 9:** New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work shall be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.
- **Rehabilitation Standard 10:** New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

7.2 IMPACTS ASSESSMENT

7.2.1 Resources in the Project Area

501 S. Arroyo Parkway

In terms of physical impacts to 501 S. Arroyo Parkway, the proposed Project would not demolish or relocate the two-story Moderne-style building, essentially retaining the resource in its existing location as-is. The Project, which includes the construction of a seven-story medical building, will be setback away from this building and would not result in the direct alteration to any of the existing façades or character-defining features. However, if not properly protected during construction, there is the potential for the property to be physically impacted during construction.

In terms of vibration related to construction activities, there will be no impacts to the historic resource at 501 S. Arroyo Parkway. The noise and vibration study for the Project notes that the most damaging sources of vibrations include blasting and pile driving. Lesser, yet still disruptive sources include operating heavy-earth moving and construction equipment, as well as operations from nearby mass transit, including rail. The Project will not include blasting or pile driving as part of the construction, so no vibrations from these particularly damaging activities will impact the subject property. In terms of construction equipment, the study identifies that the vibration resulting from the equipment proposed for the Project have the potential to result in damaging vibrations; however, MM-NOI-1 identifies specific actionable items to reduce the potentially damaging vibrations to a less-than-significant level, which translates to the preservation of the historical integrity of the existing historical resources. MM-NOI-1 outlines that setbacks for construction activities around 501 S. Arroyo Parkway will greatly reduce the potential for vibration-related cosmetic damage. Furthermore, vibration monitoring equipment on-site will provide data regarding the existing vibration in relation to vibration level thresholds. If vibration levels exceed these thresholds, the alternatives to reduce vibration levels will be explored. Lastly, MM-NOI-1 explicitly states that any vibration-induced cosmetic damage to the existing buildings, including 501 S. Arroyo Parkway, will be repaired in accordance with the Standards following consultation with a qualified historic preservation professional that meets the Secretary of the Interior's Professional Qualification Standards for architectural history or historic architecture. While MM-NOI-1 thoroughly addresses potential impacts to 501 S. Arroyo Parkway caused by vibration, any accidents related to smaller-scale equipment and transportation vehicles throughout the site coming in contact with the building may have the potential to physically alter significant materials or character-defining features of the building, thus resulting in physical impacts to 501 S. Arroyo Parkway.

In terms of visual impacts, the design of the Project is sympathetic to the historical resource with the generous setbacks, stepped forms, and ample solid-to-void ratio to break up the massing. If

the design of the Project continues to change, the City's design review process will require compliance with the Secretary of the Interior's Standards for rehabilitation as part of the final approvals for the Project. As stated previously, a project that complies with the Secretary of the Interior's Standards for the Treatment of Historic Properties is considered to be mitigated to a less-than-significant level for historical resources. Therefore, the Project will have less-than-significant visual impacts to 501 S. Arroyo Parkway.

Overall, the proposed Project is likely to have a less-than-significant impact on the historical resource at 501 S. Arroyo Parkway. However, current unknowns about the Project stemming from construction activities and potential accidents physically damaging the building have the potential to impact the resource.

Future tenant improvements that are not within the scope of the current development proposal will be required by the City's Zoning Code to undergo design review for any exterior changes proposed to be made to the building. As an identified historic resource, a finding of consistency with the Secretary of the Interior's Standards will be required to be made in conjunction with that process. Therefore, no significant impacts related to future tenant improvements would occur.

523 S. Arroyo Parkway

The existing one-story commercial building at 523 S. Arroyo Parkway will not be demolished or relocated as part of the Project, retaining the resources in its existing location primarily as-is. The primary (east) façade of the building, as well as the side façades, will be retained in their existing condition, leaving the character-defining features intact. However, the rear (west) façade will be adjoined to the proposed tower in a way that has not been determined. This has the potential to result in significant physical impacts to the building.

As with 501 S. Arroyo Parkway, potential vibration-induced damage to 523 S. Arroyo Parkway is thoroughly addressed through MM-NOI-1. However, potential physical damage resulting from construction activities, such as collisions, is less clear at this time and has the potential to impact the resource.

In terms of overall setting, the Project and its large buildings will be a notable departure from the existing one-to-three story character of the surrounding block, although consistent with the overall urban and dynamic character of this central location within Pasadena. The design of the Project is responsive to the historical resource at 523 S. Arroyo Parkway in its setbacks, stepped façades, and breaking up of the massing with the generous solid-to-void ratio throughout. Although future changes in the design that may be proposed during the City's review processes have the potential to result in further impacts to the resource, due to the presence of historic resources in the Project area, the City's design review process will ensure that the project is consistent with the Secretary of the Interior's Standards. This will address potential visual impacts, as well as the undetermined way in which the Project will connect the proposed building with the historical resource at 523 S. Arroyo Parkway, ensuring that all design features are Standards compliant. As noted previously, projects found to be consistent with the Secretary of the Interior's Standards are considered under CEQA to be mitigated to a less-than-significant level.

Therefore, the proposed Project is also likely to have a less-than-significant impact on the historical resource at 523 S. Arroyo Parkway, although the construction of the project in close proximity to the resource has the potential to significantly impact the resource if it is not properly protected during construction.

7.2.2 Historical Resources in the Project Vicinity

As outlined in previous sections, there are several historical resources identified in the surrounding Project Vicinity. These include the following:

- Cornet Building, 411 S. Arroyo Parkway
- The Home Laundry Building, 432 S. Arroyo Parkway
- Bryan's Cleaners, 544 S. Arroyo Parkway
- Pasadena Humane Society Building, 361 S. Raymond Avenue
- Royal Laundry Complex, 433 S. Raymond Avenue
- Raymond Flowers, 62 E. California Boulevard
- George S. Hunt Studio & Shop Building, 161 E. California Boulevard
- Wallace Neff Office, 180 E. California Boulevard
- Don Carlos Court, 374-386 S. Raymond Avenue
- Evanston Inn, 385-395 S. Marengo Avenue
- Bryan Court, 427 S. Marengo Avenue
- South Marengo Historic District
- Marengo-Pico Landmark District

While these resources are located outside of the Project area and will not be directly altered as part of the construction activities or resulting project, there is the potential of the Project to alter their respective integrity of setting, feeling, and association, which may affect their listing or eligibility for listing on the NRHP, CRHR, or Local Register. This would constitute as a "substantial adverse change" and significant impact under CEQA.

As noted previously, projects found to be consistent with the Secretary of the Interior's Standards are considered under CEQA to be mitigated to a less-than-significant level. The Standards for rehabilitation are predominantly focused on physical alterations, although there is language pertinent to surrounding resources included under Rehabilitation Standards 2, 9, and 10. The following discussion under these Standards for rehabilitation applies to all of the resources in the vicinity.

Rehabilitation Standard 2

The historic character of each of the aforementioned historic resources in the Project Vicinity will be retained and preserved. These buildings will not be physically altered by the project, and will retain all character-defining features of each historical resource in their existing condition following the completion of the Project. In terms of spatial relationships, each of these historical resources will retain their existing relationship within their respective settings of the S. Arroyo Parkway commercial corridor, the industrial and commercial areas along S. Raymond Avenue, and the more residential character found along S. Marengo Avenue. While the proposed Project will introduce a new tower building into the general vicinity of many of these historical resources, this is not a departure from the existing conditions of the area, which is defined by an intensive urban setting with that is reflected by a dynamic building stock with varied periods of construction with low and mid-rise heights. Overall, the Project is consistent with the general character of this area of Pasadena and the existing uses. Therefore, the introduction of the new buildings will not alter broader spatial relationships within the setting of each of these resources, complying with Rehabilitation Standard 2.

Rehabilitation Standard 9

As described above, the resources in the Project Vicinity will not be physically altered by the Project and will retain all of their character-defining features and historic materials following its completion. While the proposed tower will be seven stories tall and a notable departure from the existing one- to three-story height of the subject block, the overall Project Vicinity is set within a

broader dynamic urban setting that is characterized by numerous property types, building forms, and heights, which correspond with multiple periods of construction spanning from the early twentieth century to the present-day. The Project will reflect those dynamic characteristics of the overall setting and will not present a departure from existing setting.

Similarly, the Project will be clearly contemporary in design and construction and will not create a false sense of historical development in relation to any of the historical resource's setting. Preliminary plans also demonstrate a typical contemporary building with regularly repeating windows and setbacks that break up the overall massing and reduce the bulkiness of the proposed design. Materials appear to be in a contemporary material palette, which feature some materials that are reflective of the more industrial and commercial character of those relevant resources nearby. While it is noted that the design is in its early stages and may change, the City's design review process will require a finding of compliance with the Standards. Therefore, the Project will continue to be reviewed for compatibility with nearby historic resources and will ultimately comply with Rehabilitation Standard 9 upon issuance of final approvals.

Rehabilitation Standard 10

The resources identified in the Project Vicinity, as outlined above, are all located outside of the Project area and will not be directly affected by the proposed Project. If the proposed medical tower were to be removed in the future, the seven-story structure would no longer be in place and the overall character of the subject block would revert to its current one-to-three story height. Therefore, the essential form and integrity of these resource's surrounding environment would be retained and would comply with Rehabilitation Standard 10.

7.3 MITIGATION MEASURES

To reduce the potential impacts to a less-than significant on the historical resources within the Project Area and Project Vicinity, the following mitigation measures are proposed.

Mitigation Measure 1: Standards Compliant Protection Protocols & Construction Monitoring

The Project applicant shall engage with a licensed architect and/or engineer that meets the Secretary of the Interior's Professional Qualifications Standards for historic architect to develop a series of protection interventions and protocols that will preserve the two historical resources in the Project area – 501 and 523 S. Arroyo Parkway – during construction activities. These measures should take into consideration the protection of and security of both resources, particularly the preservation of the character-defining features through the installation of physical protective barriers around each resource and the creation of site protocols that will eliminate the potential for physical damage resulting from impacts with construction and transport equipment.

To ensure the protection of these resources and their character-defining features, all protective barriers (which shall be installed prior to the initiation of any construction activity) and protocols shall be compliant with the *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* and be subject to review and approval by the City planning staff.

Site protocols for protecting the historical resources shall outline issues related to site access and navigation by contractors and construction personnel to reduce the potential for any inadvertent accidents between equipment and the two on-site historical resources. Additionally, a series of emergency measures shall be developed that outlined specific step-by-step

processes in the event that an accident involves one of the historical resources. This will likely include the following:

- 1) Stop-work protocols after an accident involving a historical resource occurs,
- 2) Notification procedures and identification key contacts,
- 3) Identification of qualified historic preservation professionals to investigate the historical resources following the determination that the area is safe,
- 4) Thorough conditions assessment of the resource by the qualified consultant to ascertain the level and extent of the damage; and
- 5) Preparation of a historical resource treatment plan to stabilize the historical resource and address the damage, which will be submitted to City staff for review and approval prior to completing the work and resumption of construction activities.

Additionally, protocols shall include regular on-site monitoring during construction activities by historic preservation consultant, either a SOI Qualified historic architect or architectural historian. The historic preservation consultant shall document the existing conditions of each resource prior to the initiation of any construction activity and prior to installation of the protective barriers and implementation of the protection protocols. This documentation phase will include high resolution digital photographs of each façade, as well as details of character-defining features for each resource. During construction, the historic preservation consultant shall prepare field report memoranda to the City confirming that the Standards compliant protection barriers are installed in accordance with the Standards, and that agreed upon protocols are being followed throughout the course of the Project. These memoranda will be submitted to City staff for their records and review. A final report outlining the conditions of the historical resources prior, during, and following the Project's construction shall be issued to the City for approval following construction activities and prior to the issuance of a Certificate of Occupancy.

8.0 CONCLUSION

The buildings at 491, 495, 499, 503, and 541 S. Arroyo Parkway were individually evaluated for historical significance by applying the criteria of the CRHR and the Local Register using data gathered during the pedestrian survey and information acquired through historical research. PaleoWest's analysis finds that the buildings at 491, 495, 499, 503, and 541 S. Arroyo Parkway are not eligible for inclusion in the CRHR or the Local Register. PaleoWest also concurs with the previous evaluation and determination that the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway are eligible for the Local Register and observed no changes that would compromise that assessment. Further, PaleoWest finds that the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway are locally eligible for the CRHR under Criterion C. Therefore, the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway are historical resources for the purposes of CEQA.

Collectively, the buildings located at 491, 495, 499, 501, 503, 523, and 541 S. Arroyo Parkway represent a potential historic district (referred to as the South Arroyo Parkway Industrial District) due to the timing of their construction and original development of industrial uses along a railroad and near downtown Pasadena. PaleoWest's analysis of the South Arroyo Parkway Industrial District examined the eligibility for listing in the CRHR under Criterion A and designation as a City Landmark District. The analysis found that the district does not retain sufficient integrity to convey its historical significance. The buildings have been modified over time to accommodate their current use as commercial buildings. These modifications have led to a loss of historic material and have fundamentally changed the use and design of the buildings. Buildings that were constructed during the period of significance of the potential district have been substantially altered over time, fragmenting the association of the extant buildings with their interrelated historical use and compromising the integrity of setting, feeling, and association. Therefore, the South Arroyo Parkway Industrial District is not a historical resource for the purposes of CEQA.

As determined in this report, the Project area contains two historic resources: the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway. Based on available plans, the Project will not involve the physical destruction of the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway, nor will it result any significant physical modifications that will compromise the historic integrity of the buildings. The proposed Project will have an effect on the integrity of the setting, but those changes will not physically alter the buildings and are not substantial enough to compromise the overall historic integrity or obstruct the view of the buildings from the public right-of-way. The surrounding area has been modified over time by new construction and modifications to existing buildings, including the construction of multi-story buildings, which has resulted in the disruption of the historical setting. Therefore, based on the Project description, the Project will not result in a substantive adverse change to the historic integrity of the buildings at 501 S. Arroyo Parkway and 523 S. Arroyo Parkway.

While the current Project description will not result in a substantive adverse change to the historic integrity of the buildings at 501 and 523 S. Arroyo Parkway, the potential for future modifications to them does exist in the form of tenant improvements. However, the City's existing design review process, established in Zoning Code Section 17.61.030, which requires a finding of consistency with the Secretary of the Interior's Standards for Rehabilitation to approve any proposed exterior changes to historical buildings within the Central District, will ensure that potential tenant improvements associated with this project or future projects do not result in a significant impact on the identified historical buildings.

This review process is being supplemented by additional mitigation measures, including further consultation with a qualified architectural historian or architect in the development of protective barriers to surround the on-site historical resources during construction activities, as well as the establishment of site protocols that outline preventative site access measures to reduce the likelihood of potential accidents involving the resources. This will also include emergency measures and processes in the event of an accident, and outlining the construction monitoring and reporting regimen to be implemented before, during, and after construction activities.

*NRHP Status Code:

*Resource Name or # (Assigned by recorder) South Arroyo Parkway Industrial District

D1. Historic Name: 491-541 S. Arroyo Parkway

D2. Common Name: 491-541 S. Arroyo Parkway

***D3. Detailed Description** (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.): The South Arroyo Parkway Industrial District is located at APNs 5722-008-002, 5722-008-012, 5722-008-017 within the City of Pasadena. The district has eight buildings located within its boundaries, six of which are considered contributing resources 491, 495, 499, 501, 503, 523, and 541 S. Arroyo Parkway. The buildings were all constructed within the same general time (1921-1945) within an industrial zone established by the city of Pasadena in 1914 and were all constructed for similar use. The buildings are generally Modern Vernacular, utilitarian, or Moderne in design.

***D4. Boundary Description** (Describe limits of district and attach map showing boundary and district elements.): The South Arroyo Parkway Industrial District is located within APNs 5722-008-002, 5722-008-012, 5722-008-017.

***D5. Boundary Justification:** All contributing elements to this resource are located within APNs 5722-008-002, 5722-008-012, 5722-008-017, therefore; the boundary of this resource is defined by the boundary of APNs 5722-008-002, 5722-008-012, 5722-008-017.

***D6. Significance: Theme:** Pasadena Industrial Development

Area: Pasadena, CA

Period of Significance: 1921-1945

Property Type: Industrial **Applicable Criteria:** A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Early industrial development in Pasadena was largely concentrated along the north-south axis of the Santa Fe rail tracks, which entered the city through the center of the block between Raymond Avenue and Arroyo Parkway (then Broadway) where the business had access to incoming and outgoing freight services (Historic Resources Group, et al. 2007). In 1914 industrial zones were designated adjacent to railroad tracks within the city of Pasadena. While zoned for industrial purposes, these areas also contained residences which largely housed immigrants and minorities (O'Connor, et al. 1993). The industrial district was confined to Arroyo Parkway, Raymond, and Fair Oaks Avenues between Del Mar Boulevard in the north and the Arroyo Seco (now the route of the Pasadena Freeway) in the south. The main industries were laundries, light manufacturing, custom automobile assembly, storage and transport, lumber yards and milling (Historic Resources Group, et al. 2007).

In Pasadena, common architectural styles associated with commercial buildings of the period include Late Moderne, Corporate Modern, Vernacular Modern, New Formalist and Brutalist styles. It must retain high integrity of design, materials and workmanship that convey its period of construction. While most buildings undergo alteration over time, these alterations should not significantly change the historic appearance of the building (Historic Resources Group, et al. 2007).

CRHR Evaluation

CRHR Criterion 1: The South Arroyo Parkway Industrial District locally meets CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The establishment of industrial zones, while part of the standard practices of city government, is representative of the growth that Pasadena experienced in the early 20th Century.

Page 3 of 51

*Resource Name or # (Assigned by recorder) South Arroyo Parkway Industrial District

*Recorded by: PaleoWest, LLC

*Date: May 2020 ☒ Continuation ☐ Update

***D6. Significance (continued):**

While the South Arroyo Parkway Industrial District was not the only industrial one established by the City of Pasadena, its proximity to the downtown commercial area and the railroad tracks suggests its importance to the economic development of the City. Therefore, South Arroyo Parkway Industrial District is locally eligible for the CRHR under Criterion 1

CRHR Criterion 2: The South Arroyo Parkway Industrial District does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. Research has yielded no information to suggest that any persons of historical significance are specifically associated with the buildings that comprise the South Arroyo parkway Industrial District, collectively. The industrial zone established by the City of Pasadena in 1914 was planned as part of the standard duties of local governments and is not attributed to a single individual. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: The South Arroyo Parkway Industrial District does not to meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The buildings were constructed by different developers over time and do not share a significant, planned, cohesive architectural style. Therefore, The South Arroyo Parkway Industrial District is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: The South Arroyo Parkway Industrial District does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of mid-twentieth century building construction and city planning, or the history of Pasadena. Therefore, The South Arroyo Parkway Industrial District is not eligible for the CRHR under Criterion 4.

Integrity: The CRHR recognizes a property's historic integrity through seven aspects or qualities. These include location, design, setting, materials, workmanship, feeling, and association. For a property to be eligible, it must retain some, if not most, of the aspects. With the exception of 501 and 523 S. Arroyo Parkway, the buildings that contribute to the South Arroyo Parkway Historic District do not generally retain integrity of materials, workmanship, design, feeling, or association. The buildings have been modified over time to accommodate their current use as commercial buildings. These modifications have led to a loss of historic material and has fundamentally changed the use and design of the buildings. Buildings that would have been previously considered contributors to the district have been lost due to new construction over time, fragmenting the association of the extant buildings with their interrelated historical use and compromising the integrity of setting, feeling, and association. Therefore, the South Arroyo Parkway Industrial District does not retain sufficient integrity to convey its historical significance.

City of Pasadena Historic Preservation Ordinance Evaluation

The South Arroyo Parkway Industrial District is not located within an existing Landmark District and does not retain sufficient integrity to be considered a historic district.

CONTINUATION SHEET

*D6. Significance (Continued):

491 S. Arroyo Parkway was constructed in 1945. Sanborn Fire Insurance Maps from 1951 show that 491 S. Arroyo Parkway indicate that it was used as a warehouse for a garden spray manufacturer and interior doors connecting the building with 495 S. Arroyo Parkway indicate that the two buildings were directly associated with one another (Sanborn Map Company 1951). By 1965 the building housed Servisoft, a water conditioning service (*Independent Star-News* 1965). Research has uncovered little information regarding subsequent occupants of the building. In 2010 permits were approved for new storefronts for the building, which included the current entry and windows (Pasadena Building and Safety Division 2010).

CRHR Evaluation

The following presents an assessment of the historical significance of 491 S. Arroyo Parkway by applying the procedure and criteria for the CRHR. The purpose of this assessment is to evaluate the eligibility of the resource for listing on the CRHR.

CRHR Criterion 1: 491 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many commercial/industrial buildings constructed throughout California and Pasadena throughout the twentieth century. While the building likely housed many different tenants, the two historical uses that were identified were for a garden spray manufacturer and a water conditioning service. There is no indication that significant historical events related to either of these industries occurred at this location. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 491 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 491 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building has housed several tenants over time and has been the workplace of numerous individuals, however; research has yielded no indication that any person of historical significance is specifically associated with this building. Therefore, 491 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 491 S. Arroyo Parkway does not meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The building is a common and unremarkable example of modern vernacular architecture. It is nearly indistinguishable from other buildings of that style constructed throughout the 20th century. Further, the addition of commercial storefront windows and an entryway has significantly compromised the historical appearance of the building. While the architects and builders of the building were not identified, it is unlikely that the building represents the work of a master. Therefore, 491 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 491 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of twentieth century building construction or the history of Pasadena. Therefore, 491 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance Evaluation

491 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 491 S. Arroyo Parkway is not located within a Landmark District and does not appear to be a contributor to a potential historic district.

495 S. Arroyo Parkway is a one-story vernacular commercial building constructed in 1925. The building features a flat roof with a short parapet and a gable vault. The building is of brick construction. The east elevation of the building features a glass entry door flanked by fixed sidelight windows located off-center on the elevation. The entry is recessed and features a cantilevered awning. Two large fixed commercial windows are also located on the east elevation. The east elevation is clad in stucco. The north elevation features an entry door beneath a cantilevered overhang located on the west portion of the elevation. Two recessed fixed windows are located on the east portion of the elevation and a bank of large commercial windows are centered on the elevation. The south elevation abuts the adjacent building. The west elevation is clad in corrugated metal.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Early industrial development in Pasadena was largely concentrated along the north-south axis of the Santa Fe rail tracks, which entered the city through the center of the block between Raymond Avenue and Arroyo Parkway (then Broadway) where the business had access to incoming and outgoing freight services (Historic Resources Group, et al. 2007). In 1914 industrial zones were designated adjacent to railroad tracks within the city of Pasadena. While zoned for industrial purposes, these areas also contained residences which largely housed immigrants and minorities (O'Connor, et al. 1993). The industrial district was confined to Arroyo Parkway, Raymond, and Fair Oaks Avenues between Del Mar Boulevard in the north and the Arroyo Seco (now the route of the Pasadena Freeway) in the south. The main industries were laundries, light manufacturing, custom automobile assembly, storage and transport, lumber yards and milling (Historic Resources Group, et al. 2007).

***D6. Significance (Continued):**

495 S. Arroyo Parkway was constructed in 1925. In 1927 William C. (W.C.) Crowell, operated out of the building. He was identified as a contractor (Los Angeles Directory Co. 1927). In 1928 he was awarded the construction of the Gordon B. Kaufmann designed Athenaeum Building on the California Institute of Technology campus (*Pasadena Evening Post* 1928). In 1931, W.C. Crowell was listed as a member of the Pasadena Junior Chamber of Commerce (*The Pasadena Post* 1931). Crowell was a prominent builder in Pasadena and was involved in the construction of many notable buildings including the Scottish Rite Cathedral in Pasadena, the NRHP-listed Kindel Building, the Huntington Library, and the Pasadena Civic Auditorium. Sanborn Fire Insurance Maps from 1931 show that 495 S. Arroyo Parkway was used as sheet metal works (Sanborn Map Company 1931), however W.C. Crowell was still listed as a contractor at that location in 1938 and 1939 (Los Angeles Directory Co. 1938, 1939). By 1942 the property was occupied by Destruxol Corp. LTD, a garden chemical manufacturer (*Los Angeles Times* 1942). The Sanborn Fire Insurance Maps from 1951 indicate that the building was a garden spray manufacturer and interior doors connecting the building with 491 S. Arroyo Parkway indicate that the two buildings were directly associated with one another (Sanborn Map Company 1951). By 1956 the building was used as a machine shop while jointly being used by the Destruxol Corporation which occupied the property until at least 1960 (*Los Angeles Times* 1956, *Pasadena Independent* 1960). At some point between 1960 and 1978, Properties International/John K. Woo occupied the property before relocating in 1978 (*Los Angeles Times* 1978a). In 2009 a seismic retrofit permit was issued for the building followed by permits for new storefronts and a new roof for the building in 2010 (Pasadena Building and Safety Division 2009, 2010a, 2010b).

CRHR Evaluation

The following presents an assessment of the historical significance of 495 S. Arroyo Parkway by applying the procedure and criteria for the CRHR. The purpose of this assessment is to evaluate the eligibility of the resource for listing on the CRHR.

CRHR Criterion 1: 495 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many commercial/industrial buildings constructed throughout California and Pasadena throughout the twentieth century. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 495 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 495 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building's long term occupant was W.C. Crowell a contractor and builder responsible for the construction of several significant buildings including the Scottish Rite Cathedral in Pasadena, the NRHP-listed Kindel Building, the Huntington Library, the Atheneum at California Institute of Technology, and the Pasadena Civic Auditorium. While W.C. Crowell undoubtedly made significant contributions to the built environment of Southern California, this building does not convey that significance. Better examples that do convey his significance include the buildings listed above. Research has yielded no information to suggest that other persons, including other occupants of the building, of potential historical significance are specifically associated with this building. Therefore, 495 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 495 S. Arroyo Parkway does not meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The building is a common and unremarkable example of commercial vernacular architecture. It is nearly indistinguishable from other buildings of that style constructed throughout the 20th century. Further, the addition of commercial storefront windows and an entryway has significantly compromised the historical appearance of the building. While the architect and builder of the building was not identified, there is a possibility that it was designed and/or constructed by W.C. Crowell. Even in that event, the building is not a masterful example of his work and does not adequately express the significance of his accomplishments as a builder. Therefore, 495 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

*Resource Name or # (Assigned by recorder) 495 S. Arroyo Parkway

*Recorded by: PaleoWest, LLC

*Date: May 2020 ☒ Continuation ☐ Update

***D6. Significance (Continued):**

CRHR Criterion 4: 495 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of twentieth century building construction or the history of Pasadena. Therefore, 495 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance Evaluation

495 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 495 S. Arroyo Parkway is not located within a Landmark District and does not appear to be a contributor to a potential historic district.

*P3a. **Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) 499 S. Arroyo Parkway is a one-story vernacular commercial building constructed in 1921. The building features a flat roof with a short parapet. The east elevation of the building features a recessed entryway accessed by concrete stairs behind a metal security gate centered on the elevation. The entry is flanked by bands of recessed windows. The elevation is clad in stucco and the top portion of the elevation has seismic retrofit bolts. The north and south portions of the south elevation abut the adjacent buildings. The center portion of the south elevation features three former loading bays that have been filled with fixed windows. Concrete stairs leading to a glass entry door are located on the east section of the center portion of the elevation.

***D6. Significance (Continued):**

499 S. Arroyo Parkway was constructed in 1921. On the 1931 Sanborn Maps, 499 S. Arroyo Parkway is depicted as having two wire-glass skylights. Interior doors connecting the building with 501 and 503 S. Arroyo Parkway indicate that the buildings continue to be directly associated with one another. The use for the complex is indicated as wholesale grocery (Sanborn Map Company 1931), the Market Basket Warehouse (Heumann 2000). On the 1951 Sanborn Maps 499 S. Arroyo Parkway is depicted as having two wire-glass skylights. Interior doors connecting the building with 501 and 503 S. Arroyo Parkway indicate that the buildings were directly associated with one another. The use for the complex is indicated as paper warehouse and distribution (Sanborn Map Company 1951). In 2010 permits were issued for storefront installations and alterations on the building (Pasadena Building and Safety Division 2010, 2010). In 2011 a permit was issued for a new wall sign and new awnings for the building (Pasadena Building and Safety Division 2011).

CRHR Evaluation

The following presents an assessment of the historical significance of 499 S. Arroyo Parkway by applying the procedure and criteria for the CRHR. The purpose of this assessment is to evaluate the eligibility of the resource for listing on the CRHR.

CRHR Criterion 1: 499 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many commercial/industrial buildings constructed throughout California and Pasadena throughout the twentieth century. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 499 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 499 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building has housed several tenants over time and has been the workplace of numerous individuals, however; research has yielded no indication that any person of historical significance is specifically associated with this building. Therefore, 499 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 499 S. Arroyo Parkway does not to meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The building is a common and unremarkable example of vernacular commercial architecture. It is nearly indistinguishable from other buildings of that style constructed throughout the 20th century. While the architects and builders of the building were not identified, it is unlikely that the building represents the work of a master. Therefore, 499 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 499 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. is unlikely that this property has the potential to broaden our understanding of twentieth century building construction or the history of Pasadena. Therefore, 499 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance Evaluation

499 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 499 S. Arroyo Parkway is not located within a Landmark District and does not appear to be a contributor to a potential historic district.

*Date: **May 2020** ☐ Continuation ☒ Update

501 S. Arroyo Parkway, identified as the Market Basket Warehouse Offices, was initially recorded by Carson Anderson in 1989. Anderson did not specify what criteria was considered for its historical significance but noted that it is one of the "best intact examples of 1940s Moderne design in the Arroyo Parkway Industrial Area (Carson 1989). In 2000 the building was evaluated by Leslie Heumann of PCR services and was recommended as eligible for the Local Register "as an example of World War II era Modern vernacular commercial design" (Heumann 2000). On May 4, 2020 PaleoWest staff revisited 501 S. Arroyo Parkway and noted the existing condition of the building. PaleoWest staff found the building as largely unchanged in any way that would compromise its historic integrity. Therefore, PaleoWest concurs with the 2000 recommendation that 501 S. Arroyo Parkway is eligible for the Local Register. Further, PaleoWest recommends that 501 S. Arroyo Parkway and 523 S. Arroyo Parkway are locally eligible for the CRHR under Criterion C.

DESCRIPTION

- 7a. Architectural style: 1940's Moderne
- 7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

This is a two story reinforced concrete office structure associated with a warehouse complex (rear). The building is nearly a cube in shape, and is symmetrically organized. Entrance occurs through the center bay of the three-bay-wide facade. The building is very simple in design, and relies upon symmetry, horizontal-banded mouldings (window sill level, first & second floor), and the multi-paned pattern of the metal casement sash for subtle enrichment.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Early industrial development in Pasadena was largely concentrated along the north-south axis of the Santa Fe rail tracks, which entered the city through the center of the block between Raymond Avenue and Arroyo Parkway (then Broadway) where the business had access to incoming and outgoing freight services (Historic Resources Group, et al. 2007). In 1914 industrial zones were designated adjacent to railroad tracks within the city of Pasadena. While zoned for industrial purposes, these areas also contained residences which largely housed immigrants and minorities (O'Connor, et al. 1993). The industrial district was confined to Arroyo Parkway, Raymond, and Fair Oaks Avenues between Del Mar Boulevard in the north and the Arroyo Seco (now the route of the Pasadena Freeway) in the south. The main industries were laundries, light manufacturing, custom automobile assembly, storage and transport, lumber yards and milling (Historic Resources Group, et al. 2007).

***D6. Significance (Continued):**

503 S. Arroyo Parkway was constructed in 1921. On the 1931 Sanborn Fire Insurance Maps, 503 S. Arroyo Parkway is depicted as a concrete building. Additional associated buildings are shown abutting the building to the south but are no longer extant. Interior doors connecting the building with 501 S. Arroyo Parkway indicate that the buildings were directly associated with one another. The use for two buildings, along with 499 S. Arroyo Parkway, is indicated as wholesale grocery (Sanborn Map Company 1931), the Market Basket Warehouse (Heumann 2000). On the 1951 Sanborn Fire Insurance Maps 503 S. Arroyo Parkway is depicted as a concrete building. Additional associated buildings shown abutting the building to the south but are no longer extant. Interior doors connecting the building with 501 S. Arroyo Parkway indicate that the buildings continue to be directly associated with one another. The use for two buildings, along with 499 S. Arroyo Parkway, is indicated as paper warehouse and distribution (Sanborn Map Company 1951).

CRHR Evaluation

The following presents an assessment of the historical significance of 503 S. Arroyo Parkway by applying the procedure and criteria for the CRHR. The purpose of this assessment is to evaluate the eligibility of the resource for listing on the CRHR.

CRHR Criterion 1: 503 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many commercial/industrial buildings constructed throughout California and Pasadena throughout the twentieth century. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 503 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building has housed several tenants over time and has been the workplace of numerous individuals, however; research has yielded no indication that any person of historical significance is specifically associated with this building. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 503 S. Arroyo Parkway does not to meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The building is an unremarkable and common example of a vernacular commercial/industrial building. While the neighboring 501 S. Arroyo Parkway is located immediately to the west, it shares none of the characteristics of Moderne design that make the building at 501 S. Arroyo Parkway historically significant. Additionally, the north-adjacent building at 499 S. Arroyo Parkway, with which the subject building appears to share an internal connection, has been evaluated separately under this criterion and does not appear to rise to a level of significance for its architecture that would result in a significant association. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 503 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of mid-twentieth century building construction, or the history of Pasadena. Therefore, 503 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance Evaluation

503 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 503 S. Arroyo Parkway is not located within a Landmark District and does not appear to be a contributor to a potential historic district.

523 S. Arroyo Parkway, identified as the former Lewis Iron Building, was initially recorded by Jas. Draeger and C. Anderson in 1989 and was not specifically recommended as eligible under any criteria (Draeger and Anderson 1989). In 2000 the building was evaluated by Leslie Heumann of PCR services, and was recommended as eligible for the Local Register "as an example of commercial design by the prominent local architecture firm of Marston and Van Pelt" (Heumann 2000b). On May 4, 2020 PaleoWest staff revisited 523 S. Arroyo Parkway and noted the existing condition of the building. PaleoWest staff found the building as largely unchanged in any way that would compromise its historic integrity. Therefore, PaleoWest concurs with the 2000 recommendation that 501 S. Arroyo Parkway is eligible for the Local Register and recommends that 501 S. Arroyo Parkway is locally eligible under CRHR Criterion C.

DESCRIPTION

- 7a. Architectural style:
- 7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The Lewis Iron Building is a one-story, brick, commercial building. The front facade is symmetrical and is dominated by two large, arched openings. The one on the north has a sectional window composed of a two-light center section flanked by single panes and topped with a three section transom. The arched opening on the south has original, wood-panel garage doors. In the center of the facade is a pair of small six-light casements. On the north & south ends of the facade are wooden doors with transoms. The cornice is composed of a course of soldier brick topped by six courses of headers and a concrete coping. A continuous band of soldiers bricks runs above the doors and window arches.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

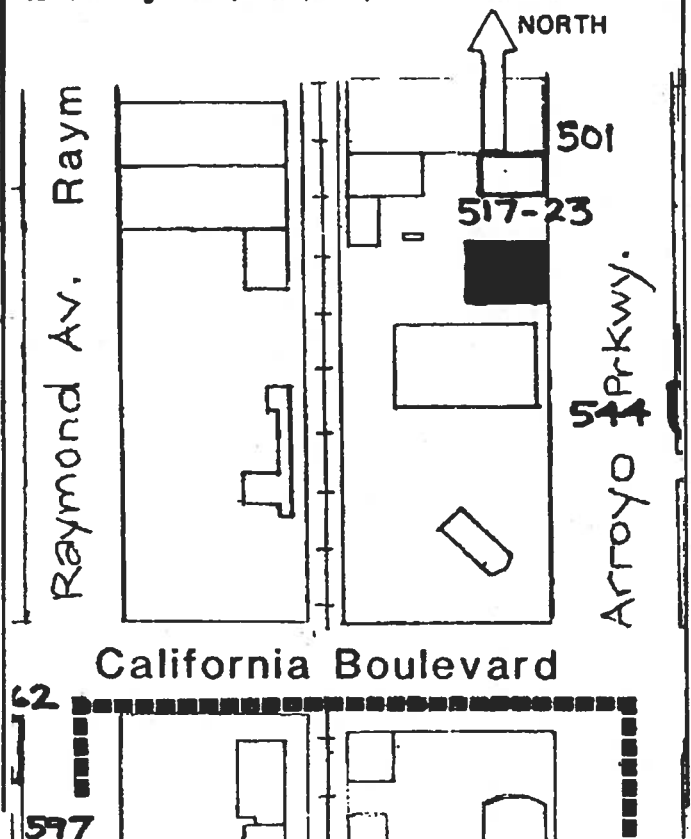

This handsomely detailed building is the work of the distinguished architectural firm of Marston & Van Pelt, which with its successor firms authored many commercial, institutional and residential buildings locally. This simple design, built originally to house the offices of the C. E. Millspaugh Electrical Contracting Company shows a masterful placement and proportioning of the window/door details, and use of contrasting brick patternwork (viz. Flemish, header, and soldier bond) for subtle decorative effect.

541 S. Arroyo Parkway is a one-story mission revival-style/ Spanish revival style commercial building constructed in 1951. The building has a rectangular plan with a Spanish tile mansard roof. Mission-style parapets are centered on the south and east elevations. The south elevation features a recessed arched entryway with decorative concrete surrounds on the east portion of the elevation. A square tower with a Spanish tile hipped roof is located above the entry. The tower features two windows filled with wooden slats just below the roofline of the tower on each of the elevations. A fixed multi-light window with decorative concrete surrounds is centered on the elevation beneath the mission-style parapet. To the west of the window is an entry door with decorative concrete surrounds located beneath an awning with Spanish tile. A fixed multi-light window with decorative concrete surrounds is located on the west portion of the elevation beneath a short mission-style parapet. The west elevation features vents and a utility closet. The east elevation features a covered patio area with a Spanish tile roof. A chimney with decorative vents and a hipped Spanish tile roof is located on the roof above the covered patio. The north elevation partially abuts the adjacent building and the remainder of the elevation has no doors or fenestration.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Early industrial development in Pasadena was largely concentrated along the north-south axis of the Santa Fe rail tracks, which entered the city through the center of the block between Raymond Avenue and Arroyo Parkway (then Broadway) where the business had access to incoming and outgoing freight services (Historic Resources Group, et al. 2007). In 1914 industrial zones were designated adjacent to railroad tracks within the city of Pasadena. While zoned for industrial purposes, these areas also contained residences which largely housed immigrants and minorities (O'Connor, et al. 1993). The industrial district was confined to Arroyo Parkway, Raymond, and Fair Oaks Avenues between Del Mar Boulevard in the north and the Arroyo Seco (now the route of the Pasadena Freeway) in the south. The main industries were laundries, light manufacturing, custom automobile assembly, storage and transport, lumber yards and milling (Historic Resources Group, et al. 2007).

In Pasadena, common architectural styles associated with commercial buildings of the period include Late Moderne, Corporate Modern, Vernacular Modern, New Formalist and Brutalist styles. It must retain high integrity of design, materials and workmanship that convey its period of construction. While most buildings undergo alteration over time, these alterations should not significantly change the historic appearance of the building (Historic Resources Group, et al. 2007).

*Resource Name or # (Assigned by recorder) 541 S. Arroyo Parkway

*Recorded by: PaleoWest, LLC

*Date: May 2020 ■ Continuation □ Update

***D6. Significance (Continued):**

541 S. Arroyo Parkway was constructed in 1951. By at least 1959, the building was home to the Westward Ho Steak House (*Star-News* 1959) owned by Ed and Loretta Nicastro (*Star-News* 1962). The restaurant was known locally for live music and for its 10 ounce "small" steak (Gambole 1966). The Westward Ho Steak House operated until 1977 (*Los Angeles Times* 1977). In 1978 a restraint called Duck Soup opened at the location, operated by Carl Warren, Sam Goldenberg, Mert Wallen, and Joe Dietchmann (*Los Angeles Times* 1978b). Warren, Goldenberg, Wallen, and Dietchmann were all, at the time, either owners or top executives in the International House of Pancakes (Thomey 1968). By 1989 Duck Soup had closed and Manan Restaurant was located in the building (*Monrovia News-Post* 1989). In 2002 a design review was requested for a remodel of the building (Pasadena Building and Safety Division 2002a) and permits were issued for the remodel the same year (Pasadena Building and Safety Division 2002b). Permits were issued in 2004 (Pasadena Building and Safety Division 2004) for a new monument sign and in 2005 for an illuminated wall sign (Pasadena Building and Safety Division 2005).

CRHR Evaluation

The following presents an assessment of the historical significance of 541 S. Arroyo Parkway by applying the procedure and criteria for the CRHR. The purpose of this assessment is to evaluate the eligibility of the resource for listing on the CRHR.

CRHR Criterion 1: 541 S. Arroyo Parkway does not meet CRHR Criterion 1 for association with events that have made a significant contribution to the broad patterns of California's history and cultural heritage. The building is one of many restaurants constructed throughout California and the United States during the mid-twentieth century. Research has yielded no information to suggest that any significant events associated with the history of Pasadena, California, or the United States are specifically associated with this building. Therefore, 541 S. Arroyo Parkway is not eligible for the CRHR under Criterion 1.

CRHR Criterion 2: 541 S. Arroyo Parkway does not meet CRHR Criterion 2 for any direct associations with the productive lives of persons important in local, state, or national history. The building was constructed by restaurateurs Ed and Loretta Nicastro and was home to their Westward Ho Steak House until 1977. Further, several musicians performed at the restaurant during its period as the Westward Ho Steakhouse. After 1977 several different owners and operators, including a partnership between several International House of Pancakes executives wither owned or operated out of the property. Research has yielded no information to suggest that any of these individuals were historically important or that any persons of historical significance are specifically associated with this building. While the Nicastros were prominent business owners and the Westward Ho Steakhouse was a popular dining destination, there is no indication that they made a substantial contribution to the history of Pasadena, California, or the United States. Therefore, 541 S. Arroyo Parkway is not eligible for the CRHR under Criterion 2.

CRHR Criterion 3: 541 S. Arroyo Parkway does not to meet CRHR Criterion 3 for embodying the distinctive characteristics of a type, period, and method of construction, or as the work of an important creative individual, or as having high artistic value. The building was initially a mission revival-style building but has subsequently undergone renovations that have included Spanish revival-style elements such as the tower over the entryway. Both mission revival and Spanish revival style architecture are ubiquitous in southern California, as is the amalgamation of the two styles. This building is not a remarkable example of either style nor is it a remarkable example of the combination of the two styles. While the architects and builders of the building were not identified, it is unlikely that the building represents the work of a master. Therefore, 541 S. Arroyo Parkway is not eligible for the CRHR under Criterion 3.

CRHR Criterion 4: 541 S. Arroyo Parkway does not meet CRHR Criterion 4 since it is unlikely to yield information important to prehistory or history. It is unlikely that this property has the potential to broaden our understanding of mid-twentieth century building construction, the history of the restaurant industry, or the history of Pasadena. Therefore, 541 S. Arroyo Parkway is not eligible for the CRHR under Criterion 4.

City of Pasadena Historic Preservation Ordinance Evaluation

541 S. Arroyo Parkway is recommended not eligible as a Historic Monument or a Landmark under the Local Register following the reasons outlined in the preceding section regarding eligibility under the comparable CRHR criteria. The criteria specific to Historic Signs and to Landmark Trees are not applicable to this building. 541 S. Arroyo Parkway is not located within a Landmark District and does not appear to be a contributor to a potential historic district.

Re: Records Search Results for the 3PAS012100 Project

The South Central Coastal Information Center received your records search request for the project area referenced above, located on the Pasadena, CA USGS 7.5' quadrangle. Due to the COVID-19 emergency, we have temporarily implemented new records search protocols. With the exception of some reports that have not yet been scanned, we are operationally digital for Los Angeles, Orange, and Ventura Counties. See attached document for your reference on what data is available in this format. The following reflects the results of the records search for the project area and a ½-mile radius:

As indicated on the data request form, the locations of resources and reports are provided in the following format: ☐ custom GIS maps ☒ shape files ☐ hand drawn maps

Resources within project area: 3	19-183400, 19-183401, 19-183402
Resources within ½-mile radius: 69	SEE ATTACHED LIST
Reports within project area: 0	None
Reports within ½-mile radius: 16	SEE ATTACHED LIST

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the **C**alifornia **H**istorical **R**esources **I**nformation **S**ystem,

Michelle Galaz
Assistant Coordinator

Enclosures:

(X) Emergency Protocols for LA, Orange, and Ventura County BULK Processing Standards – 2 pages

(X) GIS Shapefiles – 88 shapes

(X) Resource Database Printout (list) – 7 pages

(X) Report Database Printout (list) – 2 pages

(X) Resource Record Copies – (within project area) 9 pages

Emergency Protocols for LA, Orange, and Ventura County BULK or SINGLE PROJECT Records Searches IF YOU HAVE A GIS PERSON ON STAFF ONLY!!

These instructions are for qualified consultants with a valid Access and Use Agreement.

WE ARE ONLY PROVIDING DATA THAT IS ALREADY DIGITAL AT THIS TIME.

Some of you have a fully digital operation and have GIS staff on board who can process a fully digital deliverable from the Information Center. IF you can accept shape file data and do not require a custom map made for you by the SCCIC, and you are willing to sort the data we provide to you then these instructions are for you. Read further to be sure. You may have only one project at this time or some of you have a lot of different search locations that can be processed all at once. This may save you a lot of time getting results back and if we process your jobs in bulk, and you may enjoy significant cost savings as well.

Bulk processing will work for you if you have a GIS person on staff who can sort bulk data for you and make you any necessary project maps. This type of job can have as many job locations as you want but the point is that we will do them in bulk – at the same time - not one at a time. We send all the bulk data back to you and you sort it. This will work if you need searches in LA, Orange, or Ventura AND if they all have the same search radius and if all the other search criteria is the same– no exceptions. This will not work for San Bernardino County because we are not fully digital for San Bernardino County. You must submit all your shape files for each location at the same time and this will count as one search. If you have some that need a different radius, or different search criteria, then you should submit that job separately with its own set of instructions.

INSTRUCTIONS FOR BULK PROCESSING:

Please send in your requests via email using the data request form along with the associated shape files and pdf maps of the project area(s) at 1-24k scale. PDFs must be able to be printed out on 8.5X 11 paper. We check your shape file data against the pdf maps. This is where we find discrepancies between your shape files and your maps. This is required.

Please use this data request form and make sure you fill it out properly.

<http://web.sonoma.edu/nwic/docs/CHRISDataRequestForm.pdf>

DELIVERABLES:

1. A copy of the Built Environment Resources Directory or BERD for Los Angeles, Orange, Ventura, or San Bernardino County can now be found at the OHP Website for you to do your own research. This replaces the old Historic Properties Directory or HPD. We will not be searching this for you at this time but you can search it while you are waiting for our results to save time.
2. You will only get shapefiles back, which means that you will have to make your own maps for each project location.

3. You will get a bulk processed bibliographies for resources and reports as selected; you will not get individual bibliographies for each project location.
4. You will get pdfs of resources and reports if you request them, provided that they are in digital formats. We will not be scanning records or reports at this time.
5. You will get one invoice for the bulk data processing. We can't bill this as individual jobs on separate invoices for you. If there are multiple project names, we are willing to reference all the job names on the invoice if needed. If there a lot of job id's we may ask you to send them in an email so that we can copy and paste it into the invoice details. If you need to bill your clients for the data, you can refer to our fee schedule on the OHP website under the CHRIS tab and apply the fees accordingly.
6. We will be billing you at the staff rate of \$150 per hour and you will be charged for all resources and report locations according to the "custom map charges". This is in lieu of the \$12 per GIS shape file data fee that we normally charge for GIS files and this will only apply during the Covid 19 emergency. You will also be billed 0.15 per pdf page, or 0.25 per excel line as is usual.
7. Your packet will be mailed to you on a CD or via Dropbox if you have an account. We use 7-zip to password protect the files so you will need both. We email you the password.

I may not have been able to cover every possible contingency in this set of instructions and will update it if necessary. You can email me with questions at sccic@fullerton.edu

Thank you,

Stacy St. James
